Q. Mr. Grubb, you are giving us this evidence to indicate that Mr. Lavigueur's reasons were as indicated in his letter, and not a refusal to sell in the Ontario territory. You heard the evidence of Mr. Craise?—A. Yes.

Q. Mr. Craise is a fertilizer man?—A. Possibly, I don't know.

Q. Do you mean that as a compliment, or as an insult?—A. Certainly not as an insult.

Q. You say, "possibly"; he has been in the business a long time?—A. Yes, he is not in the business to-day; I am not sure that he is familiar with the existing conditions in the business up to date.

Q. He is carrying on business and has his price lists, and is selling all over Ontario, and has been for 20 odd years?—A. He is a fertilizer's jobber at present.

Q. Yes, but why do you say "possibly" when I say he is a fertilizer man.

Mr. FACTOR: Not a member of the Association.

Mr. SOMMERVILLE: He is not a member of the Association, I beg your pardon.

Mr. EDWARDS: He is not a mixer, he is a jobber.

By Mr. Sommerville:

Q. I don't know what you mean by "mixer," it is all right. You heard his statement when he was asked as to whether you can buy in Quebec and ship to Ontario, and his answer was, well just try and buy it. Isn't it a fact that you could not buy from any member of your association in the province of Quebec at Quebec prices, cheaper than the Ontario prices, f.o.b. in Quebec and ship into Ontario?—A. I can only answer for myself there. We would not accept an order for shipment west of the Kingston line. What the other members of the association would do would be their own business.

Q. Why?—A. Because the matter of costs do not permit. I have a statement here which I can give to you.

Q. As a matter of fact, you know that the other members take the position that you do?—A. No I don't.

Q. Is that not one of the things that you discuss when you get together?—A. It is not.

Q. And you have never discussed the question of shipping into Western Ontario?—A. We have not.

By the Chairman:

Q. Who fixed this Kingston line this mysterious Kingston line?—A. I did. You have got the right man.

By Mr. Sommerville:

Q. We know who did it now. Why does everybody accept the Kingston line, part of the association's plan?—A. I don't think they like it. Let me explain.

Q. They may not like it, but they have taken it?—A. The Kingston line is not mysterious. I will explain it. When we began manufacturing in the province of Quebec, we figured that we had sufficient weak sulphuric acid to make up a given quantity of superphosphates. We figured we had enough to look after the Quebec requirements. The first price list that I brought out, which I think was in 1931—

By Mr. Factor:

Q. Was that the time the Kingston line was fixed?—A. No.

Q. When was the Kingston line fixed?—A. When I thought I had too much superphosphate in the province of Quebec.

Q. What year was that?—A. Our first price list was in 1930.

By Mr. Sommerville:

Q. The first price list was in 1930?—A. Yes, and my line was the Quebec line.

Q. The Quebec border?—A. The Quebec border.

Q. Yes, proceed?—A. I found that I was not able to market all of my superphosphate in the province of Quebec, either as such or in mixed fertilizers. So I decided I had better extend it as far as I could. Consequently, I think it was two years later, I think it was 1932—answering your question—that price list does not show. It merely says Quebec. It does not say the year, but I can give you that from my records.

By Mr. Factor:

Q. It is 1932 that you fixed this Pembroke-Kingston line.—A. Yes. I fixed that for this reason: As far as I could find out, there were approximately 1,000 tons of fertilizer used in that section of Ontario between Kingston and the Quebec border, and I decided I had sufficient superphosphate at the moment to look after that trade. I had obligations in the province of Quebec with the largest buyer, the Co-Op. Federee; I was tied up with them with a contract to keep them supplied, and I could not keep myself short. Consequently I found the freight rate from the Hamilton plant to Kingston is $3.10 a ton; the freight rate from the Beloeil plant to Kingston is $3.10 a ton, so it looked like the logical breaking point, and I had sufficient. This year conditions in the province of Quebec have improved, and I was left high and dry. I had to bring from Hamilton, and accept a loss on about 1,500 tons of superphosphate, to my Beloeil plant, in order to live up to my contract. Now, as to whether or not next year I will be able to maintain the line at Kingston, or have to drop back to Brockville or Ottawa, I don't know.

Q. Will you elaborate a little more on the fixation of the Pembroke-Kingston line?—A. Yes.

Q. What were you motivated by?—A. I had more superphosphate, my chief ingredient, in the province of Quebec than I had a market for; and I found that this district used approximately my surplus. So by referring to the freight rates, I found that if my plant costs were equal, I could go to Kingston at a rate of $3.10.

By the Chairman:

Q. You said your plant costs were not equal?—A. They are not.

Q. You said there was a $4 differential?—A. In superphosphates.

Q. That is what you are talking about?—A. Yes.

By Mr. Sommerville:

Q. And relatively so in other ingredients?—A. In ingredients.

Q. In the proportion of superphosphates?—A. Yes.

Q. In the other ingredients?—A. And the other ingredients, yes; in manufacturing costs, no.

By Mr. Ilsley:

Q. It is not relatively so in the other ingredients surely?—A. I am willing to say this: I agree at Hamilton I am a little farther from the water than I am

at Beloeil. I am dealing in general terms. I can get sulphate of ammonia at either plant approximately the same; potash at either plant, not a great deal of difference, because when I bring it into Hamilton, I will bring it in by water.

By Mr. Sommerville:

Q. The differential is very slight?—A. It does not amount to enough to bother this committee with. But there is one other difference I would like to point out. If you will note on my price list there, for Ontario we have 21 brands of mixed fertilizer listed. In Quebec we have 6 brands. One of the mottoes behind all of our organizations is standardization. In Ontario three years ago we had 82 brands commonly being sold on the market. With the assistance of Guelph and among ourselves, we got that worked down, so that commonly we are now selling around 27 or 28 brands. We definitely list 21. That means that we must have those 21 brands in bins, cured and ready for shipment. In Quebec we have got 6 brands.

By Mr. Factor:

Q. Are there not 6 brands among the Ontario brands similar to the six in Quebec?—A. Quite right.

Q. And is there not a spread of price between Quebec and Ontario which is not accounted for yet, as far as your evidence has gone?—A. That is correct.

Q. Outside of freight?—A. That is right. The point that I am making is that in our factory costs we have to provide more ingredients, more space, and it costs us more money to manipulate and have in stock 21 brands than it does to have 6 brands. I will file the costs with the committee. My relative additional cost in Ontario is one dollar a ton.

By Mr. Sommerville:

Q. That is because you have got 21 brands in Ontario; you say that it costs a dollar per ton to carry the 21 brands, over the carrying of the 6 brands?—A. No, carrying has nothing to do with it. We don't charge interest in our costs.

Q. What is the one dollar for?—A. The addition would be in power. I should think part of it would be in power. Labour, I should say, would be approximately the same; and I should say the prime reason is that I have to carry ingredients to make up 21 different mixtures as against 6 mixtures.

Q. And your price would be as much as one dollar per ton on that?—A. I will file my costs. My remembrance is that it was $1.02.

By Mr. Factor:

Q. Those 6 brands in Ontario similar to those in Quebec cost you a dollar a ton more to manufacture?—A. Yes.

By Mr. Ilsley:

Q. I don't think you have told us the difference in costs per ton to this difference in the cost of superphosphates. Would you take an ordinary brand and say what difference in cost there is in a ton due to that?—A. Yes. I would like to pass this out, and you can possibly follow me in the explanation.

Mr. Ilsley: My point is that you say there is a $4 difference in the cost of superphosphate, but it would be very much less than that in the cost of the mixed fertilizer?

By Mr. Factor:

Q. That dollar a ton difference does not account for the difference in the superphosphate?—A. No, it has nothing to do with it.

By Mr. Sommerville:

Q. Yes, proceed, Mr. Grubb?—A. Now, in this statement I am trying to explain the difference in our price list, Quebec versus eastern Ontario. So to do it, I have put the price list on a similar basis.

Q. Have you any more of these?—A. Yes, here are some more.

Q. I will pass them around. This is a statement of detail of fertilizer prices?—R. Yes. What I want to refer to is the statement of detail of fertilizer prices, east versus west, breaking at Kingston, Ontario. I want to present it from the viewpoint of the price to the ultimate user, and the result to the C.I.L. in profit or loss as the case may be. 2-12-6 is a standard brand in both provinces. In the west the C.I.L. cash price to the consumer, delivered to his barn, is $33.75.

Mr. FACTOR: West of Kingston.

By Mr. Sommerville:

Q. The C.I.L. cash price is what?—A. $33.75.

Q. Look at your price list. It is $40.20, according to the price list. That is a credit price list?—A. We take $2 off in both provinces, so we may just as well—I think you are wrong on that $40.

Q. Well, I am reading from it. Here it is?—A. 2-12-6?

Q. Wait a minute. I was looking at 2-12-10?—A. $35.75 is the time price. We take $2 off for cash.

Q. I beg your pardon. 2-12-6 is $33.75?—A. Yes. In Quebec the price is $25 at the plant.

By the Chairman:

Q. It says $28 here?—A. I think delivered to the farmer's barn.

Q. In Quebec?—A. In this set-up that I am trying to explain, as to the difference in prices, I set out to explain the difference which is $11; that has been discussed, your 9 and 11 items.

Q. Put it on the same basis?—A. We must put it on the same basis. So that if the farmer in Quebec buys it—yes, I will sell to him at $25 at the plant; but if he wants it delivered to his farm, I think I am well within the bounds of common costs if I say it costs me $3.50.

By Mr. Sommerville:

Q. Per ton?—A. Per ton.

The CHAIRMAN: I think you would make good money at it; but never mind, go ahead.

By Mr. Sommerville:

Q. What if he calls for it and takes it away himself?—A. I am not trying to put anything over. I have got the freight rates here. We can ship within a radius of 125 miles for $2.50 a ton, that is in carload lots. If it is less than a carload, my rate is practically doubled; and then have got to move it from the station to the barn. However, I am not fighting with you about 50 cents or a dollar.

By Mr. Factor:

Q. Take truck delivery?—A. I might save some. But there are other cases where it might cost me $10 to deliver it. However, if there is any question on that $3.50 price, I am quite willing to try and break it down.

The CHAIRMAN: We will let it go.

The WITNESS: Thank you. That means a difference of $5.25 in the farmer in Quebec versus Ontario. The C.I.L. viewpoint is this: When we make 20 per cent superphosphate, I have explained it costs us $4 a ton less. That means there is 20 units at $4 a ton, which is 20 cents a unit. In 2-12-6 there are 12 units of P_2O_6, so that the difference in the superphosphate contained in 2-12-6 is $2.40 per ton.

By Mr. Sommerville:

Q. In Ontario over Quebec?—A. In Ontario over Quebec, right.
Q. At Hamilton over Beloeil?—A. Right. My plant is one dollar.

By the Chairman:

Q. That is for the 21 brands?—A. Among other reasons.

Mr. SOMMERVILLE: Why do you call your "plant, one dollar"?

The CHAIRMAN: Those 21 brands that it keeps the book-keeper looking after.

The WITNESS: That is right.

Mr. ILSLEY: Manipulation, he says.

By Mr. Sommerville:

Q. Manipulation of the chemicals?—A. That is right.

By Mr. Ilsley:

Q. It is a little more than book-keeping?—A. It is very much more than book-keeping. We will be glad to turn that up. Now, in the province of Quebec the fertilizer is handled by the dealer, generally speaking, at a 5 per cent profit. I think that is probably largely brought about due to the French element there, who are willing to handle things cheaper than some other people, and more co-operatives in the province. That is our only discount in Quebec. As far as the difference between our merchant and consumer is concerned, for 5 per cent they handle it. They have an additional profit, if they want to take it, in the fact that when we ship, we will say, a carload of fertilizer to Sherbrooke, for example, the carload rate, we will say, is $2.50. Less than a carload would be about $5. So a merchant at Sherbrooke, in addition to making his 5 per cent, could make a portion of the freight, and in some instances probably does. In Ontario our marketing was badly falling down. We could not interest the merchants in handling fertilizers, and we wanted to very badly, not only for our own good but also for the good of the farmers. We find that if a merchant will carry fertilizer in stock, he has got it there, so that when the sun comes out the farmer can go and get it, instead of waiting, sending to the factory and getting a few bags. Unfortunately the fertilizer shipping season is very short, usually about six weeks; and if there is a big drive on the fertilizer factory for six weeks, it is impossible to deliver the material to each farmer on the day that he wants its. They all want it on the sunshiny days. So that if we can get a merchant to carry that in stock, he is certainly doing a service to the farmer. In addition to that, that merchant knows more about the financial standing of the farmers adjacent to him than we can possibly know. In addition to that, he will probably swap cows or hams or pigs for fertilizer, which we cannot do. So that we definitely do want to keep the merchant in our picture as a distributor. In order to do that, he must have a profit. He will not work on 5 per cent. We give him 10 per cent in Ontario; and in addition to that, for s.d.b.l., we give him one per cent, which makes 11 per cent.

By Mr. Sommerville:

Q. For spot cash?—A. For spot cash.

Q. With delivery?—A. With delivery. In addition to that, one of the big problems has been the truck. These trucks come to our factory on the sunshiny days, early in the morning, and up until 10 or 11 o'clock at night; and it costs us more money to handle material by truck at our plant than it does by rail. By rail it is a 15-ton minimum, up to sometimes 20 or 30 or 40 tons. We can get our machines going. We bag this stuff as it is loaded. It is the only way we can get the run off. The bags roll into the box car. By truck we have to load them as the trucks come in. They will back up to the platform, if we want to go ahead and load them on the truck. To encourage rail shipment in Ontario, we are giving a dollar a ton to the merchants in addition to the 11 per cent. In Quebec that is not so workable, because the roads do not open up there so early; trucking is not the problem, and we have snow roads, and we don't have as many good roads. So to further assist the entire picture, we try to encourage rail shipment. So that the difference in our distributing costs in Ontario versus Quebec is $3.15. That is taken on our discount of 6 per cent in addition to the 5, an additional 6; 11 instead of 5 to the dealer. So that our out of pocket costs in Ontario for selling 2-12-6 is $3.15 in distribution. That makes a total additional cost to Canadian Industries, Limited, on 2-12-6 of $6.55.

Mr. FACTOR: You charge $1.30 more?

By the Chairman:

Q. You are losing $1.30?—A. We are losing $1.30. I am losing more money in selling in Quebec than I am in Ontario, by $1.30, on 2-12-6.

Q. You told us a little while ago you were losing money in Quebec?—A. And in Ontario and in the Maritimes.

Q. So you are losing $1.30 a ton in Ontario?—A. Yes, that is right, on 2-12-6.

By Mr. Factor:

Q. You mean you are actually losing money?—A. Definitely.

Mr. SOMMERVILLE: So he says.

The WITNESS: I have my statement here which I will file. We have lost over $100,000 each year in the last three years.

By Mr. Young:

Q. Is it possible for the farmer to bring in his stock of fertilizer in the winter time, and have it on hand when he wants it? If it will store with the dealer, why would it not store with the farmer?—A. No, I won't say it stores with the dealer. The dealer will have his fertilizer shipped say beginning with March, April and May, stretching it over say about 90 days. With regard to the farmer, they will all want it about the fifteenth day of April.

Q. Why could not they get it at a lower rate by importing?—A. Importing it? In car lots our Canadian schedule is cheaper than they could import it. You are talking about mixed fertilizers?

Q. Suppose he got it from you instead of having to go to the dealer and give him this little extra to carry along? Why could not the farmer get it?—A. We have set up, this year, a retail price that we want the dealers to maintain. We have asked them to maintain it.

By Mr. Edwards:

Q. Just on that point of Mr. Young's, I think it is very important?—A. Possibly I overlooked it.

Q. If they could anticipate their requirements and lay them in ahead of time, that would be a very much better way?—A. It would be.

Q. Is it not a fact, no matter whether it is your business or anybody else's business, they have had it drilled into them to just purchase from hand to mouth, on account of truckage and one thing and another?—A. Yes.

Q. And they will not look ahead in any line of business?—A. That is true. In that connection, in Ontario two years ago we offered special terms of payment if they would buy ahead; if they would take the stuff in February or March, we would date their invoice April 1st and give them just practically an additional month; and few take it. In the province of Ontario we gave 25 cents a ton for shipment up to the end of February. Practically nobody takes it. If we could find some solution, whereby we can ship fertilizer out of our plant beginning January 1st, we would be delighted.

By Mr. Factor:

Q. You say you have been losing money; what do you want to extend your business for?—A. We hope there will be a happier day, for one thing. I am hoping the superphosphate situation will not last forever.

By Mr. Young:

Q. This stuff is in your plant from January, and it is not needed until the first of April?—A. Well, I think it is in before then. We bring potash and rock in before the close of navigation, by boat.

Q. Have you tried to persuade the farmer to take it in January or December, whenever it is ready, and not have to pay for it until he requires it, on the 15th of April? Have you given him that much time?—A. Never given that much. There is a reason there, to. Fertilizer continues to have a chemical action possibly for a year after it is made and cured. If we were putting fertilizer into bags in January and it was not used until May, and had been left in a damp barn and possibly piled eight or ten bags high, it would probably become lumpy to a certain extent. These lumps would probably disappear if the farmer would manipulate them a little; but if there is the smallest idea that there are lumps in a bag of fertilizer, it usually comes back to the factory.

By Mr. Sommerville:

Q. Would not the same thing happen with your merchant who has stored it, that you are anxious to encourage him to store it in advance?—A. No, he will not usually have it over say about thirty days. He gets it pretty well the beginning of April; I should say thirty days.

Q. This question of $1.30 loss is dependent upon whether the one dollar you take off for plant and $3.15 which you take off for additional cost of distribution, or $4.15, is entirely reasonable?

Mr. Factor: And also that $3.50 charge for delivery to the farmer.

Mr. Sommerville: Yes, the two.

The Witness: Whether it is reasonable or not, it is the fact.

By Mr. Sommerville:

Q. Well, your facts?—A. If we can find some way of getting around it, I would be glad.

Q. Your facts may not be reasonable?—A. Well, possibly so.

Q. In other words, items of cost may be added to in there with which we are not familiar at present?—A. Quite right.

Q. And that would alter the picture?—A. We would be glad if you would look at our books.

Q. What is the price at which 2-12-6 is sold to the Federee?—A. We give the Federee a special discount of 5 per cent.

Q. Discount for what?—A. On quantity.

By the Chairman:

Q. You give them a discount of 5 plus 5?—A. Right.

Mr. SOMMERVILLE: Then the cash price in Quebec is $28.50.

Mr. FACTOR: No, $25.

The WITNESS: Mr. Stevens, with this special discount, I would just raise the question: Is it wise to have this appear in public?

The CHAIRMAN: Well, possibly not.

The WITNESS: I would prefer giving it to the committee; because if any little farmer ever thinks that anybody gets a special discount, it makes it a little hard.

The CHAIRMAN: It would have been better to have just stated it in confidence.

The WITNES: May I amend my statement?

The CHAIRMAN: The press are behind you; they will respect your request, and not mention that.

The WITNESS: All right. In confidence, The Federee gets such discount.

The CHAIRMAN: Anything of that kind that you want to state, just tell us.

The WITNESS: All right.

By Mr. Sommerville:

Q. You will table the prices that the Co-Op. Federee get on all these brands?—A. I will.

Q. And then the relative cash price in the province of Ontario for each of these brands?—A. Yes. I have them here for all the brands common to both provinces, right on this statement.

The CHAIRMAN: You see, Mr. Grubb, up to this point we have been taking your statement of the 5 per cent discount as covering the whole thing. It has been in the evidence right along that the Federee are the biggest distributor.

The WITNESS: Yes.

The CHAIRMAN: They are the main distributors.

The WITNESS: Right. I will table that.

The CHAIRMAN: So that it is normal; I mean to say the discount there is normal. It is not extraordinary.

By Mr. Sommerville:

Q. You give the jobber 10 per cent in Ontario?—A. There is a difference. I will be glad to table the percentage of our business that we do with the Co-Op. Federee versus the general trade. But there is this difference, the Co-Op. Federee are backed by the government.

By the Chairman:

Q. Let me interrupt. You emphasized to the committee your breakdown of that $3.15, and made the special point that you were forced in Ontario to give the dealer who would not work as cheaply as the man in Quebec, an extra 5 per cent. After we have swallowed all that we find something which is virtually the same. You can't escape it. It is about the same commission?—A. No—just a minute, Mr. Stevens, I am not trying to make you swallow anything.

Mr. SOMMERVILLE: The difference in the commission that you allow in Ontario and the commission that you really allow in Quebec is practically the same.

The WITNESS: Just a minute.

By Mr. Sommerville:

Q. Well, in the one case it is 10 per cent. and in the other it is 5 and 5?—A. Well, in Quebec, our money with the Co-Op. Federee is definite, absolutely not a nickel lost. In Ontario our risk is a great deal more.

Q. That is getting off on another point?—A. Once again I tell you that I was discussing things generally. We have some customers in Ontario who get a special discount, but they are not in our general picture. I was trying to spread before you gentlemen a general picture. I will table with you, with the minutes of our last meeting at which we discussed prices, and which minutes I have with me and had with me yesterday, a list of the people who get a special discount, together with their discount; so I don't think the picture would be so far out.

Mr. SOMMERVILLE: I think I have that here.

The WITNESS: I think there was a kind of big hunt for that yesterday. I have the minutes.

The CHAIRMAN: Of course, I don't mind saying—speaking for myself—it immediately puts your $3.15 out of gear.

The WITNESS: Out of kilter? Well, I will be glad to work these figures up the other way, if you like. I was trying to present a fair picture.

By Mr. Factor:

Q. Let me ask this: You said that the price in the Maritime provinces, delivered, is the f.o.b. price in Quebec. That means that 2-12-6 in the Maritimes sells for $25, is that right?—A. Yes.

Q. Delivered?—A. I said approximately.

Q. Well, yes, approximately?—A. I think so.

Q. Approximately then, the price of 2-12-6 in the Maritimes is $25 a ton?—A. Yes.

Q. Making a spread or difference of $8.75 between western Ontario and the Maritimes?—A. Yes.

Q. Now, what enters into this spread?—A. In the Maritimes I have to take my medicine on imports.

Q. On what?—A. On imports, any raw materials coming to the Maritimes free of duty.

Q. They come in all over Canada?—A. All the year around, so that we are really under more keen competition in the Maritimes than we are elsewhere.

By Mr. Factor:

Q. Is that the only factor that enters into the spread of $8.75 between the Maritimes and Western Ontario?—A. My raw materials would be cheaper in the Maritimes than in Western Ontario, because the Maritimes are on the seaboard.

By Mr. Sommerville:

Q. Not very much of a differential, I think you have already recognized that freight is negligible?—A. No, I do not think so. I said around $2. Let us take the same freight, I am talking about raw materials.

Q. Yes?—A. Now, if I bring Potash into my Halifax plant, I can put a boat right alongside of it, and put it into my plant for about 25 cents a ton unloading, and I have a wharfage charge of 10 cents. If I bring that stuff to my Hamilton plant—I will say this that the railroads in competition at import times issue special freight rates from Montreal to the various fertilizer plants in Ontario, $3.50, that is competitive to the boat rate of bringing it in.

Q. But you have had it come by boat right to Hamilton and had the boat take away canned goods on the return journey?—A. If we help the canners out I am glad. When it comes to bringing it in ocean boats, they do not come to Hamilton, that must be trans-shipped to Montreal.

Q. You have had tramp steamers come right up there with your potash, so I am informed?—A. Never to Canadian Industries, we have never had a tramp steamer come direct to our dock in Hamilton in the interests of our fertilizers.

Q. No potash?—A. If some of the other manufacturers have, I don't know. We have not, we have had to transfer every pound of it.

By Mr. Factor:

Q. I still can't see why there should be a spread of $8.75 between the Maritimes and Western Ontario; do you lose money on the Maritime business? —A. Yes. I will say this, that last year—I am not trying to hide anything—our fertilizer picture is drawn up differently in Eastern Canada than it is in Western Canada—when you ask me if we lose money in the Maritimes, we did not keep books separate for the Maritimes, and Quebec and Ontario. That could be broken down and we would be glad to do it. To my mind I am satisfied that our $100,000 loss per year is divided between the three districts.

By Mr. Ilsley:

Q. In your mixing plant at Halifax, do you use this cheaply manufactured superphosphate?—A. I have been sending superphosphate from my Beloeil plant to Halifax on a freight rate of $3.40.

By Mr. Edwards:

Q. Has not the proximity of American establishments to the Maritimes something to do with it?—A. Yes.

Q. You say you are meeting competition, and you made application for duty evaluation on the American product; has not that quite a lot to do with your Maritime situation; I mean, shipments from the United States into the Maritimes?—A. The very fact that all ingredients enter Canada duty free means that our Canadian schedule of prices on mixed fertilizers could not be exorbitant.

Q. The mixed product coming in from the United States is subject to duty? —A. To 10 per cent, right.

Q. Has not that competition from the United States tended to lower the price in the Maritimes?—A. Right.

Q. That is a big feature, isn't it?—A. That is right.

By Mr. Young:

Q. Which of these brands is the heaviest seller? You have five in the red here, and three in black.—A. I would like to explain one or two grades of this—2-12-6 is carried at $1.20, 2-12-10 is carried at $1; on 4-8-10 I make money in Ontario, $1.96. But 4-8-10 is my largest seller in Quebec. I sold 2,014 tons in 1933, as compared to 190 tons in Ontario; so if the Ontario man is penalized $1.96 on 190 tons, versus 2,014 tons, I do not think that is too unreasonable. Coming down to the 6-8-10 where the Ontario man is penalized $3.44, I sold 30 tons in Ontario as against 275 in Quebec. And coming down to 9-5-7, which on the face of it I admit looks out of reason, $6.54, it is a new brand we brought on the market last year in Quebec—different agriculturists have got behind it and recommended it for fruit planting—last year my sales in Ontario were 8 tons, so that on my extra 50 there, it is not a large amount.

By Mr. Sommerville:

Q. But if you sell 1,000 tons this year?—A. Undoubtedly the thing would come up for review.

Q. Review, by whom?—A. By me.

Q. Oh, yes. That is a fertilizer on the face of it that shows a difference of $12.45 per ton in Ontario above that of Quebec?—A. That is right.

Q. Yes?—A. Now, on the superphosphate, if you will note, I lost $5.05 a ton in Ontario, and on the 16 per cent $5.53.

By Mr. Factor:

Q. You say you lost, you mean you make less?—A. Either way is equally correct, I make less—yes.

By Mr. Young:

Q. If you lost in Quebec you mean you would lose more?—A. That is right

By Mr. Kennedy (Peace River):

Q. What is the amount of your sales in Ontario and Quebec on Superphosphate?—A. What is that?

Q. The amount of your sales?—A. The amounts, I will have to tell you that broadly, because the figures I have here indicate my bulk Superphosphate shipments with my bagged. But I will say this, roughly in the province of Quebec, I am mixing much more Superphosphate than in Ontario, and my sales of Superphosphates would probably be ten to one, Quebec versus Ontario; in bag Superphosphate not so much—they would run about five to one—subject to verifying figures.

By Mr. Sommerville:

Q. Is it correct that all fertilizers have gone up $3 a ton higher in 1934 than in 1933 in the province of Ontario?—A. No, sir.

Q. How much are they, generally. You would know, approximately?—A. Some of them are a little lower, some a little higher. I do not think there is a brand that shows the difference of a dollar.

By the Chairman:

Q. Have you got your price lists?—A. Yes, sir.

Q. Let us have your price list?

By Mr. Sommerville:

Q. You will fill that price list in any event?—A. I will.

By Mr. Young:

Q. You say Mr. Grubb, that the ingredients used in mixing fertilizers are free, and there should be no difficulty in obtaining these supplies for mixing?—A. I can conceive of no difficulty.

Q. We have the evidence here that Mr. Scott set up a mixing plant at Aldershot, in the heart of the fruit district, and found it impossible to get these raw materials except by buying them from Canada Packers and paying them an extra $2 a ton as commission to get these raw materials. Now, Mr. Scott is not going to pay $2 a ton if he could avoid it. How do you account for that? —A. I do not know Canada Packers transactions. Mr. Scott asked us for a price on Super-Phosphate.

Q. Yes?—A. We gave it to him.

Q. And apparently he did not buy it from you?—A. No.

By Mr. Factor:

Q. In this 4-8-10 where the Ontario grower is penalized $1.96, you gave figures showing that you only secured 90 tons in Ontario and 2,000 odd tons in Quebec; is that right?—A. 90 tons in Ontario.

Q. Is there any arrangement between you and Canada Packers whereby you zone out the districts between you?—A. None whatever.

Q. Do Canada Packers sell this kind, 4-8-10, which you sell in Ontario? —A. I would not think so, it is just a brand that is not sold to a great extent. There are government records showing the sales of each brand in the different provinces. There is no zoning arrangement of any kind.

By Mr. Sommerville:

Q. Yes?—A. Can we continue with this order here for Northumberland County?

Q. Yes, if you have anything further to say; but Mr. Scott—?—A. I do not want to avoid that. Scott asked us for a price on Super-Phosphate and we quoted him.

Q. What price did you quote him?—A. I will be glad to detail it.

Q. Was it the regular jobber's price?—A. I quoted him s.d.b.l.

Q. What is that?—A. Sight draft bill of lading.

Q. That would be for cash?—A. Yes, sir, based on former experience.

The Chairman: Of course, that is your privilege.

The Witness: I know.

The Chairman: There is no question about that. But what price did you quote him, did you quote him the same price that you would quote to any similar buyer.

The Witness: The same price I would quote to any similar buyer.

By Mr. Sommerville:

Q. Although he was going into the mixing business?—A. If he had come to me for a thousand tons or two thousand tons, I would have quoted him a better price.

Q. Apparently he went to Canada Packers and paid that $2 commission for buying the quantity he required?—A. I do not know about that, Canada Packers buy some of their super-phosphate from me, from 2,000 to 3,000 tons at a time. It is their privilege to sell it at any price they like. They may have undercut my quotation.

Q. Then on the basis of allowing Canada Packers $2 a ton commission, it cost him $36.10 per ton a hundred-pound bag?—A. $36.10 for Super-Phosphate.

Q. For his fertilizer?—A. Impossible.

Q. Because that exhibit that Mr. Robinson filed yesterday; we had the evidence of Mr. Robinson and Mr. Craise yesterday that it cost Scott $36.10, and he offered it for sale at $40.60 a ton with the Ontario list price at $50 a ton?—A. What is the material you are talking about.

Q. Nitrate. And upon communicating with the International Fertilizers here, one of the companies in your association, he found that the list price was $50, according to your price, and they met the competition at Burlington by selling it for $41?—A. I do not think he should have any kick with the profit he made.

Q. I beg your pardon?—A. I do not think he should have any kick with the profit he made selling it at $41.

Q. No, but if there is a $50 list price on Nitrate of Soda—your list price is $58 in Ontario?—A. Yes.

Q. That is the credit price, and that would mean that the cash price would be $56. He buys it from one of your association members for $41, which allows for $15 in spread between the cash price and your list cash price. There is room for some profit there. There should not be any loss, should there?—A. Just a minute: if Mr. Scott is a dry mixer of any size at all, he can buy all the Nitrate of Soda that he wants in carload lots and land it at Burlington at $35 a ton.

Q. Yes?—A. Was this Mr. Craise's evidence?

Q. Mr Craise and Mr. Robinson. Mr. Robinson was the buyer of this particular lot, and it was bought just last Monday—a week ago yesterday.

By Mr. Factor:

Q. He did say that nitrate of soda at St. Catharines last Monday was $50?—A. Let us take Craise: we sold him 20 tons of nitrate of soda at St. Catharines in a carload lot, which meant that we did not have to rehandle it, at $34.90. That is what he paid. We sold him that. I have the invoices here.

Q. When?—A. I will tell you—March 29.

Q. This year?—A. This year.

Q. That is one carload of nitrate of soda delivered at—?—A. St. Catharines.

Q. And the price was—?—A. $34.90.

Q. And the list price is $56?—A. Right. Now he could resell that—

Q. That means $22 per ton difference between the price he paid and your cash price list?—A. Yes.

Q. And that is equivalent to 80 per cent of an increase over the price he paid?—A. Yes.

Q. Rather a large margin?—A. I do not think so. He can resell that—

By Mr. Factor:

Q. You don't think so; 80 per cent you say is not a large margin?—A. If you could get it on a sufficient tonnage, it would be robbery of a kind.

By Mr. Sommerville:

Q. How does the farmer know he can buy in carloads? Here is your price list which you put out and which you apparently endeavour to maintain through the members of your association. How does the ordinary farmer know that there is such an enormous variation between one man who buys a car for $34 and another man who comes in and gets a ton and buys it at $56?—A. I think it is rather generally known; it is certainly generally known among the growers—we have a car here we sold the Vineland Growers.

Q. And you sold the Vineland Growers at what amount?—A. $35.90, and I understand we have only charged them a dollar on freight, which would make it $34.90.

By Mr. Factor:

Q. And at that price you make a reasonable profit selling in carload lots?—A. We make them $1.80 to $2 per ton, it varies I think in different seasons of the year; and incidentally we do not handle that in our plants.

By Mr. Sommerville:

Q. At that rate when you sell at $56 you certainly do make a substantial profit?—A. Let us see how much we sell.

Q. I do not know how much you sell, but the whole amount you sell is sold largely on the basis of your price list, is it not; on the basis of your agreed price list?—A. We sold nitrate of soda this season in Ontario, three carload shipments totalling 55 tons.

Q. Yes?—A. Any time we find there is an agent or a merchant handling any amount of nitrate of soda, we certainly advise him as to the cheapest way he can get it, which is carload lots. If we don't our competitor will.

By the Chairman:

Q. Every time we put our finger on something that looks rather unusual we have you saying that you have sold three or four tons of it. I am beginning to

wonder what items there are here which you do handle in quantity?—A. I could give them to you.

Q. Do you mean you only sold three carloads of nitrate of soda?—A. I had not finished. I sold shipments of carload lots, a total of 55 tons, and I sold 95 shipments which totalled 28 tons.

Q. Twenty-eight tons?—A. Yes. These 95 shipments, a lot of them will have to go by truck; possibly some of it would go in a car of fertilizer—a bag or two bags, maybe two tons—the rest of it might have to go as 500-pound shipments by itself, possibly to Sault Ste. Marie or Windsor where our freight rate would be from $10 and $15 a ton.

By Mr. Factor:

Q. But the 95 shipments were sold?—A. At the long price.

By Mr. Sommerville:

Q. At the long price?—A. That is correct, 28 tons.

Q. Twenty-eight tons, then, was sold at the long price of $56 cash, and the three shipments of 58 tons were sold at the $34 or $35 rate?—A. That is right.

By Mr. Factor:

Q. Did you keep a record of the sales to the retailer of these brands, of how much you sold in 1933 of nitrate of soda?—A. I can get it. We do not keep everything quite in that detail, but it is not hard to dig it out.

By Mr. Sommerville:

Q. You will agree, Mr. Grubbs, that the farmer is justified in asking for an explanation of this big spread from $34 cash to a $56 cash rate, as between various buyers?—A. Certainly.

Q. And what can you give him by way of explanation?—A. Well, to begin with on some of these items that were brought up, some of the smaller items which I think Mr. Stevens has mentioned.

The Chairman: Of course, they are not picked out because they are small?

The Witness: Not by you gentlemen, no. But by the grower I think they possibly are.

By Mr. Sommerville:

Q. The grower comes here and says: last Monday I called you up to buy fertilizer and the best I could buy it at was $50; then I went to the Independent, where there was an Independent in competition with a member of the association, and I was given $41 cash; that is $9 I saved that day because there was an Independent in the field; and that $9 represents better than about 20 odd per cent I saved that day through the competition; whereas, over at St. Catharines where the was no competition, the grower says, I had to pay $50 a ton?—A. If you did, I do not understand it. Mr. Craise, who testified here, has a brother and they are joint owners in the St. Catharines Cold Storage. We sold them a carload at $34.60, and I understand they resold it at $41 a ton.

By the Chairman:

Q. Which was not unreasonable, on the basis of the difference between $58 a ton?—A. To any place that there is any quantity of nitrate of soda delivered, where they can buy in carload lots, I will be glad to deliver it and explain to them how they can save on that $50 price.

Q. You went to considerable pains here about that; yes, and you made the impression upon the committee that anyone anywhere could get the raw

material for mixing their own fertilizer without any difficulty at all. Now, does not your recent statement, about selling such a very small quantity of nitrate of soda—one of the main ingredients of fertilizer—indicate that you and the larger firms discourage the mixing of fertilizer by the grower. Your price list would also indicate a very marked discouragement of it in order to force, shall I say, the buying of your mixed fertilizer—your commercial brand?—A. We prefer selling mixed fertilizers.

Q. All of the growers tell us they cannot buy materials except under difficult circumstances?

Mr. SOMMERVILLE: And at very high prices.

By the Chairman:

Q. You say there is no difficulty at all. On the other hand it is pretty clear I should say that your—I do not say it is wrong, but it is a fact—that your whole effort is bent upon selling your brand fertilizers?—A. We prefer selling them for our own good, and we think for the grower's good.

By Mr. Sommerville:

Q. There are legitimate reasons behind it, Mr. Grubb?—A. My point is this, we are not primarily interested in selling—

By the Chairman:

Q. Are you not primarily interested in discouraging the buying of that in that way?—A. I would not say that is primary. I would certainly say we do prefer to manufacture mixed goods, and to sell mixed goods; that is what we built our plants for. We could put in our own stock of raw materials, and we could say we would not sell this potash, soda and the others—that we are using it all for our own purposes.

By Mr. Sommerville:

Q. I suggest to you, in the province of Quebec, where on your own statement there is a large amount of home mixing, did not you make a price to suit that home mixing condition; but in the province of Ontario you have discouraged it, and the price is made accordingly?—A. I do not think that is a statement of fact based on our costs.

By Mr. Ilsley:

Q. It is certainly true in the Maritime Provinces, home mixing has a relation to the price down there, hasn't it?—A. It is a benefit, no question about it.

Q. Particularly in Prince Edward Island?

By Mr. Factor:

Q. In Mr. Robinson's brief he tells us that your company did reach an understanding which had for its objective the stamping out of home mixing and the discouragement of the establishment of a type of satisfactory home mixing by groups of growers. He says the grower should secure the materials, but only through controlled channels in which the price is rigidly maintained. What is your observation on that practice?—A. I do not think it is true.

Q. Well, the price at which you are selling nitrate of soda seems to me to corroborate it?—A. I do not remember. As I say, I am general manager, and I may not be in touch with all the details of the business. But I must say I do not remember any kicks, or certainly if there had been many, they would have come to my attention. But with respect to this Nitrate of Soda business, I would say that these are small articles and there would be more kicks, as I say, because in the total the packages are smaller relative to the rest of our business.

By Mr. Sommerville:

Q. I would expect it would be on this price?—A. If there were any great kick on that ground they can always go and get a carload and distribute it.

By the Chairman:

Q. Why would you have a list price for Nitrate of Soda of $58 a ton—a time price—and a cash price of $56, when your commercial brand was apparently much lower, from $30 to $40? That is a spread of about $20 a ton above the price at which you are prepared to sell it in carload lots. Is not that in itself a complete discouragement to the purchase of that locally? Why would anybody be fool enough to buy it at that price?—A. In home mixing I do not believe anybody is using Nitrate of Soda, I think they would be using Sulphate of Ammonia, and the spread would not be quite so great. Let us check up on Sulphate of Ammonia, it is $46, and Sulphate of Potash—

The CHAIRMAN: $72.

The WITNESS: Here is one I have worked out on Sulphate of Ammonia. I did not know that Soda was coming up, or I would have worked that out. On Sulphate of Ammonia our spread between the carload price, $29 and which is very well known in the sections that use Sulphate of Ammonia, versus our less than than carload lot price of $46; and that looks like a lot of money, doesn't it.

Mr. FACTOR: That is $17.

The WITNESS: This $46 price: to start with we have to take off the agent's discount, 11 per cent; and the dollar which goes to delivery, plus $2 cash discount, and I am down to $37.94, which is a spread of $8.94. We bring this Sulphate of Ammonia into our plant and handle it through the plant—I can substantiate these figures on our plant costs—at around $3.50 a ton small and large.

By the Chairman:

Q. For what?—A. For making mixed fertilizer and handling it there.

Q. You are speaking of Sulphate of Ammonia, why do you apply $3 a ton? —A. We do not in our records set up a standard plant cost. We do set up separate ingredient costs for each item that goes to the plant.

Q. I may be very dense, but you say first you bring it into the plant? —A. Right.

Q. Then you say there is $3.50 a ton. You don't mean to say it costs $3.50 a ton merely to handle it inside the plant?—A. No, not for Sulphate of Ammonia.

Q. Then why is it mentioned, that $3, where you resell it?—A. If I am putting 10,000 tons through my plant, we find our average cost of putting that through, that would be for our mixed fertilizer, and for resale ingredients, it is not far from $3.50. I will give the committee the exact cost.

Q. Is that the cost of the material plus handling, or just handling that you are talking about?—A. That is just handling.

Q. That is for mixing in with other material?—A. That includes the overhead of my plant. That is my entire —

By Mr. Factor:

Q. That would not represent the cost of handling sulphate of ammonia?— A. No. Sulphate of ammonia I am willing to concede is a dollar.

By the Chairman:

Q. I confess you have got me mystified?—A. I am sorry, because I want to get you clear.

Q. I am so simple that I cannot see how you relate merely taking into storage and putting out of storage of the one article to the taking into storage and mixing formula?—A. We don't.

Q. I can't see any relation there, but I may be all wet?—A. No, you are not. Mr. Stevens, we are trying to get the red ink into black ink in the fertilizer industry. To do that, we are cutting down the amount of book-keeping, and our office records to a minimum. We decide, we will say at our Hamilton plant, that we are going to put 10,000 tons a year through. We find that the cost of operating that plant is $35,000. That takes in superintendence, handling, book-keeping, machinery and labour. We strike an average that it cost $3.50 to put out and lay down there. If we want to get into a little more detail we can compare the price; and I find that to put a ton of sulphate of ammonia or nitrate of soda which does not come from our machinery, it merely means taking it off the car and putting it in the plant and putting it back, would cost a dollar, or 50 cents if you like. We can put that in there. Then our mix, I suppose, costs us $3.50; probably would go up, so that would be $3.75 or maybe $4. But we struck an average rate.

Q. That is a very interesting lecture, but it does not alter the point or problem we are faced with, of the discouragement of people mixing their own fertilizer by abnormally high price lists of ingredients?—A. What are you willing to accept, that I put it through the plant for a dollar?

By Mr. Sommerville:

Q. You will agree that you encourage the use of the mixed fertilizer?—A. Of mixed fertilizer, yes.

Q. Over the home-mixing?—A. Yes.

Q. I think we could leave it that way?—A. May I finish this one point? Instead of saying $3.50 to put it through the plant, let us say a dollar. I really don't believe you can unload a car, put it in and take it out for less than a dollar, and leave interest.

The CHAIRMAN: I don't see why you wasted fifteen minutes on the $3.50. You would never persuade me of that in forty years. If you have said a dollar in the first place, we would have got along faster.

The WITNESS: I will put it at a dollar.

By Mr. Factor:

Q. Or 50 cents, we will say?—A. Make it 50 cents.

Q. You said a dollar or 50 cents?—A. I am simple. I would rather state a dollar. I have a spread there to explain of $8.94, between my $46 less discount and my $29 price. That $8.94 I will explain is one dollar through my plant; the average freight and handling to the farmer's barn of $3.50 makes it up to $4.50. I have gypped the farmer $4.44 as against a carload price of $29.

By Mr. Sommerville:

Q. He thinks you have gypped him three times that much?—A. I am afraid he does. I will go this far: We would much prefer to sell every ton of nitrate of soda that we sell, in carload lots, direct shipment and not see it, than have that money.

Q. But that is not possible, because you know the farmer does not use it?—A. That is quite right.

Q. Your trade must meet the farmer's needs.

By Mr. Edwards:

Q. Mr. Grubb, is it not a fact that these gardeners are anxious to purchase nitrate alone which promotes quick growth, at a certain time of the season when they are anxious to have it; so that it is very desirable that they should

be able to purchase at a fair price?—A. Yes. We still contend that our price of $46 is fair. I don't believe it is unfair, where we would much rather sell at $29.

By Mr. Sommerville:

Q. From $29 to $46; you say a $17 spread is not unfair?—A. I have explained all but $4.44. I don't know whether it is to your satisfaction or not.

By the Chairman:

Q. What are you talking about, nitrate of soda?—A. Sulphate of ammonia is what we were discussing. I had broken that down, and I had broken that down because I had just happened to pick on that. I will break down nitrate of soda. Of the sulphate of ammonia, by the way, we sold six shipments in carloads this year, 137 tons, which would be at the $29 price, and we sold 66 shipments of 29 tons.

By the Chairman:

Q. Of course, the buyers won't buy that nitrate of soda and sulphate of ammonia at this price; that is, the small buyer. You know that?—A. Yes.

Q. He is forced to turn to the other?

By Mr. Sommerville:

Q. Take for instance this potash at the price of $72 on time a ton; and then turn to the mixed fertilizer that contains the most potash, that is 0-12-15. There are 12 parts of phosphoric acid and 15 of potash. You credit price for the mixture is $40.60, and your credit price to him for the potash alone is $72. That is a $32 of a spread. That is what you call encouraging the use of mixtures. Is that not the method of your encouragement?—A. I don't think it is.

Q. Is that the measure of your encouragement?—A. I should say not. When we entered the field—I can only speak for myself again—when we entered the field we found that Ontario, generally speaking, were using mixed fertilizers, which suited us fine. We have let it stay there.

By Mr. Factor:

Q. But you say that your tendency is to encourage the purchase of mixed fertilizers?—A. Yes.

Q. What educational methods do you adopt in that encouragement?—A. We have a development department with experts. We set out experiments on our own, and with the assistance of the different colleges in the different provinces.

By Mr. Sommerville:

Q. You contribute to the colleges?—A. Yes, and we run experiments of our own. We now have an experiment with fertilizer on pasturage that wiil cost us $3,000 or $4,000 before we are through. Incidentally, parts of it are allied to ingredients versus mixed fertilizer. We will await the answer with interest.

By Mr. Factor:

Q. You don't think the high price of ingredients has anything to do with this policy of encouragement?—A. I had never considered it. I am perfectly willing to admit that in the Maritimes and in Quebec where the buck is given to us, that we are fighting against a lot of home-mixing, that the price we set on mixed fertilizers has something to do with it. But the problem has never come up in Ontario.

By the Chairman:

Q. Why should you fight the farmer mixing his own, if he wants to mix his own? What right have you to throw impediments in the way of any farmer from buying the ingredients and mixing his own?—A. I don't think "fight" is quite the word. Here is our idea on it. When raw materials are bought, they are not uniform in analysis, and they are not mechanically in the proper condition in a great many instances to be spread on the land. We get the best raw materials.

Q. That is the business of the fellow who buys it. Why should you set up as judges over his actions?—A. I don't say we are judging.

Q. If he wants to buy potash and sulphate of ammonia and superphosphate and all the rest of it, and mix his own, why should you worry about whether he gets exactly a uniform grade? It is his funeral?—A. No, it is not his funeral. We are part of the corpse. We are intensely interested in the farming industry.

Mr. SOMMERVILLE: Some corpse.

The WITNESS: All right. If the farming industry does not succeed, the fertilizer industry does not succeed. We have ever so many things in common with the farmer. Now, if the farmer gets some of these materials with lumps, and not in the best mechanical condition and mixes them all together, he is not going to get an even mix, and in our opinion, he is not going to get an event crop.

By Mr. Sommerville:

Q. And if he does that, he will find it out mighty soon and then he will go to the mixture?—A. Right.

Q. Let him try it?—A. Why should he not try to tell me?

By the Chairman:

Q. Some of the best farmers in the country, most experienced and intelligent men,—some of them have been buyers,—said they never do anything else but buy their own ingredients and mix their own, and said they would not bother with the other?—A. Yes.

Q. You can't persuade us that the farmer is so helpless and ignorant that he cannot do these things; but in the face of this price list, I can see that he has a very serious difficulty?—A. Yes.

Q. And that is the real object of this committee. What we want to know is why these abnormal prices are charged to the farmer for these ingredients?—A. Yes. Of course, Mr. Stevens, in the old days of the muzzle loader, a shooter used to think that he could buy his powder and his shot and his wads and make up a better cartridge than machinery; but I think that idea has changed. We have an idea that the farmer will also change his idea.

By Mr. Sommerville:

Q. Here is a complaint that comes to us from the Holland marsh. You know that, up the Holland river?—A. I have never been there. My district manager goes there.

Q. It is an area of 400 acres of garden land which has been reclaimed from the swamp, or from the marsh, and highly cultivated by Dutch growers. They say the buying of fertilizers in units, the grower to do his own mixing, is the proper method and would reduce the cost; but the trouble is that the fertilizer companies demand cash for the orders for ingredients, and charge them a high price for those ingredients so as to discourage it, and thus make it expensive for them to do it, and they must buy their mixed fertilizer from you?—A. Yes.

Q. Why should not a group of farmers like that, highly developed, in a very highly intensified market gardening area, not be able to buy their ingred-

ients reasonably, and let them make their own experiments?—A. There is no reason at all.

Q. The price would seem to indicate that there is a very strong reason; and the fact is they don't do it?—A. Yes. First of all you said they could only buy them for cash. If they have the proper credit standing and we are willing to take some fairly long chances on the honesty of the grower, we will be delighted to sell them on credit. Now, if they are using any appreciable tonnage, we will be delighted to sell them in carload lots, sulphate of ammonia at today's price of $29; nitrate of soda, bring it from New York and give it to them to-day at $34 or $35 as the case may be; and potash at the best we can.

Q. That apparently was not the experience of the farmers three weeks ago?—A. Well, if they had got in touch with Canadian Industries, Limited, it would have been the experience. If my salesmen did not get in touch with them, I will get after my salesmen. Now, if that little group of farmers wanted to buy a mixed carload of the three articles, we would not have given them those special carload prices; because honestly, irrespective of the arguments here, I still do not see that we could have afforded to do so.

By Mr. Factor:

Q. There is one thing that puzzles me, and I wish you would enlighten me. Apparently on the ingredients such as nitrate of soda and sulphate of ammonia, you make a handsome profit from the grower, and a reasonable profit from the carload lots. You tell me that you lose money on the fertilizer when you mix the fertilizer. Why should you encourage the grower to buy mixed fertilizer when you can sell ingredients and make money?—A. Well, the ingredients in Ontario—people may claim it is on account of the high price—are a very small portion of our tonnage. And when you say we make money on the ingredients and lose it on the fertilizer, we don't keep separate books on the ingredients versus mixed fertilizer. They are all in the one pot.

Q. Why not encourage the sale of ingredients where you can make the same money?—A. We would then not be in the mixed fertilizer business. We would be jobbers then, instead of in the mixed fertilizer business. Merely change our line of vocation.

By Mr. Edwards:

Q. Is that not the answer?—A. I think it is.

Q. You are in the mixed fertilizer business, and naturally want to sell your product?—A. Yes.

Mr. FACTOR: And lose money.

By Mr. Edwards:

Q. Well, you are not anxious to sell individual ingredients. Otherwise, you are simply jobbers?—A. We sell the individual ingredients as a business, that is in instances where we find a large tonnage is wanted.

By Mr. Sommerville:

Q. Was there anything further you wanted to present?—A. Yes.

Q. All right, go ahead?—A. We were talking about this Eastern Ontario thing, and then this Brighton order. Now, I have worked out the Brighton order, this Northumberland County purchasing committee order.

By the Chairman:

Q. We have evidence, by the way, that the order went to the Federee?—A. No, sir, the order came to us; the evidence was that the Federee turned the order down. The Federee tell me that they never had the order, and had no correspondence of any kind. We got the order.

By Mr. Sommerville:

Q. What was your price on 2-12-6, the price at which you agreed to sell; the 2-12-6 was sold at $27 and the 4-8-10 at $30, and the 5-6-9—?—A. Here is the break-down that will explain that, if you don't mind. It is headed, comparative cost of a shipment of prepared fertilizer, 45·3 tons Sulphate of Ammonia—40 tons of Sulphate came from Trail to the Northumberland County Purchasing Committee according to the invoice.

Q. Now, this is something that you did sell to them?—A. Yes, sir. This is the order that we understood was offered to the Co-op. Federee and refused, and then refused under pressure—which evidence might be correct.

Q. Now, you don't mean that?—A. I think there must be a misunderstanding.

Q. Which evidence, you say, may be correct; the evidence was it was under pressure, you have already said it was under pressure?—A. I think we are not talking about the same order.

Q. I see?—A. I have made up your whole file, with copies of the invoices. If the goods have come from the Quebec factory at the Quebec schedule versus the Ontario schedule, I find that the entire shipment, if it had been delivered at the Ontario schedule, would have cost them 70 cents a ton more.

Q. That is your price from the Ontario price list?—A. On these particular brands. And there were in these brands 11 mixed fertilizers, four of which are not commonly stocked in Quebec, and which I would have had to have made up specially and it would have cost the Northumberland growers—they would have saved 70 cents if I had shipped them from Quebec. There was this Sulphate of Ammonia which came from Trail and which sells in Ontario and Quebec at $29, then the additional cost of mixed fertilizer, and Super-Phosphates and ingredients to the Northumberland growers would have been $1.32 a ton.

Q. Yes, they would have paid more for the Ontario than for the Quebec?—A. That is correct.

The Chairman: I do not get what you are driving at. That is the way you work it out ultimately.

The Witness: Here is the way I worked it out. We got an order here for 85 tons from Northumberland County.

By Mr. Sommerville:

Q. Let's get straight on that?—A. Yes, sir.

Q. The order from Northumberland County covered four fertilizers, here are the four; and here are the prices quoted, and I want to ask you if you have figured them out on these prices; these prices are for carload lots prepaid to Brighton, Ontario?—A. Is that my quotation?

Q. No, this is a Quebec quotation?—A. I do not know anything about it.

Q. This is a Quebec quotation that was subsequently turned down, and it was an order for 2-12-6 at $27 per ton at Brighton Station?—A. I would not have sold it at that.

Q. 4-8-10, $30 per ton at Brighton Station?—A. I would not have sold it at that.

Q. And 5-6-9 at $30 per ton delivered at Brighton Station?—A. I would not have sold it at that.

Q. And 6-8-10, $32 per ton at Brighton Station?—A. No.

Q. Then you say these comparative figures do not mean anything?—A. Just a moment, Mr. Sommerville; that is not my quotation, I take no responsibility for it. The Northumberland growers wanted a bill of goods. The specifications are on these invoices.

Q. That is the bill of goods they subsequently ordered?—A. That is right.

Q. But you do not know whether it covers the same fertilizers as were ordered in the province of Quebec?—A. I understand that this was the entire requirement of the Northumberland Growers this year. Mr. Hunt, who testified here, was on the purchasing committee. They came to us and asked if we would sell them 85 tons of mixed fertilizer.

Q. I am talking about four mixtures only?—A. They did not ask us for that, I do not know anything about it. On this particular order if they had said to me that they wanted to buy it f.o.b. Beloeil I would have taken our price list and I would have priced it on the Quebec schedule, which I have done in one column.

Q. Yes?—A. I should then have taken our Ontario price list and priced it on the other column, which I have done. On this particular order, had I supplied it on the Quebec schedule, it would have cost the Northumberland growers 70 cents a ton less than it did.

Q. That would depend—?—A. That has got nothing whatever to do with mixes, as far as mixtures—.

Q. That would depend on the price at which you start?—A. I am starting with my Quebec published price list, which is my Bible.

Q. That is the Old Testament, Quebec?—A. I think so.

Q. The New Testament is Western Ontario?—A. I would have priced it on my Ontario price list which is before the public to-day. Now, had I supplied that from my Quebec factory, it would have cost me, on the basis of the figures which I gave you, $162.96 more or a little over $2.00 a ton that I would have been out of pocket.

By Mr. Edwards:

Q. Would you supply these Northumberland growers in carload lots on the same f.o.b. price as to the Quebec growers?—A. No.

By the Chairman:

Q. You won't, and in your statement here this is what your loss amounted to?—A. I am not trying to hide anything.

Q. You are not secreting anything?—A. We do not seem to click on some of our dope.

Q. We certainly do not. In this statement here of the prices delivered at Brighton you deduct the commissions and all the rest of it?—A. Which they get, and this is what they pay.

Q. The fellow who buys paid it. The Brighton growers would have paid $1,700 in Hamilton for a certain list of goods they could have bought in Quebec at Belœil for $1,245. If you add to that freight of $158 it means about $1,400 as against $1,700 roughly speaking. That is what it would have cost the growers, a difference of around $300?—A. These growers in Brighton, as I understand it, are an association who buy collectively—have their own purchasing agent. In buying at the Ontario schedule, they paid out $70 a ton more on some 80 tons, which is about $56.00.

By Mr. Factor:

Q. That is not what the Chairman is pointing out. The Chairman is pointing out that if you look at your list price the total of the eleven invoices on the list price in Ontario was $1,700 if bought in Hamilton?—A. Right.

Q. The total list price if bought at Belœil is $1,245 for the same product?—A. That is right.

Q. Now, eliminating for a moment all of these other figures, and adding a freight cost to the $1,245 of $158, that makes a total of $1,483 for the same goods for which the grower would have to pay $1,700 in Hamilton. Is not that what you pointed out, Mr. Chairman?

Mr. SOMMERVILLE: That is what you would have got.

The CHAIRMAN: That is the advantage to the grower, could he buy in Quebec; but you say you will not sell him in Quebec for delivery in Ontario.

The WITNESS: I do not think that is right.

The CHAIRMAN: It is nearly one o'clock, and I am getting a little weary and a little hungry. Shall we have this witness back here this afternoon?

The WITNESS: I think I have a little more, because I am not honestly satisfied with the feeling of the Committee just at present.

The CHAIRMAN: We will adjourn until 3.30.

The Committee adjourned to meet again this day at 3.30 p.m.

AFTERNOON SESSION

The Committee resumed at 3.30 p.m.

The CHAIRMAN: Gentlemen, we will proceed.

Mr. SOMMERVILLE: We have several documents to be filed as exhibits.

(Ontario Price Lists Fertilizer Products filed marked exhibit 185).

(Copies of Tomato Growers Contract with the Canning Companies, filed, marked exhibit 186).

(Statement filed by L. B. Reynolds, showing the cost of crating strawberries, filed, marked exhibit 187).

Mr. SOMMERVILLE: Mr. Robinson desires to make a statement to the committee.

Mr. M. M. ROBINSON: Mr. Chairman, it has come to our attention within the last day or two that some of the canning companies and some of the jam manufacturers are under the impression that our brief is not directed at them. I would like to have it made clear and definitely established that our brief is directed against all the canning companies in Ontario and all the jam manufacturers. We do not want any false impression to be created that it is against any one company in particular. I might say, sir, that within the last day of two we have found that it might be possible by a process of negotiation to settle some of our differences as they pertain to canning and jamming, and we would like to ask that further consideration of our brief and the points raised in it, as far as the canning industry and the jam industry are concerned, could be left over for a matter of two weeks in order to permit certain negotiations to be undertaken.

The CHAIRMAN: Well, Mr. Robinson, I gather that you wish to emphasize the point, first, that your brief is directed against the industry as a whole?

Mr. ROBINSON: Yes.

The CHAIRMAN: We fully understood that, and if there was any other idea abroad, of course I would hasten to correct it. There is no question of that. Your second point is that you wish the committee to be quite agreeable to an adjournment of further hearing of this particular subject. As we have two or three other subjects in hand that are scheduled to come along, we can grant you that, and I certainly wish you luck in ironing out your differences and difficulties in the meantime if you can.

Mr. ROBINSON: Thank you, sir.

The CHAIRMAN: We will finish with Mr. Grubb on this question of fertilizer as quickly as we can.

(Continuing the examination of Mr. GRUBB).

The CHAIRMAN: Proceed, Mr. Grubb.

WITNESS: I will try to be as brief as possible. I think most of it is in. I filed this morning a statement in connection with comparative costs to the Northumberland grower had they been invoiced at Hamilton prices versus Beloeil prices, and I think that a little study of the statement at your leisure will probably make it clear. I would like, however, in passing to state that while the price of $1,700.36, list price, delivered Brighton, ex Ontario versus $1,245.09 at Beloeil is the list price, it is not the price that the Northumberland growers paid, neither is it the price that the grower paid. The final analysis is that the statement clearly shows discounts which applied in both instances and the net result was that the shipment of these goods from Hamilton cost the Northumberland growers $59.73 more than had they been shipped from Beloeil. That boils down to a total additional cost per ton of 70 cents.

Mr. FACTOR: I cannot agree with that. I have been studying that at the noon hour. I cannot agree with that, sir.

WITNESS: Might I suggest that the copies of the invoices made out on both plants have been filed.

The CHAIRMAN: There is no use of us wrangling over this. The point at issue, as far it concerns us is this: we are not dealing with isolated cases, we are dealing with something all the growers are affected by. The growers find a certain list price in Hamilton and all points west of Kingston. They find another certain list price in points east of Kingston including eastern Ontario and Quebec, and between these two list prices the average grower finds himself confronted with a strange discrepancy as far as western Ontario is concerned much against his interest. All I can say is that I fail to see in this or in any other statement you have made any justification for the difference.

Mr. SOMMERVILLE: And further, the Ontario grower would prefer to buy on the Quebec list and pay freight from Quebec and save the difference if he could, but you say he cannot.

WITNESS: Had I sufficient superphosphate at Beloeil I would be delighted to supply Canada with the cheap fertilizers; I have not got them.

The CHAIRMAN: You are not prepared to sell a grower in western Ontario on the Quebec prices and ship to western Ontario?

WITNESS: No, sir; I cannot.

By Mr. Sommerville:

Q. You and your company are manufacturers of superphosphate?—A. Yes.

Q. How about the Canada Packers? They do not manufacture it?—A. No.

Q. Do they import it?—A. They buy from me. I do not know their situation, but I should think they would not want to do it. On the other point as to our unwillingness to do it, I have filed a statement with the committee that you will have a chance to read at your leisure. If the costs set out are questioned, I hope that a government auditor will check it up. To clear up one other point. I was asked this morning as to how our sales of ingredients which the farmers might have for home mixing compared as against our total tonnage at Hamilton. Last year at Hamilton we sold and shipped 21,594 tons of fertilizer of all kinds. We sold in less than carload lots: sulphate of ammonia, 29 tons; potash, 67 tons; nitrate of soda, 28 tons, making a total of 124 tons, which is ·58 per cent. The point I am trying to make here is that we are in the mixed fertilizer business. Let those who wish to handle materials attend to their own business. In that connection the point came up as to whether these materials are easily available. At noon I found an advertisement by the United Farmers Co-operative in Ontario who can buy in the open market carloads of these various ingredients and advertise to the farmer that they are freely offered for sale. They would, undoubtedly, be offered to the farmer for sale at less than our list price. We did not check them up.

Q. They have difficulty in getting them, do they not?—A. I do not see it.

The CHAIRMAN: The evidence before us shows they have.

WITNESS: They are entitled to their opinion. If they can prove it, all right. I will sell them superphosphate.

By Mr. Ilsley:

Q. There is this to be said offhand that they can import; if they had any difficulty in buying it from you they can import?—A. They can import in the world's markets.

Q. If they tried to import superphosphate, would not they be confronted with the duty unless they proved that they have mixed it afterwards?—A. I am glad that point has come up because in Mr. Grose's evidence it was not quite clear. The duty on superphosphate for use as such is 10 per cent, except from England, when it comes in free. The duty for superphosphate for mixing purposes is free from any place. The question came up in the House in connection with nitrate of soda and Mr. Rhodes made the statement, and I certainly think that superphosphate can come into the same category; or if nitrate of soda is mixed even with sand it would be a duty free product to the farmer. Now, that same thing would apply to the superphosphate. I know that in the Maritimes bagged superphosphate is brought into Canada by the agricultural societies. The purchasers merely sign the statement it is for mixing purposes. Now, to mix that as he would, by Mr. Rhodes' remarks, all he need do is to spread it out under his apple trees and kick some sand over it with a hoe and get by.

By Mr. Ilsley:

Q. Yes, I remember that very distinctly. That was dissented from—that interpretation of 623 of the tariff. It says pretty clearly when it comes in free and when it does not?—A. I think I can definitely make this statement that the people that import bagged superphosphate in the Maritimes—the Prince Edward potato growers and the boys in New Brunswick—they did not pay 10 per cent.

Q. Even if they do not mix it with any other ingredient?—A. They merely sign the statement. I think it is rather regarded, when it is mixed on the farm, that it is mixed.

By Mr. Kennedy (Peace River):

Q. Do you think that a concern like the United Farmers Co-operative would have any trouble in buying superphosphate on the world's markets?—A. None whatever. They have done it in the past.

Q. Could they buy any amount they want?—A. I would say so.

By Mr. Young:

Q. Did your firm ask for this duty?—A. Yes. Which duty?

Q. There is a duty on superphosphate?—A. I think the duty on superphosphate was put on at the same time as the duty on mixed fertilizers. It is 663 which was in 1930. We did not ask for that duty. That was before we had really gotten into the business.

Q. Do you know who asked for it?—A. I understand that the Eastern Canada Fertilizer Association asked, and who was with them I do not know. I was not a member at that time.

Q. You do not know why they asked for it?—A. To try to save a dying industry or an industry in dire distress.

Q. To enable them to charge the farmer a little more?—A. As we are on that I will go out of my order. I would like to file this. We were asked this morning as to whether—

The CHAIRMAN: You say you want to file this. That will not be very intelligible on the record.

Mr. SOMMERVILLE: The witness is filing a statement showing the consumers' cash prices for various mixed fertilizers and 10 per cent superphosphates from 1929 to the present time.

WITNESS: In Ontario.

Mr. SOMMERVILLE: And indicating the drop in prices that has taken place on these fertilizers?

WITNESS: Right.

(Statement showing consumers' cash prices for mixed fertilizers, 10 per cent superphosphates, 1929 to date, filed marked exhibit 188.)

WITNESS: We were asked this morning had the price gone up a couple of dollars this spring of 1934 versus last spring. I think this statement will indicate that that is not correct. Now, I would like to point out in connection with this statement—I would like to point out that the duty of 10 per cent on mixed fertilizers and bagged superphosphates came into effect September 10, 1930. That is right on the statement. If you will look at the spring of 1930 versus the spring of 1931 prices you will notice that very item dropped. The reason was that it was figured that if the importations kept out our tonnage would increase and that we could afford to drop our prices.

By Mr. Young:

Q. Alongside of this you will file the prices of the ingredients on the world's market to see whether the prices here dropped any faster than they did outside of Canada?—A. You mean if the raw materials dropped?

Q. No, the superphosphate itself. You say you lowered the price $2?—A. I am not saying only superphosphate.

Q. You lowered the price of mixed fertilizer because you had the market to yourself. What we want to know is what happened to the price outside of Canada at the same time?—A. It probably went down and as far as I know, it did.

Q. Did it go down faster than it went down in Canada?—A. I could not answer that question.

Q. You have no idea?—A. I am afraid I have not.

Q. I am afraid your argument that you lowered the price because you had the market to yourself does not hold water?—A. It is a fact. The price came down when the duty came on. You cannot get away from that.

Mr. FACTOR: It is a coincidence.

By Mr. Young:

Q. The question we are concerned with is did it go down as much as it would have gone down if the duty had not gone on?—A. I will put it this way. If we had not got additional tonnage our costs would have gone up.

Q. I am speaking of the farmers' costs at the moment?—A. You are asking me if the duty had not gone on if the price would be lower than it is?

Q. Yes.—A. I do not think so. We certainly could not afford to make it any lower.

Q. I am not concerned whether you are making it at all or not; I am concerned about what the farmer is paying for it?—A. I believe if the duty was taken off and if it was offered freely in here we would face the situation—I do not know if I am prepared to give the answer as to whether we would continue to operate or whether we would try to get a higher price and stay with what business we could get or not. It would be rather a serious decision.

Q. What we want to know is if the duty were off could the farmer buy his fertilizer cheaper?—A. I do not think he could. I will tell you this that in the United States this spring the duty went on—the price in fertilizer, I understand, has gone up $4 to $6 a ton.

Q. They are operating under some form of protection over there and the price has gone up. We are operating under a lesser protection and perhaps if we could get rid of it prices would come down?—A. Coincidence, if you like; it went down when we got the protection.

By Mr. Ilsley:

Q. There is one point about the superphosphate. The item is 663:

> Articles which enter into the cost of the manufacture of fertilizer when imported for use exclusively in the manufacture of fertilizers.

Free, free, free. You say that the interpretation is that when superphosphate comes in and does not enter into the manufacture of fertilizers and is merely mixed with the soil it is treated as thereby becoming a new fertilizer and, therefore, comes under that section?—A. That is really my understanding.

Mr. Sommerville: I do not think so.

Mr. Ilsley: That is not what the section says.

The Witness: There is this to it. If any farmer needs to bring it in legitimately he may mix it with potash and the other part of it and then it comes in duty free.

Mr. Ilsley: Yes, it comes under the wording of the section.

By Mr. Sommerville:

Q. If he can get it; but what they say is that from the sources in the United States from which they would get it they find difficulty in getting it and they suspect it is because of some arrangement with the Canadian manufacturer?—A. That is right.

Q. The Canadian manufacturers are the largest customers of these American firms and, therefore, they cannot get it unless they are recognized fertilizer mixers?—A. I think they can buy it freely.

Q. That is their evidence at any rate?—A. All right. That is not my viewpoint.

Q. I would be surprised if they could buy it freely against many of their largest customers?—A. I am their competitor.

Q. If you were one of their largest customers in buying that raw material from the United States I would be surprised if anybody could write down to the States and buy from that same firm in competition with you?—A. Well, I think they could.

By Mr. Ilsley:

Q. There is one other point suggested by Mr. Smith yesterday that, perhaps, the reason the prices were so low in Quebec and the Maritimes was because there was a price war on between yourselves and this International company which was described as a Holland company with plants at St. John and Quebec. Now, is that the case?—A. The International are members of our group. There is nothing to it.

Q. That is not the case?—A. No, it is not. I will also file with the committee the losses of Canadian Industries Limited, fertilizer division. For 1931, $116,000; 1932, $130,000; 1933, $122,000.

By Mr. Sommerville:

Q. It has been suggested in the growers' brief, Mr. Grubb, that by reason of the recent advances in the making of fertilizers that there is considerable plant

and equipment carried by the fertilizer companies that is quite unnecessary, and that the cost, the overhead and the depreciation on those plants have created a condition where there are losses?—A. In that case they are presumably figuring that if everybody home-mixed it would not be necessary to have fertilizer plants.

Mr. SOMMERVILLE: No. That is not the indication.

The WITNESS: Aside from that, I remember the matter, and I say it was not clear to me, because they mentioned " except superphosphate," if I remember the way the clause read—page 29, I think.

By Mr. Kennedy (Peace River):

Q. What do you need for home-made mixing plant—a shovel and a few cradles?—A. A shovel and a barn floor; that is all—a little muscle.

The CHAIRMAN: We were told most of them had the latter.

By Mr. Factor:

Q. In this statement on the profit and loss account you kept a separate account for the fertilizer division?—A. Yes.

Q. Did you charge up salaries of the executives to that department?—A. That is worked out on proportion. As the Canadian Industries is in a large extent a holding company, we have eleven—ten or eleven different divisions or administrations as we call it so that the salaries of officials and items that cover the Canadian Industries as a whole is split on a basis that is worked out by our auditors. I believe it is on capital investment in different divisions—profits and losses in the different divisions and turnover in the different divisions. We get our proportion.

By the Chairman:

Q. Do you keep your Ontario plant separate from your Quebec plant?—A. No, but it could be very easily separated.

Q. Where does this loss occur, in Ontario or Quebec or where?—A. Well, we have never separated the accounts as between the Maritimes, Quebec and Ontario. We have separated the British Columbia account chiefly for the reason that we began out there in 1899 and the thing was carried along, and we went into business in Canada, in eastern Canada as a whole. In order to cut down bookkeeping and cut down everything else we have tried to keep it in the one account.

The CHAIRMAN: You have a pretty good idea.

The WITNESS: I would say that our loss is undoubtedly in the three provinces.

By Mr. Sommerville:

Q. Proportionately in the Maritimes where you give delivery for the same price as the Quebec price?—A. I would not be sure of that. I would rather break that down because, as I say, our costs down there are somewhat low; but we would be very glad to break down that statement and submit it, or have your own auditors do it.

Mr. SENN: I think that should be done; it is quite important.

The WITNESS: Here is the clause:—" we have reason to believe the farmers in respect to this last item are being asked to carry investments which in the light of modern knowledge of fertilizers are no longer economically sound." The item was referred to, " Investment in plants for the manufacture of fertilizers, exclusive of superphosphate." I do not quite understand " exclusive of superphosphate." If they mean that superphosphate can be made in more modern plants than we have—

Mr. SOMMERVILLE: No. they mean the reverse. The investment in plants for the manufacture of fertilizers.

The WITNESS: Of mixed fertilizers? I can only speak for our plant. We built our plant in eastern Ontario about four years ago—Ontario and Quebec four years ago. The one we have in the Maritimes we took over from Peter Jack and it was two years old. We have modern plants. When we built the plants of Quebec and Ontario our engineering department and our chemical department went through all the plants we could in the southern states. We got the best points we could get, and to the best of our knowledge we have the most modern plants in the world. We certainly hope so.

By Mr. Factor:

Q. What about the capacity of your plants in the mixing of fertilizers: is your capacity greater than you use now?—A. The capacity in Ontario, I think is about twice the consumption as a whole.

Q. The total capacity?—A. The total capacity.

Q. Your own capacity is very much larger than your consumption?—A. Yes.

By Mr. Ilsley:

Q. Is your company a subsidiary of the Imperial Chemicals?—A. No. Our company has as its largest stockholders the Imperial Chemicals and the Dupont Powder of the United States, neither one controls it. They both have seats on our board. There is additional stock outside of what they hold. We run our own show in Canada, always being able to get any information or help that we want in a technical way or a practical way from either of the others.

By Mr. Young:

Q. But they will not fill any orders?—A. When it comes to fertilizers the Dupont do not manufacture fertilizers of superphosphates. The Imperial Chemicals manufacture nitrogen. That is nitrogen of soda and sulphate of ammonia. They do not make superphosphates. Excuse me, they make superphosphate in one little old fashioned plant. Recently when there was a shortage of sulphate of ammonia in Canada—and I speak of a shipment that was required in May of this year—the goods were not forthcoming in Canada. The Imperial Chemicals would have liked to have taken the business but the home market price in England is considerably higher than it is in Canada and we felt that if they shipped to Canada there would be a dump assessed. I believe the sulphite of ammonia eventually came from Holland, or is coming from Holland.

Q. The price in England is higher than in Canada; and the price in the United States—is that higher than in Canada?—A. The price in the United States on sulphite of ammonia in carload lots to-day is the same as in Canada.

Q. It is cheaper in Holland?—A. It is cheaper than in the United States. They are able to bring it in without paying dump on Canadian prices, so it must be cheaper. Our friends the Imperial Chemicals could not ship any and it was a sizable order, 3,000 tons, which is $75,000 which they would like to have had.

Q. Do you know anything about this Dutch company operating in Quebec? —A. That is the International Fertilizer. Now, I think I covered that. I have a comparison of the costs of 2-12-6, 4-8-10 and 2-8-6 which was asked for in both plants, and I will hand that in to the committee. This covers our actual costs for the year 1933 at both plants. We are putting in the 2-8-6 as we do not make any. This statement shows the cost of Beloeil which I said I would disclose to you. It includes as a depreciation charge on our plants and machinery 4½ per cent which I think is reasonable in our costs. No interest on investment is ever shown on materials. It also shows our selling expense, our advertising and publicity, our administration of which I spoke and our development.

By Mr. Sommerville:

Q. And this covers 2-12-6?—A. 4-8-10 which are made at the two plants in question.

(Statement filed, marked exhibit 189).

We were asked to file our prices in Ontario and Quebec which I do. We will send the others later. Attached to the prices are our instructions to our dealers or agents which are for their understanding.

(List of prices and instructions to agents filed, marked exhibit 190).

We were asked for the set-up showing our operative investment. I will file with the committee such a statement for the year ending March, 1933. The statement shows the amount invested in ingredients, in finished products, in plants, in open accounts. It separates our superphosphate plants from our dry mixing plants.

(Statement for the year ending March 31st showing set-up operative investment, filed, marked exhibit 191).

By Mr. Factor:

Q. When was the C.I.L. formed?—A. Canadian Industries Limited was formed in 1927—I think the change in name was made in 1926, or 1927—1927.

By Mr. Kennedy (Peace River):

Q. Did you do pretty well up to the coming of the depression?—A. We were not in the fertilizer business, except in British Columbia. I presume you are referring to the fertilizer end of the business.

Q. Yes?—A. We were not in it.

Q. Except in British Columbia?—A. Except in British Columbia.

Q. You started in it in 1931?—A. In 1930 or 1931, I think it was in the fall of 1930.

Q. Now, you are going to file with us minutes of the meeting of the Ontario, or the Eastern Canada Association?—A. They are there, that is the last meeting.

By the Chairman:

Q. You made the price in 1934?—A. Not our own price, these are taken from other price lists. I merely wanted to show the general trend. These are the notes that were drawn up from the minutes of the meeting held in February, according to the book there.

By Mr. Sommerville:

Q. February 12, 1934?—A. That is in connection with our present spring schedule, and these instructions are, I think, complete, practically to the last detail.

Q. Yes, and these instructions then constitute your understanding of what was agreed upon at that meeting?—A. Right.

Q. And it sets out the Ontario price schedule, terms, etc?—A. It does, together with a list of anybody getting special prices.

Q. Together with a list of anybody getting special prices, and I see a list of firms mentioned here; when you say special prices, these would be known to the rest of the trade?—A. Members of the trade.

Q. Your association?—A. Yes.

Q. And these facts and figures that you are now submitting would be known to the rest of the members of your association?—A. To our association.

Q. Well, this must have taken quite a time to work out?—A. A committee was appointed to work that out, based on the discussions at the meeting naturally.

Q. And this is fixing the trucking allowance which has been made from factory points to the growers?—A. Yes.

Q. Carload freight rates, trucking allowances; and then was this distributed from headquarters of the association to the various members of the association?—A. I should say the secretary mailed it. I got my copy in the mail.

Q. From Mr. Mooney, the secretary?—A. I would say so.

Q. That is from the association. These are what Mr. Grubb referred to as the minutes that show the results of their consultation on prices, terms, and conditions right through the spring season of 1934?—A. That is right.

(Statement filed as Exhibit 192).

By Mr. Sommerville:

Q. Yes.—A. The Question came up yesterday in connection with the Timothy Eaton Company, and about 9 firms in Toronto who were referred to as seed houses, and the suggestion was made that as they were "good boys" that they get their 5 per cent back without having to wait for it.

Q. Yes?—A. Now, I think in fairness a little further explanation is necessary. To these 9 I notice that C.I.L. made sales to all of them. Whether the rest of the association members made sales to all of them or not I do not know. With the exception of the Dale Estate, of Brampton, they are all located in Toronto. The sales are on a hand-to-mouth basis, and the amount of the entire bunch is 45 tons. The results, as I was saying Ontario shows 21,000 tons was very small. They would order from one to three bags of fertilizer at a time, and they would get it. We did not want a lot of additional bookkeeping, and in order to get rid of taking care of all these separate items in our office,—if they lived up to their obligations until July 1st, they would have lived up to the stipulation that they would get back their 5 per cent,—the Canadian Industries was responsible for their getting back their 5 per cent immediately. My sales manager says this is causing me a lot of trouble in my office, and I said notify secretary Mooney of our proposal to give these people full discount right off the bat and clear it up. It will then be Mr. Mooney's duty to circularize the contents of my letter to the other members of the association.

Q. There are a lot of our people who would like to be in the same position, if it is a matter of saving bookkeeping, your bookkeeping could be saved to a very much greater extent?—A. The main idea of our withholding the 5 per cent is to keep our distributors in Ontario in the business; and I will also say that in many instances we have heard from them and they heartily endorse the present practice of holding back that money to assist in having everybody sell at the retail price.

Q. That is to say, they would be longer in the business if you hold their money for three months?—A. And they can sell at a profit, that is part of the story. Another piece of evidence came up here, and while possibly we are not the firm intended, I think it is only fair in reply to say that Mr. Craise advised that the Ontario market council tried to buy fertilizer at the Quebec price and were refused. We think an error has crept in.

Q. You say you would refuse them now?—A. I say I would refuse them. But I would like to explain this little transaction, it will only take a few moments. We had a letter from Mr. Bower in 1932 to the effect that he could sell—or, if we would be interested in having the consumption of fertilizer materially increased in Ontario. I wired him saying that I would drop in and see him. I did see Mr. Bower and Mr. Paul Fisher, who I believe is one of the directors, and Mr. Paul Fisher explained that they would like to get the Quebec price—they wanted to buy cheaper than anybody in Ontario, and they wanted to go out and sell everybody and put our competitors out of business. I explained that we could not sell at the Quebec price because I did not have the necessary amount of acids and cheap material up there. I just asked him, was he prepared to give me orders in the fall for a definite tonnage and I could get busy and make it. He said no, we

can't do that. I also said, what about financial responsibility; I understood the Canadian Markets Council was an association and he rather led me to believe that as they got a grant from the Ontario government I should not question their credit. However, I had our Mr. Carter, Sales Manager for Ontario, interview Mr. Fairbairn, whom I believe is the Deputy Minister of Agriculture, and he said the Ontario Markets Council is not in the fertilizer business and they are not going into the fertilizer business.

Mr. Grose, in his evidence yesterday: at page 2037 of the evidence, he said that we would not sell in Toronto. Now, while that is the statement, still he never asked the Canadian Industries if we would sell in Toronto at Quebec prices. So he took it for granted.

Mr. Factor: He was right.

By Mr. Sommerville:

Q. He was right. He must have known?—A. He is right.

By the Chairman:

Q. Why bring it in question, you have told us three or four times today you won't. I would not waste any more time on it. Perhaps Mr. Gross was right. He may have been guessing, but he guessed right?—A. Well, he was guessing.

Q. That is all right, but why affirm it now?—A. I think if a man is making sworn evidence he should stick to facts, he may have been refused.

By Mr. Sommerville:

Q. He must have been refused by some of your people, or all of them; you do not know of it?—A. He might have been. The other statement brings out—by the way, the depreciation on our plant is 4.5 per cent. By inference I rather gather it might be very much greater on some of these plants, they have been written off twice, ours has not. I think that winds me up, unless there are any questions.

By Mr. Kennedy (Peace River):

Q. With regard to supplying raw materials to the farmer, Super-Phosphate for instance: you have made the statement a number of times that you would supply Super-Phosphate. Would you supply the other ingredients if somebody came along with the money, or with a good line of credit, to enable the farmers to mix suitable mixtures for different crops; or is it just Super-Phosphate that you intend to sell?—A. We will supply any of them. We do not make a point of pressing the sale of ingredients, aside from Super-Phosphate, because that is not our business.

Q. But you would sell any of them?—A. We will sell any.

Q. Why do you say, on the other hand, you will not supply certain things to farmers?—A. We will sell anything in the fertilizer industry.

Q. To anybody, anywhere?

Mr. Sommerville: At a price

By Mr. Kennedy (Winnipeg):

Q. At a price which makes it practically impossible for them to buy?—A. If there are any quantity buyers they can buy in carload lots, which really I think is a very good price.

Q. Personally I think that your evidence has been very illuminating, and very frankly put?—A. Thank you.

Q. Would it not be just as well to carry it right through. I am not saying it is wrong, to just state frankly; you have intimated to the committee that after all your business is the manufacture of fertilizers, blending the different ingredients and selling the finished product?—A. Yes.

Q. Not only do you not press the sales of individual ingredients to farmers, but you really actively discourage such sales. Let us just take that side of it, is not that a fact?—A. If we discouraged them absolutely, we would not put them on our price list.

Q. Not absolutely. But your general policy is—A. Yes, I should say yes.

Q. To discourage the purchase by farmers of individual ingredients?—A. Yes, I think that is fair.

Q. And one method of discouraging it is putting the price, we won't say making it prohibitive, at such a height that it is not practical for them to purchase?—A. Yes, but I will say this: this situation has crept up here, and seemingly there has been much difference of opinion on it; first, our entire sales are .58 per cent. I would much rather drop the price $10 a ton, it does not amount to enough to us, and sell them and clean up the argument on our next price list.

Q. My feeling is, Mr. Grubb, whatever are the facts if they are frankly stated, and you assume the responsibility naturally for such a policy, I can imagine that manufacturers who may be manufacturing certain lines of articles that require blends, they would not be disposed to sell the individual the component parts of such blends, and that apparently is the situation. I think it would clear the atmosphere if you would state that?—A. I am quite willing to state that.

Mr. SOMMERVILLE: Thank you, Mr. Grubb.

The WITNESS: Thank you all for your patience.

The Witness was discharged.

Mr. SOMMERVILLE: We come now to a consideration of the rubber industry, and Mr. Hannay will present the introduction to this subject in a very short statement. After that, Mr. Sargeant will deal with the tire section, and Mr. Carlisle will then deal with the footwear section.

Mr. A. B. HANNAY, called and sworn.

By Mr. Sommerville:

Q. Mr. Hannay, you are secretary of an association known as the Rubber Manufacturers of Canada?—A. No, it is the Rubber Association of Canada.

Q. And in that association you have at least two sections?—A. Yes.

Q. And one section is known as what?—A. One section is known as the tire group, and the other section is the Rubber Footwear Manufacturers Association, although I would not say that they were in the Rubber Association. The members of these two groups, for the most part, are members of the Rubber Association and use its facilities.

Q. Yes, but there are in the Rubber Association then these two groups?—A. Well, the members of these two groups are members of the Rubber Association.

Q. And you are secretary?—A. Of the Rubber Association.

Q. Then the Footwear Group have their own secretary, have they?—A. Footwear Group have their own secretary.

Q. And the tire group have their own secretary?—A. I have frequently acted as secretary for the tire group.

Q. We will thank you for your statement now, Mr. Hannay?—A. May I preface the statement by saying that under date of April 4, I received a letter from Mr. Hereford; the Rubber Association having been mentioned by some witness before the committee, Mr. Hereford wrote and asked for certain information, and asked if I would obtain it for him. Now, the information he asks for briefly—

Q. You have it available now?—A. I have his letter. Arrangements regarding discounts allowed from list price, volume of rubber footwear and tires sold in 1933 in each customer-price classification, arrangements regarding resale price, imports of merchandise for five years and exports for five years, volume of business on footwear and tires, assets, realty and land values, duties paid, taxes paid, their payrolls for each week of 1933 and for each factory, number of employees by manufacturers for the year—male and female, and transportation charges. On all these questions I have applied to the members and they have supplied me with the information, which I have compiled and will submit. Let me preface it by reading a brief memorandum, rather explanatory. May I say that the groups have asked me to read their memoranda, and after that will answer any questions or submit to an examination—the people who are actually operating.

The Rubber Association of Canada has been directed to furnish this committee of parliament with information regarding the production of rubber goods in Canada and the merchandising distribution of such goods in Canada and elsewhere. In addition to information calculated to measure the Canadian rubber industry in its totality, specific information has been asked for as to production, merchandising, employment and pay afforded, specifically, by the rubber tire industry and the rubber footwear industry of the country, as well as information relative to the exportation and importation of these goods. All the information desired of it will be given by the association as far as it is possible to do so. Certain information regarding the merchandising of rubber footwear will be presented by representatives of the Rubber Footwear Manufacturers Association, and certain information regarding tire merchandising will be presented by the Tire Manufacturing Group.

The Rubber Association of Canada, proper, was formed fourteen years ago, chiefly for the purpose of enabling information to be contributed confidentially by association members and compiled into weekly, monthly and annual statements of inventories, production, sales, etc., of tires, footwear and other rubber goods, so that each company-member would have something definite with which to measure itself and be guided in its producing and distributing activities and methods.

It is agreed by association companies that this voluntary contribution of information by each, to be consolidated for the whole industry and its various branches, has been invaluable guidance to companies. It has directed them to seek business more actively at such times as demand and buying power existed and when business was to be had if properly sought. Also, in times of lower demand, figures disclosing smaller business for the whole industry, have shown the individual company that its loss of sales was proportionate to the decline of the whole and has thereby discouraged or prevented the individual company from resorting to improvident methods to obtain business that did not exist; when, but for this exchange of information and totalling of figures, a company might have believed its loss of sales was due to the activities of competitors, and have resorted to methods disadvantageous to itself and to the industry as a whole. This compilation of statistics perhaps has been the most useful feature of the association's work. The statistics compiled for the guidance of association members afford answers to most of the questions now asked on behalf of this committee, not merely for last year, but for many preceding years. A

statement is here offered giving, for the past fourteen years, the annual sales, employment, pay, assets, duties paid, taxes paid and freight paid. The statistics show that the Canadian rubber manufacturing business which was $66,500,000 in 1920 and $85,250,000 in 1928, last year amounted to only $35,400,000 or considerably less than half the peak and not much more than half of what it was fourteen years ago.

By Mr. Senn:

Q. That would be due to a lower price, or would it be due to a volume of business?—A. The volume of business is off too. I will submit figures to show that.

In tires, the business fell from $47,800,000 in 1928 to $15,900,000 in 1933, a decline of more than two-thirds. In footwear the business was $27,483,000 in 1928 and about half that, or $14,000,000 in 1933. Exports of all rubber goods declined from $28,270,000 in 1929 to $6,400,000 last year, or less than a fourth of the peak. Unit production figures confirm the decline in manufacturing indicated by the dollar figures. In 1928 there were produced in Canada a total of 4,252,000 tires and in 1933 the production was 1,844,000 tires, being a reduction of 2,408,000 units or 56·6 per cent. In 1928 there were 23,941,000 pairs of rubber footwear produced and in 1933 the pairage production was 13,716,000, a decline of 10,225,000 pairs or 42·7 per cent.

These figures show that in plant capacity and in experienced work-people Canada is much over-supplied for to-day's volume of business available and indicate why the average annual number of persons employed in Canadian rubber manufacturing declined from 17,896 in 1929 to 10,936 in 1933, the decline being 6,960 persons or 38·8 per cent; and why salaries and wages which totalled $21,725,000 in 1929 fell to $10,608,000 in 1933, a decline of $11,116,000 or 51 per cent.

While earnings declined 51 per cent, employment declined only 38·8 per cent. This was due to the fact that the Canadian Rubber Manufacturing endeavoured to spread over as large a number of employees as possible the available volume of production, which necessitated going to a shorter hour week.

In answer to an inquiry from the Committee, it may be stated that Association and Government figures show the following for the industry for the year 1933:

Assets..	$76,331,256	
Realty and Plant values..	44,539,096	
Duties paid..	309,540	
Taxes paid..	2,388,845	
Transportation charges paid..	1,950,772	
Average daily employment..	10,936	persons
Total pay-roll..	10,608,664	

Statements showing production of goods and the importation and exportation of tires and of rubber footwear are attached as exhibits.

Mr. Kennedy (Peace River):

Q. Just before you go on from there, is there any improvement reflected in the current year?—A. I think there are indications of a slight improvement, those are the indications from the early months of the year.

By Mr. Factor:

Q. Who composes the Rubber Association, the rubber manufacturers?—A. The rubber manufacturers—it is inclusive of the leading and of most of the rubber manufacturers of the country, they are nearly all in it; that is, tires and belts and everything else.

The tire people asked me to read this:—

TIRE MERCHANDISING PRESENTED BY THE TIRE MANUFACTURING GROUP OF THE RUBBER ASSOCIATION OF CANADA

In the Canadian Tire Industry the producing companies are Goodyear, Dunlop, Gutta Percha, Firestone, Dominion, Goodrich and Seiberling, all of which are members of the Association. Outside the Association, the following companies manufacture tires and tubes—Perfection Rubber Company, Ltd., Lachine, Quebec; Hannon Tire & Rubber Company, Toronto and The Niagara Rubber Company of Beamsville, Ontario.

The producing capacity of Canadian tire and tube plants is more than three times the present rate of production. The Association Companies meet and confer upon production and merchandising problems and exchange information as to credits and tire adjusting.

The Association Companies distribute their goods from factory (*a*) to company branches, to distributors or jobbers or to warehousemen or to dealers; or (*b*) through chain-stores and mail-order houses.

In 1933 the sales of tires and tubes by the seven Associated Companies were as follows:—

To regular dealers..	$7,569,239 42	
To distributors and jobbers..	1,860,912 87	
		$9,430,152 29
To private-brand customer accounts..		$1,059,234 10

The Association Companies issue price lists from which the dealer is sold at 20 per cent trade and 2 per cent cash discount on tires and 35 per cent and 2 per cent on tubes, plus earned bonus. The dealer may earn a bonus for volume sales. The bonus rates to dealers for passenger car sizes range from 2 per cent on sales between $500 to $1,500 a year and 10 per cent for annual sales of $30,000 or over. For bus and truck sizes, there is an additional volume bonus ranging from 2 per cent on sales volume from $2,500 to $5,000 and 5 per cent on sales volume of $25,000 and over.

There are approximately 13,000 dealers in Canada. Approximately 40 per cent of tire dealers earn a bonus. The average bonus paid in 1933 was about 5 per cent. Tables of the bonus scale are attached.

On shipments of 100 pounds and over to all customers, companies prepay transportation charges.

Sales tax is included in the list prices and is, therefore, absorbed by the manufacturer.

The excise tax of 2 cents per pound on tires and 3 cents per pound on tubes is charged to and paid by the dealer or the purchaser.

From the price to the dealer, the distributor receives a maximum discount of 15 per cent. The warehouseman is paid 5 per cent on the value of the goods delivered from his warehouse.

Private brand tires: In 1933, three of the association companies and three non-association companies manufactured and sold private brand tires. The following is a statement of the discounts from price list accorded to private brand accounts by the association companies.

The first discount is on the equivalent to standard—that is standard company—first and second line tires; the discount is 38 per cent net. The second discount is 41·4 per cent net, and the third discount, comparable to the first and second ones, is 44·2 per cent. There is a discount which is to be described as equivalent in quality to standard first and second line tires, with rubber,

cotton and moulds supplied by customer; the manufacturer charges for fabricating cost plus. Equivalent in quality to second line tire is a discount of 38·8 per cent net, and another of 44 per cent. On the third line, there is a discount of 33 per cent; on another line of customer or manufacturer, of 34·38 per cent; another of 35·2 per cent, and another of 36·2 per cent.

Using the above discount, the following is a comparison of the prices at which tires are sold in eastern Canada by tire manufacturers, taking as an example a popular size tire—4·75 x 19 in the first, second and third grades. Now, taking the first grade, the dealer's cost, if he earned the maximum bonus for that tire, would be $7.75, and if he earned the average bonus of 5 per cent, it would be $8.18; and if his business was so small he earned no bonus, the tire would cost him $8.60. On the second line of tire, with a maximum bonus, the price would be $6.67; with the average bonus, $7.03, and with no bonus, $7.39. On the third line, with the maximum bonus, the price would be $5.01; with the average bonus, $5.27, and with no bonus, $5.54. The list price for the first line is $10.55, 20 per cent off that for the trade discount, and the 33 cent poundage tax, excise tax. The second line, the list price is $9, with 20 per cent off, plus 33 cents excise tax; and the third line, $6.65 and excise tax; also 20 per cent discount.

By Mr. Sommerville:

Q. All those prices that are mentioned are subject to a 20 per cent discount?—A. Yes, to the dealer.

Q. To the dealer?—A. To the buying dealer.

Q. That is 20 per cent. That is reflected in your earlier memorandum that it would be $8.60 on the first line if he didn't get any bonus; $8.18 if he got a bonus of 5 per cent, and $7.75 if he got a bonus of 10 per cent?—A. That is correct. Now, the customer's private brand net cost contrasted with the mail order selling price—

By Mr. Ilsley:

Q. I don't understand about these private brands?—A. The private brand is a brand that is made by a manufacturer for an account which he sells. The tire is branded with the name of the seller, not with the name of the manufacturer.

Mr. SOMMERVILLE: The distributor. It is a mail order brand, something specially made up for firms.

Mr. ILSLEY: Oh, yes.

The WITNESS: That is a common trade term, private brand tire.

By Mr. Sommerville:

Q. I observe with respect to these private brands, that the amount of discount varies all the way from 33 per cent to 48 per cent?—A. Yes.

Q. No, I am mistaken—44 per cent?—A. Yes.

Q. As shown in this statement?—A. Yes.

Q. But there is one contract apparently outstanding in which the amount of discount is not shown?—A. True.

Q. Because in that case the brand is made, or the tire is made on a cost plus basis?—A. True.

Q. And the cost plus basis is made up of the cost of fabricating?—A. Yes.

Q. The rubber and the cotton and the moulds being supplied by the customer for whom the special tires are made?—A. Yes, that is the statement.

Q. That is the statement?—A. Yes.

By Mr. Senn:

Q. Mr. Hannay, those tires, I suppose, are made on different specification from the standard tires?—A. Well, I really am not able to answer technically; but others who have been subpoenaed and are present will be able to answer that last question. I can't answer with confidence, if you will pardon me.

Q. But you know something about advertising methods?—A. That would be very gladly given, but I am not in a position to give it.

Mr. ILSLEY: Are there varying discounts as between private brands?

Mr. SOMMERVILLE: Apparently, yes. There is a list of ten different private brand contracts, and these ten different private brand contracts contain certain definite discounts. The variety of discounts is shown in the statement just read by Mr. Hannay.

The WITNESS: Yes.

Mr. SOMMERVILLE: As running from 33 per cent up to 44·2 per cent, according to the various contracts.

Mr. KENNEDY (*Peace River*): The average dealer gets 12½ per cent.

Mr. SOMMERVILLE: The dealer gets 20 per cent, plus a bonus if he sells from 500 to 1,500, of 2 per cent; and a bonus if he sells over 30,000, of 10 per cent.

By Mr. Ilsley:

Q. That means that this private brand discount does not depend on the quantity bought; it depends on the brand, to some extent. Is that correct?—A. I am really not able to answer that. I suppose it is. If a manufacturer makes a contract with a customer for a private brand tire, he must have some idea. This is only assumption.

Mr. SOMMERVILLE: We will get that.

By Mr. Ilsley:

Q. I understood you to refer to three non-association companies?—A. Yes.

Q. Are there some companies outside of the association?—A. Yes. We are not able to speak for them. Then, contrasting the customer's cost of his private brand with the mail order selling price, in this size tire and type, being 4·75 by 19, 4-ply, applying that first discount of 38 per cent, gives the private brand cost for that, on that tire, of $6.87.

By Mr. Sommerville:

Q. That is the net cost to the firm for whom the private brand is made in that first and second line?—A. No, it is the net cost to the private brand company.

Q. To the private brand company?—A. That is what the private brand company would pay for it.

Q. That is what I say. The private brand company that buys them, pays for them $6.87?—A. Yes.

Q. That is what I thought?—A. And the next one is $6.51, and $6.52.

Q. $6.22, according to the statement I have got?—A. Yes, $6.22. 38 per cent discount, 31·4 and 44·2 are the discounts applied. The mail order selling price for that tire is $7.75 catalogued, and $7.90 in the maritimes, where they catalogue it a little higher. In the case of the second grade tire, one is bought by private brand for $5.84, and another at $5.37, and each sold for $6.50. The third line, one is bought for $4.79; another for $4.69; another for $4.64; another for $4.57; and that is sold for $5.50, catalogued.

Q. Mail order?—A. Yes. Now a comparison of dealer's net costs with private brand customer's average net cost, exclusive of the cost plus tires that

you mentioned. All the other tires than that cost plus are applied to this comparison. Under (A), that is with maximum bonus of 20 per cent, the net cost to the dealer is $7.75, and to the private brand for a similar tire, $6.53, a difference of $1.22 or 15 per cent.

Q. The regular dealer pays 15 per cent more?—A. Or the private brand buys for less. I am not sure which way it is.

Q. Or the private brand buys for 15 per cent less than the dealer?—A. Either one way or the other.

By Mr. Ilsley:

Q. Is that the dealer that gets the maximum bonus?—A. That is getting the maximum bonus. I will give you the figures on the other bonuses.

By Mr. Young:

Q. Those are the same tires, except with a different name?—A. Not always, sir, I believe. Again I must plead not very sure information. On the second tire, the dealer with the maximum bonus would buy for $6.67 and the private brand for $5.61, a difference of $1.06 or 15·8 per cent. On the third, the cost to the dealer with the maximum bonus is $5.01, the private brand cost, $4.67, a difference of 34 cents or 6·8 per cent on the third line tire. Now, making a comparison with the average bonus earned, that is 5 per cent, the first is $8.18 as the dealer's cost; the private brand cost, $6.53, a difference of $1.65 or 20·2 per cent. On the second, dealer's cost, $7.03; private brand cost, $5.61, a difference of $1.42 or 21·9 per cent. On the third, $5.27 for the dealer; $4.67 for the private brand, a difference of 60 cents or 11·4 per cent.

With the dealer getting no bonus, $8.60 against $6.53 for the private brand, a difference of $2.07 or 24·1 per cent; on the second one, $7.39 against $5.61, a difference of $1.78 or 24 per cent; and on the third, $5.54 against a private brand cost of $4.67, a difference of 87 cents or 15·7 per cent.

Q. All the percentages you have given us have been percentages of the amount by which the private brand is bought by the special customer less than a similar type tire would be bought by the regular dealer?—A. That is correct.

By Mr. Young:

Q. Whether it is the same tire or not?—A. It may not be the same tire, but they are regarded as similar.

By Mr. Ilsley:

Q. It looks just as good to the consumer?—A. You are as good judges as to that, as I am. The tires are not identical, but they are similar.

It is pointed out by the manufacturers of customer's private brand tires that the above spread in the prices of manufacturers' branded tires to the dealer, as against those charged the mail order houses for private brand tires, includes distribution costs as the manufacturer is relieved of freight, warehouse and advertising expense.

Statement by association companies on their weekly or bi-monthly factory payrolls, and employees for each month of 1933, showing male and female separately, are here offered for study by the committee.

By Mr. Ilsley:

Q. Before you leave this private brand story, are they overtaking the others, the ones that are sold to the dealers?—A. I don't think I understand your question.

Mr. SOMMERVILLE: Is the quantity increasing?

By Mr. Ilsley:

Q. Is the quantity increasing in proportion to the ones sold in the regular way to the dealers?—A. I don't think I am able to answer that.

Q. You have those figures somewhere in that brief?—A. No. These figures were separately filed, I think. They were asked for by the committee.

Mr. SOMMERVILLE: I have them here for 1933.

The WITNESS: I am not able to contrast the past with the present in that.

By Mr. Sommerville:

Q. But you have given the figures for 1933?—A. Yes.

Q. That the total sale of tires by the seven association members to regular dealers and jobbers, amounted to $9,430,152.29?—A. Yes, that is the statement.

Q. While the sales of the seven association companies to private brand customers was $1,059,234.10?—A. Right.

Q. That is for 1933?—A. Yes. Those are figures that were provided me after the committee asked for that information. I obtained the figures from the various companies and put them together.

Mr. ILSLEY: Special customers seem to have an extraordinary advantage in purchasing tires. It would look as if they would be driving the others out, if it kept on.

The CHAIRMAN: There is a witness who will give that.

The WITNESS: Yes, Mr. Sargeant, I think.

The CHAIRMAN: We will leave that to him. He will be able to answer that much better.

By Mr. Sommerville:

Q. Before you pass on then, in the comparison of the dealer's net cost with the private brand customer's cost, you have not given us the price or the advantage that it is to that private brand customer who buys his tires on a cost plus basis?—A. I think that may be provided by a subsequent witness.

Q. I anticipate that that is more than, or a greater advantage than 44 per cent?—A. I am not able to answer that.

Q. As shown as a special discount on this?—A. I am not able to tell you.

The CHAIRMAN: One of the other witnesses will.

Mr. SOMMERVILLE: All right. I just wanted to have that clear.

The WITNESS: Now, I have the figures of pay, the number of employees weekly, the total earnings weekly, and the average weekly earnings, male and female, and male under 18 years—that is boys—for each of 52 weeks, and these are submitted by each company.

By Mr. Factor:

Q. What year is that?—A. That is for the year 1933.

By Mr. Sommerville:

Q. This is what?—A. That is one company. Here are figures for another company. I have them for each company. Then, because some of the companies gave them to me weekly, and some of them gave them for twice a month, gave them to me in two-week periods, it was impossible to put them together, so I am submitting them for each factory.

Q. I think perhaps rather than examine on those at the present moment, if you will be good enough to leave them for us so that they can be studied, it would be better?—A. That is what I brought them for.

Q. If you will keep them altogether?—A. I will keep them altogether.

Q. And they will be filed as an exhibit now?—A. Yes.

By the Chairman:

Q. Just hand them in now, and we will file them as an exhibit?—A. In this connection, I may say, that these are sometimes accompanied by explanatory memos which we think is only fair to submit.

Mr. SOMMERVILLE: They will be attached.

The WITNESS: They are attached. I would like to read this one, if I may.

Mr. SOMMERVILLE: Yes.

The WITNESS: One company says:—

> I am enclosing herewith data requested by the Stevens' Committee on price spreads and mass buying, as outlined in your questionnaire on this subject.
>
> We have the following comments to make in connection with the answer to question No. 1, which is contained on statements marked "A" and " B " attached.
>
> The average hours worked in 1933 were below normal. This is due to the fact that we early adopted a policy of spreading the work over a greater number of employees in order to avoid the necessity of making substantial lay-offs of workmen. This was accomplished by changing from three shifts of eight hours each to four shifts of six hours each.
>
> While your questionnaire does not request any figures for 1934, you will note that at the bottom of statements " A " and " B " we have entered the corresponding figures for the pay periods ending March 22nd and 29th respectively. This shows a material increase, not only in the number of employees, but in the number of hours worked with approximately 23 per cent increase in the average weekly earnings as compared with 1933.
>
> In making this return, we have included all those employed in the manufacture of tires and tubes who are paid a daily, hourly or piece work basis, including all service departments such as engineering, stores, janitors, warehousing and shipping.
>
> It is noted that your questionnaire does not make it obligatory for the various companies in the industry to report their average hourly rates of pay and average number of hours worked per week. Our opinion is that unless you also secure this information in addition to that asked for in question No. 1, your report to the government will give the committee neither an adequate nor comprehensive picture of the wage level in the industry. It is quite possible to have a low average rate per hour with high weekly earnings or vice versa. In other words, the employees' earnings are not measured entirely by the average rate per hour but to a large extent depend on the number of hours worked."

By Mr. Factor:

Q. Those schedules are merely for the tires?—A. I have those for the footwear.

Q. But those you are now producing have relation to tires?—A. Yes, those are tires only.

(Statements showing figures of pay, number of employees, etc., filed, marked Exhibit No. 193).

By Mr. Young:

Q. Apparently those factories run day and night, do they?—A. In some cases they do. I think it is found economical to keep heat on, if possible. Those are filed by members. That is for all tires. Also I desire to file the points of distribution.

The CHAIRMAN: Let us get them one at a time.

(Statement of the points of distribution filed, marked Exhibit No. 194).

The WITNESS: Then, the tire bonus scale.

By Mr. Sommerville:

Q. That is, the scale upon which bonuses are granted on the sale of tires? —A. Yes.

By the Chairman:

Q. That is what you have already described?—A. Yes.

(Tire bonus scale filed, marked Exhibit No. 195).

The WITNESS: The imports and exports, and volume of domestic production in the past five years are shown on that sheet.

(Statement of imports and exports, and volume of domestic production filed, marked Exhibit No. 196).

The WITNESS: Then, this shows the total twelve months' sale of tires, size by size. I think it was asked for. Some tires are very popular and sold largely, and some are not sold.

(Statement showing twelve months' sale of tires, filed, marked Exhibit No. 197).

The WITNESS: Here is a record which has been filed for the information of the association itself, and the association members, over a period of fourteen years, starting in 1920 and concluding in 1933, giving the sales of tires, domestic, export and total; the average number of employees in each year; the pay to the employees in each year, fixed and liquid assets, the duty or tax paid; relative holdings and transportation charges. That covers a fourteen year history.

By Mr. Sommerville:

Q. That is information which was available in your records, that you had for your own members?—A. Yes.

(Statement covering fourteen years, 1920-33, filed, marked Exhibit No. 198).

Mr. SOMMERVILLE: That is very valuable.

Mr. FACTOR: Mr. Chairman, do you expect every member of this committee to peruse and study those schedules?

The WITNESS: We were asked for them, so we have given them.

On behalf of the rubber footwear manufacturers' association, I have been asked to read this brief:—

We welcome the opportunity of appearing before your committee for the following reasons:—

1. To assist your committee in any way possible with any information or to receive advice and suggestions, that will be helpful to this industry.

2. To bring to your attention the problems of the manufacturers in the production, distribution and sale of rubber footwear.

3. To place before your committee facts in connection with various statements that have been made to you by others from time to time.

There has been a decided change in the last few years in the merchandising of rubber footwear, due to the introduction of a great many styles and types of footwear. The demand for these has been created to some extent by the change in climatic conditions and transportation methods. These changes have lessened the demand for rubber footwear. Statistics show the total sales of the industry are approximately 65 per cent of the figures of a few years ago.

When the volume of business was considerably greater, and not as much attention paid to styles, competition among the manufacturers was very keen; and as a result some firms were forced into bankruptcy or liquidation, and later taken over by some of the other manufacturers.

The capacity of the plants continuing operations was greater than necessary for the country's requirements, allowing for a considerable volume produced for export. However, new manufacturers came into the field, and also some leather shoe manufacturers commenced the production of lines competitive with those of the rubber footwear manufacturers. The export demand was curtailed owing largely to tariff changes and unfavourable exchange. These factors brought about a keener competition for the reduced consumption in Canada, and resulted at times in merchandise being sold below cost.

The rapid change in styles brought with it a new problem—that of obsolescence—when manufacturers, in order to dispose of obsolete lines sold same at less than cost. This in turn forced down the price level of new lines, creating an additional form of competition.

The creation of styles brought with it another problem, that of production costs, it being necessary to obtain volume for each style produced, if the cost was to be comparative with similar lines or other manufacturers' prices.

Naturally the larger customers could more readily place orders for quantities and therefore, with production costs and obsolescence in mind, they obtained more favourable prices, again intensifying the competition. This resulted in such buyers having an advantage over the smaller buyer, and steadily increased the large buyers' purchases.

The manufacturers realized the seriousness of this situation, and for that reason endeavoured at different times to bring about an equitable plan of merchandising, which would aid them in continuing in business. Their efforts in this direction met with very little success, as new problems were rapidly developing, which more than ever indicated the necessity for an organization that would operate efficiently and stabilize conditions within the industry.

Following several meetings, the Canadian Rubber Footwear Manufacturers Association was formed in January, 1932, and has continued in operation since that date.

The efforts of this association were immediately directed to the following: Standardization of styles; elimination of excess lines; withdrawal of numerous branch warehouse stocks; stabilization of prices; discount differential to apply to various classes of purchasers.

A survey of the industry clearly indicated the absolute need of such a program, if the manufacturers expected to avoid bankruptcy. New lines were being continually added, lessening the production of lines they replaced. Several closely resembled others with minor changes. Additional colours were added to different ranges and a buyer wishing to purchase a fair quantity could practically buy made-to-order, and immediately introduce a new style. Manufacturers had established branch warehouse stocks at various points, resulting in five or six stocks being carried at a point where the total distribution would hardly warrant one stock. The manufacturers realized these conditions could be corrected only over a period of time, and considerable progress has been made in this direction.

The industry was suddenly confronted with a new problem, that of importations. Due to the Imperial Conference agreements, it is possible for goods manufactured in British possessions to enter Canada at considerably less than production costs in Canada, owing to the very low wage scales prevailing. Figures compiled from customs records show that in 1933 over 1,000,000 pairs of rubber and canvas shoes were imported into Canada. The quantity of imports

will no doubt increase unless some change in the existing conditions is brought about. For some months we have discussed this matter with various officials and departments of the Dominion government.

The import agencies solicit business from only larger customers in order to escape selling and distribution costs, which again widens the spread between the large and small buyer, and therefore to-day stands in the way of Canadian manufacturers further correcting this condition, owing to their inability to compete with these very low laid down prices.

By Mr. Sommerville:

Q. Before you go on, may I ask if those figures of the 1933 imports are from the empire?—A. No, from the world.

By Mr. Young:

Q. From the world. You spoke of over a million pair?—A. Over a million pair.

Q. Have you got the value?—A. I think the value is given in that statement, is it not?

Mr. YOUNG: I have the values here for 1933, rubber footwear $81,789 worth and rubber soled footwear $53,549 worth.

Mr. SOMMERVILLE: Somebody will be in a position to give us that information in detail.

WITNESS: I have it myself.

Mr. YOUNG: These are the fiscal years.

WITNESS: Ours are the calendar year according to the book Mr. Stevens is looking at.

The CHAIRMAN: In 1933, according to this statement, boots and shoes of rubber 674,143 pairs. Then there is another class where there is just canvas and rubber which is shown elsewhere.

WITNESS: Here is a statement taken from that. The total footwear—that is our turf and tennis—1,008,000 pairs, $316,979. Those are the government figures.

Mr. KENNEDY (*Winnipeg*): Where do they come from?

WITNESS: Japan, Czecheslovakia and Singapore. Those are the principal sources.

Mr. KENNEDY (*Winnipeg*): Largely from those sources.

The CHAIRMAN: Straits Settlements 566,000. Czechoslovakia 32,000, Japan 2,000 of the full rubber; and there is the other class besides.

By Mr. Young:

Q. That is for 1933?—A. That is for the calendar year 1933.

Q. I think it was for the fiscal year 1934?—A. Would that be 1933-34?

Q. Fiscal year 1934; ending March 31st, 1934, rubber footwear $281,365 and for rubber soled footwear $79,390?—A. Those figures are quite comparable.

By Mr. Kennedy (Winnipeg):

Q. Will you permit me a question. You have referred to the fact that there is a tremendous importation from the Straits Settlements, Czechoslovakia and Japan. What is the effect of that upon the rubber industry here in Canada?—A. They lose that business, and their prices are set.

Q. I realize perfectly that they lose that business if they get in here and are sold; but I am referring to that sort of competition and whether it can be reasonably met?—A. I am less familiar with the details of the footwear business than I am with the tires. Another witness will take the care of that.

By Mr. Factor:

Q. Do you know how the percentage of imports relates to the total trade? —A. No. It could be easily worked out because the dollar figures are given.

B. Mr. Ilsley:

Q. You have not any division for Empire and non Empire sources?—A. For imports? Yes, they are contained right here.

Mr. KENNEDY (*Winnipeg*): Have you any idea of the fitness of this competition—I mean the actual product itself; does it stand up?

WITNESS: Like everything, there are different qualities. I have heard just casually, again speaking without authority, that they have poor stuff and good stuff.

Mr. ILSLEY: Certainly it is cheap stuff.

WITNESS: Yes. May I continue.

Mr. FACTOR: I notice in this statement that domestic sale of footwear amounted to $11,202,751 in 1933 and the importation amounted to roughly $360,-000. That is an infinitesimal part of your trade.

The CHAIRMAN: Take the number of pairs and you will find the imports cost about 25 cents a pair.

WITNESS: I think the cheap imports have a tendency to set the domestic prices in a rather disastrous way, but that will be dealt with by other witnesses.

By Mr. Kennedy (Peace River):

Q. You mean that prices are lower because of these imports?—A. Yes. Various statements and comparisons have been made by persons appearing before you in connection with the manufacture and sale of rubber footwear, which we will now endeavour to answer: in the first place, numerous comparisons were submitted as representing large buyer's selling prices, against small buyers' costs. It is quite possible that the comparison is on importations or, again, it may be a question of obsoletes or seconds, so that without further details or samples of the shoes in question, this cannot be determined. It was stated at one of the hearings that a special discount of 12 per cent was given to large buyers who sold only about 20 per cent of the total sales in Canada. We have already, in accordance with your request, prepared considerable statistical information, including sales to all classified lists. This information is in your possession, and clearly indicates that this statement is not according to fact. A statement was also made to the effect that one party might have bought two or three carloads, but was told that his money was no good. We can hardly credit this information, as any buyer who would purchase this quantity outright and take delivery to his own place of business, without requesting the manufacturer to assume credit responsibility for numerous other accounts, or to have the manufacturer arrange packages marked for reshipment, would have no difficulty in placing such an order with any of the manufacturers, provided his financial responsibility warranted the extension of credit for such a sum, and provided he tendered a definite order covering such a transaction. Undoubtedly the discount applicable to such a volume would be allowed.

Mr. ILSLEY: The witness meant he could not get the same price as somebody else got.

Mr. SOMMERVILLE: For instance, you have in your "A" list "discounts to listed account". "A" list gets 12 per cent. "B" list gets 10 per cent. "C" list gets 8 per cent. "D" list gets 6 per cent. Now, "A" list used to get 14 per cent, and at the time this 14 per cent was in operation, I think last year, this particular group tried to buy and were buying several hundred thousand dollars worth of footwear, paying for it without there being any risk, and they

were cut off. They were getting a 10 per cent discount although they were buying a great deal more than many of the firms that were in the "A" list. They were cut off and reduced to the lowest discounts, namely, 6 per cent, and told that their money was no good in getting them the increased discount.

WITNESS: The statement placed in my hands and which I am reading appears to contradict that, Mr. Sommerville.

Mr. ILSLEY: Not what you have read.

WITNESS: I think so. I may be wrong.

The CHAIRMAN: Let us hear the rest of it, because that is really one of the main points in this inquiry.

WITNESS: We can hardly credit this information, as any buyer who would purchase this quantity outright and take delivery to his place of business, without requesting the manufacturer to assume credit responsibility for numerous other accounts, or to have the manufacturer arrange packages marked for reshipment would have no difficulty in placing such an order with any of the manufacturers—and on similar terms for quantities.

Mr. ILSLEY: It does not say that.

The CHAIRMAN: You say "any buyer". Now, it happened, I believe, in the instance before us that there were a number of buyers grouped together.

WITNESS: You will really have to get that—

Mr. SOMMERVILLE: Yes, we will get that.

WITNESS: At different times manufacturers have been approached by so-called co-operative groups, requesting that they be allowed the maximum quantity discounts on their combined purchases. The argument is advanced that the saving to the manufacturers in reduced overhead would warrant this action. In the first place, however, the financial responsibility of the co-operative company which acts as a buyer for such groups, is usually inadequate and does not warrant the extension of credit required.

Mr. FACTOR: In this case the co-operative group were willing to pay cash if they could get in the "A" class, according to the evidence given. There is no financial responsibility in that .

WITNESS: They said they were. I read the evidence, and I do not think they put up a certified cheque.

Mr. SOMMERVILLE: It was the York Trading and Guarantee account, and I do not suppose any one of the dealers would hesitate about the York Trading financial standing.

WITNESS: Experience has shown that it would still be necessary for the manufacturer to call on each individual merchant in the group to show new lines, and obtain his order by assisting him in sorting his stuff, etc. Separate shipments would have to be made to each unit with duplicate invoicing, a copy being sent to the co-operative head office, so that in the end there is no actual saving to the manufacturer. One of the most important objections to this plan is that it would only result in the formation of more co-operative groups, to the detriment of the individual retailer who is in competition with the members of such groups. We would respectfully point out that co-operative buyers object to the extent to which volume is recognized for large individual buyers, while they still insist on more discount recognition for their own co-operative volume purchases. The industry has heard no concern expressed on the part of the co-operative buyers for the small individual merchants who do not join co-operative through choice or necessity. In conclusion, we wish to state that we believe the co-operative efforts of the rubber footwear manufacturers have resulted in improved and more stabilized conditions for the industry. The above is respectfully submitted on behalf of the Rubber Footwear Manufacturers of Canada.

Now, as in the case of the tires here are the weekly wage figures for each of the eight companies.

The CHAIRMAN: You say "tires"; you mean footwear?

WITNESS: I gave them for tires. As in the case of tires I am putting this in for footwear.

Mr. FACTOR: For all the manufacturers in your association?

WITNESS: Yes, there are eight companies. The figures—well, it is a figure for each factory. In one case one has two factories, and there is a report for each factory.

By Mr. Kennedy (Winnipeg):

Q. Have we had the names of the companies to which you referred as being in your association?—A. The names of the footwear companies?

Q. Have we had the names of companies in the association?—A. Yes.

Q. Have they been read into the record?—A. Yes.

By Mr. Sommerville:

Q. Give us the names of the footwear manufacturers?—A. The Dominion Rubber Company—I am not sure of the exact title—Gutta Percha Rubber Limited, the Kaufman Rubber Company, The Northern Rubber Company, Canadian Goderich Rubber Company, The Woodstock Rubber Company, and the Acton Rubber Company.

Q. The Miner Rubber Company; you did not read that?—A. It is on the list. Now, that is all I have been asked to submit, sir.

Mr. KENNEDY (*Winnipeg*): Those are the footwear companies in your association?

WITNESS: Yes.

Mr. KENNEDY (*Winnipeg*): Now, have you the names of any other companies in your association?

Mr. SOMMERVILLE: The tire companies have been read out in the tire section.

WITNESS: They are also listed in the file.

The CHAIRMAN: Here is this evidence of Mr. MacKay that I might read to you. It is to be found on page 442 of the evidence:—

> A. Yes, as contained in classification A or B; I might have bought three or four carloads of rubbers but they told me my money was no good, and they followed it up by saying "we cannot do what you are asking us to do, we are in a certain classification and what you are asking us to do is not in accordance with the rubber association business and we might find ourselves outside the classification."

And then Mr. Factor says:

> The Rubber Footwear situation, Mr. Chairman, does seem to warrant a special investigation.

And the witness goes on to say:

> They said if they did what I was asking them to do they would find themselves with their heads chopped off.

Then Mr. Young asks:

> Q. Who would cut their heads off?—A. The Rubber Association.

Then I asked:

> Q. Let us get this clear. Your point, Mr. Mackay, is that although you were able to secure a volume equal to, say, class A—?—A. Well, it might not be class A; it might be class B.

Q. Well, class B, you were denied the similar discounts to which class B was entitled?—A. Yes. I was told my money was no good; they refused to take my money.

By Mr. Ilsley:

Q. What you have just read would indicate that they do not want to deal with these co-operatives if they can help it. There is the answer?—A. I am referring you to some one who really knows more about it.

Q. That was in the statement contained in the tire brief?—A. My understanding was that it was asked by the committee, did you not.

Q. If some one, is Mr. Sargeant or Mr. Carlisle here?

By Mr. Sommerville:

Q. Well, you mentioned to me that Mr. Sargeant or Mr. Carlisle would deal with that end of it, and some one else with footwear. Possibly we had better have Mr. Sargeant.

By Mr. Kennedy (Winnipeg):

Q. Did these co-operative companies purchase for cash or credit?—A. Really I could not say, I never sold footwear.

Q. I had in mind that co-operatives in the west by their constitution are not allowed to buy on credit?

By Mr. Sommerville:

Q. Which do you prefer to come first?—A. Mr. Carlisle represents the Rubber Association, and he talks for the people selling. I can give you very little information because I have no knowledge of the present range of tires.

Mr. SOMMERVILLE: We will call Mr. Sargeant then.

Mr. E. S. SARGEANT, called and sworn.

By Mr. Sommerville:

Q. Mr. Sargeant, what company are you connected with?—A. I am vice-president and general manager of the Canadian Goodrich Company Limited.

Q. And your factory is located?—A. Kitchener, Ontario.

Q. And your company is a member of the Rubber Association of which Mr. Hannay is Secretary?—A. That is right.

Q. And you manufacture both tires and rubber footwear?—A. Yes, sir.

Q. In the plant at Kitchener?—A. That is correct.

Q. In connection with the tire business, Mr. Sargeant, Mr. Hannay has read a report about which some particulars are desired. But before questions are asked, are there any representations you desire to make?—A. The only representations I desire to make is to say that we tried to reflect to the committee the facts of the case.

Q. The exact situation with respect to tires?—A. That is correct.

Q. Now, Mr. Sargeant, with respect to the list of ten cases that are referred to on page 2 of the Association's statement showing the private brand tire and the discount from list price; will you explain to the committee just what the private brand is, so that we will have it on record, as against the standard brand?—A. It is generally known that a private brand tire is a tire branded with the name of the customer who sells it.

Q. Yes?—A. On brands, what we term standard brands, they are tires bearing our own company brand.

Q. Yes, all the standard brands bear your own name?—A. That is correct.

Q. And the private brands do not carry your name?—A. That is correct.

Q. What objection would there be to your being required to have your own name as the manufacturer upon the private brand tire?—A. I do not know that that has ever come up for consideration.

Q. But what objection could there be to it?—A. Well, it is usually the practice with a private brand distributor, I would say that it is rather a common practice, to elect to distribute merchandise under a different name.

Q. Supposing the private brand firm's name was on the tire, what objection could there be to adding your own as manufacturer?—A. I do not know of any objection.

Q. What effect would that have upon your distributors from coast to coast? —A. I could not answer your question, sir; I mean, I do not know. I have never seen it tried.

Q. Well, if your private brands—let me get this, your standard brands you sell through the regular distribution system?—A. That is correct.

Q. You sell to jobbers and to dealers?—A. Branches or distributors.

Q. And on these there is a definite set basis of discount?—A. That is correct.

Q. And the discount to dealers is 20 per cent?—A. On tires, yes.

Q. And if they sell a certain volume they get a bonus in addition to that? —A. That is correct.

Q. But the majority of them do not get a bonus, because they do not sell the volume?—A. I would not say that, when you have an average bonus of 5 per cent they are all earning more or less.

By Mr. Factor:

Q. Is that the average for 1933?—A. That is correct.

By Mr. Sommerville:

Q. What was the average for 1933?—A. About 5 per cent.

Q. But the statement says that approximately 40 per cent of the tire dealers earned a bonus. Then 60 per cent did not earn a bonus, according to the statement that was read by Mr. Hannay?—A. I would say that is about right.

Q. But only the 40 per cent did earn a bonus, an average bonus of 5 per cent?—A. No, the bonus I would say is weighed against the total volume.

Q. Are you sure of that?—A. I am not positive, no; that was my understanding.

Q. That would hardly be so?—A. It might be, rather easily so.

Q. That is the average for the total volume—when your largest bonus is 10 per cent?—A. That is correct.

Q. For those of over $30,000, and the bonus is paid to 40 per cent of tire dealers, and you think the average would run that?—A. Yes, I would think so, that would be our experience, Mr. Sommerville, speaking for our own company. My information is confirmed, Mr. Sommerville.

By Mr. Young:

Q. Supposing you take the full 10 per cent?—A. I can probably explain that to you, the larger volumes are located in the marketing centres, and they earn a maximum bonus.

Q. Yes. Supposing the entire 40 per cent earned 10 per cent bonus, that would still leave 60 per cent that didn't earn any?

The CHAIRMAN: No, no. 40 per cent; not the number of dealers.

The WITNESS: Yes, it is on the volume.

The CHAIRMAN: Mr. Hannay has confirmed it so I imagine we can accept that.

By Mr. Sommerville:

Q. 5 per cent on the volume then?—A. That is correct; as a matter of fact, our own is a little higher than that.

Q. Then your standard tires are set at certain prices, which are maintained prices—at least you seek to maintain them, let us put it that way?—A. That is correct.

Q. And you require that they shall be sold to the public at certain prices?—A. No sir, we do not.

Q. You do not do that?—A. No, sir. We would like to be able to have some way of influencing prices but we do not.

Q. You do not fix the price at which the tire is to be sold to the public?—A. We have no control over that.

Q. It is entirely a price to the dealer?—A. That is correct.

Q. He then sells at whatever price he can get?—A. That is correct.

Q. Have you any maximum?—A. No sir, none whatsoever.

Q. Now then, private brands are usually sold at lower prices than your standard brands?—A. I believe that is the practice.

Q. That is the experience?—A. That is the statement made here.

Q. And if your name was on the private brand, would that not interfere very largely with your distribution, would not your distributors object to your putting out a brand for a private individual with your name on it, as everywhere the buyers are loading up with your standard cars?—A. I do not know that they would necessarily.

Q. Have you had any complaints of any kind?—A. I have never had experience, Mr. Sommerville.

Q. Do you make any private brand tires?—A. Not under the survey of last year.

Q. You did not last year?—A. No, sir.

Q. But you are making one this year?—A. That is correct.

Q. And you are making them on a cost plus basis?—A. Yes, sir.

Q. And on that basis the customer supplies the ingredients, does he?—A. Not with us.

Q. Not with you, what does he supply?—A. He supplies the moulds.

Q. The moulds only?—A. The moulds, the maintenance cost, and certain other charges.

Q. He supplies the moulds?—A. And any maintenance cost on the moulds.

Q. And he pays the maintenance cost?—A. That is correct.

Q. Anything else?—A. No, nothing in particular.

Q. Now, as to costs, you say they are on the basis of your actual costs?—A. Yes, sir.

Q. Supposing, for instance, you had bought rubber in advance at a low price, would that be taken on the basis of the cost of rubber to-day, or at the low price at which you bought it?—A. They would pay for it on the same cost that everybody would be privileged to buy, at the same cost.

Q. On the other hand, supposing you had bought cotton, we will say, in advance, and the price to-day was lower than the price which your contract provided; would your cost-plus arrangement means that you would have to allow them the cost of cotton at present day prices?—A. No, sir.

By Mr. Kennedy (Winnipeg):

Q. Would not the measure of cost be the replacement cost?—A. No, it is the actual cost.

By Mr. Sommerville:

Q. My reason for asking is that certain information came that the contractor for the cost-plus tire would take that which was the more favourable?—A. That is not correct.

Q. As far as your contracts are concerned?—A. Yes.

Q. So you are taking the actual cost at the present time?—A. Absolutely, that is correct.

Q. And add to that the plus figure?—A. That is correct.

Q. Now, does that give them the advantage of more or less than the discounts that are shown here?—A. I would say slightly more.

Q. So that the buyers of the private mark tire have better than a 44 per cent discount?—A. Yes.

By Mr. Factor:

Q. Are they of the same quality?—A. The specifications are approximately the same, not quite.

Q. On the standard brand and the private?—A. That is correct.

By Mr. Senn:

Q. Do you exercise any supervision over the advertising done for these special brands?—A. None whatsoever.

Q. They are allowed to do what they like absolutely on that situation?—A. Yes.

Q. Through the mail order houses and catalogues?—A. I cannot answer that question.

By Mr. Young:

Q. Does the same guarantee go with the private brand as with yours?—A. Yes.

Q. Is it the same quality of tire?—A. Yes.

By Mr. Senn:

Q. Is it your guarantee, or the guarantee of the man who buys it?—A. It is theirs.

By Mr. Sommerville:

Q. Do they require you to give a guarantee?—A. Only as to workmanship and material, which is our standard.

Q. Your standard guarantee?—A. Well, I mean that has always been a part of our standard guarantee.

Q. What I mean is when you sell a special private brand, do you give any guarantee to the company that buys it?—A. Other than workmanship and material.

Q. You give more of a guarantee to your dealers, do you?—A. Yes, we do.

Q. Then, do the company that have a private brand not require you to live up to the same kind of a guarantee that you give to your own dealer?—A. No, sir.

Q. And they assume all risks of the guarantee which they give?—A. That is correct.

Q. And is the guarantee which they give as broad as the guarantee which your dealers give on your standard tires?—A. It is the same.

By Mr. Factor:

Q. What is there beyond workmanship and materials?—A. Road hazard.

Q. That is, so many thousand miles per tire?—A. No, the road hazard guarantee is not.

By Mr. Kennedy (Peace River):

Q. The road hazard guarantee gives, for one year?—A. That is correct.

By the Chairman:

Q. If you make a tire for a special brand, do you take any objection to the distributor advertising those as if they were of a higher quality?—A. I am not confronted with that problem.

Q. You have never been confronted with it?—A. No.

By Mr. Young:

Q. The impression prevails throughout the country that these special brand tires are not as good as the others, you say that is not the case?—A. I cannot speak for other manufacturers.

By Mr. Factor.

Q. They do sell these private brand tires cheaper to the individual producer?—A. That is a matter of distribution. I mean, it is shown here in the facts we have presented.

Q. That is how they can succeed in selling them cheaper, because of the low cost of distribution?—A. That is correct.

Q. As a manufacturer, you are not complaining of the system of private brands?—A. We are not complaining about the system, no sir. The only difficulty confronting us is the vicious price cutting that goes on in the market, not only between these people but between our own people.

By Mr. Senn:

Q. Have you any complaints from your own distributors about this?—A. You can hear them from anybody.

Q. But, more so, I mean, from your own distributors?—A. Well, there are some of them; but then you can hear them from anybody. There is no phase of prevailing upon anybody to collect a given price for a given product; therefore the price cutting—if that is what you are getting at—with respect to any one of these types of outlet, may cure itself where the market is very much disturbed; that is true, that our own dealers are competing with each other as strong as competing with any other type of tire.

By Mr. Sommerville:

Q. On the price cutting the slashing does not take place to anything like the same extent between the standard tires as it takes place with private brands?—A. I am sorry to say it does.

Q. In large areas?—A. Yes, sir.

Q. Because, we just had presented to us a brief from the Summerside Board of Trade pointing out the various serious consequences to the Island, to all the distributors in the Island of Prince Edward, by reason of the sale of these catalogue tires in which—at page 485—the Board of Trade gives several examples of the effect of the spring catalogue of 1934, and refer to the dealer's fixed retail price of $10.88 as against the price of $7.90, or a difference of $2.98 on the first grade, $2.68 on the second grade, and $2.28 on the third grade; and pointing out that on this basis the dealers could not be expected to sell to the consumer, and that business will all go to the Departmental and Mail Order houses?—A. That is the case that we have illustrated in this résumé we have made, because it is a direct example of a condition within the industry, inasmuch as this particular tire as I recall it represented 12½ per cent of the sales there. You must remember this, that the dealer provides a service for the customer that the mail order house does not.

Q. The catalogue is not there when your car breaks down?—A. It is not there, neither does it take your tire off and replace it.

Q. No?—A. The dealer is entitled to charge more for service of that character than you would be expecting from a mail order house.

By Mr. Factor.

Q. It works the other way too, if the mail order house is not giving the service, they can sell it at a reduced price?—A. That is the system. You have three types of distribution in the country. While we are here, let us be very frank and candid with ourselves. We have our costly system of nation-wide distribution of tires, through branches and distributors; then we have from distributors to dealers; and then you have mail order house operation. When you save one given step in distribution on any product, I do not care whether it is on tires or any other product, if the economics of the system provide a saving in the way of relieving you of costs, and passes that saving on to the consumer—that is what we are talking about, all the people generally.

By Mr. Sommerville:

Q. What is the effect on your industry, has it not rather thrown the industry into chaos?—A. It has made it rather—no, I do not think so, Mr. Sommerville. I think these people rather take an extremely fair position. I think the responsibility is equal, if you ask me.

By the Chairman:

Q. You would say then that your business in distributing through the special brands at these low prices was preferable to you?—A. Yes. However, Mr. Stevens, you are asking me some questions which maybe I should not talk about, because I do not know all these discounts, except that they are representative. I am simply talking in generalities with respect to the principle.

By Mr. Kennedy (Winnipeg):

Q. As to these discounts that have been mentioned, is there any trade reason why it would not be desirable to disclose them? I am not suggesting you do disclose them, but if there is a trade reason that you should not disclose them, I would suggest that you file them with the committee??—A. They are here.

Mr. SOMMERVILLE: They are here. They are all disclosed, Mr. Kennedy.

Mr. KENNEDY (*Winnipeg*): All right.

By Mr. Sommerville:

Q. Is it not a fact that the extent of the discount is largely measured by the buying power of the customer?—A. I would say not.

Q. You would say not?—A. I would say that has some influence. The bonus or volume phase of merchandising had been in practice for a good many years. I mean, we adopt it in our own business; but generally speaking, I would say that the saving in costs the manufacturer is relieved of by virtue of not paying such items as freight and selling costs and so forth, are the sum total that is reflected in these discounts.

Q. This is the first year you have taken this contract?—A. Yes, that is correct.

Q. And you have taken it in competition with some other dealers or companies?—A. I presume so.

By the Chairman:

Q. Would you suggest that it would be a good thing to disband all the dealers in the country and distribute entirely through mail order houses?—A. Mr. Stevens, you are asking me a question I wish I could answer.

Q. Well, you are heading that way?—A. I am just as much confused in regard to that question, I think, as we all are. We have developed, over a

period of twenty-five years, mass production, I don't care whether it be on the farm, whether it be in the factory, or whether it be in our distribution field. Obviously it must have been sound, or it would not have grown.

Q. Not necessarily?—A. It must have been, or it would not have grown. We all supported it. Now that we have all these arteries and avenues of distribution, I think they are all entitled to a fair position in the market .

Q. But they cannot all have it. How many distributing agencies are there, outside of the mail order houses? 40,000 was it?

Mr. FACTOR: 13,000 dealers.

By Mr. Sommerville:

Q. What would you say, Mr. Sargeant, as to whether or not it would be a good thing to have all the dealers in the province of Prince Edward Island put out of business by that system?—A. That is a matter of opinion. I would rather not express myself on a matter of opinion. I think it has got to be based on cold blooded facts, Mr. Sommerville.

By Mr. Factor:

Q. May I put it that way to you, Mr. Sargeant? Suppose those dealers are put out of business and the manufacturer and the consumer get the benefit of their elimination? Is that the suggestion?—A. Well, Mr. Factor, is that correct? Your theory goes back to the theory of how the dollar can spread itself in greatest purchasing power.

Q. Quite?—A. I mean, that is the principle that is under discussion here. If distributing in large quantities of goods gives the purchaser better purchasing power under the old theory of economics, then as an economist, we will say that the theory might be sound. I wish I could answer the question.

By Mr. Sommerville:

Q. As a practical manufacturer, dealing with the condition such as we have in Canada—widespread, scattered population—what do you say as to whether or not this system of selling by that basis is not destructive to the whole distribution system of your tires?—A. I am not going to undertake to weigh that problem, Mr. Sommerville. That is too big a problem for me to answer.

Q. You are having a very important part in it now?—A. That is correct.

By Mr. Factor:

Q. How is this committee going to answer it, if you don't give us the benefit of your advice?—A. If you want my opinion, and it may be a very biased opinion from a limited field,—but you are taking in a lot of territory. When we talk about tires, tires is only one item in itself.

By Mr. Sommerville:

Q. We are talking about tires and tires only, at the present time?—A. Yes. I think these systems are all sound, and have their place.

By Mr. Young:

Q. Do you think there is any likelihood of the individual dealer or distributor being put out of business by the chain stores or mail order houses? Is it not a fact that every garage would have a demand for tires, no matter what the mail order houses did?—A. Yes, but I think the limit of this type of distribution reaches the maximum some place.

Q. There is no danger of all these other individuals being put out of business?—A. I would not think so.

Mr. SOMMERVILLE: There is just the danger of their purchasing power being very greatly restricted.

Mr. KENNEDY (*Winnipeg*): Whose purchasing power?

Mr. SOMMERVILLE: The purchasing power of the 13,000 dealers who have their investments from coast to coast.

The WITNESS: Their purchasing power?

By Mr. Sommerville:

Q. Yes, their earnings, if their business is cut by this?—A. I don't know. I think that is a part of the individual.

By the Chairman:

Q. Will you tell me, Mr. Sargeant, just on what basis you would figure a 44 per cent discount to a special brand distributor as against a 20 per cent discount to a regular standard dealer?—A. I will merely reflect to you a condition that I know something about; that is that the distribution cost that you can save by supplying tires to a special brand distributor can well be absorbed or saved to you.

Q. Can you show in an analysis that that is warranted?—A. Well, I can in the industry.

Q. But for yourself?—A. Yes.

Q. Can you supply us with that?—A. I would be very glad to submit it.

Q. If you do, it can be confidential. I think that the committee would agree that we keep that just confidentially?—A. All right.

Mr. FACTOR: You have got to take into account the bonuses too, Mr. Chairman.

The WITNESS: I would be very glad to submit that, Mr. Stevens, as representing the Goodrich Company. I can't speak for the industry.

The CHAIRMAN: No, I am speaking of what you know.

The WITNESS: That is correct.

By Mr. Sommerville:

Q. Was there anything further, Mr. Sargeant, in connection with this brief that you wanted to present?—A. Nothing, unless some of you gentlemen wanted to ask me questions.

By Mr. Edwards:

Q. Just before you leave that, you were speaking about these private brand tires. Does not the purchaser demand that his name only be put on that tire? He will contract with you this year, and contract with the Dominion another year. It is his brand?—A. Yes.

Q. Does he not own the brand?—A. Yes, he does.

Q. He furnishes the mould?—A. That is correct.

Q. And all the rest. I think that answers that pretty well?—A. It would be in our case.

By Mr. Sommerville:

Q. Are you an officer in the rubber association?—A. I am vice-president.

Mr. FACTOR: And general manager.

Mr. SOMMERVILLE: General manager of the Goodrich Company.

By Mr. Factor:

Q. Have you anything to say about the rubber footwear situation?—A. Well, I didn't undertake to study rubber footwear, and I would prefer to leave that. I will be glad to answer your questions later on.

Mr. SOMMERVILLE: All right, thank you, Mr. Sargeant. We will now call on Mr. Carlisle.

The witness retired.

C. H. CARLISLE, called and sworn.

By Mr. Sommerville:

Q. Mr. Carlisle, you are the president of the Goodyear Rubber Company of Canada?—A. I am.

Q. And have been for a number of years?—A. Yes.

Q. For a good many years?—A. Yes.

Q. Perhaps you will be good enough to give the committee the benefit of your experience, and of the conditions that exist in the tire industry to-day?—A. Well, when it comes to matters of detailed selling, I will not be so well posted. In speaking of the quantity of private brand tires sold, the statement submitted to you gives the number of tires supplied by members of the tire group in the association. Two of the companies referred to external to the association, I believe, make tires, special brand tires, exclusively; so that fact would increase quite materially, figures showing the number of special brand tires sold. There is a material difference between the prices of tires sold through dealers and tires sold through certain mail order houses. If we were to reduce the list prices of tires sold through the dealer to say 10 per cent above those of the leading mail order houses, it would mean a reduction, I think, of an average in the neighbourhood of 20 or 21 per cent. As to another mail order house, it would mean a very much larger reduction in the list prices to set a 10 per cent differential.

Now, a reduction, as I get it from information in the rubber association, of 21 or 22 per cent, would put every rubber company into red figures, or show every rubber company a material loss.

Q. What would be the effect upon the industry in Canada, generally?—A. Of which?

Q. Of such a reduction?—A. I think, first, it would mean a loss to the rubber company, to the manufacturing company; second, it would reduce the base of selling, which would lower the profit. For instance, if a dealer is making 10 per cent profit, he would make a less dollar profit after the reduction, because the base would be lowered.

By Mr. Ilsley:

Q. Excuse me, but I understood the last witness to say that it paid him just as well to sell those special brand tires as to sell through the ordinary channels of distribution?—A. Mr. Sargeant, and his company, are not selling to the mail order houses.

By Mr. Young:

Q. He said some companies sell exclusively these private brands?—A. Yes.

Q. How do they live?—A. I don't know.

By Mr. Sommerville:

Q. You know some of the history of some of them?—A. One company that is manufacturing special brands, which was organized I could not tell you how many years ago, failed. It was reorganized and then got into financial difficulties. Then there was some more money put in, and I think you will find it in a very serious financial condition to-day, from the information that I have.

By Mr. Young:

Q. How about the other two? There were two or three companies, were there not?—A. There were three. They are very small. One of them is the Hannon Rubber Company. It is a very minor affair, and I think Mr. Hannon is not operating the company at the present time.

Q. It is operating, though?—A. It may be; and I think it has been operating intermittently. It is a company with a very small capital.

Q. You think a small company in Canada can get by on this kind of contract?—A. Well, they have not proven very successful in the past.

Q. But they have not failed?—A. Oh, yes, there have been a number of companies that failed. I don't know from making special brand tires, but a great number of small companies have failed in this country. I believe from seven to perhaps ten have passed out.

By Mr. Factor:

Q. Mr. Carlisle, your company makes private brand tires too?—A. No.

Q. You don't?—A. No. We never have. Now, I will speak of these a little later, these prices, so that you can see about what they are. I will also speak of the quality of the goods. It might be interesting to know that the rubber companies in the association in this last fourteen years have made a net profit on sales of 2.56 per cent, or slightly over 2½ per cent.

By Mr. Young:

Q. How much is that on your investment?—A. Oh, I could not answer that question, because the investments are not always in relation to the amount of capital that is required to operate business.

By Mr. Kennedy (Peace River):

Q. That is all the companies in the association?—A. Yes. Another thing that may be of interest is the trend of prices. I will take that 30 x 3½ tire; that is a cross section. It was a very popular tire in 1920, and at that time it sold for $25.35. At the close of 1933, it sold for $3.96. I would say that the mileage given by that tire, that size tire to-day, is from double to triple the mileage that was given in 1920.

By Mr. Sommerville:

Q. The improvement in the quality of tires has been that great?—A. Yes. At the present time there are a number of conditions in the tire industry that are not profitable. They are not all due to the mail order house or the special brand tire, but a great deal of our trouble is due to unfair prices coming from special brand tires. It is hardly necessary to enumerate all the ills and conditions that are adverse in the industry. I would suggest some remedy by which the industry could be put on an equitable basis where prices would be fair to the consuming public, where adequate and fair returns could be made on invested capital and where fair wages could be paid.

One of the recommendations I would make would be the cancellation of the Combines Act. The principal object, I would take it, of the Combines Act, is the safeguarding of the public against unreasonably high or unfair prices. The public is entitled to such a safeguard. It is also a safeguard to industry, but I think that that safeguard could be brought around in a better shape and in a more constructive way than under the present Combines Act. If you want the maximum of efficiency, you have to have it through organization. That is true of any individual company. All of its different departments have to be coordinated and working in harmony if you are going to get the minimum of cost and the maximum of efficiency. I think the Combines Act does and will, as it stands to-day, prohibit companies from organizing so that they may become highly efficient.

In place of the Combines Act, I would recommend the enactment of legislation giving the Dominion government adequate power to regulate trade and commerce. There are many phases of trade that need regulating, as well as that of regulating high prices. Low prices are as destructive as what high prices are. If you are going to have a well regulated and orderly industry in this country, it means that a company shall earn sufficient money to pay its dividends, to pay adequate wages, to set up reasonable reserves and at the same time be able to give the public a fair price. Industry, if permitted to organize with those objects, I think would accomplish much in the constructive way. Industry, I think, should have the supervision of government where conditions arise in an industry that cannot be settled unanimously by that industry. I am not a believer in public ownership, and I am not a believer in a government operating business or attempting to operate business, but I do believe in the supervision or such things as are vital to the industry of this country, and therefore I heartily recommend legislation of that kind.

By Mr. Young:

Q. You are recommending that the government guarantee profits, are you not?—A. No, I am not.

Q. So there will be an assured dividend, an adequate reserve?—A. No. I say business has to be healthy. For this country to be in a healthy condition, that is the result you want to gain, that is the position you need in an industry. The government should not undertake to guarantee profit or even to run business. The government protects you in your investment in real estate. People cannot trespass on it. They won't allow any nuisances to be built around you, anything to deteriorate your property. But the government gives you practically no protection on your investment when it goes into industry. I think the government owes it to the invested capital of the country, which represents the general people, to give it adequate supervision.

The CHAIRMAN: Well, gentlemen, it is six o'clock, and obviously Mr. Carlisle will have to come back.

Mr. KENNEDY (*Peace River*): He is not going to finish to-night.

The CHAIRMAN: We would ask Mr. Carlisle if he would come again in the morning. Is 10.30 too early?

Some Hon. MEMBERS: No.

The CHAIRMAN: Then we will meet at 10.30; and if Mr. Carlisle will be good enough to come in the morning, we will continue hearing him on this.

Mr. FACTOR: I would like to hear from Mr. Carlisle some practical suggestions to bring into effect his recommendations.

The WITNESS: I will do that.

The committee adjourned at 6 o'clock p.m., to meet on Wednesday, May 23, at 10.30 a.m.

House of Commons, Room 368,

May 23, 1934.

The special committee appointed to inquire into price spreads and mass buying met at 10.30 a.m., the Hon. H. H. Stevens, presiding.

Mr. Norman Sommerville, K.C., and Mr. W. W. Parry, K.C., of Toronto, appeared as Counsel for the Committee.

The Chairman: Order, gentlemen, the minutes of yesterday contain the record of the witnesses heard and certain exhibits filed. I will declare the minutes adopted.

Now, Mr. Carlisle was making a statement last night. Will you come forward, Mr. Carlisle, and continue from where you left off.

Examination of Mr. C. H. Carlisle resumed.

The Witness: Mr. Stevens and gentlemen: My third recommendation is to require all members of an industry to operate in a common organization, but subject to government supervision. My reasons for this: If you get an entire industry into a single organization, you have an opportunity of discussing and studying every phase of that industry, from the position of the weakest company to that of the strongest company. The reason I suggest supervision by the government is in case that this industry could not agree on all points that may be as equitable as it is possible to make them, it would then have an opportunity of referring any of these points of dispute to the government.

By Mr. Kennedy (Winnipeg):

Q. Such regulation, Mr. Carlisle, I presume would also be used for the protection of the public?—A. Absolutely.

By Mr. Young:

Q. Would the members of this industry then have the right to say whether anybody else should enter into that industry or not, or whether a new company should start up?—A. No, they would have no jurisdiction over that. I will deal with that a little bit later. In answering the question by Mr. Kennedy (Winnipeg): My purpose back of any of these recommendations is to get an industry on an equitable and fair basis. Now, to do that, it must be fair to the purchasing public and it must be fair to the different companies engaged in that industry. If the thing is going to be workable at all, you cannot have an advantage to one and a disadvantage to another, and have a condition that is constructive or satisfactory.

By Mr. Factor:

Q. Why do you recommend cancellation of the Combines Act, Mr. Carlisle? —A. For this reason: The Combines Act seems to me to serve one purpose only, and that is the protection of the public against exorbitant prices. Now, the people should have that protection; but the things I complain of in the Combines Act are that it prohibits organization that is economic and constructive. Now,

in the United States they have two laws over there, the Sherman Act and the Clayton Act, to prohibit organization. It did not work well and they are reversing the procedure; and I think that there is strength in economic and constructive work under organization if that work is done honestly and fairly, which you can accomplish by turning over to the government full power of regulation, and you can give to the public the same measure of protection or greater protection than they have under the Combines Act.

By Mr. Sommerville:

Q. You would favour the association of the various companies in an industry for the purpose of eliminating unfair practices?—A. That is right, sir.

By Mr. Young:

Q. Would you have this organization regulate prices?—A. I think they should regulate prices, subject to the approval of the government. I think the government's approval will do this: It will assure the purchasing public that they are getting fair prices, and I do believe in uniform prices fixed on the basis of the different methods of distribution. I will go into that a little bit later.

By Mr. Kennedy (Winnipeg):

Q. Fix their prices and leave it to the different individual companies in the industry to survive by efficiency?—A. That is right.

By Mr. Young:

Q. And on what basis would they fix these prices?—A. I will go into that just now. Now, my fourth recommendation is that there be a standard cost system adopted within the industry. We are discussing the tire industry, so it would apply to that. Each company has its own cost system, it could continue that if it so desired, so that there could be a stabilization of the basis of cost. I think there should be a uniform cost system, and that all companies should compile costs according to that system and submit them to the association, and have these costs audited by a competent auditing company such as Price Waterhouse, or auditors of equal standing.

Q. Would these auditors be competent to judge whether these factories were operating efficiently or not?—A. I will come to that. Now, this cost system I think should undoubtedly eliminate over capitalization. The company that is over-capitalized could not expect a profit sufficiently great to pay dividends on stock that has no intrinsic value; on the other hand, you may have companies that are strong financially and have returns from capital.

By Mr. Sommerville:

Q. That is, invested capital?—A. Invested capital. I think returns from capital should not enter into the cost of production, any more than over capitalization should enter into the cost of production.

Q. When you refer to invested capital, you mean capital invested in outside investments?—A. Yes.

By the Chairman:

Q. Just a moment on that point, Mr. Carlisle. What would you do in regard to the modern practice, to use a slang phrase, of "unloading on the public" by way of bond issue the capital structure? In other words, in recent years the tendency has been to get away from shareholding capital to mortgage bond capital. Would you have interest on the mortgage bonds form part of your operating cost, or be considered after the operating cost has been fixed and the profit on operation has been determined?—A. I would make it after profit has been determined

Q. Whether it is an issue, or a dividend on stock?—A. That is right.

Q. That is, that consideration of the payment of winnings on capital should be out of the profits after the operating surplus had been determined?—A. That is right.

Q. A very sound principle?—A. Now, if I may continue: the procedure of costing along this line; now then, to make it further equitable even under these conditions—there will be some companies whose costs under this system will be high, others will be low. It would not be to the interests of the public to base your costs on the most efficient company, neither would it be fair to the industry to base your costs on the company that is the most inefficient. Therefore, I would recommend that you take these different costs, whatever number that would be, and divide it by the number of companies submitting costs; in that way you would get an average of costs.

By Mr. Young:

Q. Now, in the case where a company discovers some new way of cutting costs, and is able because of that to reduce its costs materially, you would not let them do so?—A. I do not think it is to the interests of the people of this country to do that, because that has a tendency to monopoly.

Q. You do not think it is in the interests of the people to pass on to the people any of the advantages of modern invention, or improvement of method, or cost reduction?—A. Oh yes, that is done; but that is more or less common to an industry.

Q. It is generally done, isn't it, by one member of the industry first and then the others are forced to follow suit or get out?—A. That is the way it has been done, and that is responsible I think for a great deal of our social troubles to-day.

Q. And you want to stop that, do you?—A. I want it equalized to some degree in the industry. If you are going to have an industry that is stable you have to make some provision for matters of that kind.

By Mr. Ilsley:

Q. Does not your scheme foster monopoly rather than the alternative one suggested by Mr. Young. Mr. Young suggests that when a new company comes along and is able to cut the costs, say 50 per cent, and the other companies that cannot go to the wall; you say that is the thing that tends to foster monopoly. Now, I suggest that your plan keeps the whole business of the country in the hands of the old companies?—A. Oh, no.

Q. Does it not?—A. I would say that the old companies are the ones that have the lower cost. When I am arguing this I think I am safe in saying when it comes to tire costs; that our company would have the lowest cost of any tire company in this country; and still I am taking the opposite view to get away from monopoly and to give a fair chance to the industry. Now, that is the position of our company; and I will tell you why I make that statement: First, our costs are written down to a very small amount; I believe our equipment plus installation is written down to about 16 or 17 cents on the dollar, our plants to about 47 cents; we have a cash position of about $7,000,000; we have a reserve of $6,500,000; and we have an earned surplus of close to $8,000,000. Now, the thing that he is advocating, if I follow the suggestion of Mr. Young, would put us in the position of further increasing the amount of business we have in this country.

By Mr. Sommerville:

Q. In other words, by reason of the strong financial position you are in, without any borrowed capital, you would be in a position if you wanted to do so to wipe out the industry?—A. I do not know whether it would wipe them out, it might make it embarrassing for some.

Q. I mean in a general sense, you could wipe out a good many of them?—A. It might be.

Q. And would limit the numbers that would be in the business and make for the possibilities of a monopoly in the hands of a smaller group?—A. But let me proceed with this, these are just suggestions, and I do not want to get into an argument. Having the basic cost put up, that I think is the fairest way I could suggest. Now then, you are selling to the different trades and the price is made to these different outlets for your product. They should be sold at different prices for various reasons. The manufacturing company should get a profit. That should be determined I think by this association with the approval of the government. The one who should receive the lowest cost is the car manufacturer, the reason being that you make your shipments in carload lots, you have practically no credit loss, and there is very little selling expense; another reason why the car manufacturer should have a low price, is that the more cars there are sold in the market the greater are the outlets for tires, and the lower your cost on most any article the more widely and the more readily it receives a market.

By the Chairman:

Q. You are now referring to tires being sold to car manufacturers?—A. I am now referring to the tire manufacturer selling his product. When you sell a car manufacturer, he should get the lowest price owing to the nature of his business. Now, the next outlet will be the jobber, he should be charged a higher price than the car manufacturer; but the jobber has to re-sell these goods, he has to stand the credit loss which applies to all sales, so he is at a considerable expense. Now, your third outlet is the mail order houses—they should be charged a somewhat higher price than the price charged to the jobber, because the mail order house will probably sell at a lower price in regard to the spread, in so much as they do not give a service and they sell for cash. Their expense is largely their catalogue, and I think most of them charge express. Now, the next outlet is the chain store. The chain store becomes competitive with the dealer. Some chain stores do not give a service equal to the dealer, other chain stores do; but those who do not should get a somewhat lower price than the dealer because they do not give a service equal to the dealer. Now, your fifth outlet is the dealer. There is where your national expense comes in selling. There are, it was stated yesterday, about 13,000 dealers in this country. This is a very large country, it has a limited number of cars, and the expense of selling through the dealer is quite great, and you have a maximum of credit loss. Now, to be fair to all these different outlets you ought to have a differential in price that is commensurate to the service that they give and the expense of doing business with them.

Q. Mr. Carlisle, have you ever thought in your business of some principle upon which you would determine the differential that would apply in each of these several divisions?—A. Yes, I have; and it is not so difficult to work out. That ought to be worked out in common with the industry, and it is not difficult to work out.

Q. Yes, but is your method of working it out arbitrary, or is it on a principle that could be invoked and would be applicable to this that and the other industry?—A. One principle is, make no sale below cost.

Q. That is fundamental, I think?—A. The other principle is that your base of cost is equitable to the industry, and excessive or under capitalization is eliminated in computing these costs; then the percentage at which you sell over cost depends entirely on the outlet. Now, here is one of the troubles in the industry, that a person who is reselling a product, if he could buy that product

at an exceptionally low price, whether he deserves the market or not, has it within his power to disturb the reselling of these goods, because he has an advantage on his purchasing over others, and if these margins are narrowed so that there is not too big a spread in the original purchase between one class and another class, you limit the extent of your selling disturbance.

Q. What gives me a good deal of concern is, you take your set-up here, or take your Rubber Footwear Association in which you are strictly interested but it comes under the same category; the manufacturer has an "A" list, a "B" list, a "C" list and a "D" list; as far as I can recall they are on that system; now, what principle directs the manufacturer in determining what the discount shall be for the "A" list, the "B" list and the others?—A. I do not know anything about the shoe industry, but what will determine it in the tire industry as I said before is the service given.

By Mr. Sommerville:

Q. That is, the value of the service as between the different distributors can be reckoned in the percentage?—A. That is right.

By the Chairman:

Q. As a matter of practice that is not done?—A. No, that is one thing I want to correct.

Q. In the matter of practice it is an arbitrary thing?—A. That is right.

Q. One manufacturer may give more than another manufacturer, and he may give a mail order house that has a good order even a greater discount?—A. That is right.

By Mr. Sommerville:

Q. He may take dictation from a big customer and allow extra bonuses, or extra discounts that are not generally allowed to the trade?—A. Yes.

Q. That is one of the abuses which you think should be corrected?—A. I am referring to that a little later.

By Mr. Ilsley:

Q. Would you mind explaining what you mean by the service given. It seems to me you laid down two prices; one was the cost of doing business with the various persons to whom you sell, that is perfectly understandable. I should think you would give the largest discount to the person with whom there is the lowest cost doing business. But what about this other principle, the value of the service given; what do you mean by that?—A. Now, you take a dealer,—we will compare the dealer with the mail order house. The mail order house gives practically no service. If you want a tire you have to write for it, you have to send your money in for it, or else he sends it C.O.D., you have to wait for delivery and if there is any mistake in the shipment, it gives you trouble and you have to go to a depot somewhere else to get that tire. Now, contrast that with the service given by the dealer. When you go to the dealer he has the tire in stock. You get immediate service, he may apply the tire and you know what kind of a tire you are getting. Now, there is the difference in service.

Q. The dealer should have the lower price, or the higher price?—A. You would have to charge the dealer a higher price, because it costs you more money to sell to the dealer.

Q. That is what I am trying to get, I understand that perfectly; but the other principle, if the dealer gives more service there—?—A. He charges more money to the consumer.

Q. Why do you charge him more?—A. Because it costs more to sell.

By the Chairman:

Q. I think what Mr. Carlisle is driving at, Mr. Ilsley, is this: that while on the basis of his costs of selling to a distributor—we will take the two cases, the mail order house as against the dealer—the mail order house might be entitled to a much lower price than the dealer, because it costs the manufacturer less to sell him. But Mr. Carlisle now argues, and I think properly, you ought to take into consideration the service given by the dealer, and therefore you should narrow the discount that the manufacturer gives as between the dealer and the mail order house. And I think Mr. Carlisle wishes, because I had some conversation with him before he came here, to emphasize that this practice of selling to mail order houses at these exceedingly low discounts is not a fair practice.

Mr. Ilsley: I see the argument now.

By Mr. Sommerville:

Q. That is one thing; then is it not further in your mind, Mr. Carlisle, that the difference between a $200,000 order and a $300,000 order may not be an additional 6 per cent, as is frequently allowed; in other words, for the volume of the order the discount is in many instances entirely out of proportion to the value of the order?—A. Yes. There is one thing more that I want to refer to in figuring these costs, and that is forward commitments. You take companies that are well financed. On low markets they can buy large quantities of merchandise, but the smaller company is not in a position to do that. I think that the forward commitments is a matter of investment, and should be considered as a matter of investment and not a matter of costs; and I would suggest on this cost system that costs would be revised every three months on the current market price. Now, here has been the practice in the industry when the market has been on the decline. The manufacturer stands to lose on that market. When the market is on the up-grade, the profits that he may have in his forward commitments as a rule are given away by selling goods at a low price; so he does not benefit to any great extent on the up market, and he loses 100 per cent on the down market.

Q. And is that particularly so in the matter of contracts for private brands?—A. Well, I would suspect so; I do not make them, so I do not know.

By Mr. Senn:

Q. When you speak of merchandise you mean your supplies of raw material?—A. Yes.

By Mr. Factor:

Q. Having regard to basic costs, who would regulate the wages paid to your employees?—A. I think that the wages paid should, to some extent, be determined by the operating company. I do not know any reason why it should not be dealt with by the organization.

By Mr. Sommerville:

Q. The same supervision as in the case of your other elements?—A. Yes, at the present time I think each company is operating independently on a wage scale.

By Mr. Factor:

Q. Would you have government supervision?—A. I would not see any reason why they should not supervise that the same as anything else.

By Mr. Kennedy (Winnipeg):

Q. In this set-up of an industry in which you provide for matters like rules and regulations, say they will play the game in that industry on rules such as for athletics if you like, and then you suggest government supervision, regulation or policing, we will call it?—A. Call it policing, or supervision.

Q. Now, the weakness or strength of such a set-up and its working out will depend a great deal on the nature of that supervision, will it not?—A. That is right.

Q. Now this is purely asking for an opinion, but you have had long experience in life and business, have you a faith that with such government supervision you are likely to get a more or less perfect condition of affairs; is there an inherent weakness in such supervision?—A. There would naturally be inherent weaknesses in it. But I think there are certain conditions existing in business, especially under the present conditions in this country, and the world's condition, that cannot be handled unless you do have a policing by government.

Q. In your judgment, that sentiment is growing?—A. I think so.

By the Chairman:

Q. Just following that question of Mr. Kennedy's, Mr. Carlisle, in your opinion would publicity in an inquiry by a government supervisory body be, shall I say, a salutory influence in the proper direction of industry, even though they had not the power to dictate?—A. I think it would be detrimental instead of helpful.

Q. You think it would be?—A. Yes, I think this: first, that people as a class are fair; and second, if the government had supervision or policing power, it would go a long ways to have different branches of industry regulate their own affairs on a fair basis. Where they could not come to an agreement, there is the place for government to step in and help them adjust the things that they are not able to adjust themselves. I think the amount of supervision that would be required of government would be the minimum. The fact that it exists is just the reason why it need only be the minimum.

By Mr. Kennedy (Winnipeg):

Q. Are you familiar with the legislation—it is almost parallel, I think—or the efforts made in legislation in certain western provinces in connection with the milk supply?—A. Yes, and other things. Take Alberta—

Q. It is along that line you recommend?—A. Yes, I think it is constructive.

By Mr. Senn:

Q. You think that could be applied to practically all industries?—A. Yes. I am not arguing the case of tires alone. I think it is applicable to all industry.

Q. That is in the line of the codes under the N.R.A. that you are advocating?—A. I think they have gone too much into details of operations. It is not advisable for governments to do this. There is a difference between policing and running industries. I think the N.R.A. has gone into almost every phase of operation, which I think is beyond the scope of government.

By Mr. Factor:

Q. I take it that you would expect from such regulations at least two results. One is the elimination of unfair practices?—A. That is right.

Q. And second, the stability of an industry that would work for the benefit not only of the manufacturer but the consumer and the producer?—A. Yes, for the benefit of the country.

By Mr. Edwards:

Q. Mr. Carlisle, I don't know whether I have it just right or not. You are not suggesting that additional supervisors be put on your industry like inspectors of various kinds, of which there are so many; but you are suggesting rather an arbitral board to decide, if the company or group itself cannot decide upon any one thing?—A. I think that should be left to the decision of the government. But my thought is that the department that is in charge of trade and commerce could operate this to the best interests of the country, the best interests of industry, with the minimum cost. It is not difficult to tell when things are wrong and when they are right, and it is usually not difficult to correct them. But when you get down into the details of operation, there is where you get into confusion. I would keep this on a high policing basis, with the government not entering into operations at all, but making decisions on policy where an industry fails to agree, in the interests not only of the industry but the people of this country.

Q. I asked that question for this reason: As you are aware, and as many of us are aware in industry, we are now supervised. For instance, in different departments we will have an inspector with us every one, two or three weeks. I think we have a great many too many. But your idea is rather an arbitral board to adjudicate on the problems that industry cannot handle itself?—A. Yes, that is right.

By Mr. Senn:

Q. Not in operating methods, but for the purpose of supervising marketing?—A. Both.

Q. Both?—A. Yes.

By the Chairman:

Q. There is one point I would like to make clear. Your scheme would involve, shall I say, an obligatory association. The members of the industry would be more or less forced to become parties to the organization or association?—A. That is what I recommended in my third recommendation.

By Mr. Kennedy (Winnipeg):

Q. Just one point there. I am interested in this: Among your suggestions was the cutting out or repealing of this Combines Act?—A. Yes.

Q. In this set up of yours, to be practical, one meets with this situation: In a given industry there is nothing inherently wrong in the members of an industry associating together for the purpose of maintaining a fair price. There is nothing fundamentally wrong in that?—A. I think it is constructive.

Q. Under an anti-combines act—the purpose of which I do not need to state, it being obvious—it is not sufficiently elastic. From the very fact that they do associate for the purpose of maintaining, we will say, a fair price, they become guilty under the act?—A. That is right.

Q. Therefore you would do away with any anti-combines act, and accept the principle that association for proper purposes should not only be permitted but is desirable for the industry and for the public in general; and such a body as you suggest would be sufficiently elastic to take the individual case and say whether it should be done or not, is that right?—A. That is right. Also that board: with organization for policing, by your government board or by your minister of trade and commerce so that there can be no unfair practices enter into this organization.

Q. The trouble with such an act as an anti-combines act is that they seize upon one phase of a thing?—A. That is it.

Q. Which is an offence, and make all such associations a crime?—A. And stifle progress.

By Mr. Senn:

Q. I fully agree with the principle of price maintenance. But would this board or arbitral tribunal which you would set up have the right to say when prices were too high?—A. Yes.

Q. That is one of their functions?—A. That is right.

By Mr. Kennedy (Winnipeg):

Q. And when they are too low?—A. Yes.

By Mr. Edwards:

Q. Following along in this line, I understand, of course, that you are in favour of price maintenance, a fair price?—A. That is right.

Q. So am I. In your opinion, is it possible to pay fair wages to your employees without having fair prices for your merchandise?—A. No, it is not.

By Mr. Kennedy (Peace River):

Q. Mr. Carlisle, Mr. Stevens asked you a little while ago about investigations. If we had a set up such as you suggest, we would have at least three different parties or classes interested: Labour, for instance; the people in the industry and the public. It would be very difficult to avoid investigations of particular industries, public investigations—once in a while, anyway—because situations would be bound to arise when one group would say they were being exploited by the other. Is that not so?—A. I don't know why it should be public. It should come up before your government organization. I am very much in favour of having that handled by the Department of Trade and Commerce. That department would know whether there were any unfair practices or not. It should be in a position to remove them. When you get people across the table, it is not difficult to settle problems with them, in any sort of dispute.

Q. Sometimes the government have a very hard time convincing the public that they are doing the right thing?—A. I know. That is true.

Q. That is one of the problems?

By Mr. Edwards:

Q. Mr. Carlisle, on this further point: Take such a board as you would set up in a given industry, we will say the rubber industry, for instance. In fixing a minimum price for that commodity, of course the element of world competition, competition of all sorts comes in. Would not such a board have to know pretty nearly as much about an industry as, say, a man like yourself who has grown up in it? I am just wondering about that, not only in that industry, but every industry. You take the iron and steel industry, where a firm builds up, goes through a family from father to son and so on down; they build up and are able to compete anywhere in the world because of their special knowledge. Are you not going to set a pretty high standard for those boards?—A. The board would get the facts, whether it pertains to internal selling or export business; and having the facts, I think the board or government agent could form as good a conclusion as if he had a complete operating knowledge.

Mr. Edwards: Again on that line, Mr. Carlisle, it has been suggested to me by one of our large furniture manufacturers that a man thoroughly competent in understanding the furniture business—possibly another one on the textile business, and another one on iron and steel, which covers innumerable lines—that men of that type be set up as a board. Of course, I think that suggestion is rather primitive, but it is worth following along rather than doing as has been done with some boards that have been set up, without really any thought as to the qualifications of them to judge the matter before them. There are many things in industry that are really only known to the men who have gone through the business.

By Mr. Kennedy (Winnipeg):

Q. Mr. Carlisle, under this system of regimentation of business as distinguished from the old free competition, you might say, is there anything to be said, or is there nothing to be said in favour of the old law of the jungle prevailing,—the survival of the fittest?—A. Oh, I think in all life the survival of the fittest wins. That is true in plant life as well as animal life or human activity, that the survival of the fittest will win. During these present disturbed conditions, I think that you will further increase monopoly if you will leave it to the survival of the fittest. I think now we want more decentralization than we want centralization. Centralization, I think, has a lot to do with the amount of unemployment that we have to-day, and if you increase the centralization it will not be long until a few concerns will operate the entire business of the country.

By Mr. Senn:

Q. Mr. Carlisle, that is just one matter that has been bothering me to a certain extent. Any system of price maintenance must necessarily take into account the cost of production. Presumably a plan that operates by hand labour must have a higher cost of production than a plant that is operating largely by machinery?—A. That is not necessarily correct.

Q. But is it not true in general?—A. Your machine only becomes efficient and economic when you have sufficient production to make it so. Now, we have a machine in our factory which, on low production, would be a liability. When we are on high production I think it takes the place of eight men.

Q. Well, the question is just how any board is going to determine the amount of machine production that could be successfully used in any plant in competition with hand labour?—A. I think that that would have to be worked out by the industry, and not by a board. If the board would ask that industry to use the maximum of manual labour instead of machine labour, I think the industry could go a long way in doing that.

Q. Would you advocate the use of more hand labour rather than machine labour in ordinary industry—in your own industry?—A. As far as industry, domestic industry, is concerned, it would be a constructive thing to do; because you have got to either employ people or you have got to support them, and people are better employed than they are supported. It is a better state of society.

Q. In other words, you think that machine production has gone too far in industry to be in the national interests?—A. I am inclined to that opinion.

By Mr. Heaps:

Q. Would it not be just the same instead of increasing the cost of production by hand labour, to decrease the number of hours?—A. In decreasing the number of hours you are liable to get a cost on your product that makes it too expensive to sell, especially in foreign markets. In our company, during this slack time of employment, we have gone to the six-hour shift, so as to distribute the work to the greatest extent possible. Now, while our wages appear low, I think they are in keeping and are better on the average than most industries. At the same time, the weekly earnings of the people is quite low owing to the shorter hours worked. If you put up your price per unit product or per hour, you get too high a cost, and then it reacts on you.

Q. Would not the same thing apply if you went back to hand production? —A. No. You can operate many of your operations by hand at no increased cost. Some of them you can't.

Q. If you employ more labour, as you suggest you would by hand labour, how could you produce at the same cost?—A. If producing by hand does not

cost you more by hand per unit than by machine, you are not increasing your cost.

Q. You don't favour reduction of hours at all; you simply replace machinery by hand labour and increase the number of persons employed?—A. I think it is better than the other.

Q. Do you think that by the scheme you suggested here you could stabilize employment?—A. I don't know whether you could or not.

Q. Would it improve, in any way, the position of the labourer?—A. Yes, because you would stabilize your return to the company.

Q. If you stabilized the return to the company, would it improve the position of the man employed by the company?—A. Of course it would.

Q. Would it increase his wages? -A. If the company is not making money, it can't very well afford to pay high wages, can it?

Q. That is true; but would it give to the man employed by the industry an annual guarantee for his labour?—A. I don't know that you can guarantee it. The way that industry is operated—the way that we have operated, when we are making a profit, a substantial profit, we increase the wages.

Q. But you are asking this morning that in some way the government regulate prices?—A. Yes.

Q. You have got to give to the industry a reasonable return, but don't you think that the man engaged in the industry is entitled to consideration?—A. Certainly.

Mr. Sommerville: I think Mr. Carlisle prefaced his statement by saying that you could not have fair wages without fair prices.

Mr. Heaps: Yes.

Mr. Sommerville: And to insure a fair wage would require a fair price.

Mr. Heaps: I don't think in anything Mr. Carlisle suggested it would guarantee to the persons employed in the industry anything in the way of permanence, or a guaranteed annual wage.

Mr. Factor: He said he was in favour of the government regulating wages too, in arriving at the prices.

By Mr. Ilsley:

Q. To put your scheme into effect would mean the institution of a system of codes in this country, would it not, very much like those instituted in the United States?—A. I don't think so.

Q. Well, along the line of Mr. Heaps' question, if the government regulates prices—which it really would—it would have to regulate wages too, would it not?—A. Yes.

Q. That would lead the government to the position where they regulate all the things that are regulated by the codes in the United States, inevitably, would it not?—A. I think not.

Q. What would not be regulated here that is regulated there?—A. Oh, they go into a lot of detail there in operations. They have interlocking codes, and I think their operations there are too cumbersome.

Q. Have you made a study of the operation of the code that applies to the rubber tire industry in the United States?—A. Yes.

Q. Would you care to give an opinion as to how it appears to be working out?—A. It has only been in operation for a very short time, but I think it has made improvements.

Q. It has made improvements, you think?—A. Yes, decidedly so. I will take some of these things up a little later.

Q. As I understand it, there are perpetual hearings over there on the question as to whether the codes are being carried out by the industries or not. Is that right?—A. I think that is true.

Q. Would you not have to have an immense governmental organization here to enforce the understandings that would be arrived at between the various companies in an industry?—A. I think if the penalty were severe enough, you would not have any trouble enforcing them.

Q. By a system of penalties?—A. Yes.

Q. You suggested supervision by the Department of Trade and Commerce, didn't you?—A. Yes.

Q. Don't you think that that would be entirely inadequate for the industry of Canada, to place it under the supervision of one department of government?—A. I would be willing, as far as I am concerned, to submit to that department.

Q. But your recommendations do not apply only to the rubber tire industry. They apply to the industry of Canada generally?—A. That is right.

Q. It would surely mean an immense increase in the number of regulating officials in the country?—A. My thought is this: That an industry should regulate itself. Where it fails to regulate itself, where you can't get an agreement, where a majority of that industry recommends a certain thing, to submit that to the government for the government's final decision whether that shall go in or whether it shall not, whether it should be modified or whether it should not.

By Mr. Sommerville:

Q. You would entirely leave it as an industry governing itself?—A. Yes.

Q. Subject to supervision?—A. Yes, and to arbitration by the government.

Mr. ILSLEY: That is exactly what took place under the N.R.A.

The WITNESS: Oh, they go further into it, enforcing conditions there. They go more into costs and things like that.

Mr. ILSLEY: The government would have to do that.

By Mr. Edwards:

Q. Don't they set down rules and regulations and everything else for the running of your industry?—A. Yes.

By Mr. Ilsley:

Q. In the States?—A. Yes.

Mr. ILSLEY: In the States the industries are invited to make codes themselves. If they fail, or can't agree on satisfactory codes, the government steps in. That would be the feature of your recommendation.

By Mr. Edwards:

Q. I think up to the point where they are asked to make codes we are in agreement. But your idea is that instead of being supervised, with a host of supervisors in every industry, where they can't decide upon matters themselves, they simply refer them to arbitration by the Department of Trade and Commerce?—A. Yes, bring it up and submit their facts, just like you would bring your case to a court for a decision.

Q. I think Mr. Ilsley had the idea, judging from his question, that it would be an expensive proposition to supervise these industries. It would not necessarily be that?—A. No, I don't think so.

By Mr. Kennedy (Winnipeg):

Q. You would have the minimum of interference, but the board would be there in case of need?—A. That is all.

By Mr. Senn:

Q. Just one more question. Do I understand that you do not advocate a board of this nature taking cognizance of a complaint, say, from a consumers' organization?—A. Well, yes, they should.

Q. That would open up the whole question?—A. If there is a complaint against an industry of that kind, it would be up to the industry to inform the government whether that complaint was correct or incorrect.

By Mr. Ilsley:

Q. As I understand it, they have elaborate hearings at Washington all the time, immensely elaborate hearings?—A. They do.

Q. I understand that they are going on continually, covering 600 or 700 industries,—and that the budget of the government is run up from about $2,000,000,000 to about $10,000,000,000 a year. If the same were done here, the budget instead of being $400,000,000 would be $2,000,000,000, perhaps not entirely due to that, but that is one of the chief features of it. Do you think that system as applied to Canada would be practicable or in the interests of the people?—A. Not at that expense, but I don't think it has to go to that expense, or any great expense whatsoever.

Mr. Sommerville: At the present time there is no system of penalties under the American codes. There is a system of appearing before a court.

Mr. Factor: There are penalties provided for breach of the codes.

Mr. Sommerville: The only penalty is removal of the sign.

Mr. Heaps: No.

Mr. Factor: No, there are penalties.

Mr. Sommerville: They are very trifling.

By Mr. Factor:

Q. Mr. Carlisle, would you favour the government limiting the profits earned by industry?—A. They could do that by limiting the price.

Q. If, for instance, the Department of Trade and Commerce found that a certain particular industry was making exorbitant profits, you say you would favour regulation of those profits by having the price reduced?—A. I think it is in the interests of industry to do that. I just want to make one remark about high profits. I don't know of anything that is more destructive to industry than that and I will tell you why. It invites and does create competition, and you get over-built industry which in the future disorganizes and practically eliminates profit from the industry. I think that high profits are strictly dangerous to any industry.

Q. We have had an illustration here in the tobacco industry—if I may express my views, and the members of the committee—which made exorbitant profits. How would be government regulate the profits earned by the tobacco industry under your scheme?—A. Reduce their selling price, or increase the price they pay for their products.

Mr. Young: That might help control the Imperial, but then you put the smaller manufacturers out of business. They say they can hardly exist with the present prices.

By Mr. Sommerville:

Q. You would do away with the unfair practices of which they complain? —A. Yes.

Mr. Sommerville: Then they say they can get along.

Mr. Factor: That does not help the problem of eliminating the smaller manufacturers. If you are going to increase the price of the raw material and decrease the price of the product that he has to sell, the small manufacturer would be out business, out of the picture.

The Witness: May be the small manufacturer is paying a great deal more for his raw product than the other fellow is.

Mr. Young: That was not the evidence that we had.

The Witness: I don't know.

Mr. Young: The evidence was just the reverse.

By Mr. Factor:

Q. Is there any practical suggestion you can give this committee as far as regulating profit goes, if the government or the department finds an industry earning exorbitant profits? You say it does not help in the industry. Would you give us the benefit of your advice or some practical suggestion on reducing those profits?—A. Lowering the selling price.

By Mr. Sommerville:

Q. That gives an advantage to the consumer?—A. That is right.

By the Chairman:

Q. What would you think of a graduated income tax on corporations instead of a flat rate, similar to what you put on private incomes, the higher the income the greater the tax?—A. I hardly think it is fair, for this reason: You take a company that is efficient, properly financed and is putting all of its energy into its operations. I think it is unfair to take that profit away from the company, and to compare that with the company that is inefficient, improperly capitalized and is not putting proper effort into its business. You are penalizing the fellow for efficiency.

By Mr. Kennedy (Winnipeg):

Q. Would there not be a reaction from such a conscription of profits tending to make a concern disinterested in building up?—A. Certainly. Take away all incentive.

By Mr. Senn:

Q. There would also be the danger of the company increasing its capitalization, would there not, to make its profits?—A. I think it would be decidedly detrimental to the industry of this country to put on a graduated tax.

By Mr. Young:

Q. Mr. Carlisle, your plan contemplates selling the product to the consumer at a price that will give to everybody that has touched it so far an adequate return, is that right?—A. That is right.

Q. What will you do with an industry that sells its product on the world's market where you cannot control the price?—A. You mean export?

Q. Yes?—A. You will have to meet that. If you sell on the export market, you have to meet it in quality of products, meet it in price, and meet it in service.

Q. Very well. You have industries in Canada that sell the bulk of their products within the country?—A. Yes.

Q. And in that case you can apply your system—we will say you can—and charge the consumer prices sufficient to meet all your requirements. But when you go to the export market, there is a place you can't do that. How are you going to compensate those people for the additional price that they pay for the things that are sold entirely within the country?—A. I don't get your question.

Q. I mean this: In the tire industry, for example, by this scheme of yours you can sell those tires to the public at prices that will enable you to pay adequate wages, maintain your dividends, build up reserves, allow for depreciation and all that; but when you come to sell in wheat, you can't do that. You

can't raise the price of the farmer's wheat by a single cent, but yet you make him pay an extra price for his tires?—A. Well, because one industry of a country is unfortunate in its make-up is no reason for you to put all the industries in the country on a nonprofitable basis.

Q. The wheat industry is not the only industry. Our lumber industry is in the same position, and several other industries that depend on the export market. In your own industry here I find that the price of rubber and its products has declined from 100 in 1929 to 84·6 in 1934; and the bulk of that decline, I believe, has come from the decline in the price of raw rubber. But in farm products the price has declined from 100 in 1929 to 57·9. That is not wheat alone. It is all farm products. There you have a very large class of this community whose income has been cut almost in half; and you are going the other way now with a scheme to make these people pay more for everything they buy, but you are powerless to increase the price of what they sell?—A. Well, your thought is that all industry should be brought down to the unfortunate position of one industry?

Q. I am asking you this: When you find one industry in this unfortunate position, how will you justify a plan that proposes taking more out of them and giving it to others who are not so unfortunate?

Mr. Sommerville: Well, you are not doing that. You are not suggesting that.

Mr. Ilsley: Let us have the answer.

Mr. Sommerville: That is not what Mr. Carlisle is suggesting.

Mr. Young: That is my question. I want an answer to it.

Mr. Sommerville: Mr. Carlisle's suggestion is that you improve industry so that it may help all in the country.

Mr. Young: Mr. Carlisle's suggestion is that they would charge a price for the product, and no doubt that will enable industry to do all the things that he outlines. I say that involves making the farmer pay more for the things he buys.

Mr. Heaps: No, he has not said anything of the kind.

Mr. Young: I say it does.

Mr. Heaps: Mr. Carlisle has not said that.

Mr. Ilsley: It does. It is in the United States.

Mr. Heaps: Is it not possible to reduce the cost by the method you suggest?

Mr. Young: It is. Mr. Carlisle contemplates reducing the cost in order to raise the profits.

The Chairman: Just a minute, gentlemen; we are getting into an argument across the table. I think we should allow Mr. Carlisle to proceed with his statement, having in mind the rather lengthy question, and see if he does not deal with it.

Mr. Factor: I would like to hear Mr. Carlisle who is an authority in industry; I would like to hear his observations on this particular phase of it.

Mr. Ilsley: Mr. Young's question, I think, is a perfectly legitimate question.

The Chairman: But let us give Mr. Carlisle a chance to answer.

Mr. Kennedy (*Peace River*): The question is based on this idea, that Mr. Carlisle is suggesting something that will lead to an increase in prices, and I think we ought to get from him whether that is so or not.

The Chairman: All right, let Mr. Carlisle proceed.

The Witness: Will you state the question, Mr. Stevens?

The CHAIRMAN: Briefly stated, if Mr. Young will permit me the question is this: That the producer of wheat has to market the major portion of his product on the export market and is, therefore, subject to world competitive conditions; he intimates that your proposal would develop a more or less sheltered condition for Canadian industries manufacturing the goods that the farmer has to buy. How, therefore, will you justify to the exporter of wheat the position that you put him in by forcing him to pay more for his goods that he has to buy in Canada?

The WITNESS: His question presupposes that this scheme means an immediate advancement in price of manufactured goods and it does not do anything of the kind. My scheme is for the stabilization and fair practices in industry, and if that is done I think that the industries could operate on a profitable basis to themselves and profitable for the country and still not increase its prices. Just because you are stabilizing prices and because you are introducing a unit in industry does not mean that you are raising prices.

By Mr. Sommerville:

Q. You are avoiding— —A. The disturbing elements in business, and I am not talking about price increase; I am talking about price regulation instead of price increase.

By Mr. Factor:

Q. Yes, but under present conditions, Mr. Carlisle, in order to stabilize industry you will have to increase your prices.—A. It would be the last thing that I would want to do if this was done to-day, as far as Goodyear Rubber & Tire Company is concerned; I would not increase prices.

By Mr. Kennedy (Peace River):

Q. For instance, Mr. Carlisle, applying it to, say, the tobacco industry, such regulation might result in reducing prices?—A. Yes, sir.

By Mr. Young:

Q. Well now, just going back for a moment, the price of rubber and its products dropped from 100 in 1929 to 84·6 to-day, and the price of farm products in the same period dropped from 100 to 52·9. Now, is that what you want to maintain?—A. I have got nothing to do with that.

By Mr. Ilsley:

Q. Mr. Carlisle, the result of codes in the United States has been to increase prices in practically all the big industries.—A. That has been the purpose of their government. The present United States government started out with the determination to raise prices in the United States. I think it is a detriment instead of a benefit. This country is an export country, naturally so, and it would be more of a detriment than anything else to increase prices. I am not advocating increasing prices, I am advocating stabilization of industry.

Q. Yes, but I thought it was pretty well agreed that the effect of codes, doing away with low labour costs and all other low costs, and giving everybody a fair return, guaranteeing it to them, placed a great big burden on industry which has resulted in higher prices, but perhaps I am wrong in that.

The CHAIRMAN: Mr. Carlisle, will you now proceed. I think we have perhaps bothered Mr. Carlisle a little too much, and we will let him proceed with his statement.

The WITNESS: Now, the next thing that I would call your attention to is a better administration of the Companies Act. That may appear somewhat afield from price fixing or price maintenance, but it has this effect on industry, that a great deal of the ill effects that we have in industry are caused directly by the maladministration of the Companies Act; companies have been allowed to increase capital; companies have been brought into existence with capital that was beyond their requirements, and these stocks and securities were sold to the public when the public has no chance of getting a return of its money or an adequate return on its investment. Another thing, companies are brought into existence without a careful study as to whether that company has a chance of success or whether it has not, or whether the industry is overbuilt or whether it is not; the nature of the operation of the company is often not investigated. That was shown here yesterday, that this industry has $76,000,000 of invested capital; I called your attention to the price of a tire in 1920 which was, I believe, about $21.

Mr. YOUNG: $25 you said.

The WITNESS: Well, that tire to-day is selling for $3.96. Its mileage has been doubled or trebled. Now, to get the increase of mileage that is in the tire it has cost many hundreds of thousands of dollars, perhaps going into the millions in development expenses.

By Mr. Sommerville:

Q. In research work?—A. Yes, in research work. Now, the public has got the benefit of that. I take exception to licensing a company to manufacture, say tires, where this company has no laboratory, where it has no engineering department, where it is contributing nothing to the future of a product. That company comes in and copies your product and sells it at a price that is demoralizing to the whole industry. I think that is one of the things that should be remedied.

By Mr. Factor:

Q. How, Mr. Carlisle?—By prohibiting companies from entering into business?—A. Unless they are qualified to go into business, and unless there is room for them to go into business. You say that would mean a monopoly for those who are already in business. If you want to distribute business to a greater extent, when those who are in business apply for additional expansion through Letters Patent it may not be wise to grant them; but if there are five companies that can supply the market and do it adequately, if you would license ten more then you would have fifteen which would mean complete demoralization of that industry, resulting in low wages, poor product, a loss in investments, and generally bankruptcy.

By Mr. Young:

Q. Is it not a fact that before Henry Ford started to manufacture automobiles there were sufficient factories in the United States to supply the market?

Mr. SOMMERVILLE: Were there any?

The WITNESS: I do not know as to that.

Mr. YOUNG: Yes, there were sufficient to supply the market, and if these men had been asked if they needed any more factories to supply automobiles to the United States they would have said no and Henry Ford would never have been heard from. However, the fact remains that he opened up a factory and he has been in the business long enough to put automobiles into the hands of nearly everybody in the country; is not that a fact.

The WITNESS: Would you recommend then multiplying companies in such a way that they could not exist at all?

Mr. YOUNG: I would say that a man himself is the best judge as to whether he is competent to go into a business or not, more competent than any civil servant, or some other competitor or competitors who do not want them in.

By Mr. Edwards:

Q. Is that not the policy and practice in Italy at the present time?—A. I do not know.

Mr. EDWARDS: I think you will find it is.

By Mr. Factor:

Q. But your scheme, Mr. Carlisle, it does seem to me, would be creating a monopoly, leaving all the business to the existing companies.—A. Those companies would keep on expanding in the industry.

Q. But they would still control the business.—A. Not necessarily. When there is room for the sixth company then license the sixth; if there is room for eight companies license the eight, but do not put in fifteen companies when there is only room for five.

By Mr. Ilsley:

Q. Would not that system make for stagnation just as Mr. Young says? There is a lot of cruelty, I know, under this "jungle system," as it has been called, but it certainly does pull down prices for the most part, does it not, and extend markets and give things to the consumer at a much lower cost. That has been the history of it for the last several years.—A. When you get an industry overbuilt.

Q. Oh yes, some of them might get out, the inefficient ones are driven to the wall, that has always been the case; that is the cruel capitalistic system. —A. And when they go out of business somebody buys them in at a few cents on the dollar and they start up again.

By Mr. Sommerville:

Q. In your earlier statement you referred to inflation and over-capitalization as one of the elements that ought to be guarded against in the administration of the Companies Act. Were you referring there to reorganizations that have taken place when industries have increased their capitalization and securities and sold to the public?—A. That is right.

Q. Without any public safeguard?—A. Yes, without much intrinsic value back of the stocks that are sold. Yesterday there was a reference made to special brand tires. I think it would only be fair to the consuming public if merchandise—and especially certain kinds of merchandise that are sold or manufactured—should bear the manufacturer's name. In doing that you give protection to the public. Now, private brand tires can be inferior in quality; they are not all that way, but they can be that way, and often they are; but there would be one of two things: There is every advantage in selling where those tires can be sold at a lower price without interfering with your standard lines, so that the quality can be inferior and then the company manufacturing them does not have to bear the responsibility for that inferior quality. I have a circular here, or a catalogue, and I want to call your attention to it. They have different tires listed; they have a third grade tire and they compare their third grade tire against the list price of the third grade tire of the standard companies. The tires we have examined, as sold by this company, are of a very inferior grade, but they make a comparison with the third grade tires of the

standard companies. Here is a tire that the standard companies are selling for $6.15, and they offer that for sale for $4.62. The name of the manufacturer does not appear. In the first place, this price list of $6.15 is the published price of the tire, but it is not the price that the dealer secures from the sale of the tire, and in publishing this difference in price it creates a sale for this inferior tire. Take it in the other grade: They compare a tire there with the highest priced tire made by the standard companies, and it shows a difference in selling price varying from 50 per cent to 60 per cent; and in another column there is another tire that is still of a higher grade than the tire that he compares with the grade of the standard companies, and this last tire is a second grade tire of the manufacturer that supplies this tire. You can see the injustice of such selling as that.

By the Chairman:

Q. Does that not come under the head of misleading advertising?—A. Well, this company has been convicted.

Mr. Factor: It was convicted in Toronto recently for false advertising.

The Witness: For false advertising and for false selling, but now this catalogue has come out here since these convictions and there is that unfair comparison in price, and it is misleading the public, and it is very detrimental to the industry.

By the Chairman:

Q. Well now, one reason for that you say would be if the manufacturer were forced to put his name or the name of the firm on the product?—A. That is right.

Q. And although the tire may bear the trade mark or name of the distributor, whether it does or not the manufacturer's name would be clearly disclosed on the tire?—A. I think so.

Q. That is one remedial measure you suggest?—A. Yes.

By Mr. Sommerville:

Q. Is it not in the interest of the manufacturer that his name be on the tire?—A. I think it is.

Q. Perhaps you will tell the committee what advantage it has to be there, and what is the effect of the omission of the name?—A. Well, when the manufacturers' name does not appear on the merchandise he has no control over it in any shape or form. Now, if I am selling a special brand article and you are supplying it, if I do not care to deal with you or if you do not give me the price that I ask I can go to somebody else and get that same article. Now, the loss or volume of business,—you have gained nothing there excepting the money that you made out of them, but if your name was on that tire, or on that article, the public knows who manufactured it and you have built up an asset in your business by having your name on that article.

By Mr. Factor:

Q. That principle extends to other than tires?—A. In most kinds of merchandise. In some cases it might not be practical to do that.

By Mr. Edwards:

Q. Would not that go a little further, Mr. Carlisle? Would it not have the tendency which possibly is to be sought after of eliminating the tire with the dealer's name on it only, at least if the manufacturer's name were placed on that tire it would have the effect of not antagonizing your regular dealers; it would have a tendency to stop that sort of thing, would it not?—A. I think so.

By Mr. Sommerville:

Q. On the other hand, has it been the experience in the United States that firms who have built up private brands have switched from one manufacturer to another and left him without any outlets?—A. Well, that is possible in places. And here is another thing: If you have followed the evidence of selling special brands in the United States you would find that when the fellow that bought special brand tires built up his volume of purchases from the manufacturer then the purchaser of the tires put up practically an impossible position to the manufacturer from whom he was dealing, and he had either to accept or lose the business.

By the Chairman:

Q. They dominate the manufacturer?—A. Yes. In one case they were supposed to get 6 per cent or $6\frac{1}{2}$ per cent over cost, but the purchaser determined how this cost should be worked out and they got certain concessions for adjustments. When the thing was boiled down, why, the manufacturer got 2 per cent or 3 per cent.

By Mr. Sommerville:

Q. What do you mean by that? Please illustrate to the committee, if you will, just what you have in mind. In arriving at costs what did the buyer of special brand tires eliminate from the costs of the manufacturer in that instance in the United States?—A. In this one case that they speak of, they would not allow anything for old age pensions, or for insurance; they would not allow the general overhead of the business to be included.

Q. You mean group insurance?—A. Yes, group insurance, and they would only allow the overhead in the particular plants where those tires were made. In fact, there were a great many things that would be eliminated.

Q. And as a result of these deductions from the cost, the cost was cut down to about 1 per cent or 2 per cent?—A. 2 per cent or 3 per cent, from the evidence given.

Q. And, in addition to that, what other terms do they impose?—A. Well, in one case they threatened to take away their business from the company unless this manufacturing company gave them a certain block of their stock.

Q. And a block of stock was given?—A. I understand so.

Q. To the private brand buyer?—A. Yes, sir.

Q. That was a very substantial block of stock, I understand?—A. It was.

By Mr. Senn:

Q. Would any reputable manufacturer care to risk his reputation, or the reputation of his standard brand tires, by printing his name on other tires? —A. Then they ought not to be sold.

By Mr. Sommerville:

Q. Why should a manufacturer be ashamed of his product if it is a good product? You think the consumer would be protected?—A. I do.

By Mr. Factor:

Q. But is the branded tire of an inferior quality to the standard?—A. It may be and it may not be. It depends on who it is made for. There are people selling private brand tires that are particular in doing business. Take for instance a tire that Eatons sell, they will sell the quality that they represent; they would not misrepresent the quality. The same is true of Atlas, they would not misrepresent the quality. But there are cases of misrepresentations in quality and false advertising, and it is for protection against that kind of selling that I am asking.

By Mr. Senn:

Q. Would it not have the effect then of driving standard companies out of that business, and other companies whose workmanship was not so good and material perhaps not so good would get the business and continue the business?—A. They could not stay in business for any period of time on account of the poor quality of their products.

Q. Not even if they buy them cheaper?—A. I don't think so.

By Mr. Heaps:

Q. Mr. Carlisle, how many tires are imported into the country?—A. Not a great many.

Q. You were talking about the export of Canadian tires. Are there many tires exported?—A. The export business is increasing.

Q. And is your main competitor in the export business?—A. All the companies throughout the world.

Q. Do you find the United States your biggest competitor?—A. That country, and Germany, France and England.

Q. You spoke about labour conditions. Are the costs of your company determined, to a certain extent, by your labour costs; if the United States is a competitor in the export market the labour costs there are, in fact, a little higher than here?—A. Their general costs are higher than they are here at the present time, and that gives us an advantage in the export market.

Q. It is an advantage to Canada in the export market?—A. Yes.

Q. Is there much difference in the labour cost in the United States as compared to Canada under the N.R.A.?—A. I have not a comparison, but I think that they are higher there.

Q. Well, they are able to compete, to sell their goods lower than you are in Canada?—A. I doubt if they are at the present time.

By Mr. Ilsley:

Q. Do you find that codes in the United States are giving Canada an advantage in the export market?—A. I think so.

Mr. SOMMERVILLE: We have the wage schedules of the various tire companies, Mr. Heaps, already filed.

Mr. HEAPS: In Canada and the United States?

Mr. SOMMERVILLE: Not in the United States.

Mr. HEAPS: If you had the codes of the United States that would give us the wages.

The CHAIRMAN: We have the codes.

The WITNESS: The wages paid in the rubber industry, I think, are quite satisfactory.

Mr. HEAPS: In Canada?

The WITNESS: Yes.

Mr. SOMMERVILLE: I observe that we have here seven companies. Perhaps this might be as good a time as any just to put on the record a short analysis that we have made of those wage scales.

Company No. 1, the weekly wage for men averages $19.52.

Mr. HEAPS: How many hours?

Mr. SOMMERVILLE: In that case we have not got the exact number of hours, but they are not full 48-hour weeks.

Mr. HEAPS: Is that the actual wages earned or the wage rates?

Mr. SOMMERVILLE: Those are the actual wages earned, but only one company has given the hours, and that is for 36 hours. May I put the list on the record in complete form:—

Company No. 1, weekly wage for males $19.52; for females $11.95; the hourly average, for males 47 cents the hourly rate for women 28·9 cents. May I put it this way, the hourly rate for men is ·471 and for women ·289.

Company No. 2, the weekly average rate through the year 1933, males $19.23; females $12.60; hourly rate males ·519; females ·355.

Company No. 3, average weekly rate $21.25 for males; for females $12.57; average hourly rate for males ·597; and for females ·334.

Company No. 4, average weekly rate for males $20.40; for females $12.48; average hourly rate for males ·487; for females ·300.

Company No. 5, weekly average rate for males $21.50; and for females $11.90. I have not the average hourly rate there.

Company No. 6, average weekly rate for males $41.24; for females $22.74. The average hourly rate in that plant is ·535 for males and for females ·320. That is for a two-week period, and, therefore, the average would not be as high. The average hourly rate would be the same as I have given, but the weekly rate was for two weeks. They give theirs bi-monthly and the average given was for two weeks—$41.24 for men and $22.74 for women.

Number 6: average wage for men $17.79—women $11.18; hourly rate average from 25 to 52 cents which has not been averaged out yet, and for women ·241. The spread analysed shows that the hourly male average was from ·471 to ·597 per hour; females from ·289 to ·355 per hour; weekly for males from $17.79 to $20.62 and for females from $11.18 to $12.60.

Mr. HEAPS: May I ask if you can give the province in which those factories are located?

Mr. SOMMERVILLE: These are all in the province of Ontario.

Mr. HEAPS: Have we got the province of Quebec? Are there any tires manufactured in the province of Quebec?

The WITNESS: The Perfection.

Mr. SOMMERVILLE: That is not in the association?

The WITNESS: No.

Mr. FACTOR: Have you made an analysis of the footwear wage scale?

Mr. HEAPS: You did not state the period for which this wage applied.

Mr. SOMMERVILLE: This is the average for the entire year 1933, and we have the list of the wages paid in every plant for the entire year.

The CHAIRMAN: In answer to that question, we now have the footwear wages and they will be filed.

(Footwear wages filed, marked Exhibit 199.)

Mr. FACTOR: Will there be an analysis?

The CHAIRMAN: We will have an analysis made of it.

Mr. FACTOR: When you make the analysis, can you make it by provinces?

The CHAIRMAN: We will do that. Now, Mr. Carlisle is there anything further?

The WITNESS: I would like to enumerate some of the abuses that are in the tire business at the present time. One thing that is very disturbing to the prices is what we call loss leaders where tires are sold at cost or less than cost as a drawing card for business. We believe the department stores in the States and the chain stores in the States sold 31 per cent of their goods last year by that method.

By Mr. Factor:

Q. In the United States?—A. Yes.

Q. What about Canada?—A. I do not know the figures in Canada. The condition is not as bad in Canada as in the United States.

By Mr. Sommerville:

Q. It grew to that extent last year in the United States?—A. Yes.

Q. What was the effect upon the industry in the United States of that practice?—A. It is very demoralizing. The tire prices in the United States have been awful, and look at the losses the companies have sustained. There was no such thing as a stabilized price until the government stepped in and they have made certain regulations that have improved the condition. And another thing that is detrimental and very disturbing to the selling of tires in this country is what we call seasonal sale, where the merchant will put on a week's sale or two weeks or sometimes a month's sale, and during that time it affects the legitimate selling and maintenance of price in industry.

Mr. SENN: These seasonal sales would not be old stock, would they?

The WITNESS: No. They are tires usually bought at a special price and sold at special prices, a sort of drawing card. They are put on in the spring or a mid-summer sale or often a sale in the fall. Now, another thing that is an unfair practice—the industry's tire adjustment and tire guarantees—that is a means of reduction in the price and I think it should be regulated. In the United States they had a guarantee that guaranteed material and workmanship of the tire during its lifetime, and then they had a year's guarantee against almost any hazard. I think there were a few exceptions. The government in the United States a few days ago reduced that guarantee to ninety days which I think is constructive, and I think it should be done in this country.

By Mr. Young:

Q. Do you mean to say you would prevent a man guaranteeing his product? —A. No. A ninety-day guarantee is a fair guarantee; but it is an unlimited guarantee, is it not.

By Mr. Sommerville:

Q. The guarantees had reached the point in the United States where they guaranteed against almost every conceivable hazard on the road, whether it was the fault of the tire or not?—A. That is right.

Mr. FACTOR: What about the Canadian situation?

The WITNESS: We have a guarantee, a time guarantee. I think on some grades of tires it is for nine months and other grades of tires it is for a year. I think it is a very unfair guarantee.

Mr. SOMMERVILLE: You guarantee against all road hazards?

The WITNESS: Practically all.

Mr. SENN: You do not mean that that guarantee in the United States was limited on workmanship and material?

The WITNESS: No. They have a time guarantee as well; but the government now only allows guarantees against defects for ninety days.

Mr. EDWARDS: In other words, you think a defect will show up within ninety days?

The WITNESS: I think so.

Mr. YOUNG: Have you a mileage guarantee?

The WITNESS: No, we have not.

By Mr. Sommerville

Q. There used to be?—A. Yes.

Q. And that has been replaced by the guarantee against all road hazards, has it not?—A. Now, many other conditions are not good. There are special and secret discounts which lead to price cutting. I have a number of advertisements here, some from Montreal and other locations, where they are advertising tires at cost. Now, it costs the retailer something to do business, perhaps 15 per cent. If he gets his regular margin he wants 40 per cent. Here he is advertising at cost. That is very destructive and should be prohibited. Selling tires at cost he is losing money, and he is merely draining his capital in an effort to sell his goods. Here are some of the remedies—

Q. Or else it comes out of his profit on other goods—A. Yes, or out of his other goods. Now, these are some of the abuses that should be corrected, and I think it is the purpose of this committee to make such corrections and to ask for such legislation that will give fair remedies to the malpractices that are in the industry. If this is to be done, I take it you have sufficient information here as to the industry in general to be able to formulate such legislation, and if there is to be a correction I think it can only come through legislation, and I have my doubts if very much improvement, if any, can be made through further public examinations.

By Mr. Young:

Q. Have you ever had any price maintenance arrangement in Canada in the tire business?—A. Yes.

Q. When?—A. Oh, a number of years ago, I think there is practically none at the present time that I know of.

Q. Was there any last year?—A. I think not. I would like to see maintained prices—would lend myself to the fullest extent to bring that about; but prices were not maintained last year.

By Mr. Factor:

Q. You do not believe in the principle that publicity has a certain levelling effect in remedying abuses?—A. No, I do not. I think it will have to be done through direct control.

Witness retired.

W. A. Eden, called and sworn.

By Mr. Sommerville:

Q. What is your position?—A. President, Dominion Rubber Company.

Q. And what is your position in the Rubber Association, the Footwear Association?—A. I am a director of the Rubber Association.

Q. Now, Mr. Hannay stated yesterday that in the Rubber Association there was a branch or a group known as the Rubber Footwear Association, and you are now representing them in your presentation to the committee?—A. Yes.

Q. Who are the members that constitute the Rubber Footwear group in the Rubber Footwear Association? Well, we got them from Mr. Hannay yesterday, so you do not need to repeat them. Now, we have had presented to us from several sources the complaint, Mr. Eden, that the Rubber Footwear Association have a certain group of distributors whom they allow a larger discount to than others?—A. Yes, they are all filed with you, I believe.

Q. And I observe on the statement that is filed your discounts are arranged to listed accounts as follows: group A get a discount on tennis footwear of 12

per cent; group B get a discount of 10 per cent; group C get a discount of 8 per cent and group D get a discount of 6 per cent. Is that correct?—A. Yes.

Q. Now, that is this season's discount allowance on tennis footwear. Then, on last year's tennis footwear the grouping was the same except that group A got 15 per cent discount; is that correct?—A. Fourteen, I believe.

Q. Well, this is on the statement?—A. Those figures will be correct.

Q. Yes. 15 per cent on last year's list on tennis?—A. Yes.

Q. On rubber footwear for the present season the discounts are the same as in the case of tennis footwear?—A. Yes.

Q. Last year your discount to group A was 14 per cent; to group B 11 per cent; to group C 8 per cent and to group D 6 per cent?—A. Yes.

Q. And then, in addition to these discounts what other discounts are allowed to group A?—A. Well, there is a sliding scale of bonuses on volume which is recorded there over a certain amount.

Q. And this is your scale for volume; customers' bonus for volume, customers purchasing over 250,000 annually—from 250,000 up to 500,000, 1½ per cent on the excess over 250,000?—A. I believe that is 1 per cent now.

Q. This says 1½ per cent?—A. Is that tennis or what?

Q. This is tennis and rubber footwear?—A. Yes.

Q. 1½ per cent. Customers purchasing 500,000 up to 750,000, 1½ per cent on the excess over 500,000; customers purchasing 750,000 to 1,000,000, 1½ per cent on the excess over 750,000. Customers purchasing a million or over, 1½ per cent on the excess over a million. That would be a total of 6 per cent to the customers purchasing a million or more?—A. Only on the last part of it.

Q. Yes. Then your bonus for unlisted accounts—with reference to the bonus for rubber footwear for the present season you allow 1 per cent instead of 1½?—A. Yes.

Q. And in the case of rubber footwear that is ½ per cent less than you allowed last year all the way down the line?—A. Yes.

Q. Then, the bonus for volume of unlisted accounts. You have, I see, purchases of \$500 to \$999 and the rate is 1 per cent; \$1,000 to \$2,499 and the rate is 2 per cent; \$2,500 to \$4,999 and the rate is 3 per cent; \$5,000 to \$9,999 and the rate is 4 per cent; \$10,000 to \$14,999 and the rate is 5 per cent; \$15,000 or over, and the rate is 6 per cent. What do you mean by that?—A. Those are the dealers where they are too numerous to list. They run into the thousands.

Q. Do you mean the page is too short, or the willingness of the association?—A. Not at all. We would be perfectly pleased, sir. We will give you files, thousands of dealers.

Q. Oh, no, no. These are the retail dealers?—A. The retail dealers.

Q. Right across the country?—A. Right across Canada.

By Mr. Factor:

Q. They are not contained in these groups A, B and C?—A. They are not large enough to put in these groups.

Q. What is the principle you apply before you list a dealer?—A. He has to buy—after he buys over \$20,000 I believe, he goes into—but these listings are made absolutely on the basis of the savings we have made.

Mr. SOMMERVILLE: Mr. Eden, how do you arrive at these groupings and A, B, C and D?

The WITNESS: By volume purchases.

Mr. SOMMERVILLE: Now, what is the volume purchase required to get into class D—the lowest class?

The WITNESS: I would like to have the secretary answer that.

Mr. FACTOR: I thought the volume controlled.

The WITNESS: It does in the lower brackets.

Mr. EDWARDS: That is the combined buying?

The WITNESS: The combined buying from any Canadian company.

Mr. SOMMERVILLE: What is the volume required to get into group D?

The CHAIRMAN: We had better swear Mr. Badden.

H. J. BADDEN, called and sworn.

By Mr. Sommerville:

Q. To get into class D, Mr. Eden, one must sell $20,000 worth; must buy from the association members $20,000 worth of footwear; is that right?—A. Yes, sir.

Q. And that means if you buy $20,000 worth from the whole group you do not have to buy it from one merchant?—A. No, anyone, or from all of them.

Q. And if you did that you got a discount of 6 per cent?—A. Yes.

Q. And that is to encourage volume buying. You increase the discounts with the increased volume?—A. Oh, yes, quite.

Q. Now, then, what is the minimum amount of purchase required to get into class C?

Mr. BADDEN: $20,000.

Mr. SOMMERVILLE: $20,000 to get into class C?

Mr. BADDEN: Yes.

Mr. SOMMERVILLE: That is the same as D?

Mr. BADDEN: Yes.

Mr. SOMMERVILLE: And if you are in class D then you get 8 per cent?

Mr. BADDEN: If you are in class C.

Mr. SOMMERVILLE: What is the other inducement that is to be held out to get into class C?

Mr. BADDEN: You are asking me?

Mr. SOMMERVILLE: Yes.

Mr. BADDEN: There is no inducement; class D is a co-operative group.

Mr. SOMMERVILLE: Class D is a co-operative group?

Mr. BADDEN: Yes.

Mr. SOMMERVILLE: Are there many in that group, or are there only one or two?

Mr. BADDEN: Three or four, I believe—about four I think.

Mr. SOMMERVILLE: Now, class C is the same volume of capacity and they get 8 per cent?

Mr. BADDEN: Yes, sir.

Mr. SOMMERVILLE: What volume is required in class B?

Mr. BADDEN: $38,000—$35,000.

Mr. SOMMERVILLE: That is to say, if you have $35,000 worth of goods then a discount of 10 per cent is allowed?

Mr. BADDEN: Yes, sir.

Mr. SOMMERVILLE: Then, what is the requirement to get into class A?

Mr. BADDEN: $75,000. Do you want the names?

Mr. SOMMERVILLE: Yes, please.

Mr. BADDEN: Agnew-Surpass Shoe Stores, Dupuis Freres, Limited, Montreal, T. Eaton Company, Hudson Bay Company, J. B. Lefebvre, Robert Simpson Company, Army and Navy Department Stores and Neighbourhood Stores Limited.

Mr. SOMMERVILLE: When did Army and Navy Stores and Neighbourhood Stores Limited move up from class B to class A?

Mr. BADDEN: This year.

Mr. SOMMERVILLE: Purely on volume?

Mr. BADDEN: Yes, sir.

Mr. SOMMERVILLE: And you say that the only requirement for getting into class A is the volume of $75,000 or more?

Mr. BADDEN: Yes, sir.

The WITNESS: No, excuse me—

Mr. BADDEN: Except co-operative buying.

By Mr. Sommerville:

Q. Mr. Eden, suppose a co-operative group wanted to buy from you $200,000 worth of shoes in rubber footwear in a year, that would be a volume that you would desire?—A. Yes, sir, we would.

Q. Why would not you give them the same 12 per cent that you give to the Hudson Bay Company or Lefebvre or Dupuis Freres?—A. On the basis, sir, that unless a company can relieve us of expense they are not entitled to a discount.

Q. What do you mean by unless they can relieve you of expense?—A. With the co-operative you have to put your travellers on the road; you have to go out and write the amount; you have to ship them in individual shipments and the only thing they do is guarantee the credit.

Q. That is rather an essential thing, is it not?—A. I do not know.

Q. Is not that a very essential thing, Mr. Eden?—A. I would sooner have a group of a few thousand merchants than have some of the guarantees you would get from the co-operatives.

Q. Now, let me see, in this class we will take the York Trading Company; that is rather a responsible organization, is it not?—A. I believe so.

Q. If the York Trading Company offered you business of $200,000 guaranteed payment, would you refuse them 12 per cent?—A. I cannot say offhand. I would like to look at their statement. I do not know.

Q. Now, you know the principle that actuates you, that dominates; you have had it up before your association?—A. I would not give the York Trading Company $250,000 credit.

Q. Why not?—A. I do not think their assets warrant it.

Q. Well, they have paid you, have they not, or your association as much as $250,000 or $300,000 a year, have they not?—A. Yes, sir.

Q. Well, why on the business for which they paid you cash $250,000 or $300,000 a year—why not put them in the same position as Lefebvre Brothers, we will say, who, I fancy did not buy two or three hundred thousand?—A. You would have the travellers' expenses in canvassing that would run anywhere from, I would say, 5 to 8 per cent to canvass the York Trading Company's accounts. You would have something else—I would think to canvass the Lefebvre account of one-half of 1 per cent.

Q. You have your travellers on the road anyway canvassing independent dealers?—A. No, we give a traveller a full day's job. We route those travellers. Every place they go takes time. It is a mistaken idea. Some people think because our traveller is in the town he can call at two places at the cost of one. It cannot be done.

Q. Do you say it is double the cost?—A. No, but take that type of business, calling more or less on the retail trade, travellers' expenses will average in Canada more than 7 per cent. Lefebvre will take carload lots; York trading, small shipments to small individuals.

Q. If the York Trading Company took the shipment into their own warehouse and distributed the goods themselves would you give them the 12 per cent? Why hesitate?—A. Well, if they maintained prices, but we were not interested in that type of business.

Q. You are not interested in that type of business; why not? You are looking for volume.

Mr. ILSLEY: The answer is no.

The WITNESS: If that does not relieve us of the expense we cannot afford, our price is such; we cannot give discounts unless we get rid of some expense.

By the Chairman:

Q. Yes. But, Mr. Eden, Mr. Sommerville's question was if a given concern offered you the business delivered in their warehouse, limiting your expenses to which you referred, would you sell them; is your answer "No" —which I understand it is—you have not said so?—A. It might, or it might not be, sir. I doubt very much if our company would take it.

Q. Let me put this to you: the retailer in the country finds himself confronted with an extraordinary form of competition, namely the large distributor such as the department store, and he finds that the department store is able to sell your goods—the identical goods—at cost, and in some cases below what he can buy at?—A. Not our goods, sir.

Q. I am talking about the goods which you represent, rubber goods?—A. I doubt it very much.

Q. We have evidence here to that effect?—A. You mean in Canada.

Q. Yes, but we will not quibble over that; sold at prices he cannot compete with, was the term. Now, they are forced to get together in self defence, and they get together and they try to buy in carload lots so as to meet your volume requirement, and you won't sell them. Now, why?—A. We cannot give a discount where we do not eliminate expenses.

Q. You do eliminate expenses with them, they get together and order in volume. Don't forget this, Mr. Eden, you gave evidence here definitely that the principle upon which your discount is fixed is on volume?—A. Yes, sir.

Q. A group of retailers get together and give you volume.

Mr. FACTOR: Have them shipped to a central warehouse.

The CHAIRMAN: Yes, have them shipped to a central warehouse. Now, they have met your requirements, but you will not give them what you would give to a big department store on your Class A list. In fact, the difference is 14 per cent; or, if you take Class D it is the difference between 14 per cent and 6 per cent, or 8 per cent.

Mr. BADDEN: Pardon me, the big trade get an extra 2 per cent.

The CHAIRMAN: I am not talking about the big trade at the moment, I am talking about another group.

The WITNESS: Any group can get, and co-operative group that bought that quantity would immediately go into this 6-and-2 per cent.

Mr. SOMMERVILLE: Yes, but then if they bought $500,000 worth, they would not get into the 14 per cent class.

By the Chairman:

Q. On what basis do you fix that Class A? You have told us it is on volume, and when we put to you the question which has been laid before this committee in evidence from the retailers, you say, no you can't do it. Now, I ask you, on what condition do you fix this Class A discount of 14 per cent? —A. Volume, I suppose, is the main thing—

Mr. FACTOR: That is not answering the question. Supposing Mr. Young, Mr. Ilsley and I group ourselves together and buy $100,000 worth of rubber footwear, and ask you to ship it to a warehouse; would you put us in Class A and give us 14 per cent.

Mr. SOMMERVILLE: You would put in Class B.

Mr. FACTOR: Why not in Class A, if volume was the only consideration?

The WITNESS: It is volume, and method of doing business.

Mr. FACTOR: I know, but we are eliminating your extra expense of doing business by having you ship it to a warehouse. You have no traveller's expenses. We come to you with an offer for $100,000 worth of footwear. Now, what is the extra expense. There is no expense for travellers. Why are we not entitled to go into Class A.

The WITNESS: I do not know what the action of the other companies would be, we would not take that business.

Mr. FACTOR: Why not, if volume is the only consideration.

By Mr. Edwards:

Q. Is volume the only consideration?—A. No, the stability of your customers.

By Mr. Kennedy (Peace River):

Q. We are paying cash, I do not see what stability has to do with it.—A. I never had that experience.

Mr. YOUNG: What do you mean by saying the stability of your customers?

By the Chairman:

Q. You know, Mr. Eden, there are hundreds of retailers throughout this country that have been doing business with your several firms for ten or twenty years, first class accounts, no question of payment, no risk other than ordinary risks; and yet if a group of them got together and wished to buy collectively in order to give you volume and eliminate the cost of travellers and so forth, you won't sell them; and yet you expect them to distribute your goods in competition with your Class A list who are preferred, without any saving made in additional cost over what these others would be. Is that a fair way of treating your retail customers?—A. If they picked out an isolated customer in this town, and another isolated customer in another town, that does not relieve us of travelling expenses.

Q. I am not talking about isolated cases. Take Calgary, for instance, you send Class A goods there, and you send the same kind of goods to Regina, or Edmonton, or Toronto, or Montreal, or other places that you send to. Your travellers still go to these towns all over the country and you do not eliminate travelling because you sell one person on a Class A list. Now, if another group comes along and places a similar volume, you will not sell them?—A. No. But I would like to see the whole trade of the country organized so you could cut down this expense, sir; I would be tickled to death to do it.

Q. Why do you give one class of distributor a 14 per cent advantage over the other? Can the other fellow live? I ask you as a business man, and as a manufacturer, can the distributor live with a handicap of 14 per cent?—A. You mean the retailer?

Q. The retailer?—A. I think the closest spreads I know of, Mr. Stevens, on any line of merchandise being distributed in Canada are these footwear spreads. I think he could live, yes.

Q. I do not, not on 14 per cent spread?—A. Yes, sir. That is the lowest I have ever seen it. It is the lowest I know of on any general line of merchandise being distributed, the spread between the big account and the small account. It is the lowest of any kind of merchandise I know of being distributed.

By Mr. Sommerville:

Q. That is the very finest evidence we have had so far that the retail merchant is under a very much worse handicap than has yet been disclosed to us. Do you say yours is the lowest?—A. It is the lowest I know of, sir.

Q. Tell me this, Mr. Eden, will you swear that everyone in the Class A group that you have mentioned has bought during the last year $75,000 worth or more of merchandise?—A. From the records that Mr. Badden submits to me; he is the man who made the audit, I did not.

Mr. BADDEN: I would swear to that, yes, sir.

Q. In your class A is there any other consideration than this volume that gets 14 per cent in the Class A?

Mr. BADDEN: Not that I know of.

Mr. EDEN: There is not.

Q. Now, let us have Class B, the names of the persons in Class B; there is the Woodward Store, Vancouver.

Mr. FACTOR: This is another illustration of the making of laws outside of parliament, we will have a lot of this.

Mr. BADDEN: Class B: O. Berriere, Montreal; J. Beaudin, Montreal; B. E. Belarose, Montreal; Brikovitsky Limited; Central Supply Warehouse, Toronto; Merchants Consolidated Limited, Winnipeg; R. Neil, Peterborough; Paquette Company Limited, Quebec; Pollock Shoes Limited, Toronto; Segal Shoe Stores Limited, Hamilton; David Spencer, Limited, Vancouver; Vancouver Boot and Shoe Company, Vancouver; Woodward Stores Limited, Yellow Sample Shoe Stores, Zellers Limited—that is all.

Q. When did Zellers Limited of Montreal, and R. Neil Limited of Peterborough move up from Class C?

Mr. BADDEN: This year.

Mr. FACTOR: Who is the Central Supply Warehouse?

Mr. BADDEN: I do not know who they are.

Mr. FACTOR: Is that the organization that supplies the Provincial government in connection with their relief work.

Mr. BADDEN: I do not know who they are.

Mr. FACTOR: Do you mean to tell me you don't know who your customer is.

Mr. BADDEN: It is not my customer.

Mr. FACTOR: Is that the organization that Mr. Sparks is at the head of?

Mr. BADDEN: I don't know.

Mr. FACTOR: Who would know?

The WITNESS: It is not our account. I don't know.

Mr. SOMMERVILLE: The members of the association that are selling at their discounts ought to know their customers, I would think.

The WITNESS: We will get that information. We will find out.

Mr. SOMMERVILLE: Mr. Eden, Woodward's Stores, Limited, would not buy a volume exceeding $75,000 in a year?

Mr. BADDEN: They didn't last year, apparently.

Mr. SOMMERVILLE: Well, the year before?

Mr. BADDEN: They may have the year before.

Mr. SOMMERVILLE: They have never been in class A?

The WITNESS: They have never had the qualification.

Mr. SOMMERVILLE: Never qualified?

The WITNESS: No.

Mr. SOMMERVILLE: That is, they never had the volume?

The WITNESS: Never had the volume.

Mr. SOMMERVILLE: David Spencer, Limited, never had the volume to qualify for class A?

The WITNESS: No.

Mr. SOMMERVILLE: What is the qualification for class B, $35,000?

Mr. BADDEN: $35,000.

Mr. SOMMERVILLE: Do you say that all the people who are in class B bought $35,000 worth of shoes last year—rubber footwear?

Mr. BADDEN: Yes.

Mr. SOMMERVILLE: Were there any persons who bought from you last year $35,000 worth of footwear that are not class B?

Mr. BADDEN: Nobody except the co-operatives.

Mr. SOMMERVILLE: I observe that you have Neil, Limited, of Peterborough, on that list?

Mr. BADDEN: Yes.

Mr. SOMMERVILLE: And he is in the same position as Woodward's Stores of Vancouver and David Spencer of Vancouver?

The WITNESS: He runs a string of shoe stores through the province of Ontario. He is not just located in Peterborough.

Mr. SOMMERVILLE: A chain store. When you sell to chain stores, don't you ever go to the various stores and see what their supplies are?

The WITNESS: No. They all come in through a central purchasing house.

The CHAIRMAN: You distribute direct to each store?

The WITNESS: In some part of the year; other times you ship to a main warehouse.

Mr. SOMMERVILLE: Who are in class C?

Mr. BADDEN: Bryson & Graham at Ottawa; Cut Rate Shoe Stores, Hamilton; A. J. Freiman, Ottawa; R. T. Holman, Limited, Summerside; Henry Morgan & Company, Montreal; Pattenick & Company, Toronto; J. G. Watson, boots and shoes, Montreal; Syndicate Stores, Quebec, Limited, Quebec; S. & A. Chain Stores Limited, Hull.

Mr. SOMMERVILLE: What is Syndicate Stores, Quebec; is that a co-operative?

Mr. BADDEN: Not that I know of.

Mr. SOMMERVILLE: What are they?

Mr. BADDEN: I understand it is an individually owned concern.

Mr. SOMMERVILLE: Those are all the firms that bought $20,000 or more of shoes from your firm or from the various firms, from the group?

Mr. BADDEN: Yes.

Mr. SOMMERVILLE: Except the co-operatives?

Mr. BADDEN: Yes.

Mr. SOMMERVILLE: Let us see this select class of co-operatives. Who do they include?

Mr. BADDEN: Association Grocers at Calgary; Marquis Chain Stores, Regina and Saskatoon; Merco Wholesale, Limited, Edmonton; Western Grocers, Limited, Winnipeg; York Trading Company, Toronto.

Mr. SOMMERVILLE: Last year the Merchants Consolidated moved up from class D to class C.

Mr. BADDEN: The Merchants Consolidated are not a co-operative, are they?

Mr. SOMMERVILLE: Well, you have them in class B.

The WITNESS: Well, if they went up, their volume justified them in going up from one group to another.

By Mr. Sommerville:

Q. Now, Mr. Eden, we had evidence given here that in the year 1931 two of the members of your association did supply rubber footwear to the Mutual Stores, payment for which was guaranteed by the York Trading Company and in respect of which they were given the discount which their volume justified them in getting. Do you know that?—A. I know they were sold. I don't know what the discount was.

Q. What discount do you believe they were sold at?—A. I have not the faintest idea.

Mr. SOMMERVILLE: Perhaps the secretary can tell us.

Mr. BADDEN: No. This organization was not in existence then. I have not any record.

Mr. SOMMERVILLE: It was not in existence. It was during the period of transition. It had been in existence before that, had it?

Mr. BADDEN: I don't know anything about it.

Mr. SOMMERVILLE: When did it come into existence?

Mr. BADDEN: January, 1932.

Mr. SOMMERVILLE: Yes, January, 1932; and in January, 1932, it has been sworn that when this organization you say came into existence, these men came to the Mutual Stores and stated: We are very sorry that we cannot sell to you on the discounts that we allowed last year, because the association won't let us." Is that true?

Mr. BADDEN: I don't know. I don't know what was said to them.

Mr. SOMMERVILLE: Weren't you at the meeting, Mr. Badden?

Mr. BADDEN: No, sir.

Mr. SOMMERVILLE: Were you at a meeting at which Mr. Kaufman explained to the members of the Mutual Stores why they could not?

Mr. BADDEN: I was at a meeting, yes, where he discussed the matter with them.

Mr. SOMMERVILLE: What was he discussing?

Mr. BADDEN: Their discounts.

Mr. SOMMERVILLE: What discounts was he discussing?

Mr. BADDEN: Various figures that they wanted.

Mr. SOMMERVILLE: What discount was mentioned at that meeting as the discount allowed the previous year?

Mr. BADDEN: I don't remember, sir.

Mr. SOMMERVILLE: Did Mr. Kaufman not bring you in to bear out the statement that the association would not allow them to sell to these Mutual Stores?

Mr. BADDEN: I don't know why Mr. Kaufman brought me in.

Mr. SOMMERVILLE: Didn't he explain to them in your presence that that was the object, that he brought you in to bear out his statement that it was not his statement alone, but you were the secretary of the association?

Mr. BADDEN: I think he wanted me to hear their remarks.

Mr. SOMMERVILLE: And you heard his?

Mr. BADDEN: Yes.

Mr. SOMMERVILLE: Yes. And didn't he say to the members: "The reason I can't is because Mr. Badden holds my bond."?

Mr. BADDEN: I don't recall.

Mr. SOMMERVILLE: Well, do you hold his bond?

Mr. BADDEN: Yes.

Mr. SOMMERVILLE: The bond of how many members of the association?

Mr. BADDEN: Every one of them.

Mr. SOMMERVILLE: What is the amount of the bond?

Mr. BADDEN: It varies.

Mr. SOMMERVILLE: Was his bond $10,000?

Mr. BADDEN: No.

Mr. SOMMERVILLE: What are the amounts of the bonds, the variation?

Mr. BADDEN: They vary from $10,000 to $75,000.

Mr. SOMMERVILLE: From $10,000 to $75,000?

Mr. BADDEN: Yes.

Mr. SOMMERVILLE: And those bonds are given by the rubber footwear manufacturers?

Mr. BADDEN: Yes, sir.

Mr. SOMMERVILLE: Why this bond of $75,000? What is that for?

Mr. BADDEN: As a guarantee of good faith.

Mr. SOMMERVILLE: Good faith in what?

Mr. BADDEN: The association's arrangements.

Mr. SOMMERVILLE: The association's arrangements. Well, these are all reputable merchants who have been carrying on business for a long time. Why insist on a bond for good faith?

Mr. BADDEN: You heard Mr. Carlisle say that these things never work out.

Mr. SOMMERVILLE: And this is a guarantee that something will work out?

Mr. BADDEN: We hope so.

Mr. ILSLEY: Have you the bond?

Mr. SOMMERVILLE: Will you be good enough to tell me the amount of the bond of each of the members of the association?

Mr. BADDEN: Yes. Canadian Goodrich Company, $20,000; Gutta Percha & Rubber Limited, $20,000; Dominion Rubber Company and its subsidiaries, $25,000.

Mr. SOMMERVILLE: You are in the preferred class, Mr. Eden.

The WITNESS: It would seem so.

Mr. BADDEN: Kaufman Rubber Company, $20,000; Northern Rubber Company, $20,000; Miner Rubber Company, $20,000; Woodstock Rubber Company, $15,000; Acton Rubber Company, $10,000.

Mr. FACTOR: Have you got a copy of the bond?

Mr. BADDEN: There is not any bond. It is cash.

Mr. SOMMERVILLE: Oh, it is cash?

Mr. BADDEN: Yes.

Mr. SOMMERVILLE: That is better still. The bonds are called.

Mr. FACTOR: Deposited with whom?

Mr. BADDEN: With us.

Mr. SOMMERVILLE: Who do you mean by "with us"?

Mr. BADDEN: Hardy & Badden.

Mr. SOMMERVILLE: At Toronto?

Mr. BADDEN: Yes.

The CHAIRMAN: It is no wonder they find them difficult to manipulate, class A.

Mr. FACTOR: Under that agreement, Mr. Badden?

Mr. BADDEN: Yes.

Mr. FACTOR: Where is the copy of the agreement?

Mr. BADDEN: I have it here.

Mr. FACTOR: Will you file it with the committee?

Mr. BADDEN: I will have to file my original minute book. I can send a copy.

Mr. SOMMERVILLE: I think we will have that minute book. You won't need it for a little while. We will send it back to you.

Mr. FACTOR: What are the essential terms of the agreement?

Mr. BADDEN: What do you mean?

Mr. FACTOR: What are its terms? What are the conditions of making the deposit? What does the man have to do? How does he have to behave?

Mr. BADDEN: To carry out the various arrangements that are entered into.

Mr. SOMMERVILLE: What arrangements are entered into, as to price?

Mr. BADDEN: As to price, standardization.

Mr. SOMMERVILLE: There is standardized price?

Mr. BADDEN: Standardization of goods.

Mr. SOMMERVILLE: Of goods?

Mr. BADDEN: Yes.

Mr. SOMMERVILLE: First of all there is standardization of goods?

Mr. BADDEN: Yes.

Mr. SOMMERVILLE: And the price agreed upon is standardized?

Mr. BADDEN: Yes.

Mr. SOMMERVILLE: Then one member can't depart from that standard without submitting his suggestions to the association?

Mr. BADDEN: Yes.

Mr. SOMMERVILLE: And if one member desires to manufacture a certain line then the other members must be made aware of it and agree upon that.

Mr. BADDEN: Yes, sir.

Mr. SOMMERVILLE: And then any member may manufacture the same line.

Mr. BADDEN: Yes, sir.

Mr. SOMMERVILLE: So that there is, in that respect, standardization of lines?

Mr. BADDEN: Yes, sir.

Mr. SOMMERVILLE: Now then, is there a standardization of price for these standard lines?

Mr. BADDEN: Yes, sir.

Mr. SOMMERVILLE: And that price is agreed upon among the members of the association?

Mr. BADDEN: Yes.

Mr. FACTOR: That is the price at which they are to sell.

Mr. SOMMERVILLE: That is the price at which they are to sell the goods to the jobber.

Mr. BADDEN: Yes, to anybody.

Mr. EDEN: That is the list price.

Mr. SOMMERVILLE: That is what you call your list price?

Mr. BADDEN: Yes, sir.

Mr. SOMMERVILLE: And from that list certain payments are agreed upon?

Mr. BADDENS Yes, sir.

Mr. FACTOR: And also a price that the retailer has to get for it.

Mr. BADDEN: No, sir.

Mr. FACTOR: That is not the case?

Mr. BADDEN: No, sir.

The CHAIRMAN: We will now adjourn to meet at 3.30.

The committee adjourned at 12.55 to meet again at 3.30 p.m.

AFTERNOON SITTING

The Committee resumed at 3.30 p.m.

The CHAIRMAN: Order, gentleman.

We will continue with the same witnesses we had this morning.

Examination of Mr. W. A. Eden, and Mr. H. J. Badden, resumed.

By Mr. Sommerville:

Q. At adjournment we were dealing with the question of association that exists, and the basis of this association. Now, let me understand it, in addition to fixing the price among the members of the Association I understand you also fix the quota of business for each member of the association?—A. Yes, sir.

Q. If you will just speak up so the reporter can hear you?—A. Yes.

Q. And the last quota fixed was apparently on the 5th April, 1934, at a meeting; and I read this resolution: that the new pool percentages effective January 1, 1934, are confirmed as follows: Dominion Rubber Company Limited, 38·92 per cent; Gutta Percha Rubber Limited, 11·29 per cent; Kaufman Rubber Company, 10·58 per cent; Miner Rubber Company, 10·62 per cent; Northern Rubber Co., Ltd., 9·91 per cent; Canadian Goodrich Company, 9·16 per cent; Woodstock Rubber Company Limited, 6·78 per cent; and the Acton Rubber Co., Limited, 2·74 per cent—a total of 100 per cent. That constitutes the whole volume of business as filed, is that right?—A. Yes, sir.

Q. And if any one member sells more than his quota, what happens?—A. He pays into the pool 25 per cent of his excess.

Q. He pays into the pool 25 per cent excise?—A. No, excess.

Mr. YOUNG: You might as well call it an excise tax.

By Mr. Sommerville:

Q. And then that 25 per cent forms the pool fund?—A. Yes.

Q. Now, let me see; that amount was increased, was it not, by 15 per cent? Page 120 of the minute book contains this resolution: Resolved that the resolution covering the additional pool tax as passed at the meeting held on November 8, 1933, is amended by adding, "shall only apply on the new season's list;" making the resolution now read: "that the resolution passed at a meeting held October 26, adding 15 per cent additional pool tax for all goods shipped at former prices after the new list was in effect shall apply only on the new season tennis list." Does that mean there is 40 per cent paid?—A. No.

Q. What does it mean?—A. It means that orders which are not shipped after a certain date, if there is a price increase, take a certain tax.

Q. But this says— —A. An additional tax.

Q. Additional?—A. That is to prevent any company where there is an increase in material, and it is evident that there is to be an increase in price, going out ahead of time and taking unfair advantage of the industry, writing up a lot of business ahead of time. If they do that, there would be an extra tax on it.

Q. I do not get that yet, Mr. Eden. They would in any event pay 25 per cent if they sold more than their quota; then you say they would pay 15 per cent excess over the quota?—A. Yes.

Q. What does this mean when it says 15 per cent additional pool tax?—A. That would be 40 per cent.

Q. On new season tennis list. This additional 15 per cent is for all goods shipped at former prices after the new list is in effect?—A. Yes.

By the Chairman:

Q. This is similar to the Cartel system in Europe?—A. Exactly the same, the same general principle.

By Mr. Heaps:

Q. Your quota system applies for domestic consumption?—A. Just for domestic, yes.

By Mr. Sommerville:

Q. In addition to fixing the quotas in this way, I observe this resolution on the 6th April, 1934: "That no addition shall be made by any member to either the consignment jobbers' list or the ordinary jobbers' list without having first obtained the approval of members of the association." Does that mean that a manufacturer could not add anyone to his jobbers' list or to his consignment list without getting the approval of the other manufacturers?—A. In effect, yes.

Q. That is it?—A. Yes.

Q. And then, is it also a fact— —A. Now, let me explain this consignment jobber list. They act in lieu of branches in some cases. If a member company of the association have a branch the smaller company will have a jobber, and he consigns his merchandise, and he performs all the functions of a branch for the small company. You could not have them jumping all over the lot from one day to the other. It is an orderly basis of keeping together, and knowing what the other fellow's basis is.

Q. That refers to consignment jobbers, this resolution applies to all jobbers, so it does not matter whether they are performing that service or not, no jobber can be appointed by any one without the consent of all?

By Mr. Factor:

Q. Do you limit the number of jobbers?—A. They are fast disappearing, like other lines of business.

By Mr. Sommerville:

Q. Are you encouraging them to remain in the business or to disappear?—A. Unfortunately, we are the tail of the dog, and the leather shoe people—who were the big suppliers—when the leather shoe people went direct to the retailer that was the death-knell of the jobber. Rubber goods are probably only 20 per cent of sales in shoe stores, the big item is leather shoes, they are sold by the leather shoe manufacturer direct, and it has just been a continuous list of failures for the last twenty years.

Q. You have been closing out jobbers yourselves regularly and consistently, have you not?—A. Oh well, we have.

Q. And your association encourages that?—A. It gets down to more economical merchandising, and gives the public of Canada cheaper merchandise. We have cut out all the waste we could find in our industry.

Q. Yes. Then from time to time your association meet, and then after the list is out you may decide to increase the price?—A. It is subject to change without notice, but invariably we go through a season without a change of price. Our tennis season is from September to September and our waterproof season is from March to March.

Q. I observe here that on April 7th—?—A. That is our new season's prices, covering this. We hope, if it is possible, to run these prices up to March of next year.

Q. This is April?—A. That is when we go out selling goods for Fall delivery.

Q. I observe that this resolution is adopted: that effective forthwith the list price on all rubber footwear shall be advanced 3 per cent, with the exception of rainettes, on which a new price will be issued, the price committee to figure out the list price on the above basis. Now, is that an addition to the existing list price?—A. Yes.

Q. And is that additional to the new list price which has generally prevailed since March?—A. There were no new list prices in March, as all the articles on last year's prices went right through the season.

Q. This is in April of 1932?—A. 1932—no, we would not have a change in March of all that difference. That probably was including the new sales tax.

Q. April of 1932?—A. Yes, I think footwear went from 3 to 6, or from $1\frac{1}{2}$ to 6.

The CHAIRMAN: From 3 to 6; it was $1\frac{1}{2}$ for a while. It was $1\frac{1}{2}$, then it was 4 per cent sales tax, and then the 4 per cent was increased to 6 per cent.

The WITNESS: That was just covering the sales tax, Mr. Sommerville.

Mr. SOMMERVILLE: Yes, now then on the business of the association I observe that you file this statement which should be read into the record, showing your basis of discounts for tennis footwear, and rubber footwear for the present season. We will not enter the rates for the last season.

The CHAIRMAN: That statement will be taken into the record at this point.

LIST OF RUBBER FOOTWEAR SALES

The total sales of the manufacturers in the twelve months ending February 28th, 1934, amounted to \$9,816,811.38. This was divided into class accounts as follows:

"A" List	\$2,687,580.25	27·377%
"B" "	745,979.10	7·599%
"C" "	123,481.20	1·258%
"D" "	448,097.65	4·565%
		40·799%

Sales to accounts earning bonuses as follows:

6%	\$430,933.00	4·390%
4½%	223,020.00	2·272%
3%	547,339.00	5·576%
2%	724,430.00	7·379%
1%	1,183,154.00	12·052%
	\$3,108,876.00	31·669%

Sales to accounts not earning bonuses.. ...	2,702,797.18	27·532%
	9,816,811.38	100·00%

Sales to all jobbers are included in the above figures.

TENNIS FOOTWEAR—PRESENT SEASON

Discounts to Listed Accourts:—

A..	12%
B..	10%
C..	8%
*D..	6%

*York Trading Company Limited appearing on this list receive an extra 2 per cent at end of bonus year.

Discounts to Jobbers:—

Where the account is carried by the manufacturer instead of the jobber, 7½ per cent commission to cover cost of selling.

Where jobbers sell on a 7½ per cent commission basis the maximum rate of bonus to be paid by the manufacturer to any one account sold by this commission jobber shall be 3 per cent, any further bonus due the customer shall be paid by the manufacturer and deducted from the jobber's commission.

Commencing March 1, 1934, where the account is carried by the jobber direct 12 per cent commission and a further one per cent bonus at the end of each bonus year, from which the jobber must pay any bonuses due to his own customers on his own sales. Prior to March 1, 1934, payment of bonus earned by jobbers' customers was optional with the manufacturers.

Where the jobbers are located at branch points and carry goods on consignment for one manufacturer, and have exclusive representation and territory, for that same manufacturer, they shall be allowed a discount or commission of 12 per cent for selling and carrying the account, and a further allowance of 5 per cent to cover handling when the goods are shipped from consignment stock, making a total commission or allowance of 17 per cent on goods shipped from consignment stock.

Sales by jobbers carrying consignment stocks to listed accounts shall be invoiced in the name of the manufacturer, and the maximum commission to be allowed to such jobbers selling listed accounts instead of the regular jobbers' discounts or commission shall be as follows:

Sales to the "A" List, 3 per cent.

Sales to the "B" List, 4 per cent.

Sales to the "C" and"D" Lists, 5 per cent.

and in addition to the above commissions shall be allowed the usual 5 per cent to cover handling when goods are shipped from consignment stock.

Bonus for Volume—Customers purchasing over $250,000 annually.

Over—

$ 250,000	and up to $ 500,000,	1½ per cent on excess of	$ 250,000
500,001	and up to 750,000,	1½ per cent on excess of	500,000
750,001	and up to 1,000,000,	1½ per cent on excess of	750,000
1,000,001	and over,	1½ per cent on excess of	1,000,000

Bonus for Volume—Unlisted—Accounts Purchases of—

\$ 500 to \$ 999—Rate..	1 per cent
1,000 to 2,499—Rate..	2 per cent
2,500 to 4,999—Rate..	3 per cent
5,000 to 9,999—Rate..	4 per cent
10,000 to 14,999—Rate..	5 per cent
15,000 and over —Rate..	6 per cent

RUBBER FOOTWEAR—PRESENT SEASON

Discounts to Listed Accounts:—

A..	12 per cent
B..	10 per cent
C..	8 per cent
*D..	6 per cent

* York Trading Company Limited appearing on this list receive an extra 2 per cent at end of bonus year.

Discounts to Jobbers:

Where the account is carried by the manufacturer instead of the jobber, 7½ per cent commission to cover cost of selling.

Where jobbers sell on a 7½ per cent commission basis the maximum rate of bonus to be paid by the manufacturer to any one account sold by this commission jobber shall be 3 per cent, any further bonus due the customer shall be paid by the manufacturer and deducted from the Jobber's commission.

Where the account is carried by the jobber direct 12 per cent commission and a further 1 per cent bonus at the end of each bonus year, from which the jobber must pay any bonuses due to his own customers on his own sales.

Where the jobbers are located at Branch points and carry goods on consignment for one manufacturer, and have exclusive representation and territory, for that same manufacturer, they shall be allowed a discount or commission of 12 per cent for selling and carrying the account, and a further allowance of 5 per cent to cover handling when the goods are shipped from consignment stock, making a total commission or allowance of 17 per cent on goods shipped from consignment stock.

Sales by jobbers carrying consignment stocks to listed accounts shall be invoiced in the name of the manufacturer, and the maximum commission to be allowed to such jobbers selling listed accounts instead of the regular jobbers' discounts or commission shall be as follows:—

Sales to the "A" List 3 per cent.

Sales to the "B" List 4 per cent.

Sales to the "C" and "D" Lists 5 per cent.

and in addition to the above commissions shall be allowed the usual 5 per cent to cover handling when goods are shipped from consignment stock.
Bonus for volume—Customers purchasing over \$250,000 annually.

Over

\$250,000 up to \$500.000, 1 per cent on excess over \$250,000

\$500,001 up to \$750,000, 1 per cent on excess over \$500,000

\$750,001 up to \$1,000,000, 1 per cent on excess over \$750,000

\$1,000,001 and over, 1 per cent on excess over \$1,000,000

Bonus for volume—unlisted accounts.

Purchases of

$500 to $999, rate 1 per cent.
$1,000 to $2,499, rate 2 per cent.
$2,500 to $4,999, rate 3 per cent.
$5,000 to $9,999, rate 4 per cent.
$10,000 to $14,999, rate 5 per cent.
$15,000 and over, rate 6 per cent.

Q. And further, you have given us a list of the rubber footwear sales as follows: Total sales of the manufacturers in the twelve months ending February 28, 1934, amounted to $9,816,811.38. This was divided into class accounts as follows: A list, $2,687,580.25 equal to 27·377 per cent; B list, $745,979.10, equal to 7·599 per cent; C list, a total of $123,481.20, equal to 1·258 per cent; and D list, $448,097.65, equal to 4·565 per cent. Your total is 40·799 per cent sold to these four groups on the list.

Then you set out sales to accounts earning bonuses are as follows: 6 per cent bonus on accounts amounting to $430,933 or 4·390 per cent; 4½ per cent bonus on accounts of $223,020 or 2·272 per cent; 3 per cent on accounts of $547,339 or 5·576 per cent; 2 per cent on accounts of $724,430 or 7·379 per cent; and 1 per cent bonus earned on accounts of $1,183,154 or 12·052 per cent. Total business upon which bonuses were paid was $3,108,876, equal to 31·669 per cent.

Then your sales to accounts which did not earn bonuses, I observe, amounted to $2,702,797.18 or 27·532 per cent, making the total sales of the group of members in the association, $9,816,811.38, equal to 100 per cent of your sales. Now, class D is the lowest class of listed accounts, and on that 6 per cent is paid generally. Yet I find that the volume for the limited number of persons in class D is $448,000 as against the volume of class C of $123,000, which draws 8 per cent. Why should that be, if volume means anything to you? Why do you penalize the volume in class D as against the volume in class C?—A. We don't sir. One is an individual account of from 20 to 35, and the other is from 35 to 75. It just happens there are more individuals.

By the Chairman:

Q. You gave us the list this morning. They are a little different from this year; but last year in class C you had four accounts and in class D you had four accounts. That is last year. That has varied this year?—A. It all depends. They just fall into the class or volume that fits them.

Q. But wait a minute— —A. There is something wrong. Either I don't understand your question, or else there is something wrong with those figures.

Q. Mr. Sommerville has just read out to you the sales in the classes, class C and class D for that year, to which those figures apply, which have four accounts. You recall that?—A. Yes.

Q. The question now is if the merchants in class D bought $448,000 worth of goods, are they not entitled to a larger discount on the volume basis than the four merchants or houses that handled $123,000 worth or less than a third of the volume? You said volume was your basis?—A. Not entirely. Volume and method of doing business.

By Mr. Sommerville:

Q. Well, we have the volume now. On the basis of volume, what explanation have you to make to this committee as to why you discriminate against the four customers who gave you $448,000 of business as against four customers that gave you $123,000, to the extent of 2 per cent discrimination? Why?—A. Well, their method of doing business is different.

Q. Do you want to get away from volume then?—A. That is the one place where we are away from volume.

Q. At one place you have it volume, and another place you have not got it volume. Which is it? Is volume a factor?—A. It is not entirely a factor, even with the co-operatives. But the co-operatives do not get the same volume, because they don't function in the same way.

Q. Here is your volume with the co-operatives, and there are four co-operative buyers in that year; they bought nearly four times as much as the four individual accounts in class C. Why discriminate against the co-operatives who want to live and want to compete with the big accounts?—A. I believe in that, one large co-operative got 6 and 2, I think he got 8, that you listed in that class.

Q. They got a bonus of 8 per cent, but they are entitled to a bonus in any event on volume, because your bonus is based on volume, and others got bonuses on volume. This is a discount that we are discussing now. Have you any explanation?—A. Well, it is the method of doing business.

By Mr. Factor:

Q. Does it cost you more to do business with four co-operatives than with four individuals?—A. Yes, we have to put your travellers on the road. You have got to go to the individual members right through.

By Mr. Sommerville:

Q. You have to put your travellers on the road for Zellers, Neil, Limited, and the others?—A. You make the one call for sixty places, interview one man and do business for the season. With these others, you have to put a flock of travellers on the road, and call on the individual merchants, write individual orders, make them up in small packages, ship them direct. It is a different type of business entirely.

By Mr. Ilsley:

Q. Is that always so? I thought they did some buying as a unit, these individuals?—A. I believe in certain lines of merchandise they can, but in footwear they have got individual patterns and sizes. You have got to have an experienced man to go into a shoe store and size up the sales. The sizes are broken. You have got to fill in. It is a different thing, I imagine, selling a bunch of groceries than it is selling a line of fashionable merchandise that runs into lasts, patterns and sizes.

By Mr. Sommerville:

Q. Yes, but you have got your lasts standardized, your patterns standardized?—A. Yes.

Q. A man can take a catalogue, and he can look at that catalogue and he does not have to look at the name of the catalogue because they are all the same. What is the difficulty about ordering these goods when you have got, every one of your firms, travellers out selling the same line of goods, the same quality, the same standard, the same price, to the same trade. If you want to cut down expenses, why not start there rather than on the merchant who wants to come in and compete with the big brother?—A. Well, I wish, Mr. Sommerville, that this line was as simple as you think it is. I don't know how many hundred models and lasts and patterns they have got to know. In the leather shoe business, they have got to go into the store and see what leather shoes the merchant has in stock, got to fit the overshoes and so on.

Q. I think you have done a fine thing in standardization?—A. By gad, I know we have.

Q. I think you have, and I see the necessity for it. But when you have standardization, what I am anxious to know is why you discriminate against these little fellows that are struggling to make a living, and why you discriminate to the extent you do?—A. I contend that we don't discriminate.

By the Chairman:

Q. Mr. Eden, this is perhaps one of the most important points of our inquiry, in this particular portion of it?—A. I appreciate that, and I wish I knew the answer. I wish to God I did.

By Mr. Sommerville:

Q. I will tell you the answer. You just won't sell to them?—A. If that was the answer, it would be simple and easy to tell you.

Q. Let me give you an illustration of it. You did sell to Mutual Stores and Kaufman and another firm too; and as soon as your organization came into existence with these deposits, they were cut off?—A. Oh, but let me tell you that the top discount was a great deal farther away from the York Trading discount in those days than it is to-day.

Q. I know that?—A. All right.

Q. And therefore the very much greater discrimination against the Mutual Chain Stores in those days than there is even to-day?—A. Yes; that was with disorganization and no association.

Q. When your association came into existence, you cut off these men who were struggling to compete with the big departmental and chain stores?—A. No, we put their price closer to the price of departmental and chain stores.

Q. 14 per cent was what their price was?—A. Before?

Q. Yes, 14 per cent.

The CHAIRMAN: Discount.

By Mr. Sommerville:

Q. 14 per cent was the discount to the big store and 6 per cent was the discount to the D class?—A. No—when you are talking about that they had this big discount, what discount did they get?

Q. You know. What did they get?—A. I didn't sell them. It is reported to me what discount they got; but I know what the class A man got and I know they got 40.

Q. 40 per cent?—A. Yes.

Q. The class A man got 40 per cent?—A. Yes.

By Mr. Factor:

Q. Before the organization was formed, do you say?—A. Yes.

By Mr. Sommerville:

Q. What did class B get?—A. I can't tell you, because pretty nearly everybody in Canada got a different discount, but they were 10 per cent at least away from their top discount, the York Trading Company, and they are closer to it to-day than they were before there was any organization.

By the Chairman:

Q. Can I put this question to you, Mr. Eden: That the large buyers in class A insist upon a discrimination against those, say, in class D?—A. No, sir.

Q. They do not indicate to you that they do not wish to have class D extended similar privileges?—A. No, sir.

Q. Well, you have not given us an explanation of why; because I confess frankly when you have an organization like this in class D, and in addition to

that a wide range of unorganized retailers who are forced to compete with this class A, and they are handicapped right off in many instances, by a straight 14 per cent plus some other bonuses and discounts, I don't know how you expect those distributors handling your goods to do so successfully?—A. Mr. Stevens, we have got the lowest spread in history between the small man and the big man.

Q. It must have been murderous before?—A. By gad, this thing has been going on for about twenty-five or thirty years.

Q. Oh, no?—A. It has not? By gad, it has, as far as any industry I am connected with is concerned.

Q. I would like to see that statement demonstrated?—A. A few years ago you had all these big fellows buying direct. You had the jobber servicing the small store. The jobber had an operating cost of 20 per cent, and he was making a profit.

Q. But there was more distribution through the jobbers then than there is now?—A. Yes.

Q. You are distributing direct?—A. The jobber had to mark up. The big operator bought as cheap or cheaper than the jobber, and the jobber had a 20 per cent operating cost which meant to get that he had to mark up 25 per cent over his purchase price, and he was making a profit, so you have a spread of over 30 per cent.

By the Chairman:

Q. Tell us what were your sales or the proportion of your sales on your A list five years ago, or seven years ago?—A. I would be pleased to give that to you. Mind you, the solution of this thing means a great deal to us. I could go back in our individual company. I have no association records. I would be pleased to send them to you.

Mr. Sommerville: Perhaps Mr. Badden could give us that.

Mr. Badden: No, I have nothing before 1932.

By Mr. Sommerville:

Q. I suggest to you as something that is well known in your association that for years back the buyers have been saying, "Unless you give us the spread in discount we will set up manufacturing ourselves;" you have heard that?—A. A good many times, sir. I have never heard that from the buyers themselves.

Q. It has come to you as one of the reasons why there must be a spread and you will not allow anybody to come within reach of the big fellows because of that danger?—A. Well, I think our spread there, sir, shows that that is not a fact.

Q. The spread speaks for itself?—A. You do not interpret the spread the same way I do then.

By the Chairman:

Q. Here is another reason that is suggested. One of your members justifies the large discounts to the class A group— —A. We call them moderate discounts.

Q. I call them large. When you get them altogether they are fairly large. One of your members would justify these discounts by suggesting that inasmuch as the overhead of the large retail distributing organization is much greater than that of his smaller competitor he is entitled to a larger rate of discount? —A. Yes, in saving costs you make a tremendous saving in your factory.

Q. No, you are getting me wrong. The point I mentioned is this: one of your members justifies allowing the class A group the large rate of discount

on the ground that his overhead—that the class A group distributors' overhead is much larger than his smaller competitor and therefore he is entitled to a larger discount?—A. I do not know.

Q. Have you heard any of your members argue that way?—A. I have never heard it.

By Mr. Sommerville:

Q. Have you had it advanced to your men by the large buyers as a reason why they must have larger discounts?—A. No, sir.

Mr. Ilsley: Who said that?

The Witness: I have never heard of that.

The Chairman: I have the name.

Mr. Ilsley: It does not appear in evidence yet.

The Chairman: It is information I have.

The Witness: I do not see that we can take the distributing costs of these stores and take that into our cost. We have to take our own cost.

Mr. Factor: Would you give us a little fuller explanation why the spread exists, in addition to the volume; apparently the volume alone is not the only governing factor.

The Witness: Except for co-operatives. We maintain these jobbing companies, our own branches—we have travellers out, and the co-operatives—if they have a jobber he is not maintaining the price. Now, they do their business. They cannot maintain the price. They cannot live. We endeavour to have some order.

By Mr. Sommerville:

Q. Oh. You endeavour to have some order. If that is so, then the firms to which you give the largest discounts should be the firms that would maintain prices; is not that right?—A. Well, now, if they are going to rob the consumers of Canada—

Q. No. The firms whom you are giving the largest discount to. If it is for the purpose of maintaining prices, they are the people who ought to maintain prices. You know they are the people that cut and cut?—A. I am talking about distributors, not retailers—where they go out and sell to the trade. We could not have a jobber out—we give a jobber a line of merchandise and we have a similar line ourselves. If we give him a price and he sells under us we might as well shut up shop.

By the Chairman:

Q. Those companies you sell direct to and give a preferred position to do more than cut the price?—A. Mr. Stevens, we set a price where we could sell every retailer in Canada at the same price; and take this tremendously high-priced business—we would not have their big account, and we would have them in the manufacturing business. Unfortunately, that is one of the problems that this committee is up against. If you can settle what you have started out to settle we will be the happiest people in the world.

Q. Now, you are coming to the reason. That is that these big class A fellows would go into the manufacturing business themselves?—A. If we ever proposed to equalize that between the smaller retailer and the big account in Canada that would be a reason for the big account—he could go into the business and there would not be anybody left, and then you would have a fine mess in this retail business.

By Mr. Sommerville:

Q. Let me put this to you. Suppose you say that this discount is based upon volume and the method of doing business?—A. Yes.

Q. Those are the two factors: one, the size of the order will warrant a bigger discount; and if you do not have to go around to all the stores you have a saving in your selling cost and that warrants the discount. Now, then, supposing this organization, Mutual Shoe Stores, came to you with an order for their entire supplies amounting to $250,000 which is considerably more than is necessary to get into class A and said, "We will take this into our own warehouse." You do not have anything to do but to sell to them and they will distribute it themselves. Would you let them in?—A. And they were able to maintain resale prices.

Q. Would you let them in on the 14 per cent?—A. If they could maintain retail prices.

Q. You do not exact that condition from Eatons?—A. We do it through the distributors.

The CHAIRMAN: You do not exact it from these class A people.

The WITNESS: We do through the distributors. They would be in the position of a jobber.

The CHAIRMAN: No.

The WITNESS: Yes, they would.

By Mr. Sommerville:

Q. What difference does it make to you?—A. It makes a big difference. We have a town of five customers; somebody picks up one of those customers and says, "Come in with me and I will share the discount" and that disrupts this town.

Q. You are selling all this stuff to the rest of the four, and you would be better off?—A. You have switched this thing over night.

Q. Yo do not want it switched.

By the Chairman:

Q. You place upon the co-operatives inhibitions that you do not place upon your class A list?—A. They do not function the same way. They would function as a sort of semi-jobber who cuts prices.

Q. The evidence we have had from scores of retailers or from those representing hundreds of retailers is that most of these class A list are the worst price cutters in the country?—A. Surely they sell to the customers, undoubtedly, cheaper than the small concern.

Mr. FACTOR: You are not concerned with that?

The WITNESS: They should. I do not think—

Mr. FACTOR: If they should, why should not the co-operatives that buy in large volume do the same thing.

By the Chairman:

Q. We have evidence here, Mr. Eden, that some members of the class A group sell to the consumer at less than the retailer can buy the goods from the jobber?—A. They lose money on it. I have never seen it.

Q. We have evidence; we have lots of it?—A. I read over this thing here and I could not identify any Canadian merchandise in these prices.

By Mr. Sommerville:

Q. It was all Canadian merchandise that was referred to, nothing but Canadian merchandise because they were not dealing with Czeckoslovakia or Singapore merchandise?—A. I am satisfied, sir, that some of the prices I saw were on this Singapore stuff, but if they sold, they are either obsolete shoes or they sold at a loss.

Q. You say that you do not want the co-operatives to have this full discount of 12 per cent even though they give you $250,000 worth of business in a year, and even though they remove all the expense of your travellers and your distribution?—A. I know they cannot.

Q. You do not want them to have it. Never mind what their problem is. Will you give it to them?—A. Well, you are talking about a supposition that cannot exist, because they cannot do it.

Q. You are skidding around it again?—A. I am not skidding around.

Q. I am going to tell you that it does exist and that you refused it, and refused it twice last year, and that your association has on record a letter asking for an answer and you have not given an answer—agreeing to buy all their goods, agreeing to pay you in cash for those goods, and agreeing to remove all the question of selling and all the question of distribution, and the members of your association agreed to bring it before your association, and there has not been an answer to this day—the members themselves saying they did not want to do business with the Mutual Shoe Stores. What have you got to say to that? That is the condition from which scores of retailers that are organized in Mutual Shoe Stores are suffering, and they say it is not fair?—A. I am more interested in the thousands of retailers that are not organized.

Q. The sooner they are organized the better. There are hundreds of them that are organized, and when they do organize you say, "We will not have anything to do with you."

The CHAIRMAN: Did your association receive a request of that kind?

The WITNESS: I cannot recall it. They may have, Mr. Stevens.

Mr. BADDEN: Yes, sir.

The CHAIRMAN: And what action was taken by your association?

Mr. BADDEN: No further action than the records show.

Mr. SOMMERVILLE: There is nothing in the minutes.

The CHAIRMAN: No answer was given?

Mr. BADDEN: No, sir.

The CHAIRMAN: Why did you not give an answer?

Mr. BADDEN: I think it was a verbal discussion. I did not discuss it.

The WITNESS: If they had written a letter to me they would have got an answer, because we do not refuse to answer anybody.

By Mr. Factor:

Q. What would you answer to a proposition like that?—A. I would not take it.

Q. Why?—A. Because they cannot function as a jobber. If they could function as jobbers—

Q. They are not trying to function as jobbers; they are trying to do business in order to exist, and you do not give them an opportunity of getting merchandise along with the larger stores?—A. We give them a bigger discount to-day than I say they are entitled to.

By Mr. Sommerville:

Q. The evidence is that when the individual retailer asked you for a larger measure of discount you said to him, "You cannot get the discount until you

produce the volume; organize." When he does organize then you say, "We will not do business with you." Now, what is the retailer to do? Will you tell him just to sit and suffer? That is not the answer?—A. No, it is not.

Q. It is in action?—A. No, it is not.

Q. Well, actions speak a good deal louder than words.

Mr. HEAPS: It is in action.

By Mr. Ilsley:

Q. I do not know. Perhaps I have not got the proper angle of this, but I have been listening to every syllable to see if I could get your idea. What are you afraid of in giving this co-operative, the Mutual organization, the same quantity of volume discount that you give the large buyer? What harm would it do? How would it hurt you to do that?—A. We would have to have a set-up to handle that business. We would have to give a discount to handle it, and we would be straddled in between. We have a set-up to handle the small retailer which is quite an expensive set-up. We call on every hamlet in Canada.

Q. Now you are saying that you want to keep on calling?—A. I do not know whether we do or not.

Q. That is what you are saying?—A. I say we have it; that is a fact.

Q. You have been complaining about that as a great source of expense. Now, you say you want to keep on doing it?—A. Until I see the road clear as to where we are going. I do not know which way the road is.

Q. If you have a real answer to the question I wish you would give it, because this is one of the very important things we are struggling with?—A. I do not think you can share your business and be satisfied that you are going to get out from under the expense. That is the position we are in to-day.

Q. Mr. Sommerville made his question very clear. The co-operative organization comes along and offers to buy $250,000 worth of goods and pay for it and handle it so you will not have any of these extraordinary distribution expenses. Now, why don't you give that organization the same discount that you would give those in the A class?—A. We would have to cover that same territory.

Mr. EDWARDS: That is the point, Mr. Eden.

Mr. SOMMERVILLE: When I mentioned that to you this morning you said, "Well, you would have to call on those same stores anyway." I asked you about the elimination of the number of stores and you said, that would mean extra travellers because you had routed your travellers and you would have all that expense.—A. You take that over a big district, if we could get enough business in one district to fill up ourselves, then it is a different situation.

By the Chairman:

Q. When you sold any of these class A or class B, they are in areas where your travellers go just the same, but you give them the discount; but a new type of business comes along in the same area and you will not give it to them?—A. I would say this, Mr. Chairman, apparently it is in a state of flux, these other fellows have been there.

Q. Can you tell me this: What is there in this price question that is unreasonable—it certainly would solve the whole problem in my mind if I knew what it was. I will ask you the question in any case. What returns did you get over cost of manufacture on goods sold at the rate of those sold under class A last year, $2,687,000 worth of goods? Can you tell that?—A. What, net return?

Q. Yes?—A. I do not know. I will try to work that up the best we can, if that would be of assistance to this committee. It will take some study. We try to net the same profit from each type of account we sell.

Q. Here is what is urged by the representations of thousands of retailers; they say that they are penalized with a high price to make up to the manufacturer what he actually loses on these excessively low-priced goods to, say the class A groups?—A. I am not sure. I would have to turn the accountants loose on it, my opinion is that we make more profit on the class A account than we do on the small retailer.

By Mr. Sommerville:

Q. Why not take more of it, it is being offered to you now?—A. If we could fill out the districts and organize this thing it would be a different thing.

Q. You can't have it both ways, if you increase your volume of class A, you know that it puts them in the position where they can undersell your retailer?—A. Why.

Q. Does it not put them in a position where they could undersell the retailer, the ordinary retailer?—A. Of course it does.

Q. And has not that had the effect of reducing the financial standing of the retailers, their business has gone down very substantially as compared to the good old days you were talking about; that is a matter of fact, is it not?—A. It is.

Q. Is there any more certain way of destroying the retailer, the local retailer, than by giving large advantages to the mass buyer?—A. Our aim has been and is right along to shorten the spread between the big account and the small account. We can show you conclusively over a period of years that we have cut that spread, cut it and cut it. This is the reverse. Now, there is a different thing altogether back of it. Now, you talk about this trend in business destroying the small retailer, it is not the price, I can take you into a dozen Ontario towns like Ayre, Brighton and others, where these fellows off the railroad used to sell $3,500 to $4,000 worth a year. There is nobody in those towns to-day, the automobile and the change in business has driven all this business from the small country towns, driven it into places like Kitchener, Guelph and Brantford.

Q. There are just as many people on the farm?—A. Yes, but they are not buying in these little towns.

Q. Largely because the mass buyer has captured the market?—A. I do not know, I think it is the attractions, the automobile and a lot of other things.

By Mr. Ilsley:

Q. Years ago, before the automobile came, the spread between your price to the large buyer and the small buyer was not so serious?—A. It was bigger than it is to-day.

Q. But the effect of it was not so apparent?—A. The population was not so mobile. It is not the spread altogether, it is attractiveness and quickness of transportation.

Q. The retailer, even if he did pay more for his goods in proportion to the large buyer years ago could still keep on, because of the immobility of the population?—A. Then of course he used to take things in trade for merchandise, the farmer was tied up to local merchants; so it is not price altogether by any means.

By Mr. Sommerville:

Q. Here is another factor, Mr. Eden. You said that you did not want to sell to this large buyer, the co-operative buyer, because that would enable them to compete with your jobber in the district?—A. If I said that I did not know it.

Q. It would enable them to distribute?—A. If I said that, Mr. Sommerville, you can erase that from the record; I did not say that.

Q. Did you not say that?—A. No, sir.

Q. I think what you said was— —A. If that is in the record, it is a wrong impression.

Q. You say that if you sold to these co-operatives they would be competing with your jobber?—A. Our branch, not the jobber.

Q. All right; and that they would be able to go into a town and pick out one account and say, come on in with us and you can get the discount; that is what you say?—A. Yes.

Q. And then compete with your jobber?—A. We know our business and we know our expenses; if we did not know that how could we do it without putting up our prices.

Q. Here is what I see is your discount: where jobbers are located at private points and carry goods on consignment for one manufacturer they should have exclusive representation and territory for that same manufacturer, they should be allowed a discount or commission of 12 per cent for the selling and carrying account, and a further allowance of 5 per cent to cover handling when the goods are shipped from consignment stock, making a total commission or allowance of 17 per cent on goods shipped from consignment stock?—A. That is right.

Q. You allow the 17 per cent?—A. Those are the fellows that act as a branch where you have no other representation, that is the way a small company—

Q. This is at branch points?—A. No, you would not have a branch at the same point at which you would have a consignment jobber, there is never the two. If you have a branch in a town you have enough business to support a branch. Some small company may be in town without enough business to support a branch, they will have a consignment jobber function for them as a branch.

Q. That is to say, where your branch has the competition of a jobber in a branch point, then that jobber if he carries consignment goods, gets 17 per cent discount?—A. He acts as somebody else's branch.

By Mr. Factor:

Q. There is no such thing as your branch being a consignment jobber?—A. Not in the same town for one company, if you have the one you do not have the other.

By Mr. Sommerville:

Q. Is that right?—A. Yes, that is.

Q. Wait a minute now, what are branch points, is not that a point where you have a branch house?—A. Yes, but all companies do not have branches. If they do not have a branch they put in a consignment jobber.

Q. That is to say, Gutta Percha may have a branch, we will say at Ottawa, and Dominion may have a consignment jobber at Ottawa?—A. Yes.

Q. That is true?—A. Yes.

Q. And they are competing?—A. Yes.

Q. And where that condition exists you allow the consignment jobber 17 per cent?—A. Yes.

Q. And you will take back at the end of the season whatever goods are left on the consignment jobbers' hands, if necessary?—A. Yes.

Q. That is worth around 3 or 4 per cent more to the jobber, to be able to get his goods sent back?—A. He does not send them back, they are reserved; but he is in exactly the same position.

Q. That is worth something, he does not have to pay for them?—A. He is your appointed agent, he has exclusive right, it is your stock.

Q. So that he has 17 per cent?—A. Instead of paying him a salary you pay him a commission on the business that goes through. That is the only difference between a consignment jobber and a branch—you pay rents and salaries to your people, while the other man pays his own rent, and so on.

Q. Now, listen; the Mutual Shoe Stores handle goods and distribute them among their related firms, all they ask is to be given this 12 per cent without any right to return goods at all. The jobber has 5 per cent plus this rate, and the right to return his goods?—A. That is your branch jobber. We own our branches. We have got a big set-up, pay rents, salaries and so on.

By Mr. Factor:

Q. The point Mr. Sommerville makes, he cannot compete with the consignment jobber?—A. That is a different set-up entirely, he is not a sole representative.

By Mr. Sommerville:

Q. I just wanted to see what there was in that argument, that there were mutual shoe stores competing with your jobbers; apparently there is not much in it? Is there any possible reason you can now furnish to us showing why this discount should not be given, and this account brought nearer in line with the large accounts?—A. I have said the only reason I know is, you share your business and you do not share your expenses; and we cannot afford to do that unless we increase our prices.

Q. Now, do not let us misunderstand it, we have it definitely on record from you on behalf of the association that if the Mutual Shoe Stores offer you $250,000 worth of business—or if any cooperative offer you $250,000 worth of business—take the shoes from you and distribute them themselves, arrange to take their own orders, and you have no selling expenses; that you will refuse to give them the Class A discount?—A. I cannot speak for the Association, I can speak for our company, that we would not take it ourselves. You are making a supposition that I cannot accept. If you want to make that a hypothetical case, my answer is, no, not at the present time.

Q. I am not making any hypothetical case at all, I am giving you an actual case?—A. I say it is hypothetical, because, from my knowledge of the rubber business—.

Q. In the spring of 1931 you sold $300,000 worth of rubber footwear and were paid for every dollar of it by the Mutual Shoe Store—this is one of the Cooperatives. In the year 1932 your association refused to do any business with them at all on the basis of anything better than the Class D discount. In 1933 they came to two members of your association, Mr. Kaufman and the Goodrich people, and definitely agreed that they would take the goods, warehouse them themselves, take their own orders and pay for them, and added to that the guarantees that had been given in 1931; and they were told we will not do business with you. A month later one of these two representatives, Mr. Kaufman, met the committee and said he would submit the matter to the association. A month later they wrote to the association for an answer and up to the present moment they have never received a reply. Now, that is not a hypothetical case, that is an actuality you are dealing with; and up to this moment you have not given an answer, and we must assume that you refuse the business—there can be no other presumption?—A. These companies apparently refused it.

By Mr. Kennedy (Winnipeg):

Q. You are accepting that statement as correct, so there will be no misunderstanding?—A. I can only say had that business been put to me I would have refused it, because they cannot function the way Mr. Sommerville describes.

The CHAIRMAN: Mr. Eden has already stated that this case was before the Association, and the Association gave no answer to it.

By Mr. Factor:

Q. You verbally refused the business?—A. No, sir.

By Mr. Kennedy (Winnipeg):

Q. But you are further stating that if that same offer was made now, you would refuse the business?—A. Because, they can't function the way Mr. Sommerville explains, at least, that is my opinion.

Mr. FACTOR: They can't function you say.

The CHAIRMAN: I don't know that there is any need of pursuing that any farther.

Mr. YOUNG: Maybe Mr. Badden can tell us. He said they discussed that freely. What did they say?

Mr. BADDEN: The manufacturers discussed it. I don't know what they said.

Mr. YOUNG: You were not there?

Mr. BADDEN: No.

The CHAIRMAN: In any case, the business was not accepted.

The WITNESS: That is apparent. The order was not taken.

Mr. EDWARDS: Perhaps you had better find out if the experience with that company was satisfactory.

Mr. SOMMERVILLE: From $200,000 to $300,000.

Mr. EDWARDS: I mean other conditions, whatever those conditions were; I don't know.

By Mr. Sommerville:

Q. May I ask this: We have been talking about the allowance to class A buyers. That is 12 per cent this year, a 12 per cent discount, is it not?—A. Yes.

Q. What else do they get as well as the 12 per cent?—A. The bonus shown on the schedule given you there.

Q. What would be the bonus in the case of the sale of $300,000 worth of goods?—A. It would be 1 per cent of $50,000.

Mr. BADDEN: Right.

By Mr. Sommerville:

Q. 1 per cent?—A. 1 per cent of $50,000.

Q. In the case of the sale of $1,000,000 worth of goods it would be what?—A. It would be 1 per cent on 250; it would be 2 per cent on 250 and 3 per cent on 250. Is that right?

Mr. BADDEN: I don't know how you figured that out.

Mr. SOMMERVILLE: 1½ per cent, is it?

Mr. BADDEN: It is changed to 1, on one line.

Mr. SOMMERVILLE: Not on tennis?

Mr. BADDEN: Not on tennis.

The WITNESS: Some end of the business, the big end waterproof has been changed to one. That would be 1 per cent on a quarter-million; 2 per cent on a quarter-million, 3 per cent on a quarter-million.

By Mr. Sommerville:

Q. 1 per cent on the first quarter-million, 2 per cent on the second quarter-million?—A. No, there would be nothing on the first quarter. 250 to 500, that is 1 per cent, and 500—

Q. $500,000 to $750,000, 2 per cent?—A. Yes. $750,000 to $1,000,000, it would be 3 per cent.

Q. What other advantages do they get?—A. None that I know of.

Q. Any special discounts?—A. No. Everything is filed with you.

Q. Any cash discount?—A. They get the same cash discount as everybody else gets.

Q. What is that?—A. 2 per cent. That information is right there. Those figures are absolutely comparative on the spreads.

Q. No advertising allowance?—A. No, none at all.

Q. Are there any advertising allowances paid by the members of your association at all?—A. No.

Q. To anyone?—A. To anyone.

Q. Any free goods?—A. No, sir.

Q. Any special allowances for anything like that?—A. No, sir.

Q. Then the advantage that they have over the ordinary retailer is represented— —A. Absolutely reflected in that chart there.

Q. In the chart that you have put in?—A. Yes.

By Mr. Factor:

Q. May I ask you this: If such a thing were possible, that all the retailers in Canada would group themselves in localities and co-operatively buy from you, eliminating the travellers, would you be willing to do that?—A. We would be, if such could be done. It would take away a lot of our troubles if we could get back and be in a position of doing business as we did with the jobbers before they were more or less exterminated. They have destroyed the set-up which apparently was useful. Apparently it is gone. They may come back. I don't know.

Q. Do you think in your business the jobber system is the most advantageous way of merchandising?—A. No. It got to a point where it was too extravagant for the volume they could give; because the leather fellow had gone to the fair-sized retailer and there was no quantity of the leather business for this chap to do. He just had to go to the very small outlet or bad credits, and they left him high and dry. I think possibly over a period of time that you would get organized retailers.

Q. I can see your problem, where part of the merchandise would be bought co-operatively, and part you would have to send travellers and go to the individual retailers, and you could not co-ordinate those two together?—A. You can't co-ordinate them. You can't afford to do it.

By Mr. Kennedy (Peace River):

Q. How are you going to get them organized 100 per cent or 80 per cent, if you won't do business with them?—A. We do do business with them. We give them more to-day than we did.

Q. You have been telling us here you would not give them the same consideration that you would to another?—A. Pardon?

Q. I say you have been telling us you would not give them the same consideration that you would give other firms?

Mr. SOMMERVILLE: There is no encouragement to the organization of the kind you want.

By Mr. Kennedy (Peace River):

Q. You say you want a certain type of organization, but you discourage the function of that type?—A. No, we pay more to-day to that type of organization than we can afford to pay, ourselves, right now.

By Mr. Young:

Q. When you refused to sell them these orders, can you blame the companies for trying to get their supplies from some place else?—A. Not a bit.

Q. Did you ever ask the government to put a duty on so they could not import their supplies?—A. It just happens that there is not a duty on our stuff. There is a protective duty on a lot of raw materials, but there is no duty on our finished goods.

Q. No duty on rubbers?—A. No.

By Mr. Factor:

Q. What was responsible for the destruction of the jobber system in the rubber shoe business?—A. In the main, I think it was the multiplicity of small rubber shoe manufacturers, and each one reaching out for the fair sized retailer, and they picked off all the good retailers themselves, going direct, and thus they starved their own jobbers.

Q. Was the departmental store not responsible to some degree?—A. I think it may have been contributing, but I think it was more the manufacturers. I think it is the same in footwear as it has been in any other line. Here you have the biggest dry goods people in Canada—Greenshields, Racines and Hodgson & Summer—three of the biggest wholesale drygoods people in Montreal, who had to amalgamate a few months ago. I think the cause of that is undoubtedly that these big concerns go to Europe and bring in the type of merchandise they were buying.

By Mr. Kennedy (Winnipeg):

Q. May I have your attention for a moment. I have a wire here from the Winnipeg Merchants Association at Winnipeg, and the gist of it is, "Understand rubber companies appearing before Stevens committee this week," and they ask for full investigation into what they term "unfair discounts the large buyers of rubber footwear receive." Are the discounts referred to in this wire the discounts that are set out in the schedule filed?—A. In the schedule filed here.

Q. They do not elaborate. Have you any comment to make as to what they term unfair discounts, that might be reflected in complaints you receive? Would you comment on that?—A. I don't know just what the small retailers would consider a proper spread between the small fellow and the big fellow. I know of lines of merchandise on which, by gad, there is a 35 per cent spread.

Q. I take it your point of view is—and I am not arguing the point at all—that where you sell in large quantities you give a bigger discount, naturally, than you do where you sell in smaller quantities?—A. Surely. We can afford to.

Q. In view of the fact that selling in smaller quantities, from your experience, is much more expensive to you?—A. Very much more expensive.

Q. Is that what they refer to as unfair discounts?—A. Yes.

Q. And from your experience in business, shall I take it that your view is that these are not unfair discounts?—A. I think they are fair discounts. I know of no industry in Canada with discounts like those you have before you here.

Q. Would it be a correct interpretation of their viewpoint as put forward in this wire, that they seem to think that the small retailer should get as much discount as the large buyer?—A. It is.

Q. Is that what they impress on you?—A. That is what they impress on everybody in the country.

Mr. SOMMERVILLE: They are not asking for the same discount as the big buyer or class A. They are asking to reduce the spread between the two so that they can compete.

The WITNESS: Have you any idea, Mr. Sommerville, what they think the spread should be?

Mr. SOMMERVILLE: I have no doubt they have discussed it with you time and time again.

By Mr. Kennedy (Winnipeg):

Q. Just let me finish this point. Then I can take it that the spread as indicated in that schedule of discounts filed is the spread on which your company operates, and similar companies in the association?—A. Yes.

Q. And in the view of your association, those are fair spreads?—A. Yes. The reason that I believe there is a criticism of these discounts is because they are known. There are no secret rebates or premiums or advertising or anything given away. In a lot of cases they think they are getting a good discount and they are not. This is right open. There are no secret rebates or anything. It is all public property.

Q. Let me just go one step further. They say: "Assistance badly needed," the independent shoe dealers. Assuming that, as a result of these discounts, the small retailers have to go out of business to a considerable degree, what effect generally on the industry would that have?—A. Well, it will probably leave a store vacant in some towns.

Q. I mean, as manufacturers are you concerned, from a business point of view, as to whether or not these small dealers do go out of business?—A. No. There are undoubtedly some small dealers that should never have been in business, but the unfortunate thing is they are there and what are you going to do with them?

Q. If the effect of these discounts is to drive, we will say, any considerably quantity of retailers out of business, are you as manufacturers concerned in that?—A. I don't think it is our problem.

By Mr. Sommerville:

Q. You say there have been no secret discounts?—A. No.

Q. Were not all these discounts secret until this morning? The retail trade didn't know what they were?—A. Every retailer pretty near in Canada knows them.

Q. Is that so?—A. Yes.

Q. Are they generally known throughout the trade?—A. Yes.

Q. The amount that is allowed?—A. Yes.

Q. Then they still consider them unfair, according to the wire received? —A. Yes. Most of these lines they don't know, and they get a discount and somebody else gets a whopping bigger discount and they don't know about it, and they think they are all right.

Q. Let me ask you this: Are you interested in enabling your retail merchants to compete with the large firms on reasonable terms?—A. We hope that every person that buys from us has the same reasonable chance of success.

Q. All right. Let us try it out on bicycle tubes. You make a bicycle tube known as Endurance?—A. I believe we do.

Q. Or rather a bicycle casing, don't you?—A. I believe we do. It is one of our brands, I think.

Q. And the cost to the retailer is a dollar?—A. I don't know.

Q. That is as it appears on the Dominion Company price list which I have here. Then you make another bicycle casing called Regent?—A. I can't tell you. I will be pleased to look it up and file the information.

Q. You don't know that that is one of your brands?—A. No. We make about fifty million different things.

By Mr. Factor:

Q. It is too much for you, as president?—A. Yes, when it comes to bicycle tubes.

By Mr. Young:

Q. Do you say there is no duty on your goods?—A. Not from England or Singapore.

Q. Just a minute— —A. There is on tennis. There is a 15 per cent duty on tennis, but no duty on waterproof footwear, the big end.

Q. What about clothing?—A. We were talking about footwear. I understood you were asking about that.

Q. Under the general tariff there is a duty of 27½ per cent. On clothing it is 25, 30 and 35 per cent plus 50 cents?—A. The markets we are most liable to get our stuff in from, there is no duty, barring Slovakia.

Q. Something was said this morning about imports from Japan and Czechoslovakia?—A. Imports from Japan are practically shut off; and the serious imports are from Singapore, which come in free.

Q At the moment they are free?—A. Yes.

Q. It is only footwear that is free?—A. Yes. On tennis there is a 15 per cent duty, I believe.

Q. 25 per cent on clothing?—A. Well, I don't know anything about clothing. I am not in the clothing business.

Q. Rubber coats and so on?—A. We don't make them.

Q. Do you make hose?—A. Yes.

Q. 20 per cent on that; tires and so on, 22½ per cent under the British preferential?—A. Whatever is in the book. It speaks for itself.

By Mr. Sommerville:

Q. Let us see about this casing. Perhaps you will recognize your price list?—A. Yes.

Mr. Factor: It is a coloured price list.

By Mr. Sommerville:

Q. It is a green one. They have all the colours of the rainbow in here?—A. That looks like ours.

Q. The price for the Endurance casing is $1, is that right?—A. Yes.

Q. The price to the consumer, $1.50?—A. That is our suggested consumer's price.

Q. Well, there is the price, at any rate, that you put out on your list?—A. Yes. Whether anybody gets that or not, I don't know.

Q. At any rate, those are your list prices, and you charge the retailer $1?—A. Well, if he buys $600,000 or over, he has a 10 per cent discount.

Q. 10 per cent?—A. Yes.

Q. I show you this advertisement. Price list, $1.50. You make a bicycle called "Regent." Your firm name would be on that?—A. I do not know.

Q. I think it is sold to one of the department stores?—A. I do not know. I would have to look it up for you.

Q. Do you not make any brands that you reserve especially for the departmental stores?—A. As a rule any brand we make for a departmental store is their brand.

Q. That does not have their name on it. This is a casing that has your name on it. The retailers advise that, "bicycle dealers in this city"—This is written from Calgary—"have requested the Dominion Rubber Company to supply to trade same line as sold by the T. Eaton Company, but have been refused. The public are led to believe that they are purchasing same quality of tire from Eatons and assume that independent dealers are getting enhanced

profit when they sell tire in accordance with consumers price list as set by the Dominion Rubber Company." Why do you refuse to sell to the retailer the goods which you sell to Eatons?—A. I do not know anything about that. I would have to go into it.

Q. They refer to these three items in unfair competition: first, "Bicycle casings, Endurance, size 28x1½. Cost to retailer $1 as per Dominion Rubber price list. Retail selling price to consumer as per attached Dominion Rubber price list $1.50."

Exhibit 2: "Bicycle casing (Regent) size 28x1½ advertised and sold by the T. Eaton Company at ·79 cents as per voucher. See attached advertisement dated Tuesday, March 27."

Exhibit number 3: "Bicycle casing (Rgent) size 28x1½ sold by the T. Eaton Company including the tube as per attached for 95 cents complete. Price of this tube to retailer from Dominion Rubber Company 38 cents."

Now, how in the world do you expect your retailer to compete with that condition when you will not even sell him the goods that will enable him to sell in competition?—A. I do not know whether we would or not. I do not know anything about it. I would have to investigate it and give you a report on it.

Q. Is there no truth in the statement made by these retail merchants that they cannot buy these goods from you?—A. I do not know.

Q. Here is a bicycle tire and tube for 95 cents made by you, and here is the list, your own list, and here is your invoice for an Endurance casing, present price $1 to the retailer?—A. You are speaking of something I do not know anything about.

By Mr. Factor:

Q. You did say that the article made for the departmental stores is exclusively theirs?—A. If it has a private brand.

Q. If the Regent was made for the T. Eaton Company you would not sell the Regent without any brand?—A. We might or we might not. I do not know what kind of arrangement we have made. It is not customary to confine a brand with our name on it to one person.

By Mr. Sommerville:

Q. No. That is what I understand?—A. I do not know about that. I have to go into it. But as a rule if a departmental store has a brand, if they own the name—

Q. But their name will be on it, and no one will be able to identify that it is made by the Dominion Rubber Company?—A. Yes.

Q. But when your name is on it and your brand is on it this committee would like to know why you refuse to sell to a retailer so that he might compete?—A. I will have to go into it.

Q. As far as you know, has there been any representation made by the large buyers that they will not consent to you selling these brands to the retail trade to compete with them?—A. Not to my knowledge. I do not think there would be.

Q. Have you heard of representations from other sources?—A. We will have to go into it and give you the answer.

Mr. Heaps: Are we to have anything about wages?

Mr. Sommerville: I beg your pardon. There is the question of wages. Somebody was asking a few minutes ago about a letter received as to the reason for the difference in the discount allowed departmental stores, and here

is a letter written from the Gutta Percha Rubber Company, Montreal, January 19, 1934, addressed to a person in Ontario, a dealer which says:—

> We realize it is hard for the dealers to compete with some of the prices that are offered by chain store organizations. They usually take one or two lines and use them as leaders on which they get an exceedingly low price. Then again the difference in overhead of a large organization as compared to a smaller store must be considerable and should be considered.

The WITNESS: I do not know what they are talking about, do you?

Mr. FACTOR: That is the explanation of the Gutta Percha Company for the difference of the discount.

The WITNESS: Is it the dealer's buying price or the consumer's price or what?

Mr. SOMMERVILLE: "Concerning discount allowed for volume purchase would say that the bonuses are as follows." They set out the bonuses up to 6 per cent on $15,000 purchases.

The WITNESS: Yes.

Mr. SOMMERVILLE: And then they say, "This is the only method that you can obtain a greater discount than you are now obtaining." Then they go on to point out this reason why these discounts are given to the larger concerns.

The WITNESS: Read that again.

Mr. SOMMERVILLE: "Then again the difference in overhead of a large organization as compared to a smaller store must be considerable and should be considered." That is one of the reasons, undoubtedly.

The WITNESS: As far as that is concerned, we do not think it is any of our business what the operating costs of our customers are; we are concerned about our own.

(File, *re* bicycle casings filed, marked Exhibit 200.)

Mr. SOMMERVILLE: Now, you were asked about the rubber footwear. We made an analysis of the wages and this is what we find. Dealing with the Ontario companies: first factory, average weekly earnings, male $16.74, female, $8.57, average hourly rate, male .379, female .264; factory number 2, average weekly earnings, male $13.73, female $8.78, hourly rate is not carried forward in that instance; factory number 3, average weekly earnings, male $20.40, female $12.48, average hourly rate .408. male and .283 female; factory number 4, average weekly earnings, male $20.71, female $11.35, average hourly rate, male .430, female .269; factory number 5. average weekly earnings, male $15.60, female $8.63, hourly rate not carried out.

Mr. HEAPS: Is there any reason why they are not carried out?

Mr. SOMMERVILLE: We have not got the hours worked by the plant in the report that has been made.

Mr. HEAPS: It seems it is the low ones that you have not got and the high ones that you have.

Mr. SOMMERVILLE: No, the lowest one $8.57, we have that. On the first one, the hourly rate for men is .379, women .264; factory number 6, average weekly earnings, male $11.57, female $7.26, average hourly rate, male .40, female .25. That is for the Ontario companies.

Mr. KENNEDY (*Winnipeg*): Over what period?

Mr. SOMMERVILLE: This is for the whole year 1933, but it is quite apparent that it does not cover a full week in the case of the women because the hourly rate would indicate that they had worked less than the full week—both men and women.

Mr. FACTOR: Is that all in Ontario?

Mr. SOMMERVILLE: That is in Ontario, these six factories. There is one company that has a factory in both Ontario and Quebec. Now, these are the Quebec figures: the first factory, average weekly earnings, male $15.73, female $8.42, hourly rate not carried forward; second factory, average weekly earnings, male, $13.90, female $9.29, hourly rate, male ·325, female ·235; factory number 3, average weekly earnings, male $14, female $10.92, hourly average not carried out. These are the figures on nine factories six of which are in Ontario and three in Quebec.

Mr. HEAPS: It discloses the fact that practically in every case the employees are working for away below anything we would call a living wage.

Mr. SOMMERVILLE: The rates per hour in Ontario run from 37 cents to 43 cents for men and from 25 cents to 28 cents for women. In Quebec the only one we have is a rate of 32 cents for men per hour and 23 cents for women.

Mr. KENNEDY (*Winnipeg*): Can you tell me where the rates per hour are carried out, does it indicate a breach of the law in as far as the minimum wage law is concerned?

Mr. SOMMERVILLE: I would not say so because the lowest rate is 23 cents per hour and that is in the province of Quebec, and if that is located the rate would provide the minimum wage regulation.

Mr. HEAPS: Have you not got the list of the profits made by these firms in the same year?

Mr. SOMMERVILLE: We have a composite statement of, I think, their earnings. No, we have not, Mr. Heaps.

Mr. HEAPS: Perhaps Mr. Eden could tell us the profits of the Dominion Rubber Company for 1933.

Mr. ILSLEY: Are you going into all that question of capitalization?

The WITNESS: I will file our statement.

Mr. SOMMERVILLE: I will get a composite picture of the various companies.

Mr. HEAPS: Yes, this is rather an important question, when you find the firms in question are being granted such large privileges by the government and you find these average wages paid where a woman earned $7.36 a week and a man earned $11.50 a week.

By Mr. Factor:

Q. Do you mind giving us— —A. Not a bit, but the unfortunate thing is the speed with which these factories have been running. Some of these factories have been shut down for weeks. If you take a payroll and divide it by the number of weeks in a year it gives you a distorted view of the average weekly wages.

Mr. HEAPS: Try to compare that with the profits earned in the same period.

By Mr. Factor:

Q. Yes, try to compare that with the profits earned in the same period? —A. I do not think you will find any excess profits with us. We did over $8,000,000 worth of business and lost over $17,000.

By Mr. Sommerville:

Q. I will get from Mr. Hannay a statement of all the operations?—A. Our problem is to try to get these minimum wages up for these provinces; they cannot make them high enough for us, we pay over the minimum.

By Mr. Heaps:

Q. Which provinces are below the minimum?—A. We pay well above the minimum in each of the provinces, so much so that it is embarrassing. We would like to see these minimum wages in the provinces put up.

Q. How much difference in wages does your firm pay as compared to the other ones?—A. I do not know, that is not available to me.

By Mr. Young:

Q. Mr. Sommerville asked you a while ago if you had ever been threatened by any of these big buyers that if you did not give discounts they would set up factories of their own; from whom did you hear that?—A. I do not know, I think it was general gossip.

Mr. FACTOR: You will give us the details of the profits.

Mr. SOMMERVILLE: Mr. Hannay, will you be good enough to furnish us with a statement from each of the companies, their balance sheets showing the profits over the last five years.

Mr. HANNAY: I will ask them for it, and if I receive it I will send it to you by mail.

Mr. SOMMERVILLE: I want that for both the tire companies and the footwear companies.

Mr. HANNAY: In some cases the two are one, they are combined; one statement would cover both cases in some instances.

Mr. SOMMERVILLE: If they are, one statement will cover, unless they have it divided to show the footwear section; if so I would like them separate.

Mr. HANNAY: I think I have most of that.

Mr. SOMMERVILLE: Yes, if you would be good enough to file that.

Mr. HANNAY: I will send it to you by mail.

The CHAIRMAN: Are there any other witnesses?

Mr. SOMMERVILLE: Mr. Hougham was interested in the Mutual Shoe Stores; I do not know whether he wanted to make any statement, or any reply.

Mr. HOUGHAM: I think perhaps the representatives of the stores who conducted the negotiations might make a worth-while contribution. I do not think I would care to waste the time of the committee.

The CHAIRMAN: You can get it ready then, ask them to present it in as brief a form as possible.

Mr. HOUGHAM: Do I understand that you will be prepared to receive representations.

The CHAIRMAN: Yes, later on.

We will stand adjourned until Tuesday morning at 11 a.m.

Mr. FACTOR: What is coming on Tuesday morning?

The CHAIRMAN: On Tueday morning we will commence with the reports of the auditors on the packing industry.

We will adjourn until Tuesday morning.

The Committee adjourned to meet again at 11 a.m. on Tuesday, May 29, 1934.

House of Commons, Room 368,

May 29, 1934.

The special committee apopinted to inquire into price spreads and mass buying met at 11 a.m., Hon. H. H. Stevens, presiding.

Mr. Norman Sommerville, K.C., of Toronto, and Mr. W. W. Parry, K.C., of Toronto, appeared as Counsel for the Committee.

The Chairman: Order, gentlemen. The minutes of the last meeting record the names of witnesses heard, and certain exhibits filed. We will declare the minutes approved.

Mr. Boulanger: Before we proceed with the business of the day I would like to make a motion concerning the travelling expenses of Mr. Victor Chartrand, of L'Ephiphanie, who was heard as a witness before the committee on May 10th. He was not summoned regularly, he was in the room and Mr. Sommerville called him to the stand. I do not see why there is any reason that he should not receive his expenses the same as other witnesses, and I would so move.

The Chairman: Instead of making a motion, I think if you would take that up with the Clerk of the Committee, it would be arranged.

Mr. Boulanger: I understand not. I understand that as he was not summoned in the regular way, a motion is required.

The motion on being put was carried.

Mr. A. B. Shepherd, called and sworn.

By Mr. Sommerville:

Q. Mr. Shepherd, you are a partner of the firm of Peat, Marwick, Mitchell & Co., Auditors and Chartered Accountants?—A. Yes.

Q. And you have made an examination for the Committee of certain phases of the packing industry?—A. I have.

Q. And in certain plants?—A. Yes.

Q. What plants in Canada have you made an inquiry into, and what is the extent of that inquiry?—A. The plants we have examined are Wilsil's Limited.

Q. Wilsil Limited, of Montreal?—A. Yes. Swift's at Toronto and Edmonton, Swift Canadian Limited, Hunnisett, of Toronto; Gainers Limited, at Edmonton; and Canada Packers Limited, at Toronto and Hull; and certain operating statistics at Montreal, Winnipeg and Peterborough.

Q. You have not examined all of the plants of Swift?—A. No.

Q. And you have not examined all of the accounts and all of the plants of Canada Packers?—A. No.

Q. But with respect to the two plants at Toronto and Hull, you have made an examination of certain phases of their activities; and then with respect to certain other operations you have made examination of some figures from Canada Packers at Peterborough and Winnipeg?—A. Winnipeg and Montreal.

Q. Then you examined Burns Limited?—A. No.

Q. That was examined by somebody else, and the firms that have been mentioned are the large packing operators of Canada, are they not?—A. Two of them are.

Q. Canada Packers and— —?—A. Swifts.

Q. Then the next in order?—A. Wilsil, and after that, Gainers.

Q. And Burns?—A. Burns would, I think, come before Gainers.

Q. Burns would come before Gainers?—A. And Wilsil.

Q. Probably before Wilsil?—A. Yes.

Q. You have, for certain purposes, made an examination of the packing industry in Canada?—A. Yes.

Q. Now, take the first plant you named, Wilsil; will you just indicate to us—that plant is located at Montreal?—A. Montreal.

Q. And it is a single unit; it has no branch plants in other parts of Canada?—A. No.

Q. It operates at Montreal?—A. Yes.

Q. I understand that this is a plant in connection with which you have made an examination of certain features?—A. Yes.

Q. Will you kindly indicate to the commiteee what are the features of the examination that you made at Wilsils?—A. The features of our examination are:—

(*a*) To ascertain the Net Income earned on the capital invested in the Company after eliminating extraneous charges or credits to operations, if any.

(*b*) To determine the spread between the price paid to the producer of live stock and the price received by the Packer from the sale of the various products manufactured from live stock.

(*c*) To determine the dressed cost of hogs, beef and small stock purchased through (1) direct shipments, (2) stockyards or markets, and (3) truckers, and the percentage which each of these classes bears to the total purchases.

(*d*) To determine the hourly rates of wages paid by the Company and prepare a tabulation giving the number of employees paid at each of the different hourly rates.

Q. These were the four sections you were dealing with in connection with your report?—A. Yes.

Q. And in support of this information you are handing in a memorandum submitting statements?—A. Yes.

Q. And the statements you submit are?—A. The following:—

Exhibit "A"—Consolidated Balance Sheet, Wilsil Limited and City Renderers Limited as at December 31, 1933.

Exhibit " B "—Condensed Statement of Operations for the five years ended December 31, 1933.

Exhibit " C "—Statement showing percentage of Net Income to invested Capital for the five years ended December 31, 1933.

Schedule " 1 "—Statement showing the approximate average yield and average selling price of hogs for week ended March 10, 1934.

Schedule " 2 "—Statement showing the approximate average yield and average selling price of hogs for week ended March 17, 1934.

Q. Will you be good enough to submit to the Committee the results of your enquiries on each of the four divisions of your reference?—A.:—

(*a*) To ascertain the Net Income earned on the capital invested in the Company after eliminating extraneous charges or credits to operations, if any.

Q. Before we deal with this I would suggest that the memorandum submitted should be printed in the records as such.

The CHAIRMAN: I think that is agreeable to the Committee.

Mr. SOMMERVILLE: We will then have the record in proper form.

TORONTO, ONT., May 16, 1934.

MEMORANDUM *RE* WILSIL LIMITED

In the following paragraphs we submit certain information prepared from the certified accounts of the Company's auditors, from the books and records of the Company and from information obtained by us from the management without independent verification of the accounts.

The scope of our investigation, which is outlined in general terms in the Resolution of Parliament, may be divided into the following specific enquiries:—

(*a*) To ascertain the Net Income earned on the capital invested in the Company after eliminating extraneous charges or credits to operations, if any.

(*b*) To determine the spread between the price paid to the producer of live stock and the price received by the Packer from the sale of the various products manufactured from live stock.

(*c*) To determine the dressed cost of hogs, beef and small stock purchased through (1) direct shipments, (2) stockyards or markets, and (3) truckers, and the percentage which each of these classes bears to the total purchases.

(*d*) To determine the hourly rates of wages paid by the Company and prepare a tabulation giving the number of employees paid at each of the different hourly rates.

In support of the information included in the memorandum we submit the following statements:—

Exhibit "A"—Consolidated Balance Sheet, Wilsil Limited and City Renderers Limited as at December 31, 1933.

Exihibit "B"—Condensed Statement of Operations for the five years ended December 31, 1933.

Exhibit "C"—Statement showing percentage of Net Income to invested Capital for the five years ended December 31, 1933.

Schedule "1"—Statement showing the approximate average yield and average selling price of hogs for week ended March 10, 1934.

Schedule "2"—Statement showing the approximate average yield and average selling price of hogs for week ended March 17, 1934.

(*a*) To ascertain the Net Income earned on the capital invested in the Company after eliminating extraneous charges or credits to operations, if any.

Capital.—Wilsil, Limited, was incorporated on March 27, 1929, with an authorized capital of 16,000 convertible preferred shares of \$5 each, and 50,000 common shares of no par value. At December 31, 1933, there were issued and outstanding 16,000 convertible preferred shares of \$5 each and 18,000 common shares with a stated value of \$5, a total capital of \$170,000. The preferred shares carry no stipulated dividend rate, but are limited to \$1 per share in excess of the dividend paid on the common shares and are exchangeable at any time on the basis of two common shares for each share of preferred stock. Since January 1, 1930, dividends have been paid annually on the preferred shares at the rate of

$1 per share, and for the year ended December 31, 1929, a dividend of 25 cents per share was paid. No dividends have been paid on the outstanding common shares in accordance with the restrictive terms of a mortgage agreement now in force.

The entire outstanding preferred and common shares were originally issued as a bonus to the subscribers to an issue of 6 per cent Second Mortgage bonds due on January 1, 1949, in the amount of $800,000.

In Exhibit "A" we submit a Consolidated Balance Sheet of the Company at December 31, 1933, based on the audited Balance Sheet submitted to the shareholders.

Net Income.—A condensed statement of the operations for the period from the parent company's inception, March 27, 1929, to December 31, 1933, is submitted in Exhibit "B". It should be noted, however, that the figures for 1929 include the operations for the entire year.

In reviewing the operations consideration was given to such controllable items of cost as salaries, repairs and depreciation and adjustment of inventories which might have an important bearing on the Net Income of the Company, as reported.

No items of sufficient relative importance were found to warrant adjustment of the earnings, but we are of opinion that the aggregate provision for repairs and depreciation is liberal representing as it does an amount of $574,269.23 for the period under review, or 54 per cent of the average book value of the depreciable assets.

The following comment is submitted on certain items included in the operating statement:—

Sales.—In the following tabulation we submit details of the Companies' sales for the period under review, together with the percentage which the net income bears to the sales:—

Period	Sales	Net Income	Percentage
	$ cts.	$ cts.	%
Year ended December 31, 1929	6,704,070 60	98,605 11	1·47
" " 1930	5,936,224 66	73,983 54	1·25
" " 1931	5,174,010 58	55,516 89	1·07
" " 1932	4,416,959 77	9,552 89	0·22
" " 1933	5,244,670 97	166,438 00	3·17
Total	27,475,936 58	404,096 43	1·47
Average for period	5,495,187 31	80,819 28	1·47

Inventories.—The inventories appear to be conservatively valued at estimated cost or market, whichever was lower at commencing and closing dates, and the basis of valuation appears to be the same throughout the period covered by our examination. The figures, therefore, do not call for special comment or adjustment.

Depreciation.—The following rates have been used by the Company in computing depreciation on fixed assets:—

Buildings	$2\frac{1}{2}$%	per annum	
Machinery	10	"	
Stable equipment	10	"	
Office furniture	10	"	
Trucks	25	"	for first year, and
	20	"	thereafter.

Repairs and Renewals.—While the annual charges for repairs and renewals appear to be high we are informed that these expenditures are necessitated by the nature of the business. Our examination of the accounts relating to repairs indicated that of a total expenditure of $276,834.58 over the period of five years approximately $32,000 is in respect of charges which might be regarded as being in the nature of renewals or betterments.

Executive Salaries.—The total annual salaries of the three Executive Officers are $36,500.

These annual rates have been in force since 1930. No bonuses are paid to these officers.

Invested Capital.—In Exhibit "C" we submit a statement showing the relation which the Net Income before providing for interest on the second mortgage bonds bears to the average invested capital during the period under review, based on the annual Balance Sheets and Profit and Loss Accounts as certified to by the Companies' auditors.

In preparing this tabulation the book value of the preferred and common shares, namely, $170,000, has been excluded as we are informed that these shares were not issued for any tangible consideration. The invested capital, therefore, is represented by the value of the second mortgage bonds outstanding, plus the earned surplus, less the balance of goodwill after deducting therefrom the stated value of the preferred and common shares. We have adopted this basis of arriving at the Invested Capital because the second mortgage bonds appear to represent the owners' equity in the business, the preferred and common shares having been issued without tangible consideration.

On the above basis the percentage of Net Income to Invested Capital is as follows:—

—	Average Invested Capital	Net Income	
		Before Second Mortgage Interest	Percentage to Invested Capital
	$ cts.	$ cts.	%
Year ended December 31, 1933	878,497 06	207,988 00	23·67
" " 1932	840,386 52	53,833 78	6·45
" " 1931	831,020 18	101,206 56	12·17
" " 1930	799,156 11	121,023 54	15·14
" " 1929	740,154 28	146,605 11	19·80
Total	4,089,214 15	630,656 99	15·42
Average for period	817,842 83	126,131 40	15·42

(*b*) To determine the spread between the price paid to the producer of livestock and the price received by the Packer from the sale of the various products manufactured from livestock.

In the case of Wilsil, Limited, practically all the transactions of the Company are represented by the purchase of livestock and its conversion into packing products, so that the spread is represented by the difference between the price paid to the producer and the selling price. This spread, however, covers all the products handled by the Company, and the records of the Company are not designed to show the spread on individual commodities.

In common with other packing establishments Wilsil, Limited, does not maintain a cost system which would enable the actual cost of individual products

to be determined. To secure approximate costs for their own information the officials have "test runs" made from time to time and by the adoption of an average percentage of yield and an average selling price they arrive at the estimated gain or loss on the sale of an average dressed carcass.

In Schedules "1" and "2" we submit particulars of the approximate average yield and average selling price of hogs for the weeks ended March 10 and 17, 1934, based on the result of Company "test runs" which purport to show the gross gain per hundred pounds to be $1.37 and $1.24 respectively. These estimates, however, do not include the costs of killing, cutting or handling, and as they cannot be reconciled in any way with the actual operating results of the Company we feel that they are of little, if any, value in determining the spread.

Due to the impossibility of reconciling the result of the "test runs" made by the Company with the books of account we are unable to determine the spread between the price paid to the individual producer of livestock and the price received by the Packer from the sale of the resulting manufactured products, and we are therefore forced to substitute for this inquiry consideration as to whether the Packer receives a reasonable or an excessive return (*a*) on the capital invested, and (*b*) on the sales made to the public. The information necessary to arrive at a conclusion on these points is submitted in the section of this memorandum dealing with invested capital and sales, the average return shown being 15·42 per cent on invested capital and 1·47 per cent on sales.

As the operations of Wilsil, Limited, during the period under review were confined largely to hogs we did not obtain particulars of a "test run" for beef.

(*c*) To determine the dressed cost of hogs, beef and small stock purchased through (1) direct shipments, (2) stockyards or markets, and (3) truckers, and the percentage which each of these classes bears to the total purchases.

The above information has been secured in connection with hogs for the months of September, 1933, and February and March, 1934, and is submitted in the following summary:—

—	Direct Shipments	Stockyards or Markets	Truckers
	Average Cost per 100 lbs.		
	$ cts.	$ cts.	$ cts.
September, 1933	10 28	10 24	10 03
February, 1934	13 64	13 68	13 22
March, 1934	13 51	13 70	12 72
	Percentage of Total Purchases		
	%	%	%
September, 1933	44·85	50·28	4·87
February, 1934	75·30	22·60	2·10
March, 1934	80·92	16·55	2·53

The prices paid for hogs are stated to be based on the market price for the bacon grade with the following differentials on or off bacon grade:—

Select	Premium of	$1.00 per head above the bacon.
Butcher	Discount of	$1.00 per head below the bacon.
Light	"	0.50 " "
Heavy	"	0.50 " "
Extra Heavy	"	1.50 " "
No. 1 Sow	"	1.50 to $2.00 per head below the bacon.
No. 2 Sow	"	2.00 to $2.50 " "

While the above differentials are generally applied on hog purchases, our examination of purchase invoices showed minor variations, particularly as affecting extra heavy hogs and sows. Prior to March 12, 1934, no discount was applied on the bacon price of local purchases in the case of butcher grades, but we are informed that the Company now applies these differentials on all purchases.

From the records maintained by the Company it is not possible to determine whether the Company gains an additional profit through the operation of the differentials beforementioned. After the hogs are dressed and cut they lose their identity in the plant, and the product is sold at the most advantageous market price.

On all purchases of carload lots the Company pays a commission to the Agent of $10 per car on hogs and $17 per car on cattle coming direct to the plant by rail. Purchases of carload lots on the local market carry a commission based on the following rates:—

	Carload	Mixed	Mixed
Cattle	$15.00		
Calves	12.00	$12.00	$10.00
Hogs	10.00		
Sheep and Lambs	10.00		

The average dressed cost of cattle, veal and lamb for the weeks ended March 10 and 17, 1934, are given below. We were, however, unable to secure the information necessary to enable us to distribute the purchases under the required headings.

	Average Cost per 100 lbs. Week ended March 10, 1934	Average Cost per 100 lbs. Week ended March 17, 1934
Beef	$ 9.20	$ 9.64
Veal	11.55	11.41
Lamb	13.34	11 99

(*d*) To determine the hourly rates of wages paid by the Company, and to prepare a tabulation giving the number of employees paid at each of the different hourly rates.

In the following table we submit information showing the number and percentage of the Company's employees engaged at the various hourly and weekly rates as at March 24, 1934:—

Hourly Rate	Number of Employees	Per Cent of Total
$ .20	38	10·27
.22	6	1·62
.25	21	5·68
.28	14	3·78
.30	69	18·65
.33	19	5·14
.35	36	9·73
.36⅔	6	1·62
.38	10	2·70
.40	12	3·24
.42½	1	·27
.45	8	2·16
.50	16	4·33
·55	1	·27

Weekly Rate	Number of Employees	Per Cent of Total
$10.00	1	·27
15.00	2	·54
16.00	3	·81
18.00	25	6·76
20.00	26	7·03
21.00	4	1·08
22.00	29	7·84
22.50	3	·81
25.00	11	2·97
27.50	1	·27

None of the Company's employees are on piecework or under any bonus system, and we are informed that no employee is required to "stand-by" in his own time. Our examination of the payrolls over a period did not disclose any evidence to the contrary.

The basis of employment is a 55 hour week and an examination of the payrolls at August 12, 1933, and November 11, 1933, discloses that the rates in force at these dates were substantially the same as those given in the foregoing tabulation as at March 24, 1934.

By Mr. Sommerville:

Q. If you would just go ahead with your statement, and read it slowly so we can follow?—A. Capital: Wilsil, Limited, was incorporated on March 27, 1929.

Q. Just five years ago?—A. Yes. With an authorized capital of 16.000 convertible preferred shares of $5.00 each, and 50,000 common shares of no par value. At December 31, 1933, there were issued and outstanding 16,000 convertible preferred shares of $5.00 each and 18,000 common shares with a stated value of $5.00, a total capital of $170,000.00. The preferred shares carry no stipulated dividend rate, but are limited to $1.00 per share in excess of the dividend paid on the common shares and are exchangeable at any time on the basis of two common shares for each share of preferred stock.

Mr. FACTOR: Are there any copies available?

Mr. SOMMERVILLE: We have not. When it came in yesterday it was so long it was impossible to copy it in the time available.

Mr. FACTOR: Will you have it read a little slower then, so we can follow it?

By Mr. Sommerville:

Q. That is to say, when Wilsil Limited organized and issued its capital stock, it issued 16,000 preferred shares, of $5.00 each?—A. Yes.

Q. And 18.000 common shares, having a stated value of $5.00 each; then they were given a value of $5.00 on the books of the company by resolution. The statement would indicate that both the preferred and common stock were issued as a bonus?—A. Since January 1, 1930, dividends have been paid annually to the preferred shares at the rate of $1.00 per share, and for the year ended December 31, 1929, a dividend of 25 cents per share was paid.

Q. That is to say, for the last four amounts the dividend of a dollar a share would be equal to 20 per cent per year?—A. Yes.

Q. For the last four years on preferred shares?

Mr. HEAPS: How much of that was paid up?

Mr. SOMMERVILLE: It was all bonus; the entire preferred and common shares were issued as bonuses.

By Mr. Factor:

Q. I do not quite understand that; a bonus to what, was it not issued and sold to the public?—A. No, it was issued as a bonus to the people who subscribed the bonds.

By Mr. Sommerville:

Q. Perhaps if you will just finish this first paragraph, then we will summarize it and get it very clearly, I think?—A. No dividends have been paid on the outstanding common shares in accordance with the restricted terms of a mortgage agreement now in force.

Q. The existing first mortgage on the property requires that no dividend be paid on common shares until the first mortgage is paid off?—A. Yes. The entire outstanding preferred and common shares were originally issued as a bonus to the subscribers to an issue of 6 per cent second mortgage bonds due on January 1, 1949, in the amount of $800,000.

Q. When this company was incorporated, as at present existing, it was incorporated for the purpose of taking over the assets of a former company?—A. Yes.

Q. Which was in operation?—A. Yes.

Q. And the former company, was that also known as Wilsils Limited?—A. No.

Q. Whatever the name was?

The CHAIRMAN: Two names were combined.

The WITNESS: Yes.

By Mr. Sommerville:

Q. That is to say, when the company was taken over in 1929, the existing firm of Wilsil Limited was taken over by the new company; that is right?—A. Yes.

Q. The existing firm of Wilsil Limited was largely owned by two men, Mr. Wild and Mr. Silcox?—A. Yes.

Q. And the consideration paid for the company was what?—A. You mean the actual consideration? They issued the preferred and common stock.

By the Chairman:

Q. That was 18,000 common, and 16,000 preferred, was it not?—A. Yes.

By Mr. Sommerville:

Q. Yes. And $800,000 of second mortgage bonds?—A. They were turned over, and they assumed the first mortgage.

Q. So that the new company for the assets of the old issued $800,000 of second mortgage bonds, assumed the existing encumbrance of $400,000 upon the old company, and gave as well 16,000 preferred and 18,000 common shares in addition?—A. Yes.

By Mr. Factor:

Q. Who bought the second mortgage bonds; were they sold to the public?—A. They were sold to the public.

By Mr. Sommerville:

Q. Not by the new company?—A. By the syndicate.

Q. By the syndicate?—A. Yes.

Q. And the syndicate turned over the proceeds of that to the shareholders of the old company?—A. Yes.

Q. What was the book value of the assets of the old company when it was taken over?—A. I will give you the exact amount. The appreciation of the assets taken over was $257,929.65.

Q. That is to say, when the old company was taken over the assets of that company were appreciated to the extent of $257,929.65?—A. Yes.

Mr. Heaps: What were the assets?

By Mr. Sommerville:

Q. What were the assets that were appreciated to that amount; what was the value of the assets that were appreciated?—A. Buildings and equipment was appreciated $249,929.65.

By Mr. Factor:

Q. How was that value determined?—A. After appraisal.

By Mr. Sommerville:

Q. Before appraisal they were?—A. $664,975.02.

Q. And they were increased in value by an amount of— —A. $249.929.65.

Q. That would be about 40 per cent?

Mr. Heaps: What did these assets comprise?

By Mr. Sommerville:

Q. First of all, land and buildings?—A. Buildings and equipment.

Q. These are land and buildings. Now then, at that time these lands and buildings were appreciated in value; was there anything appreciated in value?—A. The investments were appreciated $8,000,

Q. So that except for the investments the entire appreciation was applicable to land, buildings and equipment; what was the total value on the books at which these assets were taken over?—A. The net book value was $442,522.08.

By Mr. Factor:

Q. Excluding land and building?—A. No, that is the net book value of all the assets taken over after deducting liabilities.

By Mr. Kennedy (Peace River):

Q. But there was a mortgage against that of $400,000?—A. That is naturally after deducting the mortgage and the other liabilities.

Mr. FACTOR: I thought you told us the net value of land, buildings and equipment was $664,000 odd.

Mr. SOMMERVILLE: That is subject to mortgage.

By Mr. Sommerville:

Q. What was added to bring the value of these assets up to the $800,000 that was paid for them by the issue of these bonds?—A. The appreciation of $257,929.65.

Q. That would not be sufficient to bring up the net value?—A. In addition there was an item of goodwill put in the books of $269,548.27.

Q. And in addition to the depreciation that has already been mentioned, an item of goodwill was set up in the books?—A. Yes.

Q. Amounting to what?—A. $269,548.27.

Q. There was an increase over the net value of the assets that was handed over to the new company. The total amount was goodwill, $269,000—what was that exactly?—A. $269,548.27.

Q. Plus an appreciation in the value of— —A. $257,929.65.

Q. An appreciation in the value of land and buildings and investment of $257,929.65, or a total increase in the value of these two items of— —A. $527,477.92.

Q. When the assets were taken over, they were paid for by the issue of bonds to the extent of $800,000?—A. Yes.

Q. Those bonds were issued to the syndicate that turned over the assets to the new company?—A. Yes.

Q. You say preferred shares and common shares were issued to those who had received the bonds?—A. Yes.

Q. That is, the syndicate?—A. Yes.

Q. Then I presume they were sold by the syndicate some of them distributed among the shareholders of the former company and some sold to the public?—A. Yes.

Mr. FACTOR: As I gather it, the net value of the bonds was $442,522, plus an item of $527,000, making a total of about $969,000?

Mr. SOMMERVILLE: Yes. That is made up of $800,000 of second mortgage bonds plus 18,000 preferred shares and 16,000 common shares.

Mr. KENNEDY (*Peace River*): A mortgage of $400,000.

Mr. SOMMERVILLE: The whole property was subject to an existing mortgage of $400,000.

By Mr. Sommerville:

Q. Will you please proceed with your statement, Mr. Shepherd?—A. Yes.

In Exhibit "A" we submit a consolidated balance sheet of the company at December 31, 1933, based on the audited balance sheet submitted to the shareholders.

Q. Just a minute. Let us see this. On this consolidated balance sheet at December 31, 1933, there is shown to be outstanding by way of obligations the first mortgage of $400,000?—A. Yes.

Q. That is funded debt; a second mortgage of $800,000 which has been reduced in the past five years by $143,000?—A. Yes.

Q. Leaving the net amount of that second mortgage $657,000?—A. Yes.

Q. Then there is shown to be outstanding capital stock preferred $5 shares, 16,000 shares, total $80,000; and common, without nominal or par value, 18,000 shares, having a book value or at least having a resolution value of $5 or $90,000?—A. Yes.

Q. A total of $170,000 of common and preferred shares?—A. Yes.

Q. And there is shown to be a surplus of $313,743.33?—A. Yes.

Q. That is the accumulation, surplus for those years?—A. Yes.

Q. Perhaps we had better proceed with the statement. Will you proceed with the net income?—A. Yes.

Net Income: A condensed statement of the operations for the period from the parent company's inception, March 27, 1929, to December 31, 1933, is submitted in Exhibit "B". It should be noted, however, that the figures for 1929 include the operations for the entire year.

In reviewing the operations, consideration was given to such controllable items of cost as salaries, repairs and depreciation and adjustment of inventories which might have an important bearing on the net income of the company, as reported.

No items of sufficient relative importance were found to warrant adjustment of the earnings, but we are of opinion that the aggregate provision for repairs and depreciation is liberal, representing as it does an amount of $574,269.23 for the period under review, or 54 per cent of the average book value of the depreciable assets.

Q. That is to say, from March, 1929 until the end of 1933?—A. Yes.

Q. The amount of repairs and depreciation charged against profits in that period is $574,269.23?—A. Yes.

Q. And that represents 54 per cent of the average book value of the depreciable assets?—A. Yes.

Q. In five years?—A. Yes.

Q. Less than five years. Your full assets are not recorded yet?—A. The earnings are taken in for the full five years.

Q. That is for the five-year period?—A. Yes.

Q. On that basis your entire assets would be wiped out. The book value of the entire assets would be wiped out in less than another five years?—A. Well, that is not quite a fair assumption, because part of this is repairs.

Q. But on the same basis, if repairs and depreciation continued?—A. Of the $574,000, $281,000 represented depreciation.

Q. You say $281,000 represents depreciation?—A. Yes.

Q. All right. Just continue?—A. Yes. The following comment is submitted on certain items included in the operating statement:—

Sales.—In the following tabulation we submit details of the company's sales for the period under review, together with the percentage which the net income bears to the sales.

Q. Well, you can give us the total?—A. The total average sales for the period. $5,495,187.31; net income, $80,819.28; percentage, 1·47.

Q. That is the average net income each year, after making allowances for depreciation, repairs and other charges?—A. Yes.

Q. Your average net income has been $80,819.28?—A. Yes.

Q. For the five year period?—A. Yes.

Q. Last year, in the year 1933, the net income was $166,438?—A. Yes.

Q. After making provision for depreciation, repairs, etc. of 3·17 per cent, in percentage?—A. Yes.

Q. By the way, just looking at that balance sheet, I observe the inventory in the case of this company is $302,588.04?—A. That is so, yes.

Q. And average sales of $5,495,000. That would indicate that their inventory is turned over about seventeen times a year?—A. Yes, approximately.

Q. A rapidly turning inventory?—A. Yes.

Q. Will you continue?—A. Yes.

Inventories: the inventories appear to be conservatively valued at estimated cost or market, whichever was lower at commencing and closing dates.

Q. That is in their inventories, they take either the market or the cost, whichever is lower?—A. Whichever is lower.

Q. And that has been the practice for some years?—A. Yes. The basis of valuation appears to be the same throughout the period covered by our examination. The figures, therefore, do not call for special comment or adjustment.

Depreciation: The following rates have been used by the company in computing depreciation on fixed assets:—

Buildings, $2\frac{1}{2}$ per cent per annum.
Machinery, 10 per cent per annum.
Stable Equipment, 10 per cent per annum.
Office Furniture, 10 per cent per annum.
Trucks, 25 per cent per annum, for the first year, and 20 per cent per annum thereafter.

Q. By the way, your depreciation has been figured on the increased value that was given to the plant and buildings at the time it was taken over?—A. Yes, on the appraised value.

Q. That was between 35 and 40 per cent above the former value in the former company?—A. Yes, approximately.

Q. Will you proceed?—A. Yes.

Repairs and Renewals: While the annual charges for repairs and renewals appear to be high, we are informed that these expenditures are necessitated by the nature of the business. Our examination of the accounts relating to repairs indicated that of a total expenditure of $276.834.58 over the period of five years approximately $32.000 is in respect of charges which might be regarded as being in the nature of renewals or betterments.

Executive Salaries: The current annual salaries of the executive officers, for three, are as follows—

Q. Just a minute; will you just give us the total of the executives' salaries?—A. $36,500.

By the Chairman:

Q. For the group?—A. For the three.

By Mr. Sommerville:

Q. We will see that it is entered in that way, $36,500 for the three executive officers?—A. Yes.

By Mr. Kennedy (Peace River):

Q. How many are there?—A. Three.

The WITNESS: These annual rates have been in force since 1930. No bonuses are paid to these officers.

Invested Capital: In Exhibit "C" we submit a statement showing the relation which the net income before providing for interests on the second mortgage bonds bears to the average invested capital during the period under review, based on the annual balance sheets and profit and loss accounts as certified to by the company's auditors.

In preparing this tabulation the book value of the preferred and common shares, namely $170.000, has been excluded as we are informed that these shares were not issued for any tangible consideration. The invested capital, therefore, is represented by the value of the second mortgage bonds outstanding, plus the earned surplus, less the balance of goodwill after deducting therefrom the stated value of the preferred and common shares. We have adopted this statement of arriving at the invested capital because the second mortgage bonds appear to represent the owner's equity in the business, the preferred and common shares having been issued without tangible consideration.

By Mr. Factor:

Q. Have you got the amount tabulated there of the net invested capital?—A. Yes, we are just coming to that.

By Mr. Sommerville:

Q. In arriving at this sum of the net invested capital, you have allowed for the goodwill that was entered at $269,000?—A. Yes.

Q. Less the sum of $170,000?—A. Yes.

Q. Of stock, preferred and common, issued?—A. Yes.

Q. So that you allowed in this estimated income for an amount of approximately— —A. $90,000.

Q. $90,000, as representing goodwill?—A. Yes.

Q. And as representaing invested capital?—A. Yes.

By Mr. Factor:

Q. May I ask who got the stock as a bonus? Was it the former owner?—A. The subscribers to the second mortgage bonds.

Q. That is, the subscribers to the second mortgage bonds got stock as bonus?—A. Yes.

By Mr. Sommerville:

Q. While we are on that, let us clear it up. Is it not a fact that a large block of mortgage bonds were given to the former owners, or some of the former owners of the company?—A. The name of one former owner is in the list.

Mr. Young: Did you say "given"?

The Witness: I don't know that.

Mr. Sommerville: Well, in payment of his share in the old company.

The Witness: Yes.

By Mr. Kennedy (Peace River):

Q. On that basis were they distributed?—A. I can't tell you. That was a transaction outside.

By Mr. Sommerville:

Q. Outside of the company. It was a transaction between the syndicate and the former owners of the former business. But at any rate, one of the owners of the former business appears as the owner of bonds to the extent of what?—A. $140,000.

Q. And with that would go a block of preferred and common shares?—A. Presumably.

Q. Will you continue?—A. On the above basis the percentage of net income to invested capital is as follows:—

Q. Just go slowly on this, will you please?—A. Yes.

Q. Taking it year by year?—A. Yes.

Year ended December 31, 1933, average invested capital, $878,497.06; net income before second mortgage interest, $207,988; percentage to invested capital, 23.67 per cent.

Q. That is, the earnings for that year represent 23.67 per cent?—A. On the invested capital.

Q. Will you continue?—A. Year ended December 31, 1932, average invested capital, $840,386.52; net income before second mortgage interest, $53,833.78; percentage to invested capital, 6.45.

By Mr. Factor:

Q. Why do you include the interest on the second mortgage?—A. Because the second mortgage is really invested capital in this case. Year ended December 31, 1931, average invested capital, $831,021.18; net income before second mortgage interest, $101,206.56; percentage to invested capital, 12·17. Year ended December 31, 1930, average invested capital was $799,156.11; net income before second mortgage interest, $121,023.54; percentage to invested capital, 15·14. Year ended December 31, 1929, average invested capital, $740,154.28; net income before second mortgage interest, $146,605.11; percentage to invested capital 19·80. Total average invested capital, $4,089,214.15; net income before second mortgage interest, $630,656.99; percentage to invested capital, 15·42.

By Mr. Sommerville:

Q. Over the five year period?—A. Yes.

Q. Then your average on invested capital over the five year period, for each year, was what?—A. $817,842.83. The average net income was $126,131.40; and the average percentage was 15·42.

Q. After providing for the depreciation to which you have already referred, and the repairs to which you have already referred, this income paid 20 per cent on the preferred shares for five years?—A. Yes.

Q. And in each year, what was the amount of the income that was left for distribution to the common shareholders, or available for distribution to the common shareholders?—A. I have not got the exact figures, year by year, on that.

Q. Well, the average, I mean, for the five years?—A. For the five years?

Q. The average earnings on the common stock?—A. The dividend paid on preferred stock was $68,000, which left $353,743.33, during the five years. A fifth of that would be $70,000 a year.

Q. $70,000 a year?—A. On the common stock.

Q. On 90,000?—A. On 90,000.

Q. So that $70,000 a year on common stock of 90,000 would represent about 70 per cent?—A. 78, approximately.

Q. About 78 per cent of the common stock earnings?—A. Yes.

Q. After payment of 20 per cent a year on the preferred?—A. Yes.

Q. For five years?—A. Yes.

Mr. Factor: That was available. It was not absolutely paid.

Mr. Sommerville: Oh no, available. It could not be paid because of a term in the first mortgage bond that the first mortgage must be paid off before dividends were paid on the common shares.

The Witness: That is so.

By Mr. Sommerville:

Q. Those were the earnings?—A. Yes.

Q. The net earnings of the company after payment of preferred dividends?—A. Yes.

Mr. Kennedy (*Peace River*): What was paid on the preferred?

Mr. Sommerville: 20 per cent, one dollar per year on the $5 shares.

By Mr. Factor:

Q. Have the figures you gave me any relation to net income on investment capital, or do they take into account the payments of dividends on the preferred shares?—A. No; that is earnings before dividends.

Q. Before dividends?—A. Yes.

By Mr. Sommerville:

Q. The statement will show how it is distributed each year. Schedule C. Now, will you just proceed with the second branch of your inquiry?—A. To determine the spread between the price paid the producer of livestock and the price received by the packer from the sale of the various products. In the case of Wilsil, Limited, practically all the transactions of the company are represented by the purchase of livestock and its conversion to packing products, so that the spread is represented by the difference between the price paid to the producer and the selling price. This spread, however, covers all the products handled by the company, and the records of the company are not designed to show the spread on individual commodities. In common with other packing establishments, Wilsil Limited does not maintain a cost system which would enable the actual cost of individual products to be determined. To secure approximate costs for their own information the officials have "test runs," made from time to time, and by the adoption of an average percentage of yield and an average selling price, they arrive at the estimated gain or loss on the sale of an averaged dressed carcass.

In schedules "1" and "2" we submit particulars of the approximate average yield and average selling price of hogs for the weeks ended March 10th, and March 17, 1934, based on the result of company "test runs" which purport to show the gross gain per hundred pounds to be $1.37 and $1.24 respectively.

Q. Just before you come to that, explain to the committee a little more clearly this question, the difficulty of getting the exact cost system in the packing industry, because it will arise in connection with other companies. What is the problem?—A. The problem is to determine just what is the selling value of the individual articles.

Q. Yes?—A. A hog, for instance, may be bought and processed and cut into a large number of different cuts, each of which have a different selling value.

Q. Yes?—A. And it is impossible to determine what the individual hog, which was purchased for a specific price, realized when it was sold.

Q. Is it equally impossible to tell what the actual cost of each operation was in putting it through the plant?—A. Yes, the packers estimate those figures.

Q. The packers estimate those figures?—A. Yes.

Q. Take, for instance, hogs; they go into the killing room, and from the killing room they go into the cutting room to be cut up into various commodities or products?—A. Yes.

Q. They go into the curing room to be cured for various purposes, and portions of them go to the offal department, to the fertilizer department, and other departments, rendering departments and so on, and because of that it is impossible to get the exact cost of each operation?—A. You cannot trace the individual carcass once it gets past that stage.

Q. After the killing room they lose their identity?—A. Yes.

Q. So that after they come in there on an established basis of grading, they lose their identity from the killing room on through the plant?—A. Yes.

Q. That is the difficulty?—A. Yes.

Mr. Senn: Would it not be possible to trace a day's killing?

The Chairman: They make test runs, he says.

The Witness: It might be possible, but they do not do it.

The Chairman: It is not practicable.

The WITNESS: No.

The CHAIRMAN: At least, considered not.

The WITNESS: No.

By Mr. Sommerville:

Q. Now, you say in schedules 1 and 2—I do not know that we need to go through the details of these, but schedules 1 and 2 are statements that are given to you by Wilsil, Limited?—A. Yes.

Q. As their method of arriving at an approximate— —A. Average.

Q. —Average gain from the hogs that are put through—A. On an average selling price?

Q. This is a statement showing the approximate average yield and the average selling price of hogs for the week ended March 10, 1934, and the cost of the average dressed hog, 135 pounds, at 14·07 per hundred pounds dressed, and it was $18.99, and then they break up the various operations of that hog into its various operations and departments and products and show the gross gain per carcass to be $1.87 on a hog of 135 pounds?—A. It should be noted there that that is before the cost of killing, cutting and handling—

Q. And the gross gain per 100 pounds is $1.38?—A. Yes.

Q. From which must be taken the cost of handling, killing, and cutting?—A. Yes.

Q. That is the basis that is given to you?—A. Yes.

Q. That is an indication of the spread subject to these other charges?—A. Well, it is an indication of the spread, yes, an estimate that they have of their own costs.

Q. I see a similar statement on schedule 2 for the week ending March 17, 1934, and there they take the cost of the average dressed hog for the week.

Mr. FACTOR: Give us the name.

By Mr. Sommerville:

Q. To the packer. As I understand it, the packer can tell very closely the dressed costs on the rail after the handling?—A. Yes, that is the basis, yes.

Q. That is the basis of all packing house operations?—A. Yes.

Q. Not the cost of the live animals?—A. No.

Q. But it is the dressed cost; that is his basis, and that is the foundation of all his operations?—A. Yes.

Q. So that he has an average dressed hog of $18.61 for the week of March 17, and he shows gross gain on a carcass of 135 pounds to be $1.68 or a gross gain per 100 pounds of $1.24?—A. Yes.

By Mr. Senn:

Q. There are two ways of disposing of those carcasses, one through the fresh meat trade, and the other through the bacon trade? Which one of those two are the profits estimated on, the bacon trade or the fresh meat trade?—A. On the fresh.

Q. Fresh meat?—A. Yes, that is the one. There is a small amount of bacon in this estimate, but it is mostly fresh.

Q. They are both taken into consideration?—A. Yes.

Mr. SOMMERVILLE: Now, will you proceed?

The WITNESS: These estimates, however, do not include the cost of killing, cutting or handling, and as they cannot be reconciled in any way with the actual operating results of the company, we feel that they are of little, if any value, in determining the spread. Due to the impossibility of reconciling the result of the "test runs" made by the company with the books of accounts, we are unable to determine the spread between the price paid to the individual producer of livestock and the price received by the packer from the sale of the

resulting manufactured products, and we are therefore forced to substitute for this inquiry consideration as to whether the packer receives a reasonable or an excessive return (*a*) on the capital invested, and (*b*) on the sales made to the public. The information necessary to arrive at a conclusion on these points is submitted in the section of this memorandum dealing with invested capital and sales, the average return shown being 15·42 per cent on invested capital, and 1·47 per cent on sales.

As the operations of Wilsil, Limited, during the period were confined largely to hogs, we did not obtain particulars of a test run for beef.

By Mr. Sommerville:

Q. On the basis on which you have taken the average return on invested capital, you have taken the average net return?—A. After allowing for all expenses.

Q. After allowing for all expenses?—A. Yes.

Q. May not some of the departments, for instance, for the purpose of argument the bacon department, show a substantial profit, while the beef department may show a loss, and the net result is reflected only in the net income?—A. That is so.

Q. And therefore this basis does not give you an accurate statement of the spread between the costs paid and the costs received?—A. Except on all the products handled.

Mr. Factor: You cannot separate them.

The Witness: You cannot separate them.

By Mr. Sommerville:

Q. In other words, if any company desired to do so, and were making a large profit on the bacon end of their business, they might easily take a substantial loss of beef, for the purpose of extending that end of the business?—A. Yes, they might.

Q. There is no way of checking that in their net return?—A. In this particular company, no; in the larger companies, it might be done.

Mr. Factor: On the sales it shows 1·47 per cent?

The Witness: Yes.

Mr. Sommerville: Will you proceed?

The Witness: (C). To determine the dressed cost of hogs, beef and small stock purchased through (1) direct shipments, (2) stockyards or markets and (3) truckers, and the percentage which each of these classes bears to the total purchases.

The above intimation has been secured in connection with hogs for the month of September, 1933, and February and March, 1934, and is submitted in the following summary.

Mr. Sommerville: Just before you submit that, I think I should distribute to the committee a composite picture of those various figures in the various plants examined, so that the committee might have this information before them.

The Chairman: You had better put these in now.

By Mr. Sommerville:

Q. You are now submitting a comparative summary of average dressed costs of hogs, classified as to source of supplier, for the months of September and December, 1933, and March, 1934?—A. Yes.

Q. From Canada Packers, Limited, Swift Canadian Company, Limited, Wilsil's Limited, and Gainers, Limited?—A. Yes.

INVESTIGATION OF PACKING COMPANIES

Comparative Summary of Average Dressed Costs of Hogs, Classified as to Source of Supplier, for the months of September and December, 1933 and March, 1934

—	Canadian Packers, Limited					Swift Canadian Co., Ltd.		Wilsils, Ltd.	Gainers, Ltd.
	Toronto	Montreal	Winnipeg	Hull	Peterborough	Toronto	Edmonton	Montreal	Edmonton

Test lots	....	....	....	....	....	12 49	....	....	....

*The costs developed for the Swift Canadian Company Limited are not comparable with those of other companies, as the costs of the Swift Canadian Company, Ltd. exclude certain lower grade hogs, thus increasing the costs of the balance of the year.

†Based on a yield test made March 18th, 1933.

By Mr. Factor:

Q. Why did you take those months?—A. We just chose them at random for comparative purposes. We obviously had to take some months in which—

Q. No particular significance is attached to them?—A. No.

By Mr. Sommerville:

Q. This statement shows the dressed cost of the hog on the rail in each of those plants for the entire month that is represented there, or four weeks of a month?—A. Yes.

Q. And it shows the difference between the cost of hogs that came in by direct shipments by rail to the plant. In the first line they came in through the stockyard each month, and the second and third they came from the truckers?—A. Yes.

Q. These are the differences, are they not?—A. Yes.

Q. Now, in the case of Wilsil's—we will deal with each of the firms in turn as we come to their statement—will you just continue with your narrative?—A. The above information has been secured in connection with hogs for the month of September, 1933, and February and March, 1934, and is submitted in the following summary. Average cost per hundred pounds, September, 1933. $10.28, stockyard $10.24, truckers $10.03.

Mr. FACTOR: May I ask you if you know what the cost would be for dressing the hogs?

The WITNESS: We have not got that for Wilsil's.

Mr. KENNEDY (*Peace River*): It would be the same in each case.

The WITNESS: Not necessarily.

Mr. SOMMERVILLE: Very close.

Mr. SENN: You just count the labour involved, or do you include the shrink as well.

Mr. FACTOR: Labour and shrink, the difference between the live hog and the hog on the rail?

The WITNESS: You mean, just the shrink?

Mr. SOMMERVILLE: The whole thing, the whole cost.

The WITNESS: Right through to the point where it is distributed to the public, sold to the public?

By Mr. Sommerville:

Q. No. What are the elements that enter into the costs between the live hog and the dressed hog?—A. On the rail?

Q. On the rail. There is, first of all, shrink?—A. 25 to 30 per cent on the shrink.

Q. I think the proportion given by Canada Packers was something like that—77 per cent.—A. That would be 23 per cent.

Mr. SENN: The shrink would vary between the off car price and the fed and watered price?

Mr. SOMMERVILLE: The average.

The WITNESS: The percentage of yield for Wilsil's, is 73.01 truckers, 72.28 for market and 79.39 for shipments.

Mr. SOMMERVILLE: Direct shipments?

The WITNESS: Yes.

Mr. SOMMERVILLE: The average would be 75?

The WITNESS: Yes.

Mr. SENN: Is that based on the off car price, or on the fed and watered price?

Mr. SOMMERVILLE: It would not make any difference, because they take whatever the cost is. They take the cost and the shrink and the cost of handling in each case.

Mr. SENN: The price off car is always higher than the fed and watered price.

Mr. SOMMERVILLE: That would be reflected here on the dressed cost of the hogs off cars. There would be, first of all, the shrink on those cars and there would be the cost of operating those hogs, and then there would be, in the case of the hogs in the stockyard, the same consideration, the price paid, the shrink and the cost of operating and the cost of truckers.

Mr. SENN: That is right so far as shrink itself goes.

Mr. SOMMERVILLE: The shrink is taken out in each case.

The WITNESS: That is why the percentage differs.

By Mr. Sommerville:

Q. The witness has indicated that in the figures referred to. The shrink is different in each case. At any rate, this is the difference in the dressed cost on the rail from these three sources?—A. We got down to, I think, March.

Q. February?—A. Yes. Direct shipments $13.64; stockyards $13.68, truckers $13.22. March, $13.57; stockyards $13.70; truckers $12.72.

Q. Now, at this point, in March 1934, a new system was adopted of paying for hogs on the Montreal market by Wilsil's. Up to that time they had been sold on the Montreal market flat. Now, a differential operates. Is that not the fact?—A. May I read the report on that? There are some little differences. While the above differentials are generally applied on hog purchases, our examination of purchase invoices showed minor variations, particularly as affecting extra heavy hogs and sows. Prior to March 12, 1934, no discount was applied on the bacon price of local purchases in the case of butcher grades, but we are informed that the company now applies these differentials on all purchases. From the records maintained by the company it is not possible to determine whether the company gains an additional profit through the operation of the differential before mentioned. After the hogs are dressed and cut, they lose their identity at the plant, and the property is sold at the most advantageous market price.

Q. The total purchased by truck was comparatively small?—A. Yes, 4·87 per cent, 2·10 per cent and 2·53 per cent.

Q. Through the stockyards the purchases were much larger?—A. 50·28 per cent, 22·60 per cent, and 16·55 per cent.

Q. And the direct shipments?—A. 44·85 per cent, 75·30 per cent, and 80·92 per cent.

Q. That is to say from September 1933 to March 1934 the direct shipments have increased from 44·85 per cent to 80·92 per cent?—A. Yes.

Q. Nearly double?—A. Yes.

Q. Did you find, Mr. Shepherd, in your examination whether or not that increase was due to the fact that there was a controversy going on between the commission men at Montreal who insisted on selling flat, as against the buyers who were endeavouring to introduce the differential in Montreal in that month?—A. No, I do not know that.

Q. You could not tell that?—A. No.

Q. I see that very large increase is occurring in the month in which the controversy took place. We had evidence of it here already?

By Mr. Senn:

Q. You could not tell, I suppose, whether a good deal of that source of supply was from the west—from the St. Boniface stockyards at Winnipeg?—A. No.

Q. Whether they would be purchased on the stockyards there and delivered as direct shipment?—A. On these western shipments, of course, we cannot tell from which section of the west each comes.

Q. In that case they would probably be purchased on the stock markets of the west, and would be considered as direct shipments to Montreal?—A. They might be Alberta Pool hogs.

By Mr. Sommerville:

Q. They operate in Alberta pool hogs, not buying on the stockyards at all. Yes, Mr. Shepherd?—A. The prices paid for hogs are stated to be based on the market price for the bacon grade with the following differentials on or off the bacon grade.

Q. Then there were the fixed differentials you have referred to?—A. Yes.

Q. And these differentials were that you take off 50 cents per head for lights and heavies, \$1.50 for extra heavies, \$1.50 to \$2 for No. 1 sows, and from \$2 to \$2.50 for No. 2 sows?—A. Yes. From the records maintained by the company, it is not possible to determine whether the company gains an additional profit through the operation of the differentials before mentioned. After the hogs are dressed and cut, they lose their indentity in the plant, and the product is sold at the most advantageous market price.

Q. Yes. That is, these differentials are differentials which are fixed for purposes of settlement?—A. Exactly.

Q. And as soon as they pass through the killing room—? Their identity is lost. They are not kept separate?—A. No.

Q. It is impossible, therefore, to tell what is the effect of the differentials in dollars and cents?—A. Exactly.

Q. The differential would have the effect of reducing the whole price paid for the entire load, depending on the quality?—A. It depends on the grades. On all purchases of carload lots the company pays a commission to the agent of \$10 per car on hogs and \$17 per car on cattle coming direct to the plant by rail. Purchases of carload lots on the local market carry a commission based on the following rates:—

Carload	—	Mixed	Mixed
	\$ cts.	\$ cts.	\$ cts.
Cattle	15 00	....	....
Calves	12 00		
Hogs	10 00	12 00	10 00
Sheep and lamb	10 00		

The average dressed cost of cattle, veal and lamb for the weeks ended March 10 and 17, 1934, are given below. We were, however, unable to secure the information necessary to enable us to distribute the purchases under the required headings.

—	Week ended Mar. 10,1934 Average cost per 100 pounds	Week ended Mar. 17,1934 Average cost per 100 pounds
	\$ cts.	\$ cts.
Beef	9 20	9 64
Veal	11 55	11 41
Lamb	13 34	11 99

Q. Before leaving that branch of your subject, you refer to the fact that this company pays a commission to the agents who ship direct; have this company agents in the field who buy for them, as ordinarily the farmer pays the commission?—A. I do not know that.

Q. It might be a commission or allowance to a drover; I just wanted to know what information you had on that?—A. We will try and get that.

Q. Yes. Thank you. What next?—A. —(d) To determine the hourly rates of wages paid by the company, and to prepare a tabulation giving the number of employees paid at each of the different hourly rates.

In the following table we submit information showing the number and percentage of the company's employees engaged at the various hourly and weekly rates as at March 24, 1934. At an hourly rate of 20 cents there were 38 employees, or 10·27 per cent of the total.

Q. Now just a minute; I have here a consolidated statement showing the wages in a number of these different plants. One might refer to each company as one comes to it. (Printed as Appendix No. 1 to this day's evidence.)

By Mr. Factor:

Q. In calculating the hourly rate, that does not show the actual earnings made by the employees?—A. Well, we give in the report the weekly hour basis of 48 hours usually.

By Mr. Sommerville:

Q. In Wilsil's it is a 55 hour week?—A. Oh yes, we will come to that.

By Mr. Factor:

Q. Does the statement you have prepared show the actual weekly earnings? —A. No, it shows the rates and the percentage of the employees at that rate to the total employees.

By Mr. Kennedy (Peace River):

Q. It does not show the hours per week and the actual earnings of the employees?—A. No.

Q. It just estimates that work on an average week?—A. Yes.

By Mr. Sommerville:

Q. Assuming they worked a full week their earnings would work out on the basis you indicate here?—A. Yes.

By Mr. Heaps:

Q. Might I ask if the averages here include both male and female?—A. Yes.

Q. You have lumped them together?—A. Yes.

By Mr. Sommerville:

Q. The last column in the consolidated statement just furnished, indicates Wilsil's Limited wage scale for 370 employees?—A. Yes.

Q. Of whom 257 are on an hourly basis and 113 on a weekly basis?—A. Yes.

Q. And then you indicate that there are 38 employees who are paid 20 cents an hour—if you look at your report you will find it?—A. Yes, 38 cents.

Q. And that represents 10·27 per cent of the total?—A. Yes.

Q. And this is indicated on an hourly basis?—A. Yes.

Q. Just run through that schedule?—A. From the report?

Q. Yes?

Hourly Rate	Number of Employees	Percentage of Total
$0·20	38	10·27
·22	6	1·62

By Mr. Heaps:

Q. These will be female employees I presume?—A. I can't say as to that, I think they are at these lower rates.

Continuing the statement:

Hourly Rate	Number of Employees	Percentage of Total
$0·25	21	5·68
·28	14	3·78
·30	69	18·65
·33	19	5·14
·35	36	9·73
·36⅔	6	1·62
·38	10	2·70
·40	12	3·24
·42½	1	·27
·45	8	2·15
·50	16	4·33
·55	1	·27

Weekly Rate	Number of Employees	Percentage of Total
$10.00	1	·27
15.00	2	·54
16.00	3	·81
18.00	25	6·76
20.00	26	7·03
21.00	4	1·08
22.00	29	7·84
22.50	3	·81
25.00	11	2·97
27.50	1	·27
28.00	1	·27
30.00	5	1·35
35.00	2	·54

By Mr. Heaps:

Q. Have you got the salaries of the officials too?—A. We have given those.

Mr. SOMMERVILLE: Yes, they are in. Now, the average for the hourly rate is apparently 31·5 cents per hour over the entire 257 employees who are paid on an hourly basis; and the average for the weekly rate is $15.41 for the entire 113 employees.

By Mr. Senn:

Q. May I ask: are these weekly rates the actual earnings or, at the rate?—A. At the rate.

The WITNESS: Mr. Sommerville, that last figure you gave is not the average.

By Mr. Sommerville:

Q. $15.41?—A. No.

Q. I beg your pardon, no; the average is—?—A. We did not develop that.

By Mr. Heaps:

Q. Have you got the—?

Mr. SOMMERVILLE: I am sorry, Mr. Senn was asking a question.

By Mr. Senn:

Q. I just asked if these weekly wages were the actual earnings, or is it an estimate at the hourly rate—A. It is an estimate at the hourly rate.

By Mr. Sommerville:

Q. Now, Mr. Shepherd, you are referring to two different things; the weekly rate is not an estimate?—A. No. And these are not estimates, the hourly rates are the rates at which they are being paid. The big schedule with some 3,000 employees, for all these companies, is on the basis of the actual amounts they are paid; to show them in detail would not be comprehensible, there would be too much to it.

By Mr. Heaps:

Q. Have you the total amount of wages paid per annum?—A. It can be got from the operating statements.

By Mr. Sommerville:

Q. It may be that you have that in some total form, have you, Mr. Hudson?—A. We can give it to you for the week—in the total payroll.

Mr. HEAPS: Of course, that would not give us what we wanted to know.

The CHAIRMAN: No.

By Mr. Sommerville:

Q. Let us see what that is for the week—what week have you?—A. The week ended the 24th March, 1934.

Q. That is the week now under review?—A. Yes.

Q. What is the amount?—A. A total of $6,406.06.

By Mr. Heaps:

Q. To make sure that we get that statement: does that include the categories you have just enumerated to us this morning?—A. Yes, that $6,000 figure.

The CHAIRMAN: Just a little less than $18 a week?

Mr. EDWARDS: Yes, a little less than that.

By Mr. Sommerville:

Q. What is the total?—A. For direct labor in the plant $386,807.28—that would not include office salaries, management or anything of that kind.

By Mr. Heaps:

Q. For how many employees?—A. On the 24th March it was 370.

Q. What was the average for the year; would that be a fair average for the year?—A. I really could not say, we did not take that.

By Mr. Senn:

Q. That does not include buyers and salesmen?—A. Just the plant.

By Mr. Heaps:

Q. Might I ask if in addition to the wages and salaries received any other consideration is given to the employees?—A. No, we are just coming to that I think.

The CHAIRMAN: That amounts to $20 a week over the year, average.

The WITNESS: None of the Company's employees are on piecework or under any bonus system, and we are informed that no employee is required to "stand-by" in his own time. Our examination of the payrolls over a period did not disclose any evidence to the contrary.

The basis of employment is a 55 hour week and an examination of the payrolls at August 12, 1933 and November 11, 1933, discloses that the rates in force at these dates were substantially the same as those given in the foregoing tabulation as at March 24, 1934.

By Mr. Sommerville:

Q. Were there any other questions members of the committee desire to ask before we go further.

Mr. Kennedy (*Peace River*): Have you got the salaries of the executives, that $36,500?

The Chairman: I do not think it is necessary, if the committee are agreed as to it, I think it will be probably desirable not to give particulars of those salaries.

Mr. Kennedy (*Peace River*): If we did, we would just be treating one company the same as we treated another.

The Chairman: The reason that information was disclosed in connection with the tobacco companies was that it was filed by them, together with the large bonuses that were paid, and these bonuses were of such a very high character that I ruled here that the matter should be disclosed. But in connection with the salaries of ordinary executives I do not see where there is anything to be gained. We show in this statement the amount paid for executive salaries.

Mr. Kennedy (*Peace River*): I wanted to ask a question about the salaries of the Board and the salaries of the plants.

The Chairman: I would ask Mr. Kennedy if he would be good enough not to press for detailed information.

Mr. Kennedy (*Peace River*): I am not asking for the salaries of individuals in this case, but rather the total salary list.

The Chairman: That is given.

Mr. Sommerville: The total salary list.

The Witness: These are just of the executives.

Mr. Sommerville: The total salary list and the number on a salary.

The Chairman: There is no objection to that at all.

The Witness: We can give you the total, but not the number; for 1933 it is $127,649.12.

By Mr. Factor:

Q. Does that include the $36,000?—A. Yes.

By Mr. Heaps:

Q. How many would be receiving that?—A. I could not tell you that, I have not the number.

By Mr. Kennedy (Peace River):

Q. Is that in addition to the $386,000 wages?—A. That was wages, from the list.

Q. This is in addition?—A. Yes.

By Mr. Sommerville:

Q. That would probably cover the class that was referred to as buyers?—A. Yes, it does.

By the Chairman:

Q. Office staff?—A. Yes, sir.

By Mr. Factor:

Q. And he did give us there the chief executives, their total salaries?—A. Yes.

By Mr. Kennnedy (Peace River):

Q. And no bonuses?—A. No.

Q. Might I ask you this, though: were there any wage reductions during the last three or four years, since 1931?—A. Let us see now.

Q. In either the weekly rates or the hourly rates?—A. As far back as August, 1933, they were the same rates.

Q. August, 1933?—A. Yes.

By Mr. Sommerville:

Q. They were the same rates?—A. Yes.

Q. Have you any information of reduction, in the year 1931 or 1932, in the rates?—A. No, I have not.

Q. You have not any evidence of that?—A. We may be able to find that.

Q. Will you just make a note of that, to look it up in the recess, that we may have it?—A. Yes.

Mr. KENNEDY (*Peace River*): Could they give us information as to salaries increased or decreased, wages reduced or increased? I would like the same information as about salaries. They would be treated the same.

The WITNESS: Well, we have the executives' salaries. They are unchanged.

By Mr. Kennnedy (Peace River):

Q. Since 1929?—A. I think that is what it says: "These annual rates have been in force since 1930."

Mr. KENNEDY (*Peace River*): They are better off than members of parliament.

By Mr. Factor:

Q. What salaries are those?—A. That is executives' salaries.

Q. They have not changed since 1929?—A. 1930.

Q. But you have no information as to wages?

The CHAIRMAN: Let us get on to the next one.

By Mr. Sommerville:

Q. Will you let us have another independent plant, Gainers Limited?—A. Do you want me to give the objectives of the investigation?

Q. No, I think not?—A. They are the same.

Q. Gainers Limited is a plant that is operating at Edmonton, in the province of Alberta?—A. Yes.

Q. Will you just proceed with your statement in regard to that?

MEMORANDUM *RE* GAINERS LIMITED

In the following paragraphs we submit certain information prepared from the certified accounts of the Company's auditors, from the books and records of without independent confirmation of the accounts.

The scope of our investigation, which is outlined in general terms in the Resolution of Parliament, may be divided into the following specific enquiries:—

(*a*) To ascertain the Net Income earned on the capital invested in the Company after eliminating extraneous charges or credits to operations, if any.

(*b*) To determine the spread between the price paid to the producer of livestock and the price received by the Packer from the sale of the various products manufactured from livestock.
(*c*) To determine the dressed cost of hogs, beef and small stock purchased through (1) direct shipments (2) stockyards or markets, and (3) truckers, and the percentage which each of these classes bears to the total purchases.
(*d*) To determine the hourly rates of wages paid by the Company and prepare a tabulation giving the number of employees paid at each of the different hourly rates.

In support of the information included in the memorandum we submit the following statements:—

Exhibit " A "—Balance Sheet as at September 30, 1933.
Exhibit " B "—Condensed Statement of Operations for the five years ended September 30, 1933.
Exhibit " C "—Statement showing percentage of Net Income to Invested Capital for the five years ended September 30, 1933.
(*a*) To ascertain the Net Income earned on the capital invested in the Company after eliminating extraneous charges or credits to operations, if any.

Capital.—Gainers Limited was incorporated on September 29, 1922 under the laws of the Province of Alberta, with an authorized capital of $75,000 divided into 750 shares of $100 each. The authorized capital was subsequently increased as follows:—

On Sept. 26, 1912,	increased to	$150,000 00
April 11, 1925	"	250,000 00
Aug. 17, 1928	"	350,000 00
Dec. 2, 1930	"	500,000 00

At September 30, 1933, there were issued and outstanding 3,902 shares, a total capital of $390,200.

Cash and stock dividends were distributed to shareholders during the period under review, as shown in the undernoted summary.

Year ended	Dividends distributed to shareholders			
	Cash		Stock	
	Amount	Percentage of capital	Amount	Percentage of capital
	$ cts.	%	$ cts.	%
September 30, 1929	15,234 00	6	25,390 00	10
" 1930	18,544 00	6	17,300 00	6
" 1931	19,980 00	6	28,500 00	9
" 1932	21,804 00	6	....	....
" 1933	23,020 00	6	14,100 00	4

In Exhibit " A " we submit a Balance Sheet of the Company at September 30, 1933, based on the audited Balance Sheet submitted to the shareholders.

Net Income.—A condensed statement of the operations for the five years ended September 30, 1933, is submitted in Exhibit " B."

In reviewing the operations consideration was given to such controllable items of cost as salaries, repairs and depreciation and adjustment of inventories which might have an important bearing on the Net Income of the Company, as reported.

No items of sufficient relative importance were found to warrant adjustment of the earnings.

The following comment is submitted on certain items included in the operating statement:

Sales:—In the following tabulation we submit details of the Company's sales for the period under review, together with the percentages which the net income bears to the sales.

Period	Sales	Net Income	Percentage
	$ cts.	$ cts.	%
Year ended September 30, 1929	2,448,375 06	40,401 41	1·65
Year ended September 30, 1930	2,352,820 55	54,508 97	2·32
Year ended September 30, 1931	1,917,311 31	29,456 77	1·54
Year ended September 30, 1932	1,644,949 46	32,852 51	2·00
Year ended September 30, 1933	1,534,776 46	36,521 59	2·38
Total	9,898,232 84	193,741 25	1·96
Average for period	1,979,646 57	38,748 25	1·96

Inventories:—We are informed that the basis of pricing the inventories during the period under review was the estimated cost of the raw constituents without the addition of labour and overhead costs, but, from the records at our disposal, we were unable to confirm this statement.

Repairs and Renewals:—A general survey of the charges for repairs and renewals included in the operating accounts indicated that the amount was reasonable considering the age of the plant which, with the exception of recent additions, is of frame construction.

Depreciation:—The value of land and buildings is combined in one account on the books of the Company and we are therefore unable to ascertain the actual rate of depreciation on buildings. During the period under review the Company has varied the rates and basis of depreciation on its various assets frequently, and therefore the rates used in any one period have little, if any, significance. In the following tabulation we show the average rate of depreciation charged by the Company, based on the average book values, during the period under review:

	Per cent
Buildings (based on combined book value of land and buildings) largely of frame construction	4·4
Plant and equipment	8·2
Trucks	17·1

Executive Salaries:—The salaries and bonuses paid to five Executive Officers for the year ended September 30, 1933, was $23,100.00.

There were no material changes in the salaries and bonuses paid during the five years under review.

Invested Capital:—In Exhibit "C" we submit a statement showing the relation which the Net Income bears to the average invested capital for the five years ended September 30, 1933, based on the annual Balance Sheets and Profit and Loss Accounts as certified to by the Company's auditors. The following table shows the percentage of Net Income to Invested Capital:

Year ended	Net Income		
	Average Invested Capital	Amount	Percentage to Invested Capital
	$ cts.	$ cts.	%
September 30, 1929	322,268 65	40,401 41	12·54
" 1930	366,139 84	54,508 97	14·89
" 1931	398,310 71	29,456 77	7·40
" 1932	418,323 35	32,852 51	7·85
" 1933	436,948 40	36,521 59	8·36
Total	1,941,990 95	193,741 25	9·98
Average for period	388,398 19	38,748 25	9·98
Share Dividends	160,000 00		
	228,398 00		

(*b*) To determine the spread between the price paid to the producer of live stock and the price received by the Packer from the sale of the various products manufactured from live stock.

In the case of Gainers Limited, the transactions are represented by the purchase of live stock and its conversion into dressed meats and packed products, so that the spread is represented by the difference between the price paid to the producer and the selling price. This spread, however, covers all the products handled by the Company, and the records of the Company are not designed to show the spread in individual commodities.

In common with other packing establishments, Gainers Limited does not maintain a system which would enable the cost of individual products to be determined, and no records are available from which the selling price of all the products of a live animal can be ascertained.

For the above reasons we are unable to determine the spread between the price paid to the individual producer of live stock and the price received by the Packer from the sale of the resulting products, and we are, therefore, forced to substitute for this enquiry consideration as to whether the Packer receives a reasonable or an excessive return (*a*) on the capital invested, and (*b*) on the sales made to the public. The information necessary to arrive at a conclusion on these points is submitted in the section of this memorandum dealing with invested capital and sales, the average return shown being 9·98% on invested capital and 1·96% on sales.

(*c*) To determine the dressed cost of hogs, beef and small stock purchased through (1) direct shipments (2) stockyards or markets and (3) truckers, and the percentage which each of these classes bears to the total purchases.

In the following tabulation we submit particulars of the average cost per 100 lbs. dressed weight of hogs based on the Company's figures after applying thereto 4% representing the shrinkage between warm and shrunk weight:

—	Direct Shipments	Stockyards or Markets	Truckers
	Average Cost per 100 lbs. Dressed Weight	Average Cost per 100 lbs. Dressed Weight	Average Cost per 100 lbs. Dressed Weight
	$ cts.	$ cts.	$ cts.
September 1933	7 49	7 96	7 58
December 1933	6 64	7 61	6 81
March 1934	10 81	11 40	10 19
	Percentage of Total Killed		
	%	%	%
September, 1933	6·3	2·4	91·3
December, 1933	9·8	3·4	86·8
March, 1934	14·8	8·8	76·4

The current prices paid for hogs are stated to be based on the market price for the bacon grade with the following differentials on or off bacon grade:

Select—Premium of 50 cents per 100 lbs. above the bacon.
Butcher—Discount of 50 cents per 100 lbs. below the bacon.
Light and Shop—Discount of $1 per 100 lbs. below the bacon. (Optional.)
Heavy—Discount of $1.25 per 100 lbs. below the bacon.
Extra Heavy—Discount of $2 per 100 lbs. below the bacon.
Rough—Discount of $3.50 per 100 lbs. below the bacon.
Smooth Sows—Discount of $2.50 per 100 lbs. below the bacon.
All other Sows—Discount of $3 per 100 lbs. below the bacon.
Stags—Discount varies.
Cripples—Discount of $2.50 per 100 lbs. below the bacon.

From the records maintained by the Company it is not possible to determine whether the Company gains an additional profit through the operation of the differentials before mentioned. After the hogs are dressed and cut they lose their identity in the plant, and the product is sold at the most advantageous market price.

The Company does not maintain any records from which we can ascertain the dressed cost of cattle and small stock, but we submit in the following summary the percentages which the purchases of cattle and small stock from stockyards and markets bear to the total purchases during the months of September 1933, December 1933 and March 1934.

—	Percentage of Total Purchases	
	Stockyards	Truckers
	%	%
Cattle and Calves:—		
September, 1933	51·43	48·57
December, 1933	47·22	52·78
March, 1934	28·59	71·41
Sheep and Lambs:—	%	%
September, 1933	15·96	84·04
December, 1933	22·03	77·97
March, 1934	20·51	79·49

(*d*) To determine the hourly rates of wages paid by the Company, and to prepare a tabulation giving the number of employees paid at each of the different hourly rates.

In the following table we submit information showing the number and percentage of the Company's employees engaged at the various hourly and weekly rates as a March 31, 1934.

Hourly Rate	Number of Employees	% of Total
cts.		
$17\frac{1}{2}$	1	62
20	5	3·11
22	1	0·62

16 18	2	1·24
17 31	1	0·62
18 45	1	0·62
19 60	1	0 62
23 07	1	0·62
25 01–30 00	2	1 24
30 01–35 00	2	1·24
35 01–40 00	4	2·48
	15	

None of the Company's employees are on piecework or under any bonus system, and we are informed that no employee is required to "standby" in his own time. Our examination of the payrolls over a period did not disclose any evidence to the contrary.

Effective January 1, 1932, wages were subjected to a general reduction of 10 per cent. An examination of payrolls subsequent to that date did not disclose any material change in the rates of wages.

Average Invested Capital	436,948 40	418,323 35	398,310 71	366,139 84	322,268 65	
Net Income	36,521 59	32,852 51	99,456 77	54,508 97	40,401 41	
Percentage of Net Income to Invested Capital	8·36%	7·85%	7·40%	14·89%	12·54%	

A. To ascertain the net income earned on the capital invested in the company after eliminating extraneous charges or credits to operations, if any:

Capital: Gainers Limited was incorporated on September 29, 1911, under the laws of the province of Alberta, with an authorized capital of $75,000 divided into 750 shares of $100 each. The authorized capital was subsequently increased as follows:

On September 26, 1912, increased to..	$150,000
On April 11, 1925, increased to..	250,000
On August 17, 1928, increased to..	350,000
On December 2, 1930 increased to..	500,000

At September 30, 1933, there were issued and outstanding 3,902 shares, a total capital of $390,200.

Cash and stock dividends were distributed to shareholders during the period under review as shown in the undernoted summary: Dividends distributed to shareholders, year ended September 30, 1929, cash $15,234; percentage of capital, 6; stock dividend, $25,390; percentage of capital, 10.

Q. That is in 1929 a cash dividend of 6 per cent and a stock dividend of 10 per cent?—A. Yes.

Q. Issued to the shareholders?—A. Yes.

Q. Will you continue?—A. Year ended September 30, 1930, cash dividend, $18,544; percentage of capital, 6; stock dividend, $17,300; percentage of capital, 6.

Q. That is, six and six, a total of 12 per cent?—A. Yes.

Q. 6 per cent cash and 6 per cent stock dividend that year?—A. Yes. Year ended September 30, 1931, $19,980 cash, 6 per cent; $28,500 stock, 9 per cent.

Q. Six and nine; that is 15 per cent for the year 1931?—A. Yes.

Q. Will you continue?—A. For 1932, cash $21,804, 6 per cent; no stock dividends. For 1933, $23,020 cash, 6 per cent; $14,100 stock, 4 per cent.

Q. Six and four for the year 1933?—A. Yes.

Q. That is in the five years you have had a 30 per cent dividend in cash, and a 29 per cent stock dividend?—A. Yes.

Q. Will you proceed?—A. In Exhibit "A" we submit a balance sheet of the company at September 30, 1933, based on the audited balance sheet submitted to the shareholders.

By the Chairman:

Q. Before you leave that, I want to ask about these various increases from $75,000 to $150,000, $250,000 and so on. Were they represented by actual cash invested in the business?—A. That is just authorized.

By Mr. Sommerville:

Q. This was authorized?—A. Yes, that is just authorized.

By the Chairman:

Q. Then it increased to $390,000 issued, I think you said?—A. Yes.

Q. With regard to the difference between the original authorized capital of $75,000 and the issued capital of $390,000, how is that made up, of cash invested or was it stock dividends?—A. From 1929 on it is stock dividends. I can't tell you prior to 1929. We restricted it to five years on account of the time. It goes back to 1911.

By Mr. Factor:

Q. Can you give us the details year by year? I mean, each period of the increase?—A. Of the five years?

Q. Yes?

The CHAIRMAN: He has given us those.

The WITNESS: We have it.

The CHAIRMAN: They are stock dividends.

Mr. FACTOR: They are all stock dividends?

The CHAIRMAN: No. In 1929 there was a 10 per cent stock dividend; 1930, 6 per cent; 1931, 9 per cent; 1932, none and 1933, 4 per cent.

Mr. FACTOR: I see.

Mr. SOMMERVILLE: In other words, during the last five years you had a stock dividend of $85,290. That is the amount of the figures given.

By the Chairman:

Q. I suppose in the years previous to that there were similar stock dividends, presumably?—A. I think that was the practice of this company. We have got the whole thing here, I think.

By Mr. Sommerville:

Q. Very well, give it to us?—A. The original issue of $57,489 was for assets.

Q. $57,000?—A. $57,489. For services, $2,410.76.

Q. Dollars?—A. Dollars. For cash, $167,700; for dividends, $162,600; that makes up $390,200.

Q. So that $230,000 of the capital is represented by cash and services? —A. Yes.

Q. And $160,000 represented by stock dividends that have been paid?—A. By cash and the original value of the assets of the company.

Q. Cash and the original value of the assets?—A. Yes.

Q. Whatever those assets were?—A. Yes.

Q. You don't know what that value was?—A. It goes back to 1911.

Q. Will you continue, please?—A. Yes.

Net Income: A condensed statement of the operations for the five years ended September 30, 1933, is submitted in Exhibit "B."

In reviewing the operations consideration was given to such controllable items of cost of salaries, repairs and depreciations and adjustment of inventories which might have an important bearing on the net income of the company, as reported. No items of sufficient relative importance were found to warrant adjustment of the earnings.

The following comment is submitted on certain items included in the operating statement:—

Sales: In the following tabulation we submit details of the company's sales for the period under review, together with the percentages which the net income bears to the sales.

Period	Sales	Net income	Percentage
	$ cts.	$ cts.	%
Year ended September 30, 1929	2,448,375 06	40,401 41	1·65
" " 1930	2,352,820 55	54,508 97	2·32
" " 1931	1,917,311 31	29,456 77	1·54
" " 1932	1,644,949 46	32,852 51	2·00
" " 1933	1,534,776 46	36,521 59	2·38
Total	9,898,232 84	193,741 25	1·96
Average for period	1,979,646 57	38,748 25	1·96

Q. I observe for this company that in the balance sheet the inventory is $152,438.28 for the last fiscal year, which is apparently 10 per cent of their sales?—A. Yes.

Q. Indicating that they have a turnover of about ten times a year?—A. Yes, ten times.

Q. In their inventory?—A. Yes.

By Mr. Senn:

Q. When you talked about net income, you didn't include amounts set up for depreciation and reserve?—A. Oh, yes, that is the cost of operation.

By Mr. Sommerville:

Q. Net income that you have referred to is after allowance for depreciation and other reserves?—A. Yes, and all expenses.

Q. And all expenses of every kind?—A. Yes, but not dividends.

Mr. SENN: It would be interesting to know what those reserves are.

Mr. SOMMERVILLE: We have them here. The balance sheet indicates that they have land, buildings, plant and equipment; with land and buildings at $248,854; plant and equipment, $161,771.31. Those are at cost. That is $410,625.31, less reserve for depreciation of $119,744.24, a reserve for depreciation of about 30 per cent.

The WITNESS: We can't tell exactly, because land is not there, and we don't know the value of the land.

By Mr. Sommerville:

Q. You don't know the value as between the land and the buildings?—A. No. But I should say about 30 per cent.

Mr. SENN: 30 per cent on the land and buildings.

By Mr. Sommerville:

Q. Land and buildings, anyway?—A. Yes.

Q. And I think the buildings, you say in your report, are mostly frame?—A. Yes.

By Mr. Senn:

Q. That includes equipment as well?—A. Yes, that is everything.

By Mr. Sommerville:

Q. Will you just proceed?—A. Yes.

Inventories: We are informed that the basis of pricing the inventories during the period under review was the estimated cost of the raw constituents without the addition of labour and overhead costs, but from the records at our disposal we were unable to confirm this statement.

Q. They don't take cost or market?—A. No.

Q. Just the raw constituents?—A. The raw constituent cost.

Q. Without labour?—A. Without labour.

Q. That would show what?—A. That would indicate that that inventory is not on the basis of normal practice.

Q. But that has been their practice?—A. It has been their practice throughout, so that it does not affect operations.

Q. It does not affect operations?—A. No.

Q. All right. Will you continue?—A. Repairs and renewals: A general survey of the charges for repairs and renewals included in the operating accounts indicated that the amount was reasonable considering the age of the plant which, with the exception of recent additions, is of frame construction.

Depreciation: The value of land and buildings is combined in one account on the books of the company and we are therefore unable to ascertain the actual rate of depreciation on buildings. During the period under review, the company has varied the rates and basis of depreciation on its various assets

frequently, and therefore the rates used in any one period have little, if any, significance. In the following tabulation we show the average rates of depreciation charged by the company, based on the average book values during the period under review:—

	Per Cent
Buildings (Based on combined book value of land and buildings) largely of frame construction..	4·4
Plant and equipment..	8·2
Trucks..	17·1

Executive Salaries: The salaries and bonuses paid to executive officers for the year ended September 30, 1933, are as follows—

Q. Just give us the total?—A. The total was $23,100.

Q. That is salary plus bonuses for five executives?—A. Yes, $23,100. There were no material changes in the salaries and bonuses paid during the five years under review.

Invested Capital: In Exhibit "C" we submit a statement showing the relation which the net income bears to the average invested capital for the five years ended September 30, 1933, based on the annual balance sheets and profit and loss accounts as certified to by the company's auditors. The following table shows the percentage of net income to invested capital:

—	Average Invested Capital	Net Income: Amount	Net Income: Percentage to Invested Capital
	$ cts.	$ cts.	%
Year ended September 30, 1929	322,268 65	40,401 41	12·54
" " 1930	366,139 84	54,508 97	14·89
" " 1931	398,310 71	29,456 77	7·40
" " 1932	418,323 35	32,852 51	7·85
" " 1933	436,948 40	36,521 59	8·36
Total	1,941,990 85	193,741 25	9·98
Average for period	388,398 19	38,748 25	9·98

Q. That is to say it is a percentage of 9·98 on the $388,398.19?—A. Yes.

Q. But that includes what you have already stated, $160,000 of shares declared by way of dividend?—A. Yes.

Q. So that apart from the share dividend, the average cash income there would be $160,000 from $388,000, which is $228,398?—A. Well, you see, if they had not distributed that dividend in the form of stock, it would have been in surplus, so it is as broad as it is long. It would be in the invested capital, in any event.

Q. All right, will you continue?—A. Yes. (*b*) To determine the spread between the price paid to the producer of live stock and the price received by the packer from the sale of the various products manufactured from live stock.

In the case of Gainers Limited, the transactions are represented by the purchase of live stock and its conversion into dressed meat and packed products, so that the spread is represented by the difference between the price paid to the producer and the selling price. This spread, however, covers all the products handled by the company, and the records of the company are not designed to show the spread on individual commodities.

In common with other packing establishments, Gainers Limited does not maintain a system which would enable the cost of individual products to be

determined, and no records are available from which the selling price of all the products of a live animal can be ascertained.

For the above reasons we are unable to determine the spread between the price paid to the individual producer of live stock and the price received by the packer from the sale of the resulting products, and we are therefore, forced to substitute for this inquiry consideration as to whether the packer receives a reasonable or excessive return (*a*) on the capital invested, and (*b*) on the sales made to the public. The information necessary to arrive at a conclusion on these points is submitted in the section of this memorandum dealing with invested capital and sales, the average return shown being 9·98 per cent on invested capital and 1·96 per cent on sales.

By Mr. Young:

Q. You say 1·96 per cent on sales. You could not give it to us on the purchases, could you?

Mr. SOMMERVILLE: Yes, it could be given on purchases.

The WITNESS: I think for this company we might get it.

Mr. SOMMERVILLE: Yes, because we have here the cost of the goods sold.

The WITNESS: Yes.

Mr. SENN: That is the purchase price?

Mr. SOMMERVILLE: The purchase price. For instance, the condensed statement of operations in Exhibit "B" will show that the purchase price of the goods sold was $1,222,160.87.

The WITNESS: No, excuse me; that includes processing costs.

Mr. SOMMERVILLE: All processing costs.

The WITNESS: Yes, cost of goods sold and adjustment of inventories; but I think we can get it from the figures here. We will get it for 1933. About 4·2 per cent.

Mr. YOUNG: You say 4·2 per cent. Thank you.

By Mr. Sommerville:

Q. Will you continue?—A. Yes. (*c*) To determine the dressed cost of hogs—

Q. Before you reach that point, on the question of spread will you look at Exhibit "B" attached to this memorandum of yours?—A. Yes.

Q. You will observe that from the net sales you have taken the cost of goods sold, and your gross margin is $312,615.59?—A. Yes.

Q. Your spread is therefore 20.37 per cent?—A. Yes.

Q. Gross spread?—A. Yes.

Q. And that would indicate what had been the amount added?—A. You see, there are certain processing expenses that go into that.

Q. We have operating expenses taken from that?—A. In addition there would be some for the cost of the goods sold. We will tell you exactly what is in there.

Mr. FACTOR: He did say he was unable to determine it on that basis.

The WITNESS: The individual we are unable to determine. This is the aggregate. There is $240,000 for packages and supplies and other materials in there; $94,000 for direct labour; sundry supplies, $4,000; cold storage, $6,000; repairs, $5,000 and depreciation, $13,000.

By Mr. Sommerville:

Q. In that item?—A. Yes.

Q. Added to the cost of the goods sold? No, surely not. That won't show you a margin of $312,000?—A. It is included in the $1,222,000. There are certain direct expenses. For instance, depreciation is charged in there direct.

Mr. SENN: You cannot give us the purchase price of material?

The CHAIRMAN: You have it there?

The WITNESS: We gave it—$856,170.80.

By Mr. Sommerville:

Q. The purchase price in 1933?—A. Yes.

Q. Of the products, livestock?—A. Yes.

Q. How much was it?—A. $856,170.80.

Q. And sold, after certain processing charges you have indicated, for $1,534,776.46?—A. Yes.

Mr. FACTOR: Is there any way of determining what the processing charges are?

The WITNESS: Yes, we have just given them to you.

By Mr. Sommerville:

Q. The whole cost of those goods sold with the processing charges was $1,222,160.87?—A. Yes.

Q. And the margin, or gross profit, was $312,615.59?—A. Yes.

Q. That was a gross margin of 20·37 per cent?—A. Yes.

Q. Of the sales?—A. Yes.

Q. That gives a gross margin of 40 per cent, about?—A. 44·22 per cent.

Q. 44·22 per cent on the cost of the goods?—A. On the sales, based on the same thing.

Q. Based on the same thing?—A. All based on the percentage of sales.

Mr. SENN: The cost of selling would have to be taken care of out of that?

The WITNESS: We have not got down to that point. This is only the gross margin—that is shown lower down on the statement.

Mr. SOMMERVILLE: Proceed.

The WITNESS: To determine the dressed cost of hogs, beef and small stock purchased through (1) direct shipments, (2) stockyards or markets, and (3) truckers, and the percentage which each of these classes bears to the total purchases. In the following tabulation we submit particulars of the average cost per 100 pounds dressed weight of hogs, based on the company's figures after applying thereto 4 per cent representing the shrinkage between warm and shrunk weight: September, 1933, direct shipments, $7.49; stockyards or markets, $7.96; truckers, $7.58.

By Mr. Sommerville:

Q. Just stop there to examine that condition. In the case of Gainers, in September, 1933, 91·3 per cent of their entire kill was brought in by truckers? —A. Yes.

Q. 2·4 per cent was bought on the open market and 6·3 per cent was shipped direct?—A. Yes.

Q. In December, 1933, 86·8 per cent of their kill came from the truckers, 3·4 per cent from the stockyards, and 9·8 per cent by direct shipments?— A. Yes.

Q. In March, 1934, 76·4 per cent of their kill came in by truckers, 8·8 per cent through the stockyard, and 14·8 per cent direct?—A. Yes.

Q. You will observe in March, 1933, the stockyard hogs cost them dressed 7·96, trucker hogs cost them $7.58—is that correct?—A. Yes.

Q. That is a difference of 38 cents?—A. Yes.

Q. Per hundred.

Mr. KENNEDY (*Peace River*): September, 1933.

By Mr. Sommerville:

Q. September, 1933. It cost 38 cents per hundred less to the packer for trucker hogs than for stockyard hogs?—A. Yes.

Q. In December, 1933, direct shipments cost $6.64, stockyards $7.61 and trucker $6.81?—A. Yes.

Q. A difference of 80 cents a hundred less for truck hogs in December than stockyard.

Mr. Edwards: The other way about.

The Witness: No, less.

By Mr. Sommerville:

Q. 80 cents a hundred; and in March, 1934, direct shipments cost them $10.81, stockyards cost them $11.40 and truckers cost them $10.19?—A. Yes.

Q. A difference of $1.21 per hundred less for trucker hogs than for stockyard hogs?—A. Yes.

Q. That was the net result?—A. Yes.

Q. And of course, more than 75 per cent of their hogs are trucker hogs?—A. Yes.

Mr. Kennedy (*Peace River*): And the farmers lose the advantage of their own feeding and watering at the yards?

Mr. Sommerville: There is no doubt about that. Proceed.

Mr. Senn: You are dealing with hogs only, not with cattle at all?

Mr. Sommerville: We are dealing with hogs only.

Mr. Senn: Were your figures regarding receipts taken from the stockyards on direct shipments in regard to hogs?

Mr. Sommerville: All hogs, total receipts.

Mr. Senn: You gave a percentage of receipts at the stockyards—

Mr. Sommerville: We are dealing only with hogs.

The Witness: Yes. The current prices paid for hogs are stated to be based on the market price, for the bacon grade with the following differentials on or off bacon grade:

Select—Premium of fifty cents per 100 pounds above the bacon.
Butcher—Discount of fifty cents per 100 pounds below the bacon.
Light and Shop—Discount of $1 per 100 pounds below the bacon (optional).
Heavy—Discount of $1.25 per 100 pounds below the bacon.
Extra Heavy—Discount of $2 per 100 pounds below the bacon.
Rough—Discount of $3.50 per 100 pounds below the bacon.
Smooth Sows—Discount of $2.50 per 100 pounds below the bacon.
All other sows—Discount of $3 per 100 pounds below the bacon.
Stags—Discount varies.
Cripples—Discount of $2.50 per 100 pounds below the bacon.

From the records maintained by the company it is not possible to determine whether the company gains an additional profit through the operation of the differentials before mentioned. After the hogs are dressed and cut they lose their identity in the plant, and the product is sold at the most advantageous market price.

The company does not maintain any records from which we can ascertain the dressed cost of cattle and small stock, but we submit in the following summary the percentages which the purchases of cattle and small stock from stockyards and markets bear to the total purchases during the months of September 1933, December 1933, and March 1934. Cattle and calves—

Mr. Senn: Before you start with that phase, I should like to say this. The most important feature of that is whether these dressed carcasses go into the fresh meat trade or the bacon trade.

The WITNESS: On the hogs.

Mr. SENN: Yes. Do you know the percentage?

The WITNESS: No, we cannot give you the percentage.

Mr. SENN: That is, the differential should not be that much if it goes to the fresh meat trade?

The WITNESS: All hogs go into the one killing operation, and when they go in there, they are lost.

The CHAIRMAN: A part of them is used as bacon?

Mr. SOMMERVILLE: And a part goes into the fresh pork trade?

Mr. SENN: I understand a very large percentage is used in the fresh meat trade; therefore, there should not be this differential.

Mr. SOMMERVILLE: Mr. Senn is questioning about the differential.

The WITNESS: That is really a part of the price that is paid for the hogs.

Mr. SENN: I can't understand how the differential should be observed unless a certain amount of the output goes into the export trade. If there is a certain amount that goes into the export trade, the differential should be observed, in a different way from what it should be in the fresh meat trade.

Mr. EDWARDS: A dollar for a bacon hog.

Mr. SOMMERVILLE: We had a statement from one company that 90 per cent of the product was domestic.

Mr. SENN: In that case there should not be a differential.

The WITNESS: Cattle and calves, September 1933, stockyards 51·43 per cent, truckers 48·57 per cent; December 1933, stockyards 47·22 per cent, truckers 52·78 per cent; March 1934 stockyards 28·59 per cent, truckers 71·41 per cent. Sheep and lambs: September 1933, stockyards 15·96 per cent, truckers 84·04 per cent; December 1933, stockyards 22·03 per cent, truckers 77·97 per cent; March 1934, stockyards 20·51 per cent, truckers 79·49.

Mr. SENN: The last statement indicates the percentage of the total purchase from these two sources?

The WITNESS: Exactly. "D." To determine the hourly rates of wages paid by the company and to prepare a tabulation giving the number of employees paid at each of the different hourly rates. In the following table we submit information showing the number and percentage of the company's employees engaged at the various hourly and weekly rates as at March 31, 1934.

Hourly rate	Number of employees	Per cent of total
$0.17½	1	·62
.20	5	3·11
.22	1	·62
.22½	5	3·11
.25	5	3·11
.26½	8	4·97
.27	2	1·24
.27½	3	1·86

None of the company's employees are on the piecework, or under any bonus system, and we are informed that no employee is required to "stand by" in his own time. Our examination of the payrolls over a period did not disclose any evidence to the contrary. Effective January 1st, 1932, wages were subjected to a general reduction of 10 per cent. An examination of payrolls subsequent to that date did not disclose any material change in the rates of wages.

By Mr. Kennedy (Peace River):

Q. Was there any reduction in salaries?—A. No, I think they were standard throughout. I think we say that. We say there was no material change in the salaries and bonus paid during the five years.

Q. What is the total salary?—A. $23,100.

Q. That is the five executives? I was asking the total salaries.

The CHAIRMAN: We will adjourn at this point until 3.30, if you can get the information that Mr. Kennedy asked.

Committee adjourned at one o'clock, to meet again at 3.30 o'clock.

The Committee resumed at 3.30 p.m.

The CHAIRMAN: Order, gentlemen.

By Mr. Sommerville:

Q. Now, Mr. Shepherd, will you present the next statement; Canada Packers Limited?—A. In the following paragraphs we submit certain information prepared from the certified accounts of the company's auditors, from the books and records of the company and from information obtained by us from the management without independent confirmation of the accounts.

Q. Just a minute; if you would speak a little louder first of all, and secondly, this that you are reading now is a paragraph from your memorandum?—A. Yes.

Q. Your information is prepared from the certified accounts of the company's auditors?—A. Yes.

Q. I understand that is a consolidated statement of Canada Packers?—A. That is so.

Q. And they operate, how many plants?—A. Head office in Toronto; plants at Toronto, Montreal, Winnipeg, Hull, Peterborough and Chicago.

Q. Yes. Then, with respect to each of these subsidiary plants, each plant is run independently?—A. Yes, that is so.

Q. Managed independently?—A. Yes.

Q. And all of its accounts kept separate and independently?—A. Yes.

Q. In the case of each of these plants, just the net profit or loss is forwarded to head office?—A. That is so.

Q. And then each of these net profits or losses is put into a consolidated statement?—A. Yes.

Q. And that consolidated statement is then taken and audited by the company's auditors?—A. Yes.

Q. That is to say, there is not an independent audit in each of these branch plants—an outside audit?—A. I could not say that.

Q. At any rate then there is not a consolidated statement made up of the operations of each of these plants?—A. No.

Q. Just the net result of the operations, whether it be a net profit or loss? —A. That is so.

Q. That is shown in the statement you have seen at head office?—A. Yes, that is right.

Q. You therefore, except at Toronto and Hull, did not examine the details of the operations in these various plants or branches?—A. No.

Q. You made two examinations; one at Toronto and the other at Hull, on certain phases of it?—A. Exactly.

Q. And you have accepted this statement from these various plants?—A. Yes.

Q. Otherwise you would have had to rewrite the books?—A. Exactly.

Q. To get a complete picture?—A. To get a composite of the profit and loss account.

Q. Yes, thank you; then— —A. Do you want me to read the scope of the investigation?

Q. No, the scope of the investigation is the same as you have already outlined?—A. The accounts of Canada Packers Limited and its subsidiaries are maintained at the head office in Toronto, at the plants in Toronto, Montreal, Winnipeg, Hull, Peterborough and Chicago, and at the other points where branch houses, creameries and other related businesses are located.

Q. Just at that point: perhaps you will tell me, the creameries of Canada Packers are operated at, I understand, Chesley, Clinton, Grand Valley, Mount Forest, Shamrock, Shelbourne, Walkerton, Wellington and Wiarton, Ontario? A. That is correct, yes.

Q. Then in addition to the plants you have referred to, they have branches throughout Canada at about 30 places?—A. That is so, yes.

Q. And then, in addition to these, they have cold storage plants at Toronto and Montreal, part from the packing plants at those two points?—A. That is so.

Q. And then there are certain canning factories owned by Canada Packers, are there not?—A. Yes.

The CHAIRMAN: Meat canning?

Mr. SOMMERVILLE: No, vegetable canning.

The WITNESS: Yes.

The CHAIRMAN: Vegetable canning factories.

Mr. SOMMERVILLE: Fruits and vegetables.

By Mr. Sommerville:

Q. And then there is the wool pulling factory at Toronto?—A. Yes, sir.

Q. And then there is the fertilizer business at Toronto and Montreal?—A. Yes. The plants receive periodical reports from the branch houses, etc., under their control and the net results so reported are incorporated in the plant books. The plants in turn submit monthly summaries of their operating results and financial position to the Head Office where the statements of the organization as a whole are consolidated. Our examination was confined to the records maintained at the Toronto and Hull plants and to certain operating statistics at the Montreal, Winnipeg and Peterborough plants. In preparing this memorandum we have also made use of certain summaries and reports on file at the Head Office.

In support of the information included in the memorandum, we submit the following statements:—

Exhibit "A"—Consolidated Balance Sheet, Canada Packers Limited and its Subsidiaries, as at March 29, 1934.

(Exhibit A printed as appendix to this day's evidence.)

Exhibit "B"—Condensed Statement of Operations for the Period from August 15, 1927 to March 29, 1934.

Exhibit "C"—Statement showing percentages of Net Income to Invested Capital for the period from August 15, 1927 to March 28, 1928, and Six years ended March 29, 1934.

Schedule "1"—Statement showing number of Employees and percentage to total number employed at the Toronto, Hull and Peterborough plants for one week in March, 1934, classified as to hourly and weekly rates of pay.

(*a*) To ascertain the Net Income earned on the capital invested in the Company after eliminating extraneous charges or credits to operations if any.

Capital.—Canada Packers Limited was incorporated under the Dominion Companies Act on August 13, 1927, with an authorized capital of 100,000, 7 per cent cumulative redeemable preference shares of $100 each, and 200,000 common shares without nominal or par value. The Charter provides that the common shares shall not be issued for a consideration exceeding in the aggregate $2,000,000. At March 29, 1934, there were issued and outstanding 60,335, 7 per cent cumulative redeemable preference shares of $100 each and 200,000 common shares with a stated value of $1,438,284.46, making a total capital of $7,471,784.46. The Company owned as at March 29, 1934, 688 of its 7 per cent cumulative redeemable preference shares, and 698 of its common shares which are shown in the Balance Sheet at that date as investments. Preferred dividends have been paid at 7 per cent per annum from July 1, 1927 to March 31, 1934. No dividends have been paid on the common shares.

Canada Packers Limited is a holding company for investments in the shares of several wholly owned subsidiaries of which the principal are The Harris Abattoir Company, Limited, William Davis Company, Limited, Gunns Limited and Canadian Packing Company, Limited. At the inception of Canada Packers Limited the entire capital stocks of The Harris Abattoir Company, Limited, Gunns Limited and Canadian Packing Company, Limited, were acquired.

Q. That is, when the Company came into existence they acquired at once the entire capital stock of these three other companies; Gunns, Harrises and Canadian Packing?—A. Yes. The entire capital stock of The William Davies Company, Limited, was owned by William Davies Company, Inc., an American Company, and at the inception of Canada Packers Limited a majority of the shares of Wiliam Davies Company, Inc. was purchased, all but six of the remaining shares being acquired subsequently. Thereafter an exchange of shares between William Davies Company, Inc., and Canada Packers Limited took place whereby 60,404 Class "A" shares and 17,708 Class "B" shares of William Davies Company, Inc., were exchanged by Canada Packers Limited, for 20,000 shares of The William Davies Company, Limited, leaving the remaining 10,000 shares issued by The William Davies Company, Limited, in the possession of William Davies Company, Inc. The last named Company, therefore, owns 60,404 of its Class "A" shares and 17,708 of its Class "B" shares. A summary showing the consideration for and the basis upon which the shares of the various subsidiaries were acquired is shown below.

BOOK VALUE OF AND CONSIDERATION FOR SHARES OF SUBSIDIARY COMPANIES ACQUIRED AS AT AUGUST 15, 1927, AND SUBSEQUENT THERETO

Book value of shares acquired—		
The Harris Abattoir Company, Limited:		
Capital Stock:		
25,550 Common Shares of $100.00 each		$ 2,555,000 00
Surplus		2,117,949 69
		4,672,949 69
William Davies Company, Inc.:		
Capital Stock:		
Class "A"—60,435 shares of no par value—stated value Class "B"—60,000 shares of no par value—stated value	$ 3,083,536 00	
Surplus	2,161,810 54	5,245,346 54
Canadian Packing Company, Limited:		
100,000 Common Shares of no par value—stated value		25,000 00
Gunns Limited and Subsidiaries:		
Capital Stock:		
3,000 Common Shares of no par value—stated value	1,435,201 76	
Deficit	48,786 38	1,386,415 38
Total		$11,329,711 61
Consideration:		
Cash	$ 2,571,077 15	
6% Second Collateral Trust Bonds	650,000 00	
66,703½ 7% Cumulative Redeemable Preference Shares of $100.00 each	6,670 350 00	
200,000 Common Shares, without nominal or par value—stated value	1,438,284 46	11,329,711 61

Q. Now then, just at that point, let me ask you: does that indicate that the total amount paid by Canada Packers Limited for all the shares in these four companies was paid for by the sum of $11.329,711.61—A. Yes.

Q. And that was the value of what was acquired?—A. Yes, the cost.

Q. That was the cost of what was acquired, and that included not only the shares at their stated value but also the surpluses in each of these companies, and that was taken into consideration in fixing these values?—A. That is so.

Q. So the Canada Packers therefore considered that the assets they were acquiring were worth $11,329,711.61?—A. Presumably.

Q. And they paid for those assets that amount of money?—A. Yes.

Q. Or, rather, they paid that amount for these assets?—A. For those stocks, and the surpluses in each company.

Q. And the surpluses in each company in which they got stocks were taken into consideration in fixing that amount?—A. Yes.

Q. Then, the manner in which they paid this $11.329,711.61 is set out in your memorandum?—A. Yes.

Q. First of all there was cash, $2.571,077.15 received by the new company; secondly, 6 per cent second collateral trust bonds, $650,000. received by the new company; thirdly, 66,703½ 7 per cent cumulative redeemable preference shares of $100 each having a value at par of $6.670,350; and fourth, 200.000 common shares, without nominal or par value, having a stated value of $1,438,284.46; or a total of $11,329,711.61?—A. That is so.

Q. Therefore, all of these assets were acquired by the payment of this cash—approximately $2,500,000—and the balance by preferred shares to a value of $650,000—collateral trust bonds?—A. Yes.

Q. Amounting to a total of $11,329,711.61?—A. That is so. In connection with the payment of $2,555,000 in cash to the shareholders of The Harris Abattoir Company, Limited, as part of the consideration for the acquisition of that Company's shares, Canada Packers Limited borrowed $2,500,000 from its bankers and gave as security its 6 per cent First Collateral Trust 20 Year Bonds with a face value of $2,500,000. Of this loan $1,250,000 was repaid to the bank in each of the years ended March 27, 1930 and March 26, 1931.

Q. At that point, I do not observe that in your statement you have indicated the issue of any twenty-year bonds to the extent of $2,500,000?—A. Well, they were collateral.

Q. They were issued collaterally?—A. Yes.

Q. And the $2,500,000 which was borrowed to be paid on the assets was then paid back by Canada Packers to its bankers in each of the years 1930 and 1931?—A. Half of it in each of those years.

Q. Half of it in each of those two years?—A. Yes.

Q. Out of their earnings?—A. Yes.

Q. And that wiped out the $2,500,000 obligation on the bonds?—A. Yes.

Q. And they ceased to be an obligation?—A. Yes.

Q. Will you continue?—A. Yes. At August 13, 1927, the inception of Canada Packers Limited, there were outstanding first mortgage sinking fund 6 per cent bonds of William Davies Company, Inc., and the Harris Abattoir Company, Limited, with a face value of $2,200,000 and $4,000,000 respectively, of which $79,000 and $125,000 were held by these subsidiaries. At March 29, 1934, these bond issues had been reduced to $1,350,000 for William Davies Company, Inc., and $3,242,900 for the Harris Abattoir Company, Limited, of which bonds Canada Packers Limited owned $615,200 and $1,057,400 which are shown in the balance sheet as investments.

The net reduction in the bonds outstanding and in the hands of the public from August 13, 1927, to March 29, 1934, amounted to $1,386,200 for William Davies Company, Inc., and $1,689,500 for the Harris Abattoir Company Limited.

Q. That is to say, in addition to the $2,500,000 paid back to the bank as indicated above, the Canada Packers paid off the bonds of the William Davies to the extent of $1,386,200?—A. Yes.

Q. And the bonds of the Harris Abattoir Company to the extent of $1,689,500?—A. Yes, that is so.

Q. Or a total of about $3,000,000 odd?—A. $3,075,700.

Mr. Kennedy (*Peace River*): In what years?

Mr. Sommerville: From 1927 to 1934.

Mr. Kennedy (*Peace River*): Out of earnings? No new stock?

The Witness: It is partly out of earnings and partly out of the amount set aside for depreciation.

By the Chairman:

Q. That would be earnings, would it not?—A. Yes. It is charged against earnings but set up as a depreciation reserve and not invested.

Q. It would be out of gross earnings?—A. Gross earnings, yes.

By Mr. Sommerville:

Q. That is, it was not paid off by other financing?—A. No.

Q. Their net position was improved to that extent?—A. Yes. In Exhibit "A" we submit a consolidated balance sheet of the company at March 29, 1934, based on the company's tentative balance sheet which is subject to completion of the audit for the year ended that date.

Q. Just at that point, before we deal with this balance sheet,—for the $11,000,000 which Canada Packers paid they acquired the shares of these four companies?—A. Yes.

Q. And these four companies had certain plants. How many plants were there?—A. Twelve, I think, originally.

Q. Originally there were twelve plants?—A. Yes.

The Chairman: You had better give us the names of them.

By Mr. Sommerville:

Q. At Toronto they had the Harris Abattoir, Gunns' plant, Davies' plant and the Canadian Packing Company's plant?—A. Yes.

Q. At Montreal, the Canadian Packing Company's plant and the Davies' plant?—A. Yes.

Q. At Hull, the Canadian Packing Company plant?—A. Yes.

Q. At Peterborough, the Canadian Packing Company plant?—A. Yes.

Q. At Brantford, the Canadian Packing Company plant?—A. Yes.

Q. At Winnipeg, the Harris plant and the Davies' plant?—A. Yes.

Q. And at Chicago, the Davies' plant?—A. Yes.

Q. Those plants were taken over. How many plants are now operated? Those twelve were taken over. What happened to those plants?—A. They are now reduced to six.

Q. That is to say, Harris and Gunns of Toronto have been consolidated and operate as one plant?—A. Yes.

Q. What about Davies at Toronto?—A. That is 95 per cent discontinued.

Q. That is, the plant as a packing plant was closed down?—A. Yes.

Q. And is used now as a receiving station?—A. Yes, for hogs.

Q. For hogs and for cold storage?—A. Yes.

Q. You say that is 95 per cent closed down?—A. Yes.

Q. What about the Canadian Packing Company plant at Toronto? That was sold, was it not?—A. Yes.

Q. Then instead of the two plants at Montreal, Canadian Packing Company and Davies have been consolidated?—A. Yes.

Q. And operate as one?—A. Yes.

Q. Then at Hull the Canadian Packing Company plant is continued?—A. Yes.

Q. It is continued at Peterborough?—A. Yes.

Q. The plant at Brantford is closed down, except that it is used as a branch?—A. Yes.

Q. I mean, as a packing plant it is closed down?—A. As a packing plant it is closed down, yes.

Q. Then at Winnipeg the Harris plant has been continued?—A. Yes.

Q. And the Davies' plant closed?—A. Yes.

Q. At Chicago the Davies' plant has been continued?—A. Yes.

Q. That is, with these consolidations and with the elimination of certain plants, there are six plants in operation now?—A. Yes.

Q. But all of those twelve plants were covered by the purchase price paid originally for the assets?—A. Yes, that is so.

Q. Now, can you tell us with regard to the three plants now closed, at what figure they were carried on the books, their original gross book value?—A. Yes. The total was $3,877,136.08.

Q. Those are the plants that are closed, the three?—A. That is for the land, buildings and machinery.

Q. The land, buildings and machinery of the three plants?—A. Yes.

Q. That is the Canadian Packing Company at Brantford, Davies at Winnipeg and Davies at Toronto?—A. Yes.

By Mr. Factor:

Q. Is that included in the balance sheet in this $18,000,000 odd?—A. Yes, they are included.

By Mr. Sommerville:

Q. With reference to these remaining plants, they have been consolidated physically, have they not? At Toronto, for instance, the plants that remain have been consolidated physically? They work together?—A. They work together, yes, but the accounts are not entirely consolidated.

Q. No, I understand that. But with reference to the books of these four plants, they are kept separately?—A. Of the separate companies, yes.

Q. And they are maintained with their original set up of assets in each of these books?—A. The stock is maintained.

Q. The stock is maintained?—A. Yes, in order, I take it, to retain the shares. It is a stock holding.

Q. It is a stock holding; and these four companies, I understand, have their assets in their respective books or have kept their accounts in their respective names, shall I put it that way?—A. No, the actual operating accounts are pooled.

Q. That is, operating accounts?—A. Yes.

Q. But there is a statement of assets and liabilities in each of these four companies?—A. They do take it off, I am told.

Q. Then the statements from these four companies are consolidated along with the others in this consolidated balance sheet?—A. Yes.

Q. Canada Packers each year issue a consolidated balance sheet?—A. To the shareholders.

Q. That is similar to the balance sheet which is shown here?—A. Exhibit "A".

Q. In this consolidated balance sheet I observe the land, buildings, plant and equipment carry a value of $18,962,703.18?—A. Yes, that is so.

Q. And those were the valuations based on appraisals from 1919 to 1927?—A. Yes.

Q. Prior to the acquisition of these companies by Canada Packers?—A. That is so.

Q. And these are the lands, buildings and plants that were in the various companies for which $11,000,000 odd was paid by Canada Packers, as you have said?—A. Yes, that is so.

Q. Although they have been valued in this statement and were valued on the books at $18,900,000, they were actually bought, along with other assets, for $11,000,000 odd?—A. Yes, that is so.

Q. Then is the depreciation that is set up each year based upon the $11,000,000 actually paid for these assets, or upon the $18,900,000 at which they were carried in these various books?—A. It is really not based on either of those figures.

Q. How is the difference provided for or taken care of, between the $11,000,000 you refer to and the $18,000,000 that is referred to here?—A. The $11,000,000 has not anything to do with the fixed assets. That is the price paid for the net tangible assets of the company, of all the companies, which would include all assets.

Q. What amount of depreciation has been set up?—A. Approximately $750,000 a year.

By the Chairman:

Q. Depreciation reserve from Exhibit "A" shows $6,862,579.65, is that right?—A. Yes.

By Mr. Sommerville:

Q. What is that?—A. That is reserves that were on hand at the date of purchase, plus the subsequent credits which have been charged to operations. The subsequent credits are $3,795,000.

Q. That is, in the consolidated balance sheet there is this amount of reserve for depreciation, $6,862,579.65?—A. Yes.

Q. That is made up of the reserves for depreciation on hand in the various companies at the time the shares were acquired by Canada Packers?—A. Yes.

Q. What did those reserves amount to at that date?—A. $1,819,697.82.

Q. $1,800,000 odd depreciation on hand?—A. Yes.

Q. At the time that they were acquired by the Canada Packers. How much has been added to that depreciation since then?—A. Approximately $5,000,000.

Q. That is one item of reserve. Here is another item I see in this: surplus on appraisals, $5,686,547.59 set up in the consolidated balance sheet. What does that mean?—A. That is the surplus arising from the appraisals of the original company's assets.

Q. What do you mean by that?—A. Well, when these assets were appraised in 1919 to 1927, and before this company was formed, the surplus arising from the appraisals was credited to that service.

Q. The surplus?—A. In other words, the assets were written up on the books by that amount and the credit went into that reserve.

By Mr. Edwards:

Q. The difference between the book price and the appraisal price?—A. As a result of the appraisal.

Q. The difference between the values as carried in the books and the value of the appraisal?—A. Yes.

By Mr. Sommerville:

Q. Those values then would be written up?—A. Yes.

By Mr. Kennedy (Winnipeg):

Q. In what respect is that a liability?—A. It is not a liability, it is a reserve.

By Mr. Edwards:

Q. It shows in the liability column?—A. Yes.

By Mr. Sommerville:

Q. I see it is set up on the liability statement here as a surplus?—A. Yes, that is so.

Q. Then that is an amount of value in excess of the amount paid by Canada Packers for these assets?—A. That is so.

Q. So that when Canada Packers bought these assets they did not value them at the $5,686,547.59 by which they had been written up?—A. They disregarded that.

Q. And that makes a total of these two items of reserve amounting to $12,549,127.24?—A. That is so.

Q. Will you proceed with your statement, please.

By the Chairman:

Q. Just one question at that point before you proceed, Mr. Shepherd: As a matter of sound accountancy and good book-keeping in providing for reasonable earnings, including reserves and so forth, this $5,686 odd of surplus of appraisals is to be disregarded.—A. I meant that they did not pay anything for that, yes.

By Mr. Kennedy (Winnipeg):

Q. Where is that amount just mentioned by Mr. Stevens reflected in the assets column?—A. Under the $18,000,000 odd of land, buildings, leasehold and equipment.

Q. And the next item on the liability column, Reserve set-up of $6,000,000 odd is— —A. That is reflected anywhere throughout the other assets.

Mr. KENNEDY *(Peace River)*: Do I understand in paying the $11,000,000 they got this reserve fund of $1,800,000 with the buildings.

Mr. SOMMERVILLE: Everything, yes. They got the assets and they took over the liabilities and for it paid $11,000,000. All right, Mr. Shepherd.

The WITNESS: *Net Income:*—A condensed statement of the operations for the seven fiscal periods from the inception of Canada Packers Limited, August 13, 1927, to March 29, 1934, is submitted in Exhibit B.

In reviewing the operations consideration was given to such controllable items of cost as salaries, repairs and depreciation, and adjustments of inventory values, which might have an important bearing on the net income of the company, as reported.

The aggregate provision for repairs and depreciation appears to be liberal, representing as it does an amount of $6,134,288.86 for the five years ended March 29, 1934, or 51·85 per cent of the average depreciable value of the fixed assets.

By Mr. Sommerville:

Q. For the five years ended March 29, 1934, the total provision for repairs and depreciation is $6,134,288.86?—A. Yes.

Q. And that represents 51·85 per cent of the average depreciable value of the fixed assets?—A. Yes.

Q. And that is provided, of course, out of earnings?—A. Oh yes. We submit below a tabulation of the repairs and depreciation charges for these periods:

—	Repair Charges	Depreciation	Total
	$ cts.	$ cts.	$ cts.
Fiscal Year ended March 27, 1930	612,158 00	748,373 14	1,360,531 14
" " March 26, 1931	465,483 00	766,950 17	1,232,433 17
" " March 31, 1932	463,839 00	777,820 65	1,241,659 65
" " March 30, 1933	350,165 00	748,997 01	1,099,162 01
" " March 29, 1934	446,874 00	753,628 89	1,200,502 89
Total	2,338,519 00	3,795,769 86	6,134,288 86

The amounts of repair charges for the period from August 15, 1927, to March 28, 1928, and for the year ended March 27, 1929, have not been shown as the information for these periods had not been obtained up to the date of this memorandum.

If the annual provision for depreciation is maintained on the present basis it will result in the extinction of the book value of all the fixed assets, excluding real estate, within the next six and three-quarter years.

Q. That is, the basis of depreciation you say has been liberal in the past? —A. Yes.

Q. And if it is continued on that basis everything that is depreciable will be wiped out?—A. Yes.

Q. And the fixed assets will be fully provided for within six and three-quarter years?—A. Yes.

Q. Can you give the committee any idea of the extent to which that depreciation allowance is more liberal than usual?—A. No.

Q. Is that depreciation based at all on the book values that we have for the buildings in the original plan?—A. Largely on original cost and appraisals.

Q. That is, the appraisals are largely on the original costs of $18,000,000 odd?—A. No, it would be prior to that even.

Mr. FACTOR: The original company.

By Mr. Sommerville:

Q. Prior to that?—A. Yes.

Q. At any rate, it is largely on original figures and not on the figures of $11,000,000 odd which Canada Packers paid for these assets?—A. Oh, no, that has no relation.

Q. It has no relation whatever to the $11,000,000 invested?—A. No.

Q. If your books were consolidated and your assets were brought into a single company statement as assets for which you paid $11,000,000, your depreciation would be based upon your $11,000,000, would it not?—A. Whatever the figure of fixed assets showed in that balance sheet.

Q. Whatever the figure of fixed assets showed in that balance sheet as comparable, as forming part of the $11,000,000?—A. Yes, exactly.

Q. It would not exceed the $11,000,000?—A. No, it would not.

Q. Well, the depreciation is apparently taken on a basis in excess of $11,000.000 being the cost of the original buildings?—A. No, I would not like to say that. You cannot tell what the original basis is; it is an arbitrary basis.

Q. But it must be an arbitrary basis on some valuations?—A. Well, the valuations vary in every case.

By Mr. Kennedy (Peace River):

Q. What about this six and three-quarter years and the extinction of the fixed assets, was the value of the fixed assets $11,000,000 or $18,000,000?—A. The present book value, which is $18,000,000, less the reserves.

By the Chairman:

Q. But there is a relation, Mr. Shepherd, between the amount of the depreciation set aside and the valuation of $18,000,000; it may not be based upon that, but in your computation it would take another six and three-quarter years to completely wipe out the book value of all the fixed assets?—A. That is the fact.

Q. So that there is an assumed relation between the two?—A. Yes.

Mr. KENNEDY (*Peace River*): What about the plants that have been sold?

Mr. SOMMERVILLE: There was one plant sold. The receipts from that, of course, have been credited.

Mr. SENN: And also the plants that are idle?

Mr. SOMMERVILLE: The plants that are idle are still carried, of course, and they are depreciated accordingly. Will you please proceed, Mr. Shepherd, with your memorandum.

The WITNESS: The following comment is submitted on certain items included in the operating statement.

By Mr. Factor:

Q. Did you give us the percentage of the net income to the invested capital of this company?—A. Not yet; that is later on:—

Sales: In the following tabulation we summarized the company's sales for the period under review, together with the percentage which the net income bears to the sales:—

Period	Sales	Net Income	Percentage
	$ cts.	$ cts.	%
Period from August 15, 1927 to March 28, 1928	70,212,862 00	1,028,697 64	1·47
Fiscal Year ended March 27, 1929	101,026,733 00	1,503,297 58	1·49
" " March 27, 1930	100,102,203 00	1,552,071 40	1·55
" " March 26, 1931	82,841,103 00	838,111 76	1·01
" " March 31, 1932	60,081,710 00	384,302 51	0·64
" " March 30, 1933	45,027,677 00	607,671 96	1·35
" " March 29, 1934	54,380,430 00	1,451,179 76	2·67
Total	513,672,718 00	7,365,332 61	1·43
Average per year	77,535,505 00	1,111,748 32	1·43

By Mr. Sommerville:

Q. Now this net income is after providing for all expenses?—A. Yes.
Q. And after providing for depreciation?—A. Yes.
Q. And all other proper charges?—A. Yes.

By Mr. Kennedy (Peace River):

Q. Including bank loans?—A. Interest if there was any.

The figures for sales shown above were obtained from a statistical record of the company which purports to show the sales to the public, but we cannot substantiate this figure owing to the fact that sales to the public and shipments to branches are combined in one amount in the company's books of account.

Inventories.—We are informed that the inventories were valued at lower of cost or market at March 28, 1928, and that from March 1929 to 1932 inclusive the inventories were valued at cost less the following reserves deducted therefrom to reduce the valuation to what the company considerd a conservative basis:

As at March 27, 1929..	$ 586,268 95
" " 27, 1930..	688,618 75
" " 26, 1931..	686,268 95
" " 31, 1932..	686,268 95

By Mr. Sommerville:

Q. Now, those are amounts taken of below cost—A. To reduce the inventories to cost or market.

Q. To cost less the following reserves?—A. Well, that is the purpose of the reserves, to reduce them to cost or market.

Q. All right.—A. At March 30, 1933, and March 29, 1934, the company changed its basis of valuation to lower of cost or market, with a further deduction of one half cent per pound on a part of the inventories of product at the main plants. Our computation of the amount of this deduction, based on the inventories of the Toronto plants at March 29, 1934, and March 30, 1933, is $80,405.97 and $63,536.22 respectively.

Q. That is to say on these two years' valuation of inventory they took first of all whichever was the lower of cost or the market price?—A. Yes.

Q. And then from that figure they deducted half a cent per pound?—A. Yes.

Q. And in the Toronto plant these deductions amounted to $80,405.97 in one year and $63,536.22 in another year?—A. That is so.

By the Chairman:

Q. Was the same principle applied to other plants in other places?—A. This company?

Q. This company's other plants?—A. Yes, I am coming to that in a moment. As I say, our computation of the amount of this deduction, based on the inventories of the Toronto plants at March 29, 1934, and March 30, 1933, is $80,405.97 and $63,536.22 respectively, based on a total inventory valuation of the product at the Toronto plant of $1,706,322.61 and $1,469,501.57 the deduction representing approximately 4·7 per cent and 4·3 per cent respectively. Applying the same percentages to the total value of the product at the main plants amounting to $3.932,414.49 at March 29, 1934, and $2,456,960.44 at March 30, 1933, we developed deductions of $184,823.48 and $105,649.30 for the company as a whole.

Q. The total amount then of the deductions below the lowest cost, whether it was cost or market, would be $184,000, in one year and $105,000 odd in 1933?—A. Yes. That is an estimate predicated on the figures we found at Toronto.

Q. What is the effect of lowering your inventory?—A. Well, as long as the basis is the same between years it does not make any difference to the operations.

By Mr. Factor:

Q. But they changed it in 1931 by reducing it half a cent a pound.

Mr. SOMMERVILLE: In 1933.

The WITNESS: In 1933, yes.

By Mr. Factor:

Q. What was the purpose of changing it in that particular year?—A. I suppose to take care of any undue fluctuations in the market. We go on to say here:—

In the opinion of the company's officials these deductions are warranted by conservative practice in view of the rapidly changing market prices for products.

By Mr. Sommerville:

Q. We had one other case where they took the lower of cost or market for their inventories?—A. Yes.

Mr. FACTOR: But in addition to that they have taken off half a cent per pound.

By Mr. Sommerville:

Q. If these amounts were added the book statement would show larger profits, I presume?—A. Yes.

Q. It would reflect in larger profits?—A. For this year.

Q. For this year, yes?—A. Yes. An amount of $200,000, part of the General Reserve, was deducted from the total of the inventories as valued at lower of cost or market at March 30, 1933, thus making the inventory valuations $200,000 less than lower of cost or market. At March 29, 1934, no part of the general reserve was used for this purpose, but a reserve of $45,414.77 carried on the books of the Chicago plant was deducted from the inventory.

Q. What do you mean by that?—A. Those were in addition to the figures given.

Q. That is, in addition to the amount taken off inventory there was taken off last year $200,000?—A. Yes.

Q. Which was carried as a general reserve?—A. In 1933 it was $200,000.

Q. And in 1934 $45,414.77 was taken off?—A. That is so.

Q. The inventory then this year would be the lower of cost or market less one-half per cent per pound less $45,414.77?—A. That is so.

By the Chairman:

Q. Mr. Shepherd, as you reduce your inventory you naturally reduce the net income of the company, do you not?—A. Yes sir, but it does not matter if the same basis is maintained throughout a period of time, as far as the earnings are concerned.

Q. How do they correct that at the end of each year as to the previous year, having for instance deducted $160,000 odd say in 1933, how do they reconcile that in their statement for 1934?—A. Well, that reserve goes back again and it is shown on the books until this year again at the end of the next period.

Q. But in the meantime does it not show the earnings reduced by that amount?—A. Oh yes, that is so.

Q. Well, is that— —A. That is a conservative practice.

By Mr. Young:

Q. If prices were declining would that not be the proper thing to do?—A. Yes. It just defers the profit to the next year.

By the Chairman:

Q. When they do it the next year what happens?—A. That defers it again.

Q. There must come a time though when they must ultimately be disclosed unless there is an actual loss to take up that?—A. Exactly.

By Mr. Factor:

Q. In other words, if there is nothing on which to base that and they take off there $200,000 what is to prevent them taking $400,000 off?—A. Well, I suppose the facts did not warrant such a large amount as $400,000; that is the only explanation.

Q. I mean, there is an element of risk?—A. There is an element of risk, yes.

By Mr. Young:

Q. What is the proper basis then for determining that?—A. I do not know that there is any basis. It is a prudent practice to have some reserve. The general basis is lower of cost or market.

Q. If you were the auditor, would you advise a reduction by that amount under the circumstances that existed in that particular year?—A. In view of the hazardous nature of the business, yes I would think it was the proper thing to do.

By the Chairman:

Q. But should that not be disclosed in the balance sheet?—A. Well, it is not the practice to do that.

By Mr. Senn:

Q. It cannot be done indefinitely, Mr. Shepherd.—A. No, it will come in the next year.

By Mr. Sommerville:

Q. I was just looking to see what it was in Swift's. I see Swift's statement is based on lower of cost or market.

The WITNESS: Yes.

Mr. SOMMERVILLE: They do not make any other deduction.

By Mr. Kennedy (Winnipeg):

Q. Mr. Shepherd, referring to exhibit A which is the consolidated balance sheet of Canada Packers for the year ending March 29, 1934—I just wanted to clear up a point for my own satisfaction,—you find these items in the list of liabilities, surplus on appraisals $5,000,000, reserve for depreciation, $6,000,000 odd, carried along to the total liability column, $12,000,000 odd, which leaves the net result on the bottom as a surplus of $4,654,581.65. As a matter of fact, assuming all the other figures are correct, would not the real surplus be the same, $4,654,581.65 plus that $12,549,127.24?—A. Oh no, because taking the depreciation reserves, that is a reserve for the purpose of replacing wasting assets.

Q. Yes; but has not depreciation been taken into consideration on the assets already?—A. No.

Q. Not taken into consideration at all?—A. These reserves might be deducted from the assets and the assets show—no, it is just a matter of presentation.

Q. Then, a correct reflection of the assets would be $18,000,000 odd less the reserve for depreciation, $6,000,000 odd?—A. Less both of them; but of course, you would have to show all these. Of course, it is immaterial whether the assets are on the liability side or deducted on the asset side.

Mr. SENN: As a matter of fact, the cost of repair does not go on the depreciation account?

The WITNESS: No, that is a direct charge on operation.

Mr. SOMMERVILLE: It is not in here at all, because the repairs are something entirely separate.

By Mr. Kennedy (Winnipeg):

Q. Let me apply this test: Suppose you increased that item of reserve for depreciation by the amount of the surplus, you would make all your surplus disappear?—A. Then you would not be able to pay any dividends because you would not have any free surplus. You would have to show a deficit.

Q. In so far as a sheet like this is concerned, by increasing your reserves for depreciation up to the amount of this apparent surplus, your surplus would disappear?—A. I do not see how you could. These credits—

Q. Reserve for depreciation? I assume either you can further increase it or decrease it?—A. But there is a basis there. It does bear some relation to the facts. The purpose of a reserve is to replace the—

Q. I understand.—A.—fixed assets at the end of the period.

Q. You say there must be some basis. Have you examined into what the basis is that they have set up the reserve for depreciation?—A. Yes, we have examined into the basis.

Q. It is a conservative basis?

Mr. SOMMERVILLE: He says it is a liberal one.

The WITNESS: I have already dealt with that.

Mr. SOMMERVILLE: He said it is so liberal it will wipe out everything in three to four years.

By Mr. Senn:

Q. If I am not getting away from your brief, I should like to ask you one question. A short time ago you stated the amount of net income from year to year and its percentage to the total sales?—A. Yes.

Q. Would it be possible to give us that net income per pound of sale?—A. I think it would be possible, yes.

Q. There is an impression abroad that a very large proportion per pound is made by the packer. I think it would be in the interest of the committee if you could reduce that to the amount per pound of sale?—A. I think those figures are in the published reports of the company. We can get it, but it will take a little time to get it.

Mr. SOMMERVILLE: Proceed.

The WITNESS: *Depreciation.*—The following are the prevailing rates used by the company in computing depreciation on fixed assets:

Buildings..	$2\frac{1}{2}$, 5 and 10%
Machinery..	10
Delivery equipment..	25
Office furniture..	10
Trucks and autos..	25
Creamery cans..	10

The values on which depreciation is based are not uniform, some being cost and others appraisal values with subsequent additions at cost.

Repairs and Renewals.—While the annual charges for repairs and renewals appear to be high we are informed that these expenditures are necessitated by the nature of the business.

Our examination of the accounts of the Toronto plant relating to repair for the two years ended March 29, 1934, indicated that of a total expenditure of $341,789 during that period approximately $54,164.84 is in respect of charges which might be regarded as being in the nature of renewals and betterments.

Mr. SOMMERVILLE: Fifteen per cent.

The WITNESS: Yes. It is just a matter of opinion as to whether certain things are renewals or not.

Executive Salaries and Bonuses.—The annual salaries and bonuses of the major executive officers for the year ended March 29, 1934, were $73,000.

Mr. KENNEDY (*Peace River*): How many?

The WITNESS: Five major executive officers—$73,000.

Mr. SOMMERVILLE: Including salaries and bonuses.

Mr. KENNEDY (*Peace River*): I think we had better have those.

The CHAIRMAN: Just a moment. Would you leave that until Mr. McLean or whoever represents the company is a witness and can have an opportunity to express his wishes in the matter?

Mr. FACTOR: Mr. Chairman, we have adopted the policy in connection with the tobacco inquiry. It does not make any difference to me whether you disclose it or not, but why mete out different treatment to these people?

The CHAIRMAN: Suppose we do as we did with the tobacco people. They were on the stand. Mr. Miller was a witness and the president of the company. A representative of the company was on the stand. When a representative of this company is on the stand it will then be for the committee to say whether they want to hear this evidence or not.

Mr. KENNEDY (*Peace River*): Give us the lump sum.

The WITNESS: $73,000.

Invested Capital.—In exhibit " C " we submit a statement showing the relation which the net income bears to the average invested capital during the period under review, based on the annual balance sheets and profit and loss accounts as certified to by the company's auditors for the period from August 15, 1927, to March 30, 1933. For the year subsequent to March 20, 1933, we have adopted the company's tentative balance sheet as at March 29, 1934, and profit and loss account for the year ended March 29, 1934, both of which are subject to the completion of the auditor for the year ended on that date.

On the basis of the company's annual accounts the percentage of net income to the average invested capital is as follows:—

NET INCOME

Fiscal year ended	Average Invested Capital	Amount	Percentage to invested Capital
	$ cts.	$ cts.	%
March 29, 1934	11,928,282 79	1,451,179 76	12·17
March 30, 1933	11,637,494 49	607,671 96	5·22
March 31, 1932	11,634,800 77	384,302 51	3·30
March 26, 1931	11,578,447 09	838,111 76	7·24
March 27, 1930	11,056,261 45	1,552,071 40	14·04
March 27, 1929	9,918,379 84	1,503,297 58	15·16
Period from August 15, 1927 to March 28, 1928	8,605,676 12	1,028,697 64	*19·12
Total	76,359,342 55	7,365,332 61	
Average for Period	10,908,477 51	1,111,748 32	*10·20

* Adjusted to annual return basis.

In the following tabulation we show the adjusted net income of the company after the elimination of certain charges and credits which we consider from operations extraneous to the packing house and its related businesses and the percentage of the adjusted net income to the average invested capital of the company.

Mr. SOMMERVILLE: That will be copied in the record.

The WITNESS: Yes.

Fiscal year ended	Average Invested Capital	Adjusted Net Income	
		Amount	Percentage to invested Capital
	$ cts.	$ cts.	%
March 29, 1934	11,928,282 79	1,399,064 44	11·73
March 30, 1933	11,637,494 49	634,875 94	5·46
March 31, 1932	11,634,800 77	449,637 00	3·86
March 26, 1931	11,578,447 09	863,844 44	7·46
March 27, 1930	11,056,261 45	1,771,698 85	16·02
March 27, 1929	9,918,379 84	1,433,434 17	14·45
Period from August 15, 1927 to March 28, 1928	8,605,676 12	1,103,766 60	*20 52
Total	76,359,342 55	7,656,321 44	
Average for period	10,908,477 51	1,155,671 16	*10·59

* Adjusted to annual return basis.

By Mr. Sommerville:

Q. There is not much difference?—A. ·39 per cent, a little higher.

Q. The percentage as adjusted for net income is 10·59?—A. Yes.

Q. Instead of 10·20?—A. Yes. In connection with the company's major holdings in the capital stock of certain other companies which are treated as investments the following summary shows the number of shares held and values at which they are carried on the books of the company as at March 29, 1934, the original cost and the amounts written off the original cost:—

Name of Company	Number of Shares	Book Value March 29, 1934	Original Cost	Amounts Written off.
	Common	$ cts.	$ cts.	$ cts.
Dominion Stores, Limited	7,900	102,489 05	198,214 99	95,725 94
Stop and Shop, Limited	6,822½	3 00	378,759 45	378,756 45
Folkard Canning Co., Ltd	439	1 00	43,900 00	43,899 00
	Capital			
Union Stockyards of Toronto, Limited	4,686	468,600 00	468,600 00	....

Q. The amounts that have been written off for the three companies to which you refer total how much?—A. $518,380.

Q. That would be written off out of earnings?—A. Charged against profits, yes.

The CHAIRMAN: That would be before the net profits that you have just recited?

The WITNESS: Yes.

Mr. FACTOR: What is the total amount of investment in the other companies? How much is the total of the investments?

Mr. SOMMERVILLE: The original cost?

Mr. FACTOR: Yes.

The WITNESS: $1,089,474.44.

Mr. SOMMERVILLE: There is $508,380 written off, about 50 per cent?

The WITNESS: $518,000.

Mr. SOMMERVILLE: About 50 per cent?

The WITNESS: Yes, approximately.

Mr. FACTOR: Where is it shown in the consolidated balance sheet?

The WITNESSS The investment?

Mr. FACTOR: Yes.

The WITNESS: Sundry investments and mortgages.

Mr. FACTOR: Is that the amount?

The WITNESS: Yes. It is not the exact amount because there is other material in there, mortgages and so on.

By Mr. Sommerville:

Q. In other words, the various items that they have written down cost $1,000,000 odd?—A. Apparently.

Q. The entire Stop and Shop stock has been written off?—A. Yes.

Q. The entire amount for the Stop and Shop has been written off?—A. Yes.

Q. And 50 per cent of the amount paid for the Dominion Store shares have been written off?—A. Yes.

Q. And the entire Folkard Canning Co. Ltd. shares have been written off?—A. Yes.

By Mr. Factor:

Q. What is the principle adopted in writing these values off in relation to the market value?—A. The Dominion Stores were written down to market some time ago and have since gone up. The others, I take it, are written off because the company assumes they have no value, or they had no value at the time they were written off.

Q. Have these stocks written off no value now? For instance, has Stop and Shop no value?—A. I believe Stop and Shop have.

Mr. SENN: Are they paying dividends at all, can you say?

The WITNESS: Dominion Stores are but Stop and Shop is not.

By Mr. Sommerville:

Q. Union Stock Yards are not written off?—A. No, full value.

By the Chairman:

Q. What about these two chain store organizations—A. They would sell to them, but I do not know to what extent. They are two of their largest customers.

Q. They are the medium through which they distributed their goods to the public?—A. Yes.

By Mr. Sommerville:

Q. All right, go ahead.—A. In addition to the above investments carried in the balance sheet it appears that the company owns 16,900 shares of £1 each of John Loudon and Company, Limited, a firm of meat importers of London, England, in respect of which we were unable to find any record of either the purchase of these shares or the income, if any, received therefrom.

Q. You did not find out when they were acquired?—A. No.

Q. These shares amount to about $80.000 in the John Loudon Company of England?—A. That is the par value.

Q. And they do not appear on the books as having been purchased?—A. No. "At March 29, 1934, profits amounting to $191,116.22 which represent the net realized profits and losses on the purchase and sale of investments, had not been credited to surplus and remained in the accounts as a deduction from the book value of the investments.

Q. What does that mean?—A. That means that there is a reserve of $191,000 to be applied against the book value, and is applied in this balance sheet, which reserve was built up through certain trade profits less losses.

Q. Where is it applied in the consolidated balance sheet?—A. Sundry investments; and part of it is applied on government and municipal bonds.

Q. In operating—buying and selling certain investments they make a profit?—A. Yes.

Q. And that profit does not go into the surplus account?—A. No.

Q. But they apply that profit in reducing the book value of the investments they hold?—A. Yes.

Q. And in that way gradually wiping out the book value of the investments?—A. Well, I suppose ultimately if these profits amounted to the total of the investments they would.

Mr. Factor: Have they written them off?

By the Chairman:

Q. Let me put it this way: sundry investments and mortgages at book value $579,000. If this item of $191,000 had not been written off then it would show sundry investments and mortgages at book value as $579,000 plus $191,000?—A. Perhaps not plus $191,000 but plus some part of $191,000, because the reserve is also applied against government and municipal bonds to some extent.

Q. Exactly?—A. I do not know the exact distribution of the reserve.

Q. But what portion of it —A. $10,000 is against the government bonds.

Q. In other words, it would show the value of these investments as $579,000 plus $181,000?—A. Yes.

Mr. Factor: Where does the amount disappear to? It does not show in the surplus $4,000,000.

The Witness: No. It is used as the reserve to reduce its assets.

By Mr. Sommerville:

Q. Some day when the assets are sold the assets will realize a larger amount than is shown in the balance sheet. That is the only way in which it would be reflected?—A. Yes.

Q. We had a similar thing in connection with the tobacco dividends; we had the dividend from Tuckets of which $250,000—

Mr. Factor: In the case of tobacco it was plainly stated with regard to non-disbursed surplus, and here it is carried.

The Witness: In order that there should not be any misunderstanding there is $125,000 of profit made on these trades which has gone into profit and loss account in addition to this $190,000.

By Mr. Kennedy (Peace River):

Q. There is one question I would like to ask. With regard to the year 1931 I believe the net income to percentage to invested capital was 3·30 per cent?—A. 1931? No, that is 1932.

Q. 7·24?—A. Yes, 1931.

The Chairman: 14·30 is for 1934.

Mr. Factor: There is a mistake here.

By Mr. Kennedy (Peace River):

Q. 1930 is 7·24?—A. They have dropped a line there.

Q. What should it be?—A. 1929, 15·16; 1930, 14·05; 1931, 7·24.

Q. Take that 7·24. Here is a statement in the fourth annual report balance sheet of the 26th March, 1931. The most striking feature of the balance sheet is the reduction in bank loans within the year. March 27, 1930, bank loans are stated at $5,902,921.97. In addition the company was operating by special loans $1,750,000, or a total of $7,652,921.97. In March 26, 1931, total bank loans $1,616,394.48, a reduction within the year of $5,536,527.49. Is that

included in the 7·24?—A. It has nothing to do with it; one is operations and the other is reduction of assets.

Q. The company starts off with loans of $7,000,000 and pays off within the year in operations $5,000,000?—A. Well, it might have had an inventory of $10,000,000 to commence with and cut it down to $5,000,000. I do not know whether that is so.

Q. If it was made through the operations of the company during the year without a sacrifice?—A. It could not be because the operations only resulted in a profit of $838,000 and the depreciation $750,000 would be one million and a half. You say the bank loans would reduce.

Q. Five and a half million?—A. The rest must have come from a reduction in the current assets or increase in the current liabilities.

Q. How did they make the money to pay the bank loan? You cannot pay bank loans without money?—A. In that year they reduced their inventory $4,100,000.

Q. That is, the stock was falling fast and they bought it cheaper?—A. No. They sold $4,000,000 worth of inventory.

Q. Less goods in storage?—A. There would be a difference.

Q. Well, I would like the information?—A. That is the explanation. They have realized on their inventory in the form of cash—inventory was turned into cash, and the cash was applied in reducing the bank loan.

By Mr. Sommerville:

Q. Let us have the inventories at the beginning of the fiscal period 1931 and the inventories at the end of the fiscal period?—A. The inventory at the commencement is $10,188,568.34.

Mr. Factor: Commencing 1930 or 1931?

The Witness: 1931.

By Mr. Sommerville:

Q. As at what date?—A. The end of 1930, March 27th, $10,188,568.34; and the inventory the next year is $5,912,970.05.

By Mr. Kennedy (Peace River):

Q. Yes, but there was a big drop in prices in the meantime. I do not think that shows it?—A. Of course, I cannot pin it down to any specific item. You would have to take a balance sheet at the beginning and end of the periods and take the net current assets—the whole of the current assets less liabilities and determine the balances, and that must be the amount.

The Chairman: The total current assets at the end of March, 1930, were $17,000,000 odd and for 1931, $11,700,000. There is a reduction.

Mr. Kennedy (*Peace River*): I can see that all right. The price of the finished product dropped a lot more slowly than the price of cattle and hogs. That is the reason, in my judgment, why the bank loans were paid off; and, of course, the inventories show the drop because of the lower price at which they bought material; it was not by sacrificing the amount in hand.

Mr. Sommerville: Your thought was that the inventories on the 26th March, 1931, represented lower values than some inventories the previous year.

Mr. Kennedy (*Peace River*): You do not pay off bank loans by that method; you pay them off making a certain profit on the year's operation.

The Chairman: Of course, there is an important point there. What Mr. Kennedy is questioning is the basis of valuing the inventory at the end of 1930 and the following year 1931.

Witness: Yes, sir. I realize that; but, of course, the payment of bank loans has nothing to do with the current operations; it is a question of getting cash from some course to repay them.

Mr. KENNEDY (*Peace River*): I cannot go to the bank to pay off loans and say, "I am sorry, my inventories are down"; I have got to produce the cash.

The CHAIRMAN: I think you had better ask the company's representatives when they come on.

By Mr. Factor.

Q. I feel as Mr. Kennedy does. We are not technical experts. I would like some explanation of it. I do not think I can agree with Mr. Kennedy, but I cannot understand the explanation?—A. The simplest way to do it would be to let us prepare a tabulation showing the difference between these assets for the two years.

Q. It all depends upon what basis the inventory was built at, say, the end of 1931. What would the inventory consist of in a business of that kind, speaking generally?—A. Packing products.

Q. The processed products?—A. Not necessarily; principally processed.

By Mr. Young:

Q. It would not include the live stock paid for and not yet killed?—A. Yes, but there would not be a very large amount of that.

By Mr. Factor.

Q. That is principally on processed products. Mr. Kennedy's argument does not hold good, because it does not make any difference what they paid for their hogs and cattle if the inventory is carried on the processed product. What principle is adopted in valuating the processed product in the inventory?—A. Lower of cost of market.

Q. I would like the auditor to investigate this point of the payment of the loan of over $5,000,000. Was it actually paid by writing off assets, or where does the money come from?—A. Well, I don't know.

The CHAIRMAN: If you take your sales for the two years, it would indicate whether or not there was an extraordinarily large sale that year.

Mr. FACTOR: I would kind of like to know if the profits of that year were for that amount.

Mr. KENNEDY (*Peace River*): Would they be used to pay for bank loans?

By Mr. Sommerville:

Q. Perhaps the auditor will this evening prepare his statement on that for us?—A. We can get a statement. I may say that we have the whole picture here, but it is for the whole period; it would answer the question exactly, but we have got it taking the whole net income, whereas if we had that year by year we could answer your question in any specific year.

By the Chairman:

Q. Well, take the question asked by Mr. Kennedy (*Peace River*) and Mr. Factor, and work out a table to show the answer?—A. What particular year is it you want?

Mr. KENNEDY (*Peace River*): 1931.

The CHAIRMAN: It is the year between March 27, 1930, and March 27, 1931, that is wanted.

The WITNESS: Yes.

The CHAIRMAN: All right, Mr. Shepherd, proceed with your statement.

The WITNESS: In addition to the foregoing the face value, $1,672,600, of of the bonds of The Harris Abattoir Company Limited, William Davies Company, Inc., are carried in the books as $1,573,001.30, the difference, 99,598.70, representing a profit on purchases by Canada Packers Limited of bonds of its subsidiaries.

By Mr. Sommerville:

Q. Where would that be shown in the balance sheet?—A. They are shown by the net figures.

Q. That is in the Consolidated Balance Sheet?—A. It is in that $1,486,655.

Q. All the stock of the Davies Company and the Harris Abattoir Company are shown at cost less reserve?—A. Yes.

Q. That is, $1,486,655.49?—A. Yes.

Q. These have a face value of $1,672,600?—A. Yes.

Q. And these are the bonds of their own companies?—A. Yes, which they acquired.

Q. Which they acquired for $1,573,001.30—in other words, they made a profit?—A. They are carried on the books at $1,573,000 and the $99,000 is deducted from that figure.

Q. And the $99,000 profit—?—A. No, $99,000 deducted from the $1,573,000.

Q. No, the $1,573,000 deducted from $1,672,000?—A. The $99,598 is the difference between the par value and the book value, and this book value is still further reduced by $86,345.81.

Q. So that these bonds are carried in the consolidated balance sheet at a sum which is less than the par value by the amount of $186,000?—A. Approximately.

Q. And these are the bonds of their own companies?—A. Yes.

Q. About the par value of which there can be no doubt?—A. The par value is set up.

By the Chairman:

Q. Now, tell me—leaving for the moment the $99,000 out of the picture, but taking the difference between the book value $1,573,000 and the disclosed value, $1,486,000, which is a difference of $86,000—is that charged against earnings?—A. It is the application of a reserve that is set up on the books. It arises from bond discount reserve from some years back due to purchasing their own bonds.

Q. No, no; but, wait—that would apply to your first shrinkage of $1,573,000 from $1,672,000?—A. It is an old reserve carried forward from the prior company's accounts.

By Mr. Sommerville:

Q. The old reserve?—A. The 86,000.

Q. The old reserve that they acquired when they bought the assets was some $86,000, and this amount is carried as against this plant?—A. And is applied.

Q. And is applied on these bonds?—A. Yes.

Q. What is the effect of that, carrying these bonds and showing them in this way at $185,000 less than their value?—A. Well, the effect is that if the bonds were hold this $185,000 would have to be credited to surplus or some other reserve account.

Q. It reduces your surplus by that amount?—A. Yes.

By the Chairman:

Q. May I ask, has that reserve which was brought forward in the books been wiped out?—A. No, sir. It is still carried and applied against that investment.

By Mr. Sommerville:

Q. It does not appear in the reserve?—A. It does not appear in the balance sheet, it is deducted from the assets.

By Mr. Factor:

Q. How long can you carry reserves like that? That is the second illustration of carrying reserves in relation to stock investment. How long can a

company carry reserves of that kind?—A. I do not know that there is any limit of time.

By the Chairman:

Q. Of course, as long as it is shown on the books and carried along year after year there is no criticism of it; but if it is written off, then, of course, it impinges upon earnings?—A. No, it would increase your earnings, because reserve is credit.

Q. Yes, but if your purchase value were $1,573,00, and then you apply that reserve to it, and reduce your assets right down to this $1,486,000, it would affect your earnings for that year?—A. What it would affect is, if you sell these bonds, you would have on the liability side $1,672,000, and you would only have $1,486,000 to do it with; and to balance it up, you would have to have a credit to surplus.

By Mr. Sommerville:

Q. A profit would then be disclosed in that particular form?—A. Yes.

By the Chairman:

Q. But as I understand it now, it is carried at $1,573,000 as an asset, but on your liability side is a reserve set up of $86,000?—A. It is applied in this balance sheet.

Q. But it remains in the book in that form?—A. Yes.

Q. Well, there is no criticism of that.

By Mr. Sommerville:

Q. Is that what you call a secret reserve?

The CHAIRMAN: It is undisclosed as far as the balance sheet is concerned.

The WITNESS: It is not disclosed.

The CHAIRMAN: It really ought to be disclosed; it ought to be $1,573,000 less the reserve set up.

The WITNESS: It is common practice.

By Mr. Sommerville:

Q. Yes, Mr. Shepherd?—A. General reserves: In April, 1928, the Company wrote up the valuation of the inventories from lower of cost of market, to cost and transferred the difference $586,268.95 to "General Reserve." From time to time additions to this reserve were made out of profits and by transfers of the surpluses in sundry minor reserves. At the end of each fiscal year from 1929 to 1932 the Company spread this reserve on the Balance Sheet as a reduction in the Inventories and Accounts Receivable and an addition to Accounts Payable.

Q. Wait a minute: up to 1932 this reserve which was in excess of half a million dollars' worth was not shown in the balance sheet as a general reserve, but apparently was deducted from inventories and from accounts receivable?—A. Yes.

Q. On the one hand applied as an addition to accounts payable; on the other—?—A. Yes.

Q. In that way it appeared on the books, but did not appear in the balance sheet?—A. Not directly.

By the Chairman:

Q. Well, where is it now, what has become of it?—A. Most of it, I think, has been used up in bringing the inventory down to lower of cost or market.

By Mr. Sommerville:

Q. At any rate, up to March 30, 1933, that was the position with respect to that general reserve. Now, what happened then, Mr. Shepherd?—A. At March 30, 1933, the Company reverted to the policy of valuing the inventories at lower of cost or market, and an amount of $615,000 was transferred to Profit and Loss Account from the General Reserve, which, before the transfer, amounted to $840,457.71. At March 29, 1934, the balance of the General Reserve, $225,457.71, was transferred to Profit and Loss Account. This was used to reduce the inventory formerly being carried at cost.

By Mr. Kennedy (Peace River):

Q. How much was it, $600,000—what?—A. That is, $615,000.

By the Chairman:

Q. Will you make clear to myself and my colleagues just what effect that inventory had on the profit and loss account?—A. Let me take the balance sheet first, it would not have any effect on the balance sheet.

By Mr. Sommerville:

Q. Because it was already there?—A. Yes. But here they credited $615,000 to profit and loss account, which would reduce the cost value at which the inventory was included to lower of cost or market.

By the Chairman:

Q. What would be the effect upon the profit and loss account?—A. To lower of cost or market, if this were done consistently, it would not have any effect, but it would affect the figures in the profits for that year if the commencing inventory were at cost.

Q. That is the point I am getting at. For that particular year this profit and loss account would show a diminution of $615,000, and a corresponding reduction of inventory in the assets?—A. The $615,000 was a credit for the very purpose of offsetting that.

Q. A credit, where?—A. In the profit and loss account, to offset that diminution.

Q. It had already been shown as an earning?—A. Yes.

Q. It was carried forward in the profit and loss account?—A. Carried forward in reserve, being taken out of profit and loss account under prior purposes and credited to reserve—now it is brought back and put in a profit and loss account to offset these losses in the inventory value.

By Mr. Sommerville:

Q. Inventory values dropped by the amount of $615,000 and this amount was brought back into the profit and loss account to offset that drop?—A. That is so.

Q. Is that the full effect of it?

By Mr. Factor:

Q. May I ask something which may appear a foolish statement—I hope not—is there any way that you can prepare a statement for us showing the gross receipts by this company since 1929, and showing the gross profits?—A. It is right there.

Q. Right where?—A. I think you got that, under net income.

Mr. Factor: I am somewhat, shall I say, perplexed. I cannot figure these things out. Just as a plain man, is there any way in which you can prepare a statement showing what profits this company has made since 1929, including in that all reserves which you as an auditor consider are reserves which should not have been taken out of profit and loss account, if I may put it that way?

For example, in another industry which we were investigating we got a picture of the financial situation by a plain statement of what the profits were. Is there any way you can do that?

The CHAIRMAN: What you mean, Mr. Factor—and I think it is very desirable that we should have it—is not so much what the net earnings are or what the net income was after depreciation, but rather what the gross income was and then the disposition of the gross income?

Mr. FACTOR: Exactly.

The CHAIRMAN: Whether reserves or dividends or whatever use may have been made of it.

Mr. FACTOR: Yes. If the sales for the year were $100,000,000, just figure out the gross returns on those sales and figure out how you arrive at the net returns.

The WITNESS: It is done here, only these start from the net income and show exactly what happened to it.

By Mr. Sommerville:

Q. You start from the net income. Take this statement you have prepared showing the disposition of the net income from the various packing companies. Will that help clear up the situation?—A. That shows exactly what the net income was and what happened to it.

Mr. FACTOR: That is not what I mean. I don't want the net income. I want some statement to show how you have arrived at the net income.

The CHAIRMAN: You want the disposition of the gross income. That is really what you want?

Mr. FACTOR: Yes.

The WITNESS: Well, I would say in the case of Canada Packers you cannot get the gross income because the accounts are departmentalized.

By Mr. Factor:

Q. Is there no way of accumulating that?—A. Yes, you could accumulate them, but they have got eight plants, some sixty departments, and there are thirteen periods in a year, thirteen fiscal periods.

The CHAIRMAN: May I make a suggestion to Mr. Shepherd and I think probably it will meet what is in Mr. Factor's mind and also in my own. If Mr. Shepherd will take the analysis he has made here of these different sums that you notice referred to as rather out of the ordinary, and formulate them into a statement indicating where they are arrived from, what disposition was made of them and what effect they have upon the gross earnings of the company, I think it would assist us.

The WITNESS: All the reserves mentioned?

The CHAIRMAN: Those items you have mentioned here.

By Mr. Factor:

Q. There is a statement Mr. Shepherd made that I cannot understand. You say you cannot prepare a statement to show the gross income of Canada Packers for one year, say the year 1933, showing what the gross income is?—A. Just what do you mean, sales?

Q. Well, I mean sales?—A. You have got the sales.

Q. What would the gross income be, as an auditor—A. I would say sales less cost of sales.

Q. Exactly. That is exactly what I mean. Can you prepare a statement showing sales less cost of sales?—A. The books of Canada Packers are not designed to show that. They show departmental figures.

By Mr. Sommerville:

Q. Is this not the situation: All the various plants are operated independently?—A. Yes.

Q. And all the various departments in these plants are operated independently, and each department sends in its net position, not the gross less so much? A. Exactly.

Q. And what comes into the head office is the net position, and it was the net position that you had to work on?—A. Exactly.

Mr. FACTOR: It certainly does not present a picture to me at all, talking very plainly. I could see a picture, if there were $100,000,000 of products sold, and it cost $85,000,000 or $90,000,000 to produce those products, that there is a gross return of $10,000,000; then some statement would show how that gross return was disposed of.

The WITNESS: Well, in order to get that you would have to practically rewrite the books. That is what we tried to get.

By Mr. Sommerville:

Q. That was obtained in Wilsils and Gainers where you had single entry? —A. With smaller companies you can get it.

Q. But when one office receives from many departments and many plants just the net position, then you would have to go back into those various plants to get that?—A. Yes.

By Mr. Factor:

Q. Then you have had no opportunity, as an auditor, of examining the net position of these individual departments; you just took the net positions as the head office received them and you have prepared a statement of the net position, and we have to go by that?—A. We say that, yes. We have tested.

By Mr. Sommerville:

Q. You did examine Toronto and Hull, two plants?—A. Yes.

Q. But not the others?

By Mr. Senn:

Q. Do I understand that a certain amount of the profits made from each of these plants are set up in a reserve for those individual plants?—A. Oh, no.

Q. I can't see why you can't get the gross income, that is, the gross profits? A. Well, for the reason that I mentioned, that you have got to consolidate this enormous mass of figures on an entirely different basis from the basis in which they are presented in the books.

By Mr. Kennedy (Winnipeg):

Q. Could you get it by going to the individual plants?—A. You could get it by tabulating the figures.

Q. From the individual plants?—A. From the individual plants.

By Mr. Sommerville:

Q. It would mean tabulating the figures for thirteen accounting periods in each year?—A. Yes.

Q. And the period is every four weeks?—A. Yes.

Q. The net position every four weeks is sent in?—A. Yes.

Q. You would have to go into each of the plants and take the statements of assets and liabilities, or operations and costs for each of these periods?— A. Exactly.

Q. Going back of the net figures?—A. Yes. To give you an example, it took four men four weeks to tabulate the figures for one year in Toronto. We tried to get that.

By Mr. Factor:

Q. After having received the net position of the individual plants?—A. No, this is the Toronto plant.

Mr. SOMMERVILLE: The one plant.

By Mr. Factor:

Q. You examined the Toronto plant?—A. To tabulate these figures at the Toronto plant.

By Mr. Sommerville:

Q. It took four men four weeks to tabulate the figures in the one plant? —A. It virtually means rewriting the books.

Q. The reason for that being that in packing house practice, departments are conducted individually?—A. Yes, in the larger packing houses.

Q. In the larger packing house industry; I think the same thing applies in Swifts, does it not?—A. Yes.

Q. And the same thing applies in the large packing houses on the other side?—A. In the States, all of them.

Q. Each of these departments being conducted as separate departments and only the net results go into the head office?—A. Yes.

Mr. SENN: Does the head office not know the position they are in, in that respect?

By Mr. Sommerville:

Q. The head office has no consolidated statement of the operations of the various branches?—A. No.

Q. No, none of them have. Each branch has its own statement prepared every four weeks.

Mr. FACTOR: A very curious system.

Mr. SOMMERVILLE: It is.

Mr. KENNEDY (*Winnipeg*): Would the auditor's statement of the individual plants show the position?

Mr. SOMMERVILLE: There are none, except inside auditors.

Mr. KENNEDY (*Winnipeg*): Whether they are inside auditors or not, would it not show the position?

The WITNESS: They were checking the figures as produced.

Mr. HEAPS: It is not really an audit, is it?

The WITNESS: Oh, yes.

Mr. HEAPS: Internal audit.

The WITNESS: Well, they may be.

Mr. SOMMERVILLE: Just an internal audit.

Mr. HEAPS: By their own employees.

Mr. SOMMERVILLE: The consolidated audit that is spoken of if a consolidated audit only of the statements that come in from the plants, accepting those plants' statements as a basis, and not going back of them.

Mr. FACTOR: I understand. But to put it rather plainly, if I wanted to know what happened when the Canada Packers, say in the year 1933, sold we will say $80,000,000 of goods, and wanted to know what happened, what they paid for them, what labour went in, what other items went into that, it is impossible to obtain it.

The WITNESS: To get the aggregate, yes, unless you spend an enormous amount of time to get it. They treat these departments on what almost might be called a basis of individual businesses. The man running the department is responsible, and he either makes a profit or a loss.

By Mr. Factor:

Q. You were the auditors for Burns & Company. Did you recommend that system of bookkeeping?—A. No, I can't say that I did. But it is the system which is in effect, as far as I know, in all the larger packing companies. It is a system designed because the operators get the information they want. The information is not being got for outsiders or for the shareholders. It is to assist the operators, and that is the way they want it.

Q. Under that system, even the head office has not a complete picture of the individual branches?—A. Well, perhaps somebody else could tell you more about that than I can.

By Mr. Sommerville:

Q. They have a picture of the results?—A. Yes.

Q. But perhaps, Mr. Shepherd, starting from the net returns, you have built up certain figures that may be helpful to us, and that is where I think my friend, Mr. Factor, and the members of the committee may get considerable help. Look at this disposition of the net income for the period from 1927 to 1934:

INVESTIGATION OF PACKING COMPANIES

DISPOSITION OF NET INCOME FOR THE PERIODS REVIEWED

—	Canada Packers, Limited, Aug. 15, 1927, to Mar. 29, 1934	Swift Canadian Co., Limited, for the five years ended Oct. 28, 1933	Wilsil Limited, for the five years ended Dec. 31, 1933	Gainers Limited, for the five years ended Sept. 30, 1933	F. Hunnisett, Jr., for the year ended Dec. 31, 1933

	6,555,272 35	4,661,740 44	211,000 00	183,872 00	....

First of all, you start with the net income for the period from August 15, 1927, to March 29, 1934, of $7,365,332.61?—A. Yes.

Q. Then you add to that the amount that has been credited to reserves, the net amount?—A. Yes.

Q. And that is $4,587,321.10?—A. Yes.

Q. Then you add to that extraneous profits, net, of $360,348.30?—A. Yes.

Q. That makes a total net income for that period of $12,313,002.01?—A. No. If you will read a little further, you will see it is total net income, credits to reserves and extraneous profits.

Q. That makes a total of $12,313,002.01. Then to that you add increase in capital and funded debt—A. Not in this.

Q. Not in this case?—A. No.

Q. You add decrease in working and sundry assets during the period of $694,135.41?—A. Yes.

Q. Why?—A. Because that is part of the amount that has to be accounted for.

Q. That leaves you total net income, reserves, extraneous profits, decrease in working and sundry assets totalling $13,007,137.42?—A. Yes.

By Mr. Factor:

Q. Which means what?—A. That is the total amount that we are going to account for, and here is how we account for it. This is what happened to it.

By Mr. Sommerville:

Q. Is this the total amount that came from earnings of the company?—A. Earnings or credit to reserve, principally. That is depreciation reserve that they are discussing. We are adding back that depreciation reserve to the net income. Now we are going to see what happens to it.

By Mr. Kennedy (Peace River):

Q. It is made in the business, though?—A. Oh, yes.

By Mr. Sommerville:

Q. What I mean is that $13,000,000 is the total of the income plus the amount that has been taken out of income and credited to reserve?—A. Yes, which we are now putting back.

Q. You are putting it back in?—A. Yes.

Q. So that you show over the period a total income, including these reserves, of $13,007,137.42?—A. Yes.

Mr. Kennedy (*Winnipeg*): Total net income?

By Mr. Sommerville:

Q. That is total net?—A. Yes.

Q. Now you are proceeding to show what was done with that?—A. That is it.

By Mr. Factor:

Q. In these reserves and the other items, did you add those amounts for interest held back on the investments such as bonds and the stock investment?—A. Those had been used during the period, with the exception of a small amount left in the general reserve.

Q. You mean they have been disposed of somehow?—A. Yes.

By Mr. Sommerville:

Q. And they are not written back in it?—A. Well, they will be in the profits, the net income.

Q. In the net income?—A. They will show in the net income.

Q. This amount of $99,000 that has been referred to is the difference between the face value of the bonds and the price they bought the bonds at is not in this?—A. No.

Q. Nor the $86,000 further deduction is not in this, is it?—A. It is in the extraneous profits.

Q. The $99,000?—A. Yes.

Q. And the $86,000?—A. Yes, both of them.

Q. So they are both in there?—A. Yes.

Q. You have written in all those things except the item you refer to in general reserves, which you say has been used up and it reflects itself in profit?—A. Net profits.

Q. In the net profits. Then we may take it that the net position is shown as $13,007,137.42 in that period?—A. Yes.

Q. Now, what disposition has been made of this $13,000,000 odd?—A. There was retained in working capital, $6,020,997.89.

Q. They have $6,000,000 odd which they are using in the business as working capital?—A. Yes.

Q. Out of these profits?—A. That is an increase in fixed assets of $380,883.98; cash in hands of sinking fund trustees, $49.983.20. That gives you a total balance retained of $6.451.865.07, and leaves a balance to be accounted for of $6,555.272.35. That was disposed of by the payment of dividends of $2,896,316.50; the reduction of the funded debt of $3,075,700 and capital stock purchases of $583,255.85.

Q. The dividends of $2,896.000 odd is payment on the funded debt. That is bonds of—.—A. Harris Abattoir and William Davies.

By Mr. Factor:

Q. Have you any statements to show what the total bank loans were during that period?—A. They could be shown at the balance there.

By Mr. Kennedy (Peace River):

Q. Could you wipe out the funded debt with the reductions?—A. With the reductions in what?

Q. In advances?—A. If you paid off the funded debt, yes, you reduce it entirely. You would turn it into cash.

By Mr. Senn:

Q. Was that capital stock in the form of a stock bonus?

Mr. SOMMERVILLE: No.

The WITNESS: No.

Mr. SOMMERVILLE: The capital stock referred to is capital stock that they had purchased. They have used this money to purchase their own capital stock, redeem their own capital stock, their preferred shares, and thus reduce the liability on preferred shares outstanding. Now, this does not reflect itself in this memorandum that you have given us; that does not reflect the two and a half million dollars borrowed from the bank which was repaid to the bank.

The WITNESS: That is in the working capital. If the two and a half million dollars had not been repaid that would have been less.

Q. You would have had $8,000,000 working capital?—A. No, it would have been the other way. If you had shown the $8,500,000 you would have had to show the $2,500,000 in the disposition; but that was not a capital transaction, that was purely a bank loan, and is dealt with in the next figure.

Q. That is included you say?—A. In the working capital figure.

Q. In the working capital figure?—A. Yes.

By Mr. Factor:

Q. In the year 1931 Mr. Kennedy said, or I thought he said it had been repaid.—A. Mr. Sommerville is referring to the $2,500,000 of the original set-up.

Mr. SOMMERVILLE: I am referring to the $2,500,000 that was borrowed from the bank to buy other assets.

The WITNESS: Yes.

By Mr. Sommerville:

Q. And that was repaid in 1930 and 1931?—A. Yes.

Q. And that, you say, is reflected in the fact that there is $6,000,000 of working capital?—A. Yes.

Q. And if you take the $2,500,000— —A. If instead of taking the $2,500,000 from the bank they borrowed it on a bond issue then it would have been shown below as disposed of, but it did not.

By Mr. Factor:

Q. Well then, the other monies that were borrowed from the bank since the amalgamation, have you a statement of monies borrowed, and how much of it was paid, and how it was paid?—A. Well, the working capital is the difference between current assets and current liabilities which takes in the bank loans at the commencement and end of this period.

Q. Well then, is it your contention that all the bank loans were repaid by reducing assets and not paid out of earnings?—A. Oh no, I do not contend that.

By Mr. Senn:

Q. Those borrowings from the bank would be used as working capital?—A. Yes, and they are in that net figure.

By Mr. Young:

Q. Is this true, that at the beginning of this period you had reserves of $4,587,000?

Mr. SOMMERVILLE: No, they accumulated during that period.

Mr. YOUNG: No, at the end of the period they had more than that.

Mr. SOMMERVILLE: No.

Mr. YOUNG: That is the total accumulation?

Mr. SOMMERVILLE: The total during the period.

The WITNESS: Oh no, that is the accumulation during the period.

By Mr. Young:

Q. During that period?—A. Yes.

Q. And the net profits during that period were $7,300,000?—A. Yes.

By the Chairman:

Q. Well, you are disregarding I understand, the $5,000,000 approximately; that was added to the $1,800,000 in making the total $6,862,000 odd?—A. Yes.

Q. You are disregarding the $5,000,000 of depreciation that has been added during that period?—A. No, that is the original. That $5,000,000 is a surplus arising from appreciation.

Q. No no, excuse me, you do not get my point. In your balance sheet you have a reserve for depreciation $6,862,000 of which $1,800,000 was brought forward from the earlier operation?—A. Yes.

Q. But since 1927 $5,000,000 has been added to that?—A. $4,587,000.

Mr. FACTOR: That is exactly what I cannot understand, Mr. Chairman. These two items of reserve for depreciation and surplus on appraisals is a total of $12,549,000, which came out of the earnings of the company?

The WITNESS: You are referring to what?

By Mr. Factor:

Q. To the Consolidated balance sheet.—A. The appraisal surplus arose before this company was formed and was not provided by this company. All that was provided by this company was $4,500,000, and the $1,800,000 had arisen before this, so you take the $1,800,000 and add the $4,500,00 to it and you have got the depreciation reserve now.

Q. That is not the point I am trying to make. You show in this column the net income plus the other items of $13,000,000?—A. Yes.

Q. In your Consolidated balance sheet it shows a reserve for depreciation which must come out of the earnings of the company.—A. $4,500,000 of it did, and $1,800,000, you will recall, was taken over from the previous company.

Q. $4,500,000 came out of the earnings of the company?—A. Yes.

Q. Well, is that $4,500,000 included in this $13,000,000?—A. Oh yes.

Q. It is included?—A. Yes, it is the second item there, Credits to Reserve.

Q. You deduct the original $1,800,000 from the $6,000,000?—A. Yes. This $4,500,000 is the actual amount provided during this period.

Q. But the surplus on appraisals, what item disposed of that?—A. That has nothing to do with this company; that was just taken over and could be deducted from the value of the assets that were taken over originally.

Q. It has nothing to do with the profit and loss account?—A. Oh no, not at all.

By Mr. Sommerville:

Q. Now, Mr. Shepherd, is the surplus of $4,654,581 shown on the Consolidated balance sheet reflected anywhere in this schedule showing disposition of net income?

Mr. FACTOR: Credited to reserve.

Mr. SOMMERVILLE: No.

The WITNESS: Well, it is not shown directly there, but it represents the net income less the dividends and a few adjustments.

By the Chairman:

Q. Would you put down certain items and then see if we can accomplish something. Again I come back to that reserve for depreciation, $6,862,000. I understand you to say previously that $1,800,000 had been brought forward from the old company prior to this amalgamation?—A. Yes.

Q. Now, that is one item, if you will make a note of that.—A. Which is now shown as $5,600,000.

Q. All right, make a note of that. Then you have a surplus here shown on your balance sheet in addition to that of $4,654,000; that is in this balance sheet?—A. Yes. Well, you want to know how that is arrived at?

Q. No I do not. Then in addition to that you have paid out in dividends in the meantime, which is not shown on the balance sheet at all $2,900,000?—A. Yes.

Q. And in addition to that you have paid off funded debt $3,075,000?—A. Well, that funded debt hasn't anything to do with the surplus.

Q. No, but it has been paid out of earnings, that is all I am getting at.—A. Oh no.

Q. No, but you show it here as paid out of earnings.—A. No, it is not necessarily out of earnings; it is paid out of the general reduction of assets.

Mr. FACTOR: That is not what you show in your statement, Mr. Shepherd. In your statement you show a payment on funded debt.

Mr. SOMMERVILLE: Out of net income.

Mr. FACTOR: There is a disposition of $13,000,000.

The WITNESS: Yes, but that is the cash coming in in that business from other sources, not necessarily the net income.

By Mr. Factor:

Q. I am not talking about the net income, I am talking about the $13,000,000. You show an item of $13,000,000 and you dispose of it in the two columns below.—A. The two things are entirely divergent. One is the surplus and the other is the disposition of net income. The members of the committee have a statement here which is headed "Analysis of Surplus Accounts," and if they will look at that statement they will see what happened to the net income.

Mr. SOMMERVILLE: All right.

The WITNESS: That takes the total net income for the period.

Mr. SOMMERVILLE: That will go in at this point:—

INVESTIGATION OF PACKING COMPANIES

ANALYSIS OF SURPLUS ACCOUNTS FOR THE PERIODS REVIEWED

The WITNESS: That starts with the total net income for the period and which is adjusted by certain reserves applicable to prior years, and so on; and shows the amount paid out in dividends, and the remaining balance is the surplus now shown on the balance sheet.

Mr. SOMMERVILLE: Yes, $4,654,581.65.

By Mr. Factor:

Q. Where did the $3,000,000 odd come from to pay the funded debt?—A. From all the reserves of the company, cash taken into the company.

Q. Not necessarily from profits?—A. No. Profits really have no relation.

By the Chairman:

Q. You see, Mr. Shepherd, what the committee is concerned about—and I know is the thought in the minds of the members of the committee—is that we want to be able to estimate, and estimate clearly and justly, whether the relation of the earnings of this company—not its disclosed net earnings but its real earnings—have been such as to indicate unfairness in the treatment of the consumer on the one hand and the producer on the other. I think in this instance the producer is the fellow that has suffered perhaps most, and it is difficult for

us to form a judgment out of this statement unless we could have it somewhat simplified. I think the committee will agree with me, that if we could get it in a more simplified form, perhaps proceeding with these statements as they are and then later getting a more simplified statement, showing the gross if possible; I appreciate your difficulty in not getting that from the books of the company, because that would be an endless task to change the system; you have either got to accept the company's basis or else go back of that and, as you say, rewrite the books. As I said a little while ago, if we were to take the net earnings then draw into that picture as much of the disclosed depreciation and reserve charges as we could and make a composite picture of that, we would be better able to form a judgment.—A. Well, we really have it here, sir, on the percentage of invested capital, that is, after charging depreciation with approximately $750,000 a year.

Mr. SOMMERVILLE: No, you have not in mind what Mr. Stevens was asking you for. I think possibly after recess to-night we can prepare a memorandum of what is required.

The CHAIRMAN: I think probably we had better proceed before we get into too much detail; let us proceed with the general picture and see if we can work out this difference and work out a composite picture.

The WITNESS: As shown in the balance sheet at March 29, 1934, the Reserve for Income Tax amounted to $489,803.32, of which $430,000 was provided by a charge to operations during the year ended March 29, 1934. No final assessment has been received from the Income Tax Department for the fiscal years subsequent to March 27, 1930, and the company has included in the amount of $430,000 a provision of $153,000 for adjustments in respect of depreciation and other charges which may be disallowed by the Income Tax Department.

By Mr. Sommerville:

Q. Now, this year out of the operations of 1934, the company have set up a total amount of $430,000?—A. Yes.

Q. For the past five years the amount set up was somewhere from $150,000 to $175,000?—A. The amount paid averaged—

Q. The amount provided averaged?—A. About $100,000.

Q. Yes, the amount provided averaged about $100,000?—A. Yes.

Q. And this year the amount set up out of earnings before arriving at net income was $430,000?—A. Yes.

Q. Because of the suggestion of providing for some adjustments on income tax?—A. On depreciation rates.

Q. On depreciation rates?—A. Yes, which the department might disallow.

Q. Because of the fact that the department might disallow depreciation rates they have set up an extra reserve of $430,000 against the profit for this year or the past year?—A. Yes. Then:

(*b*) To determine the spread between the price paid to the producer of live stock and the price received by the packer from the sale of the various products manufactured from live stock.

In the case of Canada Packers Limited a large part of the company's transactions are represented by the purchase, manufacture and sale of products which are not derived from live stock. The business is divided into numerous departments, each of which is concerned with the handling of a particular product or group of related products, and the accounting records of the company are designed to conform to this division and furnish separate operating results for each department. In the case of live stock certain products pass through a number of departments and in the process, products derived from other species of live stock are combined and sold as one finished product.

In common with other packing establishments, Canada Packers Limited maintains a system of accounts which does not permit the actual of individual products to be determined. To secure approximate profit or loss margins for their own information the officials occasionally have "test runs" made, but for ordinary operating purposes the company estimates its net return per 100 pounds of dressed weight of hogs on a formula, the details of which are shown below for the week ending May 12, 1934.

By Mr. Sommerville:

Q. Then you set out this formula?—A. Yes.

Q. And the formula shows the price per pound for hams, bellies, loins and shoulders?—A. Yes.

Q. And the percentage of dressed weight of each, the cutting credit, the killing credit, and this shows a net return per 100 pounds of dressed weight of $10.38?—A. Yes, $10.38.

Q. And in that formula the company have charged an amount of 6 per cent interest on the capital invested in that particular operation?—A. Yes, that is so.

Q. That is the practice of the company?—A. Yes.

Details	Per Cent of 100 Pounds of Dressed Weight	Price per Pound	Value
	%	cents	$ cts.
Hams	19·7	19·0	3 74
Bellies	14·2	19·0	2·70
Loins	16·2	17·2	2·79
Shoulders	18·6	11·0	2 05
	68·7		11·28
Cutting Credit		1 10	
Killing Credit		0·20	1 30
			12 58
Less Operating Cost of Hog Departments, including interest at 6% on the capital employed			$ 2 20
Net Return per 100 lbs. dressed weight			$ 10 38

Q. If $100 worth of hogs were purchased, 6 per cent would be added, or $6?—A. I do not know that it would work out exactly in that way.

Q. Six per cent?—A. On the basis of 6 per cent per annum.

Q. On that basis 6 per cent will be added to the amount that is invested in the operation of each purchase?—A. Yes.

Q. And that is so throughout all departments?—A. Yes.

Mr. Young: Per annum on each purchase?

The Witness: No, on the assets invested in that particular department.

Mr. Sommerville: That includes money used for the purchase of the product for that department.

Mr. Young: But not on each separate purchase?

The Witness: Not on each purchase.

By Mr. Sommerville:

Q. It will be on the total amount?—A. On the capital.

Q. On the working capital?—A. Yes.

Q. In other words, each department on that basis could split absolutely even, and not show a profit, and not show a loss, and yet the company would

make 6 per cent on the entire amount of working capital used during the year?—A. On the invested assets.

Q. As a matter of fact, although the department may show no loss or no gain, the company would show a profit of $1,500,000 on last year's operations, or approximately that?—A. I do not think it would be as much as that.

Q. What is it?—A. Approximately $1,000,000.

Q. In their interest account last year, do not they show something like $1,500,000?—A. $1,500,000, subject to income tax.

By the Chairman:

Q. May I ask one question there? Is there anywhere a statement in your investigation showing the total amount of live stock purchased and the exact amount paid for it, before any processing charge or any other charge?—A. We have the head purchased.

Q. The number of cattle, sheep and lambs each year?—A. But not the amount.

Mr. FACTOR: There again is the point I raise. He has just the net income of the departments.

Mr. KENNEDY (*Winnipeg*): Mr. Chairman, does not every path lead up to this difficulty: We do not get from the individual company or plants a complete picture showing how their net income is arrived at. We only get a recapitulation of those net incomes, which leaves us in the dark.

The CHAIRMAN: I think we will have to try to get that. We will have to ask the company's representatives to get us that.

Mr. KENNEDY (*Winnipeg*): To me it is inconceivable that the individual companies have not such material to supply us.

Mr. FACTOR: Even to the extent of getting their internal audit.

Mr. KENNEDY (*Winnipeg*): Absolutely. And we could then put in a few tests as to its correctness, without going into the whole thing.

Mr. EDWARDS: Is not that the way that each individual company arrives at its own net income?

The WITNESS: On January 22, 1934, the company made a special test on one hog of a good type to determine in detail the weight of product which could be obtained from the hog and to determine the yields by weight from processing certain cuts of the hog in the curing and smoking operations. Particulars of this test were furnished to us by the manager of the provision department, and based on these figures and on information secured from other employees we prepared summaries which purport to show the selling value, purchase cost and processing expenses for the weeks ended December 14, 1933, and March 29, 1934. The original computations developed abnormal estimated net profits in both these weeks, but after advising the manager of the provisions department of the results shown he stated that certain of the valuations, yields and processing expenses which he had originally furnished to us should be changed. After giving effect to these adjustments net losses were developed of $1.15 and 96 cents on the hog for the weeks ending December 14, 1933, and March 29, 1934, respectively, after deducting the processing expenses which include approximately 42 cents for interest at 6 per cent on the capital employed.

In our opinion test runs are of little, if any, value in determining the spread due to the impossibility of reconciling the result of the test runs made by the company with the books of account, and to the facility with which the results of such runs can be altered as shown in the previous paragraph.

The CHAIRMAN: It was a fairly useless piece of work?

The WITNESS: Yes; you cannot determine anything from that.

The CHAIRMAN: What reason did they give for making those changes?

The WITNESS: The reasons were not given to me; they were given to my assistant. We can tell you what they are. They changed the hog from a bacon to a select, which made a dollar's difference right away. That was the principle.

Mr. SOMMERVILLE: After you were told of the results?

The WITNESS: After they were told of the results.

Mr. SOMMERVILLE: Then they said it should be based on a premium hog rather than a bacon hog, which made a difference of a dollar.

The WITNESS: Yes.

Mr. FACTOR: That showed a loss, on the hog.

Mr. SOMMERVILLE: That made a loss on the hog.

The WITNESS: We were unable to determine the spread on sales of beef due to the company's method of purchasing cattle in ungraded lots and subsequently grading the dressed carcasses into some forty different classes, the costs assigned to each class being determined by application of arbitrary differentials. A similar condition pertains to the purchase of small stock which are graded into seven different classes.

For these reasons we are unable to determine the spread between the price paid to the individual producer of live stock and the price received by the packer from the sale of the resulting manufactured products, and we are forced to substitute for this inquiry consideration as to whether the packer receives a reasonable or an executive return (*a*) on the capital invested, and (*b*) on the sales made to the public. The information necessary to arrive at a conclusion on these points is submitted in the section of this memorandum dealing with invested capital and sales, the average return based on the net income reported by the company being 10·20 per cent on invested capital and 1·43 per cent on sales.

Q. That is after deduction of these various reserves and depreciation reserves?—A. Yes.

Q. I wish you would let me have, if you have it available, a spare copy of the company's sheet showing the grading of cattle into various grades?—A. We have got one.

Q. It shows the purchase of the cattle and the grading into probably forty different grades.

By the Chairman:

Q. In other words, according to the practice followed cattle are bought irrespective of grades?—A. Yes, I believe so.

Q. And then the animal goes into the packing plant?—A. They are bought in lots.

Q. And they pass into the packing plants and once they are in the hands of the operatives in the packing plants they are divided up and classified into something in the nature of about forty different grades; is that right?—A. Yes, that is so.

Mr. SENN: That is the carcass; not the live animal?

The WITNESS: No.

The CHAIRMAN: Making it impossible to follow through and determine what the spread might be in that case?

The WITNESS: Of an individual case.

Mr. YOUNG: That means forty different cuts of meat.

The CHAIRMAN: No, forty different grades of meat.

Mr. FACTOR: Forty different grades of carcasses.

The WITNESS: Yes.

Mr. SOMMERVILLE: Take, for instance, baby beef. That sounds like a single grade, but in the hands of the processor it consists of five grades, choice, good, good medium, medium, and fair; each of them distinct. Heifers are

divided into nine grades as follows: choice, good, heavy good, good medium, medium, fair, plain, cutter, boner. Steers under 550 pounds are divided into eight grades. Steers. 550 to 650, are divided into choice, good, good medium, medium, and fair. Steers 650 to 750 are divided into the same five grades. Steers 750 are divided up into the same five grades. Heifer cows are in four grades. Cows are divided into eight grades: choice, good, good medium, medium, fair, plain, cutter, and boner. Bulls are divided into six grades: good, medium, fair, plain, cutter, and boner.

Mr. Young: Are all these grades reflected in different prices?

The Witness: Yes.

Mr. Sommerville: There is a grade sheet on certain shipments.

(Cattle grade sheet filed, marked exhibit 201.)

The Committee adjourned to meet Wednesday, May 30th, at 11 o'clock.

HOUSE OF COMMONS, ROOM 368,

May 30, 1934.

The special committee appointed to inquire into price spreads and mass buying met at 11 a.m., the Hon. H. H. Stevens, presiding.

Mr. Norman Sommerville, K.C., and Mr. W. W. Parry, K.C., of Toronto, appeared as counsel for the committee.

The CHAIRMAN: Order, gentlemen. We have the minutes of yesterday indicating the witness heard and certain exhibits filed. We will declare the minutes approved.

Now, Mr. Sommerville, will you proceed with your witness.

(Memorandum on Canada Packers Limited, submitted by auditors, on which evidence was taken yesterday and continued to-day, is printed as Appendix No. 1 to this day's evidence.)

A. B. SHEPHERD, examination resumed.

By Mr. Sommerville:

Q. There were certain statements that were being typed over night. They are not yet ready, and therefore we will proceed with the next phase of your memorandum and we will return to the question of the figures that were being prepared for the committee when the typed copies have come up?—A. Yes, that is "C".

Q. Dealing now with the part of your inquiry that was designed to determine the dressed cost of hogs, beef and small stock purchased through direct shipments, stockyards or markets and truckers, and the percentage which each of these classes bears to the total purchases, will you kindly give us the result of your inquiry?—A. The above information has been secured in connection with hogs for the months of September and December, 1933, and March, 1934, and is submitted in the following summary.

Mr. YOUNG: What is the number of the sheet?

Mr. SOMMERVILLE: This is a typed sheet. It is summarized on this. (See page 2259.)

The WITNESS: Toronto plant, September, 1933, direct shipments average cost per 100 pounds dressed weight—

By Mr. Sommerville:

Q. This is hogs?—A. Hogs, direct shipments, \$9.52; stockyards, \$9.46; truckers, \$9.22.

Q. That is to say, in September, 1933, for that month the dressed cost of the trucker hogs was 30 cents per 100 less than the direct shipment hogs?—A. That is so.

Q. And 24 cents per 100 less than the stockyard hogs?—A. That is so.

Q. Yes?—A. December, 1933, direct shipments, \$8.76; stockyards, \$8.77; truckers, \$8.64. March, 1934, direct shipments, \$12.10; stockyards, \$12.25; truckers, \$11.85.

Q. In the month of March, 1934, trucker hogs after dressing cost 40 cents per 100 less than stockyard hogs?—A. Yes.

Mr. YOUNG: Stockyards hogs cost more than direct shipments.

By Mr. Sommerville:

Q. Stockyards hogs cost $12.25 while direct shipment hogs cost $12.10?—A. Yes.

Mr. SOMMERVILLE: You will find that practically so all through.

Mr. KENNEDY (*Winnipeg*): Is that because of the higher price paid?

Mr. SOMMERVILLE: Because of the higher price paid on the stockyards.

By Mr. Sommerville:

Q. Yes, the next month, please?—A. The percentage of total purchases, September, 1933, direct shipments, 53·11; stockyards, 23·52; truckers, 23·37. December, 1933, direct shipments, 55·35; stockyards, 19·02; truckers, 25·63. March, 1934, direct shipments, 51·47; stockyards, 27·92; truckers, 20·61.

Q. That indicated that in those three months, taken just as samples, 70 to 80 per cent of the hogs purchased were not purchased on the market, but were purchased by direct shipments to the plant or from truckers?—A. That is so.

Q. And did not go through the stockyards?—A. That is so. The next tabulation is the same figures for the Montreal plant. September, 1933, direct shipments, $9.92; stockyards, $10.07; truckers, $9.63.

Q. That means that truckers cost 44 cents per 100 less than stockyards in September, 1933, at Montreal?—A. Yes.

Q. And 29 cents less than direct shipment hogs?—A. That is so.

Q. Yes?—A. December, 1933, direct shipments, $9.25; stockyards, $8.92; truckers, $8.93.

Mr. YOUNG: Here we have stockyard hogs being cheapest.

Mr. SOMMERVILLE: Yes. One cent difference between them and truckers.

The WITNESS: Yes.

By Mr. Young:

Q. 33 cents cheaper than direct shipments?—A. Yes.

By Mr. Sommerville:

Q. Will you continue, please?—A. March, 1934, direct shipments, $12.76; stockyards, $12.73; truckers, $12.10.

Q. In that case you have direct shipments costing 3 cents more than stockyards, and the trucker hogs costing 63 cents per 100 less than stockyard hogs?—A. That is so.

Mr. HEAPS: Are they from one stockyard only?

Mr. SOMMERVILLE: The stockyards in Montreal.

The CHAIRMAN: These are Montreal. The former ones were Toronto.

Mr. SOMMERVILLE: This is the Montreal plant.

By Mr. Sommerville:

Q. With regard to the figure of $12.76 for direct shipments, is that accounted for by the fact that some of the hogs are brought from the west, some of these pool hogs that are brought from Alberta?—A. Yes, the larger percentage of them are brought from Alberta.

Q. And the price paid in Alberta to the pool, plus the freight differential, would run the price up at that rate?—A. To that rate.

Q. Yes, to that rate. In other words, if they went on the stockyards at Montreal and bought their hogs there, it would raise the price of hogs at Montreal?—A. Well, I don't know.

Q. Perhaps you can't answer that?—A. No.

Q. Will you continue?—A. Percentage of total purchases, September, 1933, direct shipments, 47·98; stockyards, 37·78; truckers, 14·24. December, 1933, direct shipments, 65·23; stockyards, 28·40; truckers, 6·37. March, 1934, direct shipments, 63·91; stockyards, 34·75; truckers, 1·34.

Then the next is the Winnipeg plant. September, 1933, direct shipments, $8.77; stockyards, $9.80; truckers, $8.82. December, 1933, direct shipments, $8.04; stockyards, $7.86; truckers, $7.92. March, 1934, direct shipments, $12.40; stockyards, $12; truckers, $11.51.

Percentage of total purchases at Winnipeg, September, 1933, direct shipments, 53·07; stockyards, 14·85; truckers, 32·08. December, 1933, direct shipments, 51·33; stockyards, 32·67; truckers, 16. March, 1934, direct shipments, 54; stockyards, 35·72; truckers, 10·29.

At the Hull plant, direct shipments, September, 1933, $9.83 and truckers, $9.39.

Q. There is no market there?—A. No stockyard.

Q. There is no stockyard at Hull?—A. No.

Q. So the truck hogs there cost 44 cents a 100 less than the direct shipment hogs?—A. Yes, in September.

December, 1933, direct shipments, $8.95; truckers, $8.55. March, 1934, direct shipments, $12.43; truckers, $12.05.

The percentage of total purchases, September, 1933, direct shipments, 71·23; truckers, 28·77. December, 1933, direct shipments, 74·16; truckers, 25·84. March, 1934, direct shipments, 72·34; truckers, 27·66.

By Mr. Factor:

Q. How do you account for the purchase of a large percentage of direct shipments, and yet the price paid for direct shipments is more than the price paid for truckers?—A. The inference would be they could not get sufficient from truckers, I would say.

By the Chairman:

Q. Would this be western stock?—A. The direct shipments, yes—not necessarily but I think probably a large proportion of them. A good portion of them would be from the Ontario district.

By Mr. Sommerville:

Q. Will you continue?—A. Peterborough, September, 1933, direct shipments, $9.78; truckers, $9.31.

Q. That is 47 cents a 100 less for truckers than for direct shipments?—A. Yes. December, 1933, $9.02, direct shipments; truckers, $8.69.

Q. That is 43 cents less?—A. 33 cents.

Q. 33 cents less, yes?—A. March, 1934, direct shipments, $12.72; truckers, $11.87.

Q. That is a difference of 85 cents a 100 less for truckers than for direct shipments, in March, 1934?—A. Yes. Percentage of total purchases, September, 1933, 63·34, direct shipments; truckers, 36·66. December, 1933, direct shipments, 56·68; truckers, 43·32. March, 1934, direct shipments, 64·67; truckers, 35·33.

The prices paid for hogs are stated to be based on the market price for the bacon grade with the following differentials on or off bacon grade:—

Select—Premium of $1 per head above bacon.

Butcher—Discount of $1 per head below the bacon.

Light—Discount of $1 per head below the bacon.
Heavy—Discount of $1.50 per head below the bacon.
Extra heavy—Discount of $1 to $1.50 per cwt. below the bacon.
Sow—Discount of $2.50 per cwt. below the bacon.
Stag—Discount varies with the condition of the hog below the bacon.

Our examination of the purchase invoices for live stock showed that these differentials were being applied.

From the record maintained by the company it is not possible to determine whether the company gains an additional profit through the operation of the differentials before mentioned. After the hogs are dressed and cut they lose their identity in the plant and the price realized on the individual product cannot be determined. Officials of the company have stated to us that no bonuses or commissions are paid to truck operators delivering hogs or to country agents shipping hogs.

The average dressed cost of cattle, calves, sheep and lambs classified as to source are not presented as these costs are not comparable due to the purchases of cattle through the stockyards being generally of a higher grade than purchases from other sources. We submit below a tabulation showing the percentage which the number of head of each class of purchases bears to the total purchases for the Toronto plant for a week in each of September and December, 1933, and March, 1934.

	Percentage of Total Purchases		
	Direct shipments per cent	Stockyards or markets per cent	Truckers per cent
Cattle:			
September, 1933	21	65	14
December, 1933	30	55	15
March, 1934	18	63	19
Calves:			
September, 1933	11	61	28
December, 1933	22	52	26
March, 1934	39	45	16
Sheep:			
September, 1933	5	78	17
December, 1933	2	54	44
March, 1934	10	59	31
Lambs:			
September, 1933	13	42	45
December, 1933	8	68	24
March, 1934	9	89	2

(c) To determine the hourly rates of wages paid by the company, and to prepare a tabulation giving the number of employees paid at each of the different hourly rates.

In Schedule "1" we submit information showing the number and percentage of the company's employees at the Toronto, Hull and Peterborough plants engaged at the various hourly and weekly rates for one week during the month of March, 1934.

The average hourly rates paid to all employees at the Toronto plants, excluding foremen, truck drivers and others who are paid on a weekly basis, for the weeks ended March 22, 1934, and October 12, 1933, were 39¾ cents and 35¾ cents respectively.

By Mr. Heaps:

Q. May I interrupt? Does that include both males and females?—A. No—I didn't get your question.

Q. Does that average you have just given us include both males and females?—A. It includes males and females, yes.

Q. It was not worked on a piece-work basis?—A. Well, we will come to that later on.

Less than one per cent of the company's employees are on piece work or under any bonus system, and we are informed that no employee is required to "stand by" in his own time.

We are unable to determine from the pay-roll records whether or not employees "stand by" in their own time as the hours on which employees are paid are obtained from the foreman's time books and the time clock records are only used for comparison with the time books. Furthermore, we are informed that employees are permitted to "punch" the time clocks as soon as they enter the plant, which may be previous to the time when operations actually commence. However, in the case of killing floor gangs, the employees are not paid for delays in the commencement of killing operations where the company considers itself blameless for such delays. An instance of such delays, given to us by an employee of the company, is where rail shipments of livestock arrives late through weather conditions or the fault of the railroad companies.

By Mr. Sommerville:

Q. That is to say, in the killing room, the men stand by until the cattle are there for killing, don't they?—A. Yes.

Q. And if there is delay in delivery either from the stockyards or from the railroad and the cattle are not there to kill, the men are paid; they are standing by and they are paid from the time they commence operations?—A. If the company considers that it is their responsibility, they are paid. If it is their own, they are not paid.

By Mr. Heaps:

Q. Who determines that?—A. Well, I take it that the officials of the company do.

By Mr. Sommerville:

Q. The foreman, I suppose?—A. I assume so, or the timekeeper.

By Mr. Heaps:

Q. There is no well-defined rule as to who is to blame for any hold-up in the work?—A. I just didn't get that.

Q. There are no well defined rules in that respect?—A. That is the rule, as we have stated it.

Q. The employees themselves do not determine as to who is responsible for the delay?—A. Well, I assume the determination of that would rest with the officials of the company.

Q. And the employees would have no say in the matter at all?—A. Oh, I would not say that, no.

By the Chairman:

Q. Mr. Shepherd, I am now looking at your consolidated statement of hourly and weekly rates of wages paid. You have it there. I notice that the Hull plant stands out in a rather singular way for low rates of pay for a larger number than in any of the other plants that are set forth here. May I ask this question: Am I correct in saying that there is 25·60 per cent of the employees in the Hull plant that get less than 19 cents an hour; that is 19 cents down to 15 cents?—A. Yes, 25·60.

Q. I want to make that clear. That is correct?—A. Yes.

Q. And the first item of 17·60 per cent get 15 cents?—A. 15 cents, yes.

By Mr. Heaps:

Q. Are those males or females? Could we have any idea of that?—A. We are looking for that.

Q. Could we have any idea as to what work these people perform at those rates?—A. We can get that.

By the Chairman:

Q. A 50-hour week, is it?—A. A 48-hour week.

By Mr. Sommerville:

Q. In the Hull plant?—A. Does it say that?

Q. Well, I don't know. It is 48 hours at Toronto.

Mr. FACTOR: It would have been interesting to have divided the employees.

Mr. SOMMERVILLE: You say, "The basis of employment is a 48-hour week, and an examination of the pay rolls at the Hull and Peterborough plants discloses that the rates in force during the year ended March 29, 1934, were substantially the same as those set forth in Schedule "1".

By the Chairman:

Q. You are not sure whether it is a 50-hour or a 48-hour week?—A. My impression is that it is 48.

The CHAIRMAN: Well, a 48-hour week at 15 cents an hour works out at $7.20 a week. In other words, there would be 17·60 per cent of the employees working on a weekly basis of $7.20.

Mr. FACTOR: If they worked a full week.

The CHAIRMAN: Yes, if they worked a full week.

The WITNESS: Yes, that is so.

By the Chairman:

Q. That is correct, is it not?—A. Might I have that again?

Q. Yes. I say that taking your first line in this statement for Hull, the percentage of the total at 15 cents an hour—being 17·60 of the employees—means that 17·60 per cent of the employees of that plant are working for $7.20 a week, providing they get a full week's work?—A. That is so.

Q. That is so?—A. On a 48-hour week.

Q. Yes, on a 48-hour week, $7.20 a week. If it is a 50-hour week, it is $7.50?—A. Yes.

Q. The question I want to base on that is: Have you any record there to indicate what proportion of that percentage is female workers?—A. We have got the actual pay-roll here for Hull.

Q. Would you give the reporter at this point the list of those who are working at say 19 cents and under, being 25·60 per cent of the employees? It will be the first four in that list, the first four categories?—A. We will have that prepared.

By Mr. Sommerville:

Q. I think you could read that off?—A. It would be rather difficult. It is all spread over the departments.

Q. But you could pick out in each department the number of persons.

By the Chairman:

Q. Could you give us a list to be put into the record?—A. We can prepare a list.

The CHAIRMAN: I wish you would.

Mr. HEAPS: I think in that statement you should give us the actual earnings of these people.

Mr. SOMMERVILLE: That is what he is going to do, give the actual earnings for a week of those employees at this rate. That is what you will do?

The WITNESS: Yes.

The CHAIRMAN: As well as the rate. That takes in the first four categories. That includes 25·60 per cent of the 125 employees—Would that be, or would it be of 100?

The WITNESS: The total applies to 125.

The CHAIRMAN: 25 per cent—that would be about 30-odd employees.

Mr. KENNEDY (*Winnipeg*): The actual names will be read into the record?

The CHAIRMAN: Yes.

Mr. HEAPS: Will you put the names in?

Mr. SOMMERVILLE: Perhaps not the names.

The CHAIRMAN: Not the names, but give us a list, call them Nos. 1, 2, 3 and 4.

The WITNESS: And leaving the names out?

The CHAIRMAN: And you can give us the names privately.

Mr. KENNEDY (*Winnipeg*): That will indicate the actual time worked, in addition?

The CHAIRMAN: Yes.

Mr. KENNEDY (*Winnipeg*): Will there be any special week?

The CHAIRMAN: It is a typical week.

Mr. HEAPS: Is there any explanation as to why the rate is so much lower than in the other places?

The CHAIRMAN: I suppose they get them easier. Go on, Mr. Shepherd.

The WITNESS: During the course of our examination at the Hull plant we were informed that if killing floor operations were discontinued during the morning, certain employees might be released and instructed to return during the afternoon when operations would be commenced again. For example, an employee might work from 8 a.m. to 11 a.m. and from 3 p.m. to 6 p.m. and only receive payment for the six hours actually worked on the killing floor.

By Mr. Sommerville:

Q. That is, these killers are employed and paid only for the hours actually worked in each day?—A. Yes, actually worked.

By the Chairman:

Q. Was that a regular practice?—A. I believe so, yes.

The CHAIRMAN: It is pretty tough on them.

The WITNESS: By that, I do not mean daily, but it happens very frequently.

The CHAIRMAN: Quite a common practice, you would say.

By Mr. Sommerville:

Q. Perhaps their wage roll would indicate that?—A. Yes, I think that probably could be determined.

By the Chairman:

Q. Could you pick out a few typical cases, for instance, and just show the number of hours they worked?—A. We are giving the actual earnings of these people during these weeks. That will show it.

Q. That will be all right. Will you go ahead?—A. The basis of employment is a 48-hour week, and an examination of the pay-rolls at the Hull and Peterborough plants discloses that the rates in force during the year ended March 29, 1934, were substantially the same as those set forth in Schedule "1". The rates of pay at the Toronto plant were increased during the week ended October 19, 1933, which increase, taken on the pay-roll as a whole, represented approximately 10 per cent of the rates paid prior to that date.

By Mr. Sommerville:

Q. That is, there had been a reduction of the rates in 1931?—A. Yes.

Q. And then that was restored in October, 1933?—A. Yes.

By Mr. Heaps:

Q. Are you through with the wages there?—A. Yes.

Q. You have not told us whether those persons you referred to are working on a piece work basis or an hourly basis?—A. There is practically no piece work.

Mr. Sommerville: He said less than 1 per cent of these employees are on piece work.

Mr. Heaps: Less than one per cent on piece work. I didn't get that.

By Mr. Sommerville:

Q. That covers the wages with reference to that point. You had some statement that you were preparing for the committee?—A. Mr. Sommerville, might I say that that reduction was January 1, 1932.

Q. The reduction in wages that we have referred to took place on January 1, 1932?—A. Yes, 1932; not 1931.

Q. And was restored on October 1, 1933?—A. Yes.

Q. Now, returning to the questions asked by Mr. Kennedy (Peace River) yesterday about the paying off of some five million dollars of a bank loan in the year 1931: in connection with that you have prepared a statement by way of answer; now, will you just explain that to the committee?—A. Will you identify that for me; is that difference in balance sheet position between March 27, 1930, and March 26, 1931?

Q. Yes.—A. Mr. Kennedy's question, as I understand it, had to do with the sources from which bank loans of $5,536,527.49 were paid off. For that purpose we have prepared the following tabulation.

CANADA PACKERS, LIMITED

Difference in Balance Sheet Position Between March 27, 1930 and March 26, 1931

Assets converted into cash during year		$ 6,109,130 45
Net Profits for year	$ 640,463 59	
Less paid out in dividends	435,394 75	405,068 84
Increase in Depreciation Reserve, retained in business		766,950 17
Increase in Stated Value of Common Shares, etc		4,896 36
Total		$ 7,286,045 82
Applied as follows:—		
Assets Acquired	$ 745,850 08	
Less Reserves thereon acquired	59,217 40	
	$ 686,632 68	
Liabilities Paid Off—		
Bank Loans	$ 5,536,527 49	
Other Liabilities	1,062,885 65	
		$ 7,286,045 82

So that the bank loans were repaid mainly through the conversion of assets into cash.

By Mr. Kennedy (Peace River):

Q. Due to current statement, rather than through drop in inventory value?—A. Not necessarily; in other words, the amount of the inventory could be carried at the end of the year for considerably less money than it could be carried for at the beginning of the year.

Q. The annual statement I have here says: "This phenomenal reduction was due chiefly to decline in prices of products"—indicated by the following table of comparisons—that might be worth noting at this point. The farmer took the loss of five or six million dollars, whatever it was; the packers did not take it, the bank did not take it.

Mr. SOMMERVILLE: What Mr. Kennedy (Peace River) is referring to is a statement shown in the fourth annual report and balance sheet of Canada Packers Limited as at March 26, 1931, in which the President is reporting that during the year just closed they have paid off to the bank some $5,536,527.49; and then the statement in the balance sheet in the annual report says:

"This phenomenal reduction was due chiefly to decline in prices of Products. This decline is indicated by the following table of comparisons:—

—	Prices		Decline
	March 1930	March 1931	
	cts.	cts.	%
Choice Steers, Toronto Market	11½	7½	35
Select Bacon Hogs, Toronto Market	14	8¾	37
Native Steer Hides, Toronto Market	13½	9½	30
Tallow, Edible, Toronto Market	7¾	5	35
New Laid Eggs, Toronto Market	30	22	27

Because of these lower prices, the Working Capital of the Company is able to pay for almost fifty per cent more product than a year ago, and correspondingly less sums are required from the Company's Bankers to supplement Working Capital."

Mr. KENNEDY (*Peace River*): Yes, that is the statement to which I refer.

By Mr. Kennedy (Winnipeg):

Q. Just before you go on from there; surely it does not follow from that that it would be correct to state that it was the farmers who paid for these loans to the bank?—A. No, I would not draw any such inference as that from it.

Q. If it is so, let us have it; let us get the thing clear.—A. No.

Q. I gathered from the statement that that was the inference.—A. No, I do not think that that is a correct inference.

Mr. KENNEDY (*Peace River*): I don't accept that, it is as plain as the nose on your face.

Mr. KENNEDY (*Winnipeg*): If it is, let us have it.

The WITNESS: What actually happened in regard to inventory was that on March 31, 1930, it was $10,188,568.34, and on March 26, 1931, inventory was $5,912,970.05; a reduction of $4,275,598.29. But that reduction is a reduction covering the whole year. Inventory is turned over on an average about ten times a year, so that with each turnover, it required a little less money to finance the same volume of product which at the end of the year released $4,275,000 of cash.

Q. Out of working capital?—A. Yes.

By Mr. Kennedy (Winnipeg):

Q. And that was used to pay off bank loans?—A. Yes, and for a reduction in accounts receivable of $1,231,000.

By Mr. Sommerville:

Q. So that at the end of the year, on the basis of the report, Canada Packers were able to handle 50 per cent more products for the same amount of money?—A. Less than 50 per cent, about 40 per cent.

By Mr. Kennedy (Winnipeg):

Q. And because of that condition there was a surplus of working capital in the business which could be used for the purpose of paying off bank loans? —A. To pay off bank loans which probably were taken in the main for the purpose of carrying that inventory.

By the Chairman:

Q. I think, however, in fairness to Mr. Kennedy, I would like to express one point in which I am in agreement with him: I will put the question to you this way, had there not been this sharp decline in the price of live stock, there would not have been a release of a portion of this working capital?—A. No, sir.

Q. That is true, is it not? That is the point Mr. Kennedy wishes to make. It is not that it was taken out of the farmers directly, but because of the decline in the price of live stock or in the amount paid to the farmer for his live stock it required that much less working capital?—A. In other words, had the price remained stable, with the same volume of product carried, they would not have had this $4,275,000 released.

By Mr. Sommerville:

Q. They would still have been owing the bank that amount of money at the end of the year?—A. Yes.

Mr. Kennedy (*Peace River*): And the farmer would have got that much more for his live stock.

By Mr. Sommerville:

Q. The farmer would have got that much more for his live stock, that is the point Mr. Kennedy makes. Now, there is a further point I think Mr. Kennedy was discussing yesterday relative to this and that was—could you throw any light upon it—that was the point that while the price of live stock declined rapidly, the price of the finished product declined slowly, and the price of the finished product lagged far behind that of the raw product and provided an extra amount of money out of inventory in the interests of Canada Packers or all of the packing companies?—A. No, I do not think there are any figures that would show that.

Q. To be able to show that you will have to have a comparative statement showing the prices from day to day of the finished product, as against the prices paid from day to day for the live stock product?—A. Yes.

Q. Now, there was another phase of that question that was raised yesterday, that was the question of reserves?—A. Which one do you want to take first? There are two ways of looking at it, one is the reserve at the end of the period, and the other is the situation during the period.

Q. If you will take the situation during the period that will lead up to the situation at the end of the period, that is the first page of your statements? —A. We have prepared a statement headed:—

CANADA PACKERS, LIMITED

ANALYSIS OF GENERAL RESERVE FOR THE PERIOD FROM THE INCEPTION OF THE COMPANY, AUGUST 15, 1927, TO MARCH 29, 1934

	Sundry Reserves	General Reserve	Total
	$ cts.	$ cts.	$ cts.
Year ended March 27, 1929:—			
Inventory written up from lower of Cost or Market to Cost (Book entry)	....	586,268 95	586,268 95
Set aside out of Profit	52,982 64	93,678 42	146,661 06

Balance as at March 30, 1933	45,414 77	225,457 71	270,872 48
Year ended March 29, 1934—			
Transfer to Profits	....	225,457 71	225,457 71
Balance as at March 29, 1934	45,414 77	....	45,414 77

By Mr. Kennedy (Winnipeg):

Q. Mr. Shepherd, before you go on from there: referring to the first item on that page there is an expression used—probably I should know the term—the expression is "lower of cost or market to cost"; would you just explain that in full? A. "Lower of cost or market to cost": it just depends on whether the inventory at cost is lower than the inventory at market; in this case the inventory at lower of cost or market was below cost, so they wrote it up.

By Mr. Sommerville:

Q. That is, the market price of the inventory at that time, was $586,268.95 less than the actual cost; that is, they raised the inventory to cost?—A. Yes, and set up a corresponding reserve; in the balance sheet it really had no effect because reserve of $586,000 was deducted from the total inventory figure.

By the Chairman:

Q. In that item of $615,000, and the $225,000, that is the two last items transferred from reserve into income account, would that be taxable under the law?—A. Oh yes, the reserve is. It had already been taxed in the period in which the profit was earned.

Q. If you lowered your inventory you would also lower your income; how would they tax a vanishing income?—A. It would just transfer the income to the next year. When the reserve was originally set up they took that off and it would go into the taxation for that year.

By Mr. Sommerville:

Q. As I understand it, when originally set up it was set up by applying it against inventory on the one hand, and adding to bills payable on the other?—A. No, not that. It is shown as a reserve and used in that way; that is why we put in book entry, it has no effect on the real situation.

Q. Yes, all right. That is an analysis of the general reserve for the whole period. Now then we come to page 3 of your report?—A. This statement shows:

CANADA PACKERS, LIMITED

SUMMARY OF RESERVES APPLIED ON BALANCE SHEET AS AT MARCH 29, 1934

Reserves deducted from Inventories:		
Estimate of amount represented by ½c. per lb. deducted from certain products of the Inventories at the main plants		$ 184,823 48
Reserve of Chicago plant as shown under Sundry Reserves in the attached summary		45,414 77
Total Reserves deducted from Inventories		$ 230,238 25
Reserves deducted from Investments in Government Bonds:		
Profits arising from purchase and sale of Government Bonds		$ 26,619 91
Reserves deducted from sundry Investments:		
Profit arising from sale of investment in shares of Canadian Gas & Equipment Co., Ltd.		164,496 31
Reserves deducted from Investments in Subsidiary Companies:		
Profit on purchases by Canada Packers Ltd. of the bonds of its subsidiaries	$99,598 70	
Reserve acquired through purchase of stock of subsidiary companies	86,345 81	
		185,944 51
Total		$ 607,298 98
In addition to the above reserves the Company owns 7,900 shares of Dominion Stores Ltd. and 6,822½ shares of Stop & Shop Ltd., which are carried on the books at a combined market value of	$102,492 05	
Dominion Stores Ltd.—Market value, May 29th, 1934, $20.50 per share. Total Market Value		$ 161,950 00
Stop & Shop Ltd.—Market value, May 29th, 1934, $7.00 per share. Total Market Value		47,757 50
Total Market Value, May 29th, 1934		$ 209,707 50
Total Book Value " "		102,492 05
Excess of Market over Book Value		$ 107,215 45

By the Chairman:

Q. Now, in regard to the Dominion Stores and the Stop and Shop: what proportion of the capital of Dominion Stores does 7,900 shares represent—have you any information on that?—A. It is roughly about 10 per cent, I am speaking just from memory.

Q. And the Stop and Shop?—A. I do not know the figures, approximately 15 per cent.

By Mr. Heaps:

Q. Does the book value represent the purchase price?—A. No, we gave you that yesterday in the statements; the original cost for Dominion Stores was $198,214.99, and Stop and Shop $378,759.45.

By Mr. Sommerville:

Q. We now have this list of employees which will be entered in the record. This indicates some of the information you are asking for, Mr. Heaps.

FEMALE

CANADA PACKERS LIMITED

HULL PLANTS

Employees paid at the rate of 19 cents per hour and less.
For the week ended March 21, 1934.

Department	—	Total hours	Rate	Total wages $ cts.

Sausage	20	51½	19	9 79
Extra help	32	56½	15	8 48

Total Boys—13.

By the Chairman:

Q. Before we leave that: do I understand that in the Hull plant there is no stand-by other than what you mentioned in the killing?—A. Yes, sir.

Q. How about the Toronto plant?—A. Only in those cases that I mentioned, where the delay is due to causes outside of the company's power; those are all we could locate.

Q. That is in the killing plant?—A. Yes.

By Mr. Sommerville:

Q. And the delay in the delivery of the products to the plant?—A. Through spotting cars and so on.

Mr. ILSLEY: The statement last read by Mr. Sommerville, is that a statement of all the female labourers in the Hull plant getting 19 cents an hour or less.

The CHAIRMAN: It shows those getting 19 cents an hour or less.

Mr. ILSLEY: Yes. What is the total number getting 19 cents or less?

Mr. SOMMERVILLE: It was given as 25 per cent.

The WITNESS: 20 females and 12 boys.

Mr. ILSLEY: So there were 20 female employees in the Hull plant getting paid less than the minimum wage according to the Quebec law?—A. I could not say.

Mr. SOMMERVILLE: He does not know what the minimum wage may be for a town the size of Hull in the Province of Quebec.

By Mr. Edwards:

Q. You do not know what the wage is for comparable work in the Toronto work?—A. No, except on the basis of the general average being higher.

Q. It is higher in Toronto?—A. Yes.

By Mr. Sommerville:

Q. In the Toronto plant you have what?—A. 11½ cents higher average over all.

By Mr. Edwards:

Q. Per hour?—A. Per hour.

Q. 11½ cents per hour higher at the Toronto plant for work comparable to that in Hull?—A. No, that is for all work.

By Mr. Sommerville:

Q. That is for all work. That is, the average at Hull for all employees is 28¼ cents, is that right?—A. Yes.

Q. That is, hourly; and at Toronto the average is 39¾ cents?—A. Yes.

Mr. HEAPS: Mr. Sommerville, can you say whether there is a minimum wage law in Quebec that covers packing plants? I don't think there is, myself.

Mr. SOMMERVILLE: I can't say, offhand. I would be surprised if it did not.

Mr. HEAPS: I don't think it covers packing plants.

Mr. SOMMERVILLE: Perhaps not.

The CHAIRMAN: Apparently not.

Mr. EDWARDS: It is not enforced.

By Mr. Sommerville:

Q. Before we leave this, in connection with the question of the dressed cost of the various products you have mentioned at the Canada Packers, I understand the packers pay a certain price to the Union stockyards on cattle and livestock shipped direct, even though they do not go through the Union Stockyards?—A. May I read this?

Q. Yes?—A. The charges paid to the Union Stockyards Limited on livestock are as follows—

Q. While you are at it, you have Swifts also?—A. We have Swifts.

Q. Swifts also pay?—A. Yes.

Q. You might just give us both at the one time?—A. The charges paid to the Union Stockyards on livestock, according to Swift's figures were as follows—

Q. Those are direct shipments that do not go through the yard?—A. Yes, that is so. Hogs, 6 cents per head.

Q. Swifts?—A. Yes. Hogs, 6 cents per head on 40 per cent. Swifts, hogs, 6 cents per head. Packers, 2·40 cents per head.

Q. 2·4?—A. 2·4 cents per head. Sheep and lambs, 5 cents for Swifts and 2 cents for Canada Packers. Calves, 10 cents for Swifts, 4 cents for Canada Packers. Cattle, 25 cents for Swifts and 12½ cents for Canada Packers. The number of head is the number shipped direct to the plant and excludes the livestock purchased through the stockyards. A summary of the amounts in value paid to the stockyards is as follows: this figure now is Canada Packers.—In April, 1933, they paid $1,352.76; May, $1,407.54.

Q. Perhaps you could give us the total for the year?—A. The total for the year is $15,322.66.

Q. For the year ending March——A. March, 1933. For 1934, it is $16,717.88.

Q. The difference between the price paid by Canada Packers and Swifts had better be explained lest it be misunderstood?—A. We are informed that the reason for using only the percentage of the number of heads purchased is that his agreement applied originally to Harris Abattoir Company only; and when the Harris Abattoir, Davies' and Gunns' plants entered into the Canada Packers' merger, it was agreed that only the percentage of the total purchases of either company should be required to be paid upon.

Q. And the percentage is what?—A. 40 per cent, on all except cattle which is 50.

Q. On all but cattle, 40 per cent pay the regular yardage rate?—A. No, 40 per cent—

Q. 40 per cent pay?—A. Of the first figure quoted.

Q. 40 per cent of the 6 cents?—A. Of the 6 cents on hogs.

Q. And 40 per cent of the 5 cents on sheep, and 40 per cent of the 10 cents on calves?—A. Yes.

Q. And 50 per cent of the 25 cents charged on cattle?—A. Yes.

By the Chairman:

Q. Paid by the packers?—A. That is the amount paid by the packers. Swifts pay the highest.

Q. Let me ask you this: These two packing companies pay to the Union Stockyards those fees that you have recited?—A. Yes.

Q. On cattle, hogs, sheep and calves that do not pass through the stockyards at all, but that are delivered direct to their plants?—A. Yes, that is so.

Mr. YOUNG: Why is that?

The CHAIRMAN: Because they own the stockyards, I suppose.

Mr. YOUNG: Why do they pay anything? That is the first question.

The CHAIRMAN: Why don't they put them through the stockyards is the second question.

The WITNESS: We are told that the reason was to bring the stockyards to that particular district, so that they would locate there.

Mr. SOMMERVILLE: The stockyards were there first. They located after the stockyards, so that that could hardly be the situation.

Mr. KENNEDY (*Winnipeg*): Why the difference? Mr. Sommerville, will you cover that?

By Mr. Sommerville:

Q. In the case of Swifts, they had an agreement to pay the full rate on all the stock that came direct?—A. Yes.

Q. And in the case of Canada Packers, when the agreement was made it was made with Harris's?—A. Yes, that is so.

Q. That was before the amalgamation; and Canada Packers and Davies had no such agreement?—A. No.

Q. Therefore when the merger took place the agreement continued in so far as Harris's were concerned?—A. Yes.

Q. And it was put upon the percentage basis?—A. Yes.

Q. So that the total percentage of their direct livestock receipts was indicated as being 40 per cent?—A. That is so.

Q. As applicable to Harris's?—A. Yes.

Q. And therefore they pay 40 per cent of the fee on all they buy rather than the full fee on 40 per cent of what they buy. It works out at the same thing. As I understand it, Swifts and the Canada Packers own the bulk of the stock of the Union Stockyards?—A. I don't know that. I have the holdings of the Canada Packers here.

Q. Well, you have the holdings of both Canada Packers and Swifts?—A. Swifts' holding is in Chicago.

Q. All right, let us leave that. With reference to the profits in 1934 of Canada Packers, looking at their net profits for the year— —A. Exhibit "B" in the report, is it not?

Q. Yes, Exhibit "B" in the report. In that the net profits for the year, before providing for income tax, was shown as $1,881,179.76?—A. That is so, yes.

Q. That is correct, and that was after providing for all these other reserves, depreciation and costs of every kind?—A. Yes.

Q. Leaving only the question of income tax to be provided for?—A. Yes.

Q. Now, this year a large sum is provided, $430,000, for income tax?—A. Yes.

Q. Several times the amount that was provided out of the previous year's profits, because of the necessity or the possibility of having to provide for income tax on the previous year's income?—A. That is so, but not solely. A part of it is the year's provision.

Q. A part of it is this year's provision?—A. Yes.

Q. In addition to the regular disbursements of this year, as compared with the previous year, was there in the year 1934 a provision for a substantial amount being paid in bonuses?—A. Yes, there was.

Q. Do you know what the total amount for the entire number of plants was?—A. No, we have not got that.

Q. For the entire number?—A. No.

Q. But for the Toronto and Montreal plants, what did that amount to?—A. Toronto and Montreal combined is $122,583.05.

Q. Was the amount of bonus distributed among a number of the executives, foremen, buyers and chief salesmen?—A. Salesmen, office staff, superintendents, buyers, branch managers, car route salesmen, storage employees and fertilizer division.

Q. This sum of $120,000 odd was provided for those two plants?—A. Yes.

Q. But the other plants you have not the amount of?—A. No, we have not been furnished with that.

Q. That added to the $1,881,000 odd would represent upwards of $2,000,000 of net profit for last year, before providing for income tax?—A. Yes.

By Mr. Ilsley:

Q. Do I understand the income tax of the previous year was not paid, or that there was some question as to whether it was paid?—A. There have been some amendments in the adjustments which they are making provision of $153,000 for.

By Mr. Sommerville:

Q. The evidence given was that each year they set up a sum of somewhere around $100,000 approximately?—A. A little over that.

Q. Say $125,000; and that is provided against the profits of each year. This year there is provision set up of $430,000. Then were there some contracts for advance advertising charged against the 1934 profits?—A. About $25,000.

Q. That is on an advertising program of some $50,000?—A. That is so.

Q. That had not been used at the 31st of March, 1934; $25,000 represented advertising still to be used, but it was charged against the profits or operating costs of 1934?—A. That is so, the year ended March 29, 1934.

Q. Then should there not be added to these profits some portion of that depreciation that has been referred to? The total depreciation deducted last year was, I think you said, something like $753,000?—A. Approximately.

Q. And on the basis of last year's depreciation you intimate that the depreciable assets would be all wiped out in 6¼ years?—A. 6¾ years.

Q. Then to the profits of last year should there not be added some amount of that depreciation?—A. I think probably, yes.

Q. Yes, the amount of which you are not able to definitely ascertain?—A. No, that is so.

Q. Then should there not be added back to these profits that deduction from inventory of the $45,000 that was to be found in the Chicago account?—A. It could be added back, yes.

Q. In that event, the net profits of last year would substantially exceed $2,000,000?—A. Yes, they would. That is, of course, before income tax.

Q. The figures which you have used in your calculations have been the company's own figures of net after providing for income tax, of $1,440,000?—A. That is so, yes.

Q. You were going to present the disposition of the net income over the period, a consolidated statement of the income?—A. Yes, I would like to point out that this statement has been typed from our statement, and I have not got my own statement back again, so I am just assuming that it is correctly transcribed.

CANADA PACKERS LIMITED

DISPOSITION OF NET INCOME BEFORE PROVISION FOR DEPRECIATION, AUGUST 15TH, 1927 TO MARCH 29TH. 934

Surplus as at March 29th, 1934		$ 4,654,181
Add:		
Dividends paid on Preferred Stock	$ 2,896,316 50	
Less adjustments applicable to Prior Years	185,565 54	2,710,750 96
Net Income for Period		7,365,332 61
Add:		
Credits to Depreciation Reserves (Net)	$ 5,042,881 83	
Decrease in Surplus on Appraisals	455,560 73	4,587,321 10
Extraneous Profits not credited to Profit Sur. on (Net)		360,348 30
Net Income before provision for depreciation		$ 12,313,002 01
Disposition of Net Income before provision for Depreciation.		
Retained in business as:		
Working Capital	$ 6,020,997 89	
Fixed Assets	380,883 98	
Cash in hands of Sinking Fund Trustees	49,983 20	
Less	6,451,865 07	
Reduction in sundry assets	694,135 41	
		5,757,729 66
Payments for:		
Dividends	2,896,316 50	
Redemption of bonds	3,075,700 00	
Redemption of capital stock	583,255 85	
		6,555,272 35
		12,313,002 01

CANADA PACKERS LIMITED

Make up of extraneous profits (Net).			
Profits applicable to Prior Years		$	185,565 54
Profit on Purchases by Canada Packers Ltd. of the bonds of its subsidiaries	$	99,598 70	
Less Proportion taken over at inception of Company		11,161 75	
		88,436 95	
Acquired through the purchase of Stock of Subsidiary Companies		86,345 81	174,782 76
Extraneous Profits (Net)			360,348 30

Q. All right. This is a statement of what?—A. Showing the disposition of net income before provision for depreciation, covering the period from August 15, 1927, to March 29, 1934. We start with a surplus as at March 29, 1934, as shown on the balance sheet of this date, of $4,654,181.65. We add back dividends paid on preferred stock, after deduction of certain adjustments applicable to prior years, which gives a total of $2,710,750.96. The net income for the period was $7,365,332.61. Add back to that credits to depreciate reserves, $5,042,881.83, less decrease in surplus on appraisals of $455,560.73, which gives you a total add back of $4,587,321.10.

Q. You add back extraneous profits not credited to profit surplus?—A. The surplus, I take it, must be $360,348.31, giving you a total net income before provision for depreciation of $12,313,002.01. Then we show the disposition of this net income before provision for depreciation. Of this total there is retained in the business as working capital $6,020,997.89; fixed assets, $380,883.98; cash in hands of sinking fund trustees, $49,983.20, a total of $6,451,865.07 less reduction in sundry assets of $694,135.41, a total retained in the business of $5,757,729.66. Then we add back payments for dividends, $2,896,316.50; for redemption of bonds, $3,075,700; for redemption of capital stock, $583,255.85, a total of $6,555,272.35, the total of these two items being $12,313,002.01.

Q. That shows you what the total net profits have been in that period, and how they have been disposed of before making provision for depreciation?—A. Yes.

Q. And in making provision for depreciation, whatever depreciation has been allowed has been charged or is to be found included in the amount retained in the business?—A. Yes.

Q. As working capital?—A. Yes.

Q. That is represented in that?—A. Yes, and other assets.

Q. Will you just finish up the entries that you have upon this page; you were showing how the extraneous profits that have been referred to are made up?—A. Yes. Profits applicable to prior years, $185,565.54. That is a surplus adjustment. In other words, we have adopted the company's profits, but these were adjustments that went direct to surplus.

Q. And they are reflected in the previous statement?—A. Yes. Profit on purchases by Canada Packers Limited of the bonds of its subsidiaries, $99,598.70, less proportion taken over at inception of company $11,161.75 gives you a net of $88,436.95. Acquired through the purchase of stock of subsidiary companies, $86,345.81, the total being $174,782.76, a grand total of $360,348.30. That is the amount shown in the statement.

Q. Out of last year's profits there were paid in dividends to the preferred shareholders, I understand, some 17½ per cent?—A. No, that would be out of the surplus.

Q. Out of the surplus account. That represented 17 per cent?—A. $17.50, I think is the figure, but we will look that up.

Q. That represented arrears of dividends of $10.50 and $7, the current dividends for 1934?—A. For the current year. Dividends are now paid up to date.

Q. Dividends are now being paid up to date?—A. Yes.

Q. Will you just explain the system of bookkeeping in the packing plants, both Swifts and Canada Packers, to indicate what difficulty there is in getting the original purchases of live stock and showing the way that is handled through, and the ultimate amount received for that live stock so that the committee may have that explanation fully before them?—A. Do I give it in there?

Q. No, you have not?—A. Just what actually happened is that all these departments are treated as separate entities. There are in Packers in excess of 70 departments, in the Toronto plant, and I take it in each of the other main plants. That means that you have 70 departmental accounts. Those accounts are brought down to a statement of net profit or loss, and that net profit or loss is the item that is transferred into the books of the main branch. The details of how that is arrived at can only be got by taking each of those 70 departments and tabulating the results for 13 operating periods at 6 different plants. I think we gave the figures yesterday of the time that it took us to tabulate the results for one year at Toronto. We have those results here. It took four men four weeks.

Q. To tabulate the purchases?—A. Well, to prepare what might be called an ordinary operating account for the Toronto plant. We have that here.

By Mr. Kennedy (Winnipeg):

Q. While you are on that point, let me interject a question there. Let us refer now to a given plant, say Harris Abattoir Company Limited, of Toronto? —A. I don't think that one would suit your purposes, because I understand it is not in full operation—yes, it is all right.

Q. All right, take the Harris Abattoir Company, Limited, at Toronto; assuming they have some 70 departments, and that each department has a cost basis and works out its net profit or loss and reports it. That is so with the other departments of Harris Abattoir?—A. Exactly.

Q. They report their net standing?—A. Yes.

Q. And the cumulative effect of that net standing is reported to Canada Packers?—A. Yes, to the main branch.

Q. Now, before any given department of Harris Abattoir can report a loss or profit, they surely have to make up a statement themselves, to show how they arrive at that?—A. They have.

Q. All right. Suppose each one of those departments has made up such a statement, would it not be possible, upon request, to obtain from them not necessarily verification, but to obtain from them a statement showing how their net position is arrived at, showing the gross position and the resultant net position?—A. I think they could do it, but it would be very costly.

Q. No, but they must have made up such a statement in order to put in their report as to their net position?—A. No. If you will notice, the report just starts with net income.

Q. I know. That is where it starts here. But before any given department can report its position, surely to heaven they have to make up a statement, and show the whole picture, to arrive at a net result?—A. The department has it, but the management do not consolidate. Some four years ago they used to do it, but they have discontinued it.

Q. If a given department has that, can't it submit that?—A. It can, yes, but it is a matter of tabulating 70 departments. In order to get a year you have to tabulate 70 departments for 13 operating periods, with perhaps 50 items each, and do the same thing for six separate plants, and then consolidate it.

Q. I am not talking about auditing, I am speaking about before a given department can say, "Our net position is so and so," they themselves must have prepared a statement showing how that net position is arrived at?—A. Yes, that is so.

Q. That statement will show their gross position and the resultant net position, would it not?—A. Yes.

Q. Then having done that, surely those statements are available in each one of those separate departments and could be supplied upon request?—A. They could, yes. But I have just given you the time it took us to effect it in one plant for a year.

Q. But if they have them already, surely they could be got. It might take them half an hour?—A. Do you mean that the consolidation is available in all departments?

Q. No, I don't mean that. In the individual 70 departments, those statements must be available?—A. Yes, they are.

Q. If those are available, and were submitted, would they not throw a lot of light upon the matter?—A. They might, but the time required to get that information is so tremendous.

By Mr. Sommerville:

Q. Do I understand, Mr. Shepherd, that while there are these records in each department, these must be consolidated before you can get a picture of operations?—A. Exactly.

Q. And in order to consolidate those in the one plant for one year you required four men for four weeks?—A. Yes.

Q. To get a picture in one plant, and for the purposes of certain information for this committee?—A. Yes.

Q. I think you have estimated what the cost would be to the packers to get that information consolidated in the various plants?—A. Well, we thought roughly it might be in excess of $25,000 a year.

Q. And at the time of the merger of the different independent plants they had consolidated statements?—A. I do not think all of them, but I am informed that some of them did. That was discontinued.

Q. And now each department keeps its own records?—A. Yes.

Q. Each department just sends in the net position?—A. Yes.

Q. You could get the full consolidated position for all the plants by the expenditure of time and money in consolidating these various departments?—A. Yes, but I do not know how accurate they would be because you would find it rather difficult to eliminate inter-departmental transfer and sales.

Q. All these departments deal with each other?—A. Yes.

Q. And these inter-departmental transactions would complicate the situation in the consolidation?—A. Yes.

Q. You found that so?—A. Yes, it could be got, no question; it is a matter of time and money.

Q. Quite so, I do not want the impression to prevail that there is anything of an abuse of packing house methods under the present system, but it is a system that is in force in the leading packing house plants of this continent?—A. That is so.

Q. And is a well recognized system for the big packing plants?—A. Yes.

Q. We have here Burns in which the information is available with respect to that plant in another form?—A. Yes.

Q. Where you have your purchases and your sales, and you have your costs throughout; but that does not prevail in Canada Packers or in Swifts?—A. No.

Q. Therefore, you have been obliged to take the situation as it is and build your statement in the time that you have had upon that information?—A. Along the lines on which the company's figures were available.

Q. It would be possible then with the expenditure of time and money to find out how many cattle had been purchased—how many head of live stock—what had been done with them, what had been paid for them, and what had been received for the full product at the end?—A. Yes, it would.

Q. But, as you say, one would have to go through this process you are describing to get that consolidated statement?—A. I think it is a fair statement to say it would mean virtually re-writing the records.

By Mr. Kennedy (Winnipeg):

Q. And the effect of such a system is to render it exceedingly difficult for us to get the gross position with respect to any of these companies?—A. That is so, but I think the answer to that is perhaps that such information is not necessary for packing house management; it is not what they are interested in.

Q. Yes, this committee is interested more in their net position than it is in their gross position.

By Mr. Edwards:

Q. Is it not to get away from this heavy expense that they have that system?—A. That is one factor.

Q. It is for that reason that these test runs are made, and these test runs are satisfactory to the operators of the plant; is not that the idea?—A. I think so.

By Mr. Sommerville:

Q. And is not another reason the fact that by the present method you can get a four-week return on your operation, or a quarterly return very rapidly; whereas, under the old system, you had to close your books and wait until you got your statement off before you knew your position?—A. When you got the information it was too late to use it.

Q. You would get it too late to use it, market conditions might change before you could make use of it; but under the present system of having a four-week period, there is a check-up every four weeks on the various departments on the net position?—A. Every week in fact.

Q. And then, a four-week accounting period?—A. Well, it is 13 to a year.

By Mr. Kennedy (Peace River):

Q. Just what does a test-run mean, I do not think it has been explained? —A. It is an estimate.

By Mr. Sommerville:

Q. Of which we have some example?—A. It is right in the packer's report here; to secure approximate profit and loss margins for their own information they should occasionally have test runs made.

Q. Do they take a bunch of stock through and check the time?—A. No, it is based on an estimate in relation to 100 pounds of product.

Q. I think that is in the memorandum which Mr. Shepherd has already referred to, and which was read yesterday.

Mr. KENNEDY (*Peace River*): As long as it is in the evidence we can see how it works out.

Mr. SOMMERVILLE: Then, of course, the test itself is based upon there being a certain number of hams, bellies, loins and shoulders in a hog in certain proportion; but some of that may be sold as fresh meat, and some of it may be sold as bacon or sausages, therefore the test does not apply all the way across the boards.

Mr. KENNEDY (*Peace River*): No.

By Mr. Sommerville:

Q. Just by way of further explanation of these departmental accounts, where you say each department is kept separate and distinct; one department then, say the beef department, may in its net position show a loss of $5,000—is that a fact, it may show a loss?—A. Yes.

Q. Then that beef goes into the sales department and the sales department may show a net profit of $25,000?—A. Yes.

Q. And that sales department covers the sales not only of the beef and hog products, but sausages, eggs, produce and everything else?—A. Yes.

Q. So that the sales department profits do cover profits from all of the products handled?—A. Yes.

Q. And when a report is made as to the profit on the sales department, that again is a net figure?—A. Yes.

Q. So that in the accounting of that department there may be a loss on the operations of that department—there may be a loss of half a million dollars on sales in the beef department, and again of $600,000 in the sales department, and the net position would be a net $100,000 profit?—A. Yes.

Q. And the sales of this particular company during the last year, I think you said, amounted to something like $54,000,000?—A. $54,000,000.

Q. And over the five-year period amounted to an average of $77,000,000, and these come through its sales department?—A. And other departments, branches and car routes.

Q. Now, can you tell us -take for instance the Hull plant—can you give us the result of the operations in the Hull plant, the profit, for the year 1930—the last year, in which you have these operations?—A. Adopting the company's figures: at the Hull plant in 1934 there was a profit of $9,369.21; in 1933 there was a loss of $27,931.86. But I might explain that these profits are after including the 6 per cent interest which we mentioned before; that is, 6 per cent interest on the capital invested in these plants; and writing that back on an arbitrary basis we show a profit before interest is paid of $39,835.59 for 1934, and for 1933 a loss of $129.67.

Q. I understand the total amount of interest charged to the various departments of the branches during the year was a sum of something like a million and a half?—A. Approximately that.

Q. Which simply means that every department could break just even, make neither a loss nor a gain, and yet there would be a profit to the company of approximately a million and a half?—A. One million four hundred and ninety-six dollars.

By Mr. Kennedy (Peace River):

Q. Six per cent is charged against the inventory, or the stock that is brought in?—A. The assets used in the operation of that department—you mean, what is it charged against.

By Mr. Sommerville:

Q. No, what is the charge?—A. What is it calculated on?

Q. What is it calculated on?—A. On the assets used in the operations of that department.

By the Chairman:

Q. What would the aggregate be, the $18,000,000, or $11,000,000 capital investment?—A. It is calculated on accounts receivable, inventories, and certain arbitrary fixed assets.

By Mr. Sommerville:

Q. A certain arbitrary fixed asset valuation, and that certain arbitrary fixed valuation is based upon the book value of these fixed assets in the various company's books?—A. It is on $15,368,625.37 plus real estate; these are the actual assets taken in, and then real estate $1,353,925.41.

Q. That would be a basis of $15,000,000?—A. Approximately.

Q. If it were a basis of $15,000,000 that would be $900,000?—A. Then you have accounts receivable and inventories in addition.

Q. So that you have fixed assets of $15,000,000?—A. You see the basis is disturbed all the time, so it would not be a fixed amount.

Q. I understand that, you have your 6 per cent interest charged on fixed assets of approximately $15,000,000?—A. Yes.

Q. Plus the interest charge on accounts receivable?—A. And inventories.

Q. And that in last year was $1,496,000, and in previous years a sum approximately the same?

Mr. Ilsley: What accounts receivable are these, amounts receivable by the Hull plant?

Mr. Sommerville: By all plants.

Mr. Ilsley: If, but take a particular plant; what is the Hull plant—on what accounts receivable is the Hull plant charging 6 per cent.

By Mr. Sommerville:

Q. I would just ask. Mr. Ilsley would like to know on what accounts receivable the Hull plant would charge 6 per cent, or would they charge 6 per cent?—A. The amount of money invested in accounts receivable at that date, which would be the amount owing the packers at Hull by the people to whom they supplied goods.

By Mr. Kennedy (Peace River):

Q. You say the 6 per cent is charged, that means it enters into the cost of selling the product?—A. It is charged in calculating their departmental profits or losses, it is an operating expense.

By the Chairman:

Q. That is not a common practice in accountancy, is it, to charge interest charges of that kind unless it is a bonded interest, as an operating cost?—A. Oh, it is done.

Q. I always think it is wrong?—A. It is done now in any industry.

Q. Why should not they charge that interest charge after ascertaining what the operating profit is?—A. I think what they are trying to do is to provide a selling margin there; in other words, if they can realize a flat rate after calculating that interest, then they know they are making so much a year.

Q. Yes, I see.

By Mr. Edwards:

Q. Is it not on the basis that if a customer paid cash and he had to borrow money from the bank he would pay interest for it; the packing company carry him for a month or two months—whatever it may be—and they simply charge him at that rate the same as a bank would?—A. They are not charging the individual, no.

Q. On the amount of money they are using in carrying these men?—A. It is just the department that is charged that, it is not charged to the customer.

Q. It is passed on?—A. No.

Q. It is a fair charge, isn't it?—A. Really, it is an accounting procedure, that is all.

By the Chairman:

Q. But we have not been able to get the information with respect to yesterday; namely, the amount of livestock purchased by the company as a whole and the amount paid for that livestock, and then the total amount received out of meat products?

Mr. Sommerville: You could probably give that for the Toronto plant?

The Witness: Yes, we have it for the Toronto plant.

By Mr. Sommerville:

Q. Well, let us have it for that one plant?—A. Sales and transfers to outside branches. This is for the year ended March 30, 1933, the Toronto plant only, $20,308,982.57; cost of livestock and other products, $15,826,703.22—that represents 78 per cent of the sales. Materials $172,411.52, packages $658,808.04—which represents $3\frac{1}{4}$ per cent of the total of $16,657,922.78. The excess of sales over the cost of livestock materials and packages being $3,651,059.79, or 18 per cent. And then, expenses: we have the detail down here, do you want expenses?

The CHAIRMAN: You had better give us them.

The WITNESS: Supplies purchased $24,042.04, supplies transferred $5,865.04, labour $827,760.69, Workmen's Compensation Insurance $5,791.17, interest on Inventory $94,536.46, insurance on inventory $1,410.68, power $12,578.53, engine room $177,906.52, refrigeration $106,433.50, repairs $82,303.37, stock pens $60,767.06, stables $1,057.15, storage $62,191.01, laundry $12,597.06, plant overhead $218,107.96.

By the Chairman:

Q. What is that made up of?—A. We have not the detailed analysis of it—labour, and I take it depreciation, would be in that. Inventory $1,527.20, water $3,464.26, buying expenses $60,788.62, shipping $139,906.24, telegraph and telephone $4,858.85, advertising $22,868.26, interest on accounts receivable $31,316.05; car routes, salesmen's salaries expenses, etc. $656,557.12, branch house commission $176,605.41, bad debt provision $27,528.20, sundry $8,899.28; fixed charges, depreciation, interest, etc. $479,372.12; travelling $3,577.68, head office, etc. $502,131.17.

Q. What would that be?—A. That would be all the salaries, clerical expenses, management and general administration.

Q. Nearly a million dollars in those two items.

By Mr. Sommerville:

Q. What is the last item?—A. General administration expenses, $502,131.07.

Q. That is, in your fixed charges, depreciation, etc. $479,000, and general administration $502,000?—A. Yes. A total of $3,812,747.30; and the result is a net loss of $161,687.91.

I would like to point out there, the item of labour $827,760.69, is not the only labour; in these other departments—engineering, refrigeration, and so on—there is a good deal of labour in there too.

By Mr. Sommerville:

Q. Now, in this item of $161,000 loss; in showing that is this 6 per cent included in the item?—A. Oh, yes, in respect of accounts receivable and interest on inventory.

Q. What does it amount to?—A. Interest on accounts receivable is $31,316.05, and interest on inventory is $94,536.46.

By the Chairman:

Q. Will you have that statement typed and supply the committee with a copy of it? I would like to examine that with some care.—A. Yes.

By Mr. Sommerville:

Q. That is for the year just closed, 1933-1934?—A. March 30, 1933.

By Mr. Boulanger:

Q. Have you the same information with respect to the Hull plant?—A. No, we have not.

By the Chairman:

Q. Have you it for any other plant beside this one?—A. Only Toronto, sir.

The CHAIRMAN: We will stand adjourned until 3.30 o'clock this afternoon.

The committee adjourned to meet again this day at 3.30 o'clock p.m.

AFTERNOON SESSION

The committee resumed at 3.30 p.m.

A. B. SHEPHERD, examination resumed.

By Mr. Sommerville:

Q. Just while we are waiting for the typed copy of that gross profit statement which you read to us from Canada Packers' Toronto plant for last year, may I ask what efforts you made to get a gross profit statement from the Canada Packers for the whole of their operations over this period?—A. Immediately we were appointed I went down with Mr. Merson to see Mr. McLean, and we discussed their accounting records that were available; among other things I asked him if the accounts were prepared in a way which would enable us to obtain the gross profit figures. He told us no. I don't recall his exact words, but in effect he said that those figures would be of no value to them as packers. What they were interested in was the net departmental profit, and consequently they prepared their figures on that basis. We also spoke to the officers of Swifts and they told us substantially the same thing.

Q. In the case of Wilsil's, were those gross profit figures available in the form in which you wanted them when you went to that plant?—A. Not exactly, but we were able to build them up by reason of the fact that the operations were comparatively small.

Q. That is, with the single unit you were able to build up the gross profit figures?—A. Yes.

Q. And you were able to present those gross profit figures for the Wilsil plant?—A. Yes.

Q. And they are presented in the report and memorandum which has been read and which is in evidence?—A. Yes.

Q. And also for the Gainer plant, did you build them up or were they already available?—A. They were not available in the exact form, but we were able to build them up.

Q. You therefore can present, and have presented in the report you have read to the committee, the gross profit figures for Wilsil's and for Gainers over the five-year period?—A. Yes, whatever the period is which we examined.

Q. Then you have built up the gross profit figures on the Toronto plant alone of the Canada Packers for one year?—A. That is so.

Q. And Swifts for one year?—A. That is so.

Q. When you get those gross profit figures from Canada Packers and Swifts, does that not give you the spread between the price paid for the live stock and the price at which it is sold?—A. No.

Q. Why not?—A. Those gross profit figures include all departments in which the company is doing business, and they include in addition to live stock such other things as oils, butter, eggs, poultry and so forth.

Q. Combined figures?—A. Yes.

Q. And therefore it is impossible to segregate or separate all live stock alone from the other?—A. From the gross profits.

Q. From the gross profit figures in this?—A. Yes, except by going back to the individual 60 or 70 departments.

Q. And then building them up into a new set-up?—A. Yes.

Q. Now you have the figures—I think they have just been handed to you—in the typed gross profits statement for 1934 at the Toronto plant?—A. Yes.

Q. For the year ending when?—A. For the year ended March 30, 1933.

Mr. SOMMERVILLE: Give one to the reporter, please, and he will take that into the record now.

CANADA PACKERS LIMITED

TORONTO PACKING PLANT

Profit and Loss Account for the year ended March 30, 1933

Sales (including shipments to Branch Houses other Plants, etc.)		$20,308,982 57
Cost of Livestock, Materials and Packages Livestock and Other Raw Materials	$15,826,703 22	
Materials used for Ingredients	172,411 52	
Packages	658,808 04	
		16,657,922 78
Excess of Sales over Cost of Livestock, Materials and Packages		3,651,059 79
Expenses:		
Supplies—Purchased	$ 24,042 04	
Supplies—Transferred	5,865 04	
Labour	827,760 69

Net Loss after Interest at 6% on Capital Employed		161,687 91

*In addition to this amount further interest charges in excess of $100,000.00 are included in service and overhead Departments such as refrigeration, plant overhead, etc.

By Mr. Sommerville:

Q. Now, this profit and loss account of the Toronto packing plant for the year ended March 30, 1933, presumably shows a net profit of $203,206.32?—A. Yes, that is so.

Q. And that is after taking out of the statement the interest that has been charged to the Toronto plant?—A. As far as we were able to build it up; but I notice there is an additional $100,000 which could not be taken out.

Q. That is, you had not the necessary figures?—A. We hadn't the information available as to what items to apply them to.

Q. That is to say, in this profit and loss account, in the expense items as prepared on the company's figures, it showed a net loss of $161,687.91?—A. Yes.

Q. But in order to arrive at that loss, or rather in making that statement of loss, there was included in the expenses the sum of $364,894.23 for interest?—A. Plus $100,000.

Q. Plus $100,000 in the service and overhead departments?—A. Which we could not distribute.

Q. Which could not be distributed to each of those departments?—A. Yes.

Q. So that in the total amount there was the sum of $464.894.23 charged for interest?—A. Yes.

Q. And if you take out that interest charge, that shows a profit on operating for that year of what?—A. $300,000—$303,206.32.

Q. $303,206.32?—A. Yes.

Q. Which is turned into a loss if you charge back in this amount of interest?—A. 6 per cent interest.

Q. Are there interest items in some of the other expense items? Is there interest charged in some of the other expense items as well as in the two items to which you have referred?—A. There would be further interest under engine room, refrigeration and repairs, plant overhead, cafeteria, car routes and head office charges.

Q. There would be further interest?—A. Further interest which you can't determine. But this $100,000 is put in as an estimate to take care of that.

Q. The $100,000 is to take care of the items which you have referred to as being interest?—A. Yes, but we can't specifically allocate them.

Q. We will take it that, on this statement, the total amount of interest charged that you can, at the present time, see is the amount of $464,894.23?—A. That is so.

By Mr. Factor:

Q. What is the principle followed in charging interest? Have you not provided a reserve depreciation fund?—A. Well, it is a departmental charge. It is charged to each department and credited to a total amount in the final profit and loss account.

By Mr. Sommerville:

Q. It is an operating charge?—A. In other words, may I put it to you this way: That a department might show, without interest, a profit of $100,000, but by charging 6 per cent interest, you charge your $100,000 against that and the department would show no profit; but there would be a credit to interest in the final profit and loss account of $100,000.

By Mr. Factor:

Q. I understand that, but is it customary in this business to charge 6 per cent interest on the capital employed, as well as on the other items?—A. In this business?

Q. Yes?—A. It is in the larger plants.

By Mr. Sommerville:

Q. And in other businesses?—A. In some other businesses.

Q. In some other businesses it is also the practice, is it not?—A. Yes.

Q. I understand in departmental stores a similar practice is followed?—A. I don't know that that is the case. It is in some manufacturing plants.

Q. In some manufacturing plants it is followed?—A. Yes.

By Mr. Factor:

Q. Is this in addition to any reserve that is set up on the consolidated balance sheet?—A. It really can be called a bookkeeping entry. The object of it is so that the man who is operating a particular department, if he is going to break even on his department, he is charged there 6 per cent on the capital employed in it. That is really the object. But, of course, in the final analysis it is wiped out.

By Mr. Sommerville:

Q. That is shown in the profits of the company for the whole year?—A. Yes.

Q. Eventually it is thrown up in profits?—A. Yes.

Q. Whether it comes out of the operating department or whether it comes out of the interest account?—A. Exactly.

Q. It is shown then?—A. Yes.

Q. And then from that interest account of last year, these total charges run to something like $1,496,000?—A. Yes.

By Mr. Ilsley:

Q. I should think it would be wise to show the relative profit and loss of the various departments in charges of that sort?—A. Yes, it is really a sort of cost accounting procedure, to give each department some proportion of the total capital invested in it.

By Mr. Factor:

Q. So that it is shown in that net figure of $7,000,000 that you gave us a statement for?—A. Yes.

By Mr. Sommerville:

Q. It is fully reflected there?—A. Yes.

By the Chairman:

Q. Before we leave this statement, Mr. Shepherd, I might say that what we, of course, are particularly concerned in is the operating cost, to enable us to determine whether the spread is a reasonable spread. I understand from this statement that taking into consideration the sales of this Toronto packing plant and deducting from that the cost of the live stock, the materials that entered into it, the ingredients and the packages, it left something over $3,500,000, which approximated 18 per cent?—A. Yes, that is so.

Q. Then from that are deducted certain charges, and I want to ask you in regard to four of those charges. Here is an item of plant overhead, $218,000. Could you tell me just roughly—I don't want the items broken down—of what that consists?—A. It is a proportion of the fixed charges and head office charges.

Q. All right. Then we will drop down to the bottom and we find head office charges, $502,000. What is that?—A. This $502,000 is only part of the total head office and administrative expenses.

Q. Quite so, but what does it consist of?—A. It is really composed of a large number of different items—interest and labour. The only way you can get the actual details of that would be to go to the books and make an analysis of them.

Q. Does it not strike you as an extraordinary heavy charge? There is $720,000 for overhead and head office charges. Does that not strike you as an abnormally high amount?—A. It is very hard to express an opinion on that.

Q. Then, let us go a step further. In addition to that $720,000, there is an item of fixed charges, representing depreciation and insurance, of $240,000?—A. That would represent the depreciation applicable to the Toronto plant, plus the insurance.

Q. To which there could be no great objection, I will agree?—A. No.

Q. But what about these branch house commissions, $176,000?—A. Costs of selling beef through branch houses.

By Mr. Sommerville:

Q. That is an allowance to branch houses for commission on the sales of beef by those branch houses?—A. Yes.

Q. And charged to expenses of the Toronto plant?—A. Yes.

By the Chairman:

Q. That, of course, should be a part of the earning of the parent company, of the company itself. I am not objecting to it appearing here, but what I am trying to get at is what is a legitimate deduction from these rather extraordinary charges, in order to indicate what might be estimated as a reasonable return from this plant. For instance, these four items that I have just cited, amounting to $1,137,000 appear to me as exceedingly heavy charges for operations of this kind?—A. There is a large amount of labour in those figures.

Q. Quite so; I imagine clerical work, and so forth?—A. No, actual labour, part of this engine room.

Q. I am not touching the engine room at all. It is another $177,000?—A. Yes.

By Mr. Factor:

Q. What are those figures based on? How are they made up?—A. From their own books.

Q. Then you have the details of them, have you?—A. No, but the actual analysis of these accounts would be in the books of the company. We know where these came from.

Q. When you put down plant overhead at $218,000 odd, how did you arrive at that figure?

By the Chairman:

Q. Is that as it appears in their books? –A. In the departmental trading account. It appears in their books.

Q. It appears there as a charge?—A. Yes.

Q. Of course, unless one has an analysis, they won't get it?—A. You have got to analyze it.

Q. You could bury in that a tremendous number of things that might not be justified. That is the point I am trying to get at. It seems as if we were frightfully handicapped—at least I am, in my own mind, in arriving at a fair analysis of the spread that exists. Here we have a statement compiled from their own records, showing a loss in a department; but I confess very frankly that of this $1,137,000,—and there are other items I could pick out,—close analysis might also disclose perhaps unwarranted charges as against operations. It does not help us much to ascertain what is the spread. That is what worries me?—A. Well, of course, as I stated in the memorandum, that in the final analysis you have to go back to the net income; because you can't tell by taking an individual plant like this just what is included in it.

Q. In other words, about the only way in which we can estimate the extent to which the grower or producer, on the one hand, has had a fair deal, and the consumer on the other hand has been treated right, is to take the total disclosed net income of the company and also to estimate the weight of the reserve they have set up?—A. Yes, and take the percentage on the invested capital, and a percentage on the sales.

By Mr. Sommerville:

Q. That is on the net figure which they have produced from their books?—A. You mean this one?

Q. No, the net figure you have been taking.

By the Chairman:

Q. The one you gave us in your original statement where you showed one point something on sales, an average of 10 per cent?—A. Yes, that is net income.

Mr. SOMMERVILLE: That is net income as disclosed in their books.

By the Chairman:

Q. That was net income after making these heavy allowances for depreciation reserves?—A. Yes, that is so.

The CHAIRMAN: I confess it makes it very difficult.

By Mr. Sommerville:

Q. If these charges of a million dollars on the four items mentioned by the Hon. Mr. Stevens are excessive, then they reduce the profits of the year by the extent to which they are excessive?—A. Yes.

By Mr. Ilsley:

Q. For that plant?—A. For that plant.

By Mr. Sommerville:

Q. And that plant which we are now examining in respect of that $1,000,000 charge, had sales of $20,308,000?—A. Yes.

Q. While other plants of the company had sales of an additional $34,000,000 for last year, making a total of $54,000,000 of sales?—A. 1933 is $45,000,000.

Q. $45,000,000 for 1933?—A. Yes, that is so.

Q. The other plants outside of the Toronto plant had sales of $23,000,000?—A. Yes.

Q. And I presume similar profit and loss accounts for those plants would contain entries of a relatively similar character?—A. Yes.

Q. And relative in amount to those which are referred to in this statement?—A. Yes.

By Mr. Ilsley:

Q. But they would not total too much, would they?—A. There is no evidence that they would be.

Q. Do you know whether that is the case or not? You understand my question, do you? Take plant overhead, $218,000; head office charges, $502,000. If you had corresponding charges in each of the other plants, would the total be greater than the total plant overhead and the total head office charges or not, or do you know?—A. Well, the only way you can answer that question is to say that by comparison of the balance sheet there is nothing of that kind revealed.

By Mr. Sommerville:

Q. You don't know?—A. We know the total depreciation, for instance.

By the Chairman:

Q. What I am trying to get at is to what extent this is a fair reflection. Here is another item. Perhaps you can give us some explanation of this: Car route, salesmen's salaries, expenses, etc., $656,000?—A. That is the selling agency from which the product is retailed.

Q. That is a perfectly proper charge, but here again is where one is confronted with a difficulty when estimating whether an organization is economic in its operations; that is, in arriving at a conclusion, as I said before, of whether or not the producer on the one hand gets a square deal, and the consumer on the other?—A. Yes.

Q. One would have to take that $656,000 and add to it $502,000, which is the head office charges, which is a sort of over-riding charge, being the share of this plant of head office expenses?—A. Yes.

Q. That gives you in those two items alone, taking another view altogether from this other analysis, roughly $1,160,000?—A. Yes.

Q. I do not touch their depreciation, I do not touch plant overhead, and I do not touch branch house commission?—A. Of course, net income in that year was only $600,000.

Q. You mean for the whole company?—A. Yes, from the whole company.

Q. Quite so; but from the fact that that company shows a small net income, it does not necessarily follow that the plant has been economically operated and the public given a square deal, which, of course, is the very essence of our inquiry. I am trying to emphasize or to draw out, if I can, the weight of these figures. Taking the five sets of figures that I have indicated, you have $1,800,000 in that plant which is taken up in head office charges, fixed charges, depreciation, selling charges, branch house commissions and plant overhead, none of it actually operating cost or production?—A. Well, there is selling and administration. Car routes of course would be some.

Q. I am speaking about production costs. I am not saying that the things here should not be charged. Not at all. But I am trying to satisfy my own mind that the $1,800,000 is a fair sort of over-riding charge for these outside and overhead services and charges—A. Of course, the sales are $20,000,000. It only represents 5 per cent.

Mr. SOMMERVILLE: 7 per cent to 8 per cent.

Mr. FACTOR: We are not complaining that they are excessive. I think what the Chairman means, and in my opinion, I think we are unable to arrive at any decision about that.

The WITNESS: That is so.

By Mr. Factor:

Q. Is there nowhere in the books of the company where their head office charges are analysed in detail—A. Oh, you can obtain it, yes.

Q. It means a lot of work?—A. Yes.

By Mr. Young:

Q. Even then, would that be any revelation of efficiency or lack of it?—A. I don't know that you could draw that deduction from it. After all, the net income is the final test.

By Mr. Kennedy (Winnipeg):

Q. May I have your attention for a minute or two, Mr. Shepherd. Referring to the profit and loss account for the Toronto packing plant that I have before me, that is for the year ending March 30, 1933?—A. Yes.

Q. I understood you to say that for that year the Toronto plant showed a loss, is that right?—A. Yes, after charging interest at 6 per cent.

Q. Just let me get this now. In the year ending March 30, 1933, the Toronto plant, according to the statement as supplied by the Toronto plant of the Canada Packers, showed a loss for that year of how much?—A. $161,687.91.

Q. That loss would be carried through into the consolidated balance sheet of Canada Packers, Limited?—A. Consolidated profit and loss account.

Q. Yes, consolidated profit and loss account; it would be carried through?—A. Yes.

Q. We are up against this then, that that is where we started from with the consolidated profit and loss account for Canada Packers. We start with the net returns from each individual plant?—A. Yes.

Q. Of course if those are correct statements by the individual plant, all well and good. But to find out whether or not they are, you see the necessity of getting back and getting the individual statements, which you say can only be obtained with an amount of labour and time that is out of the question. Now, we get one year in the Toronto packing plant, and we come to analyse it, and as Mr. Stevens has pointed out, four items there total over a million dollars. I confess here that it is questionable as to whether or not those are proper charges. As a result of the charge that is charged in the profit and loss account, it reflects a net loss for the year assuming that they are proper charges?—A. That net loss includes 6 per cent interest, of course.

Q. Yes, but those items that Mr. Stevens has drawn attention to are so high that they raise the question whether they are proper charges against loss. Then the next step is: How are those built up? And we are faced with the answer: Well, we have not the details. It is not a matter of blame. It is to get it clear. The next step is: How are these built up, and we have not got the details?—A. No.

Mr. KENNEDY (*Winnipeg*): As I pointed out yesterday, we are just running into a blind alley in every line we take, and we are up against a stone wall in so far as getting at the figures of gross operations of these companies is concerned. There is where we land all the time, and these figures really do not lead us anywhere. We are up against a stone wall.

By the Chairman:

Q. Is there any statement available showing the consolidated profit and loss account and the surplus account, instead of using the consolidated—is there any statement showing how they make up their profit and loss account?—A. No, except the one published by Canada Packers Limited.

Q. Of course, that shows nothing?—A. That is true, but it is a result of that system.

By Mr. Kennedy (Winnipeg):

Q. One other point: you stated that the reason assigned by Mr. McLean for this system of book-keeping was that all they were interested in, so far as the branch plants are concerned, was the net profits; well, supposing those plants were showing a net loss each year, is it not reasonable to suppose that Canada Packers would be interested in delving into these figures and seeing how the losses arose?—A. I expect they would, yes.

Q. And in order to do that all the figures and all the facts will have to be available for them to see where losses arose?—A. But they would not wait for a year, they would have it at the end of the first operating period.

Q. If instead of losses there happened to be a falling off in the profits of the plant for the year, the natural procedure would be to examine the figures?—A. Yes, but they would not wait for a year.

Q. Therefore, it seems to me reasonable to suppose that, where the branch plants are showing a profit or a loss, that the central concern, Canada Packers Limited, would be interested in maintaining at all times an accountancy set-up in their individual plants which would be available to them at all times?—A. It is available, but it is not consolidated.

By Mr. Sommerville:

Q. It is available in 70 different figures, and you have to go into 70 different branches to find out what happens in 70 different departments; is not that the problem?—A. Into the main six plants.

Q. But in each of these plants in these various departments?—A. Yes, exactly.

By Mr. Kennedy (Winnipeg):

Q. And from the actuarial point of view is it suggested that it would take Canada Packers months to find out the situation in any given plant?—A. No, but you see they would not wait for a year, all they would have to do would be to consolidate a four-week period.

Q. Supposing Canada Packers Limited wanted this information from the individual plants instead of this committee, how long do you think it would take them to get that information from the individual plants?—A. I would say a considerable time.

Q. Do you mean days, weeks, or months?—A. It would take weeks, I think.

By Mr. Sommerville:

Q. It took you four weeks with four men to get that information for the one plant?—A. On the largest plant.

By Mr. Kennedy (Winnipeg):

Q. I realize the disadvantage of outside auditors going in there, it is quite different from company auditors. I cannot help but think that Canada Packers Limited, if they wanted that information as badly as we want it, could get it in a very short time?—A. They discontinued keeping it to avoid the cost.

Q. Well, the suggestion on these four items—this is a reasonable thought at least—here are four large items as a result of which is shown a loss on the year's operations for this plant. It might well be that considerable profits are buried in these items?—A. Where are they credited in the balance sheet, that is the question there.

Q. I do not know?—A. We know that.

Q. You know what?—A. We know that there are no concealed credits in the balance sheet; the point is, if they charge in operations some large amounts for services that they are not rendering or goods that they are not receiving, they have got to credit the amount somewhere.

By Mr. Sommerville:

Q. Mr. Kennedy means, for instance, if the charge of $656,000 is an unreasonable charge—if it should only be half—you cannot extract that from the consolidated balance sheet?—A. You mean, if it were actually expended, but unreasonable.

Q. Yes?—A. No, you could not detect it.

Q. In accountancy you cannot detect whether or not it is unreasonable, you can only detect whether or not it has been actually spent and reflected in the books?—A. Exactly.

Q. The question of its reasonableness or otherwise is not a matter of accountancy?—A. That is one for the management of the company.

Q. Just as you have indicated with respect to depreciation, that it is a matter not for accountancy, but you set out what are the facts charged in the books and show that if that same condition continues the whole depreciable plant would be wiped out in $6\frac{3}{4}$ years?—A. Yes.

Q. Then it is a matter of opinion for someone else to determine whether or not that basis is reasonable?—A. Yes.

Mr. KENNEDY *(Winnipeg)*: Mr. Chairman, I suggest that these respective companies, through their managing officials, be invited or requested to supply the committee with the information that is desired, to be outlined by counsel and yourself; and that if it is not furnished that they be summoned to come here, and be examined.

The CHAIRMAN: They will be available here for examination.

By Mr. Ilsley:

Q. I am at a loss to know just what we are after myself. I was not here yesterday, so I am at a disadvantage. I suppose the large sum charged at the Toronto plant for head office would mean that it would leave a much smaller sum to be charged to the smaller plants?—A. That is the case, yes.

Q. The total picture is not changed a bit?

The CHAIRMAN: That is not all there is to it, Mr. Ilsley.

Mr. ILSLEY: What is the rest of it?

Mr. SOMMERVILLE: Part of the difficulty, Mr. Ilsley, was that we were endeavouring to find the spread between the price paid for the product and the price at which the product was sold.

Mr. ILSLEY: Yes.

Mr. SOMMERVILLE: In trying to find that spread we met this difficulty, there was no consolidated statement of the operations of the company; and there being no consolidated statement, you could not get that spread. In order to make a consolidation of one plant to indicate the system followed, the auditors took four men four weeks to prepare this statement which is now submitted to us; and when it is prepared it is then found to contain these charges that are made against the Toronto plant on the sale of twenty million dollars worth of product.

Mr. ILSLEY: These auditors estimate the proper amount to be charged against the Toronto plant—is it in there?

The CHAIRMAN: No, it is the actual amount.

By Mr. Ilsley:

Q. Let me see, why did you take 4 weeks' time just to take these figures from the books of the company?—A. Because you have got to consolidate 70 departments for 13 operating periods, and 50 items in each statement for one year.

By Mr. Sommerville:

Q. This is not prepared as a single statement even the Toronto plant has not got a single statement.

Mr. ILSLEY: I see, I will not waste the time of the committee any longer on that.

The WITNESS: These are the papers (indicating large file) that were used to effect that consolidation.

Mr. SOMMERVILLE: Yes, and they make a large volume.

The WITNESS: That is what you have got to do, take each of these items and spread them so as to get your statement.

By Mr. Ilsley:

Q. Yes, then taking the head office charge, some $502,000, that is what the company says is the proper share of the head office charge to be entered against the Toronto plant?—A. That is so.

By Mr. Sommerville:

Q. And that item is spread through these various departments?—A. Yes.

Q. And when it is all gathered in from these departments it makes a total of $502,131?—A. Yes.

Mr. ILSLEY: It is part of our duty to determine whether that is excessive, and to me it looks as though that particular item of head office charge is excessive. I presume the same thought has occurred to the chairman.

The CHAIRMAN: Yes. You see, what you are going to be confronted with is the argument by the company that inasmuch as they show a loss on a set up of this kind, no one in the public can have been affected adversely; that is virtually what will be the argument. Now, the question is in my mind, and I ask it very candidly, whether that set-up does justify any such position.

Mr. ILSLEY: How are you going to find that out? You cannot find it out from the auditors figures of their business.

Mr. SENN: There is another very vital question that is raised I think: as Mr. Sommerville stated you want to find the spread between the price to the producer and the price to the consumer; but I think we were assured by Mr. McLean when he was here that the price to the producer was based on the price to the consumer. How could you estimate it on that basis if these figures are not consolidated so that some estimate of that price to the producer is available? That, seems to me, is the most important question of the lot; what basis did they work on to formulate that price to the producer, if he can't consolidate these figures and show the amount.

Mr. ILSLEY: I think all Mr. McLean meant was the market price of bacon in a general way related to what the consumer is paying; and specifically to what the consumer in Great Britain pays for the product.

Mr. SOMMERVILLE: What they could get, is the way to put it I think.

Mr. SENN: What I would like to get at is the basis on which the packer estimates his price to the producer.

The CHAIRMAN: Let me repeat, but without bias, my mystification with respect to plant overhead, car route sales charges, branch house commissions, fixed charges and depreciation, head office charges and interest; they total $2,258,000 out of $3,651,000 of that excess of 18 per cent that we mentioned a moment ago; and as I say, I am curious to know whether that is a fair and efficient set up—that is what I would like to see demonstrated.

Mr. FACTOR: Of course, there is this point also to consider: is that 18 per cent excess of sales over cost excessive in itself. I mean, there were $20,000,000 sales, for which over $16,000,000 were paid for in raw materials, leaving a gross balance of over $3,500,000, which represents 18 per cent. Taking it by itself, could we consider that 18 per cent excessive as a spread between the total return from sales and the cost of the material—leave the other items out of it altogether.

Mr. SOMMERVILLE: Then, of course, the charges against that are affected by the amount of the depreciation that is taken, whether or not that depreciation is taken on $18,000,000 of buildings, or $11,000,000 of buildings.

Mr. FACTOR: That is not the point I am making.

Mr. SOMMERVILLE: I quite appreciate your point, on the gross profit itself.

Mr. FACTOR: Yes, which they have shown with their sales amounting to over $20,000,000.

The CHAIRMAN: Before we let this stand I would like to ask Mr. Shepherd if he could give us a similar statement, if he has it ready, for Gainers and Wilsils, two of the smaller plants. Have you got that?

The WITNESS: We are preparing that.

The CHAIRMAN: Have you got Swifts?

The WITNESS: Gainers and Wilsils are already available in the reports we have submitted.

Mr. SOMMERVILLE: Swifts has been typed.

The CHAIRMAN: Where is Wilsils?

Mr. SOMMERVILLE: Wilsils went to the reporter. Here is Swifts.

The CHAIRMAN: I have before me Wilsils. I would like the committee to note that in this concern, which is one of the smaller independent concerns, the auditors were able to set up for each year the very story we were asking for; and taking December, 1933—last year—you have net sales $5,244,000; and the cost of goods sold $4,641,000; or a gross margin of $602,000 or 11·50 per cent.

Mr. YOUNG: That covers all of the same charges.

By the Chairman:

Q. Just let me ask that question: Mr. Shepherd, you have heard the figures I have just quoted?—A. Yes.

Q. Is that figure based upon the same type of calculation as that on which you based the Canada Packers' $20,000,000, less cost of live stock?—A. No, there are differences in the basis used. We had to adopt the packers' own figures there.

Q. Can you tell us what is included in this $4,641,000 in the Wilsil statement?—A. Of that $785,314.90 is manufacturing expenses, and $3,903,134.05 is purchases.

Q. Have you got the figure there for raw materials, ingredients and packages?—A. No, that is not shown separately, we cannot get it separate. The $3,900,000 would probably include packages.

Q. It is not a comparable figure then?—A. No, it is not.

Mr. SOMMERVILLE: But the gross margin that is shown in Wilsils, after taking off the cost of the goods sold which includes the manufacturing item, is: For 1933, 11·50 per cent; for 1932, 9·34 per cent; for 1931, 9·01 per cent; for 1930, 7·83 per cent; and for 1929, 7·07 per cent.

Mr. FACTOR: You mean the excess of sales over cost.

Mr. SOMMERVILLE: That is the gross margin in each of these years.

Mr. FACTOR: Have you the figures comparable to the 18 per cent of Canada Packers?

Mr. SOMMERVILLE: Not exactly, I think we can get a comparable figure in just a minute. Then, from that figure, there is deducted operating expenses for each of these years: in 1933, 5·94 per cent; for 1932, 7·06 per cent; for 1931, 6·08 per cent; for 1930, ·39 per cent; and for 1929, 3·86 per cent. That covers all the operations of the company, does it not?

The WITNESS: I have not those figures before me.

Mr. SOMMERVILLE: That is the only one that is available. You are referring now in your statement to the gross margin from which you deducted

operating expenses, and the only other item deducted is bond and mortgage interest.

The WITNESS: Yes.

By Mr. Sommerville:

Q. So that I take it that all of the operating expenses and manufacturing expenses are included in these two items; cost of goods sold, and operating expenses?—A. That is so.

Q. And then you deducted for bond mortgage interest: in 1933, 1·25 per cent; in 1932, 1·55 per cent; in 1931, 1·35 per cent; in 1930, 1·20 per cent; and in 1929, 1·07 per cent; and that reduces the amount of the net operating profit to 4·31 per cent—according to your statement here?—A. Yes.

Q. Or a total net operating profit of $225,776.86, on operations for the year of $5,200,000 sales.

By Mr. Factor:

Q. Is that figure comparable to the 18 per cent shown by Canada Packers? —A. It is not really comparable, they are arrived at on a different basis.

By Mr. Sommerville:

Q. Will the addition of the cost of the goods plus the operating statement give you any comparable figure?—A. It might be.

By Mr. Factor:

Q. Take your 1933 cost of goods, 11·50; and manufacturing 5·94—that is the total of 17·44 per cent—is that a comparable figure to the figures shown in the Canada Packers statement?—A. I could not say definitely without taking the figures and working that out.

Q. Is it approximately comparable?—A. I could not say that.

Q. Have you got any figures in the Wilsil statement showing what the sales were, the materials and live stock, and the difference in the two; have you got that?—A. The sales were $5,244,670.97.

Q. What is the next, live stock materials and packages?—A. $4,641,777.02.

Q. And the difference is what?—A. $602,893.95.

Q. And what percentage does that bear to the total?—A. 11·50 per cent.

Q. Then it is a comparable figure to the 18 per cent of Canada Packers? —A. No, the operating expenses of Wilsils are shown separately.

By Mr. Sommerville:

Q. That figure you have given as cost of materials includes the item for manufacturing in Wilsils of some $700,000?—A. Yes, that is so.

By Mr. Factor:

Q. Then the percentage would be less than if you exclude that $700,000? —A. It would be greater.

The CHAIRMAN: Well, supposing you take Swift's statement.

By Mr. Factor:

Q. Before you do that, Mr. Chairman, I just want to pursue this a little further. Is there any way in which you can show the Wilsil set up in the same way as that in which you showed the Toronto Packing plant. In the first three items at the Toronto Packing plant you have sales, cost of live stock, and the excess of sales over cost. Is there any way by which you can show it in the same way in the Wilsil operations for 1933?—A. No, the figures are not on a strictly comparable basis.

Q. Why, I cannot understand that?—A. Because the Wilsil figures are prepared to certain specifications, whereas Canada Packers figures are their own figures that we had to take off in the form in which they had them. If we had started in to adjust their figures we would never have been able to get it.

By Mr. Sommerville:

Q. That is, Wilsil's figures are adjusted, are they?—A. Yes, they are on a certain basis which we were asked to use.

Q. And Canada Packers could not be set up on that basis and completed?—A. Not without analyzing the whole accounts to bring them into the same heading.

Mr. YOUNG: In the case of Wilsil you have given us materials and then you have given us manufacturing, in the case of Canada Packers you have given us materials and then you have expenses; now, will these expenses cover more than the cost of manufacturing?

Mr. SOMMERVILLE: Oh yes, they cover the cost of selling.

The WITNESS: And head office expenses, etc.

Mr. YOUNG: If we add 11·50 per cent to the 5·94 per cent we get 17:44 per cent; and you still have to get the cost of selling to get the Wilsil proper figure.

The CHAIRMAN: Well now, are you through on that Mr. Factor? Mr. Shepherd, would you turn to Swifts account, that is a statement comparable to the one we were discussing a moment ago. I would like just to draw the attention of the committee to this, the Swifts account is the same as that one we have analyzed for Canada Packers; it shows sales of $7,859,000, which is almost 40 per cent of what Canada Packers sales were. Now, we have an item here, local selling, and teaming and trucking—local selling is $42,800, and teaming and trucking is $25,000; which is $68,000 (roughly) combined—would that item be comparable to the $656,000 salesmen's salaries, expenses and car routes.

The WITNESS: The salaries are shown in the $1,600,000, so it is not comparable.

Mr. SENN: Would salaries not be shown under head office charges?

The CHAIRMAN: In Swift's, you mean.

The WITNESS: In Swifts, yes.

The CHAIRMAN: The statement with respect to the Swift Canadian company will be entered in the record at this point.

SWIFT CANADIAN COMPANY LIMITED

Toronto Packing Plant

Profit and Loss Account for the year ended October 28, 1933

Sales (including shipments to Branch Houses, Other Plants, etc.) less Branch House Commissions on consignments, etc.			$ 7,859,685 83

Net Profit (before providing for Income War Tax)			$ 127,595 72

By Mr. Sommerville:

Q. That covers all salaries and head office as well, does it?—A. The car route department is not included in the Swift figures at all, but it is in the Packers.

By the Chairman:

Q. Where is it disclosed in Swifts?—A. It is a separate figure.

Q. It is not in this?—A. No, this is the packing plant.

Q. Well, take the Chicago administration; that would be your overhead, would it not?—A. Part of it.

Q. For head office overhead, that is $19,500 as against $500,000 in the other case?—A. They don't cover the same items at all.

Q. I can see they don't cover the same items, but I am trying to find out some common basis upon which we can estimate these things.

Mr. Senn: About the only way you can compare them is in the total, I am afraid.

By Mr. Factor:

Q. Take the item of buying in the Canada Packing. For buying expenses you have got $139,906 to buy $16,000,000 worth of goods; and you have got in the other statement, buying expenses of $5,610 to buy $7,000,000 worth of goods, less inventory—say over $6,000,000 worth of goods. Is that figure in any way comparable?—A. The packer figure includes salaries, and Swifts does not.

Q. No matter what we touch, we don't seem to be able to get anywhere.—A. Well, they are not prepared by the company on a comparable basis.

By Mr. Sommerville:

Q. That is, you take the company's own figure, at least, according to their own set up?—A. According to their own set up.

Q. And you gather them together in a consolidated statement?—A. That is all.

Q. To show how the net result was arrived at?—A. Yes.

The CHAIRMAN: I think you could safely say for our consolation that there has been nothing overlooked in that Canada Packers, has there?

Mr. SENN: May I point out that the total of expenses in both cases bear a pretty close relationship in the matter of percentages to the volume of sales.

The CHAIRMAN: That is what I was trying to find. I could not find it.

Mr. SENN: The total expenses in both those cases have a very close relationship to the volume of sales. One might be 35 per cent and the other 40 per cent.

The CHAIRMAN: You mean $977,000 as against $3,000,000?

Mr. SENN: $1,000,000 as against $7,859,000; and $3,000,000 against $20,000,000. There is some discrepancy, of course, but it is not so great after all.

By Mr. Sommerville:

Q. What did the total expenses in Packers amount to; what is the percentage toward sales?—A. We are just working that out.

Q. And also in Swifts?—A. 17 in Packers and 12½ in Swifts.

Q. 17 in Packers and 12½ in Swifts?—A. Yes. The one in Packers is before taking the interest out.

Q. Before taking the interest out?—A. I beg your pardon, that is with the interest out.

Q. That is with the interest out, and the interest is out in Swifts?—A. Yes.

Q. So that the total proportion of expenses to sales in Packers is 17 per cent, and in Swifts 12½ per cent?—A. Yes.

Mr. SENN: That is about as far as we can very usefully go, on those figures.

By Mr. Ilsley:

Q. Then the advantage is with Swifts again. When you subtract the cost of materials from the total sales, the spread is not as great. $3,651,000 is a greater percentage of $20,308,000 than $1,047,000 is of $7,859,000?—A. 13 against 18.

By Mr. Sommerville:

Q. Now, will you let us have the memorandum you have prepared on the Swift Canadian Company, prepared in the same way in your investigation as the other plants you have dealt with? This is a report on the Swift Canadian Company, similar to the report on Gainers, Wilsils and Canada Packers?—A. Yes.

Mr. FACTOR: I suppose we will get as much as we got with Canada Packers.

Mr. SOMMERVILLE: Well, I think perhaps you will get another picture.

The CHAIRMAN: All right, Mr. Shepherd, will you proceed with that?

Mr. SOMMERVILLE: This will be copied into the record at this point.

TORONTO, ONT., May 19, 1934.

MEMORANDUM *RE* SWIFT CANADIAN CO., LIMITED

In the following paragraphs we submit certain information prepared from the books and records of the Company and from information obtained by us from the Management, without independent verification of the accounts.

The scope of our investigation, which is outlined in general terms in the Resolution of Parliament, may be divided into the following specific enquiries:—

(*a*) To ascertain the Net Income earned on the capital invested in the Company after eliminating extraneous charges or credits to operations, if any.

(*b*) To determine the spread between the price paid to the producer of live stock and the price received by the Packer from the sale of the various products manufactured from live stock.

(*c*) To determine the dressed cost of hogs, beef and small stock purchased through (1) direct shipments (2) stockyards or markets and (3) truckers, and the percentage which each of these classes bears to the total purchases.

(*d*) To determine the hourly rates of wages paid by the Company, and to prepare a tabulation giving the number of employees paid at each of the different hourly rate.

In support of the information included in the memorandum we submit the following statements:—

Exhibit "A"—Balance Sheet as at October 28, 1933.

Exhibit " B "—Condensed statement of operations for the five years ended October 28, 1933.

Exhibit " C "—Statement showing percentage of Net Income to Invested Capital for the five years ended October 28, 1933.

Schedule " 1 "—Statement showing the estimated average loss on 150 Truck Hogs bought on April 11, 1934.

The accounts of Swift Canadian Co., Limited, are maintained at the plants at Toronto, Winnipeg, Edmonton, Moose Jaw, New Westminster and Moncton, and at numerous Branch Houses, Produce Houses and other selling organizations. Each of the plants receives periodical reports from the Branch Houses, etc., in its district and the net results so reported are incorporated in the Packing House books. The plants in turn submit monthly summaries of their operating results and financial position to the Toronto plant where the net profit or loss of the organiation is recorded.

Our examination was confined to the records maintained at the Toronto and Edmonton plants and in preparing this memorandum we have made use of the summaries and reports received from the remaining plants without verification.

(*a*) To ascertain the Net Income earned on the capital invested in the Company after eliminating extraneous charges or credits to operations, if any.

Capital.—On December 13, 1902, Letters Patent were granted under the authority of The Companies Act, 1902 (Dominion) incorporating J. Y. Griffin and Company, Limited, with a capital of $500,000 divided into 5,000 shares

of $100 each. Supplementary Letters Patent were granted on January 2, 1911, changing the name of the Company to Swift Canadian Co., Limited, and increasing the capital to $1,000,000 divided into 10,000 shares of $100 each. The capital was again increased by Supplementary Letters Patent on October 5, 1914, to $3,000,000 and on October 17, 1917, to $5,000,000, at which date all the shares were issued, the par value being $100. During the five years ended October 28, 1933, therefore, the capital of the Company was $5,000,000 divided into 50,000 shares of $100 each, on which no dividends were paid. There were no bonds outstanding during the period.

In Exhibit "A" we submit a Balance Sheet of the Company at October 28, 1933, prepared from the books of the Toronto plant and the monthly returns from the plants at Winnipeg, Edmonton, Moose Jaw, New Westminster, and Moncton, without independent confirmation.

Net Income.—A summary of the operating results for the five years ended October 28, 1933, is submitted in Exhibit "B". We are informed that the Company is controlled by Swift and Company, Chicago, although we are unable to substantiate this fact from the stock records since the capital stock is registered in the names of various individuals and we were unable to secure information as to the terms on which it is held.

For this reason and in an endeavour to determine whether the numerous transactions between the two Companies result in a loss to the Canadian Company we have made an examination of the inter-company account with Swift and Company, Chicago, maintained at the Toronto plant. If it were found that the Canadian Company made sales to the affiliated Companies below the prevailing market price or purchased merchandise from them above the prevailing market price, this fact would partially explain the low percentage of net income to sales of ·07 per cent for the five years under review, but no evidence of such a condition was found in the course of our examination of the Toronto accounts.

We are informed by the officials of the Company that sales to and purchases from the various affiliated Companies are made at the prevailing market price that would be used in dealing with outside purchasers or sellers. Our restricted examination, however, did not permit us to determine the facts in this connection.

In reviewing the operations consideration was given to such controllable items of cost as salaries, repairs and depreciation and adjustment of inventories which might have an important bearing on the net income of the Company as reported.

No items of sufficient relative importance were found to warrant adjustment of the earnings, but as our examination was restricted to the Toronto and Edmonton plants we are unable to say definitely that no such adjustments are required. Particular attention is directed to our remarks later on in this report regarding repairs and renewals.

The following comment is submitted on certain items included in the operating statement.

Sales.—The Company does not maintain any form of record from which the total sales of the organization as a whole can readily be tabulated. For the purpose of the annual Dominion Income Tax Returns the Company compiles a figure which, we are informed, represents sales to the public in Canada. This figure excludes, we understand, all inter-plant and inter-departmental transfers and also all transfers to associated companies in the United States and England. In the absence of any authentic total of sales we have accepted this figure without confirmation, and on this basis we have prepared a tabulation of the sales to the public in Canada, together with the percentage which the net income bears to such sales.

If the actual sales of the organization could be determined the resulting percentage of net income to sales would be lower than that shown in the following tabulation.

Period of 52 weeks ended:	Sales	Net Income	Percentage
	$ cts.	$ cts.	%
October 28, 1933	24,359,178 91	400,210 36	1·64
" 29, 1932	25,006,885 38	364,407 09	1·46
" 31, 1931	33,545,009 59	517,709 25	1·54
November 1, 1930	48,472,056 03	31,678 49	0·07
" 2, 1929	50,080,518 45	574,657 37	1·15
Total	181,463,648 36	124,429 88	
Average for period	36,292,729 67	24,885 97	0·07

Inventories.—We reviewed the basis of valuation used by the Toronto plant in compiling the inventories as at October 29, 1932, and October 28, 1933, and found that in general the prices were conservatively based on estimated cost or market, whichever was lower. We are informed that no material change was made in the basis of pricing inventories at the Toronto plant during the five years under review. No information is available at Toronto regarding the basis used in pricing the inventories at the other plants as the instructions in this connection are issued direct by the officials of Swift and Company in Chicago.

Depreciation Rates.—The following average rates have been used by the company in computing depreciation on fixed assets for Income Tax purposes during the period under review. The information was secured by us from the Income Tax Returns, but we have not reconciled the figures with the books except in the case of the Toronto plant.

Buildings	2·33%
Machinery	4·14
Office Furniture, Fixtures and Equipment	10·89
Delivery and Motor Equipment	25·36
Branch House Buildings and Equipment. (The asset value on which this percentage is based includes land, the book value of which is not known.)	3·34
Other Assets	3·93

Repairs and Renewals.—We are informed that the general policy of the company is to capitalize only those expenditures which will result in a saving or produce income of an amount which can actually be calculated and which will yield at least a nominal return on the investment. All other expenditures are charged to repairs. Renewals of complete units of the plant are, we understand, charged to the Depreciation Reserve, but the cost of renewing a part of a unit, even when the amount involved is substantial, is charged to repairs. In order to determine the effect of this policy on the repair costs of the company we made an examination of the jobs costing $500 and over, at the Toronto plant, which were charged to repairs during the five years under review, and in the following tabulation we show the yearly totals of items which might be considered as being of a capital nature and therefore chargeable to fixed asset accounts or depreciation reserves, but which actually were classified as repairs and accordingly charged against operations:

Period of 52 weeks ended:	Amount
	$ cts.
October 28, 1933	5,113 17
" 29, 1932	10,680 19
" 31, 1931	40,320 32
November 1, 1930	62,115 85
" 2, 1929	18,633 36
Total	136,862 89
Average for period	27,372 57

Executive Salaries.—The salaries paid to the executives of the company during the calendar year ended December 31, 1933, were secured from the returns made to the Income Tax Department, and in the case of salaries paid at the Toronto plant were checked with the company's salary records for the year 1933, the salaries of the three executive officers total $28,840.82.

Invested Capital.—In Exhibit "C" we submit a statement showing the relation which the Net Income bears to the average invested capital during the period under review, based on the annual Balance Sheets and Profit and Loss Accounts prepared by the company. The invested capital is represented by the par value of the issued capital stock, together with the accumulated surplus.

On the above basis the percentage of net income to invested capital is as follows:—

52 weeks ended:	Average Invested Capital	Net Income	Percentage to Invested Capital
	$ cts.	$ cts.	%
October 28, 1933	9,927,429 69	400,210 36	4·03
" 29, 1932	9,915,837 68	364,407 09	3·66
" 31, 1931	10,362,309 06	517,709 25	5·00
November 1, 1930	10,595,820 62	31,678 49	0·30
" 2, 1929	10,287,078 20	574,657 37	5·59
Total	51,088,475 25	124,429 88	
Average for period	10,217,695 11	24,885 97	0·24

(*b*) To determine the spread between the price paid to the producer of live stock and the price received by the Packer from the sale of the various products manufactured from live stock.

In the case of Swift Canadian Co., Limited, a large part of the Company's transactions are represented by the purchase, manufacture and sale of products which are not derived from live stock. The business is divided into numerous departments, each of which is engaged in the handling of a particular product or group of related products, and the accounting records of the Company are designed to conform to this division and furnish separate operating results for each department. In the case of live stock certain products pass through a number of departments and in the process, products derived from other species of live stock are combined and sold as one finished product.

The Company does not maintain any records from which the spread between cost and selling price can be ascertained, but to secure approximate net gains or losses for their own information the officials have "Killing and Cutting Tests" made from time to time and by the use of estimates of the net realization from each product they arrive at the estimated gain or loss on the sale of an average live animal. In Schedule "1" we submit a summary of a typical "Killing and Cutting Test" of 150 truck hogs bought on April 11, 1934, which shows that the average loss amounted to 15·84 cents per 100 pounds of live weight. As, however, these "tests" cannot be reconciled with the actual operating results of the Company we feel that they are of little, if any, value in determining the actual net loss or gain on a live animal.

For the reasons stated above we are unable to determine the spread between the price paid to the individual producer of live stock and the price received by the Packer from the sale of the resulting fresh and manufactured products, and we are therefore forced to substitute for this enquiry consideration as to whether the Packer receives a reasonable or an excessive return (*a*) on the capital invested

and (b) on the sales made to the public. The information necessary to arrive at a conclusion on these points is submitted in the section of this memorandum dealing with invested capital and sales, the average return shown being ·24 per cent on invested capital and ·07 per cent on sales.

(c) To determine the dressed cost of hogs, beef and small stock purchased through (1) direct shipments (2) stockyards or markets and (3) truckers, and the percentage which each of theses classes bears to the total purchases.

The above information has been secured from the Toronto and Edmonton plants in connection with what are termed by the Company "Mixed Medium" hogs (excluding the following grades; No. 4, Heavy, Extra Heavy, Stags, Cripples and Shops) for the three periods of four weeks each ended September 27, 1933, December 27, 1933 and March 28, 1934, and is summarized below.

—	Direct shipments	Stockyards or markets	Truckers	Test lots, etc.

*Average cost per 100 pounds dressed weight, not including killing and dressing expenses and before deducting value of by-products.
†Percentage of total killed.

The current prices paid for hogs at the Toronto plant are based on the market prices for the bacon grade with the following differentials on or off the bacon grade:

Select Premium of $1 per head above the bacon.
Butcher Discount of $1 per head below the bacon.
Light Discount of $1 per head below the bacon.
Heavy Discount of $1.50 per head below the bacon.
Extra Heavy Discount of $1 to $1.50 per 100 pounds below the bacon.
Sow Discount of $2.50 per 100 pounds below the bacon.
Stags Discount varies.

The corresponding differentials in use at the Edmonton plant are as follows:

Select Premium of 50 cents per 100 pounds above the bacon.
Butcher Discount of 50 cents per 100 pounds below the bacon.
Light and Shop Discount of $1 per 100 pounds below the bacon.

Heavy Discount of $1.25 per 100 pounds below the bacon.
Extra Heavy Discount of $2 per 100 pounds below the bacon.
Rough Discount of $3.50 per 100 pounds below the bacon.
Smooth Sows Discount of $2.50 per 100 pounds below the bacon.
All other Sows Discount of $3 per 100 pounds below the bacon.
Stags Discount varies.
Cripples Discount of $2.50 per 100 pounds below the bacon.

From the records maintained by the Company it is not possible to determine whether the Company gains an additional profit through the operation of the differentials before mentioned. After the hogs are dressed and cut they lose their identity in the plant, and the product is sold at the most advantageous market price.

The average dressed cost of all classes of cattle, veal, sheep and lambs at the Toronto plant for the two weeks ended March 31, 1934, are tabulated on the following page. Prior to this period the records maintained by the Company did not show the distribution of the purchases under the required headings.

—	Direct Shipments	Stockyards or markets	Truckers
	$ cts.	$ cts.	$ cts.

Lambs*	15 80	15 88	12 53
	%	%	%
Cattle (all classes)†	6·0	91·1	2·9
Calves " †	18·5	73·0	8·5
Sheep†	4·2	86·9	8·9
Lambs (42·6 per cent of lambs killed were transferred from the feed lot)†	9·3	47·7	0·4

*Average cost per 100 pounds dressed weight included estimated killing and dressing expenses and less estimated value of by-products for the two weeks ended March 31, 1934.
†Percentage of total killed.

The records at the Edmonton plant are not designed to furnish the foregoing statistics relating to cattle and small stock.

(*d*) To determine the hourly rates of wages paid by the Company, and to prepare a tabulation giving the number of employees paid at each of the different hourly rates.

In the following table we submit information in connection with the Toronto and Edmonton plants showing the number and percentage of the Company's employees, not including office clerks, engaged at various hourly and weekly rates for the week ended March 24, 1934. In the case of the Toronto plant the wage rates include the regular bonuses, but the rates for the Edmonton plant represent the basic rates only aggregating $5,372.67 the bonuses amounting to $212.39 having been excluded.

The average hourly rates, including bonus, paid to all employees of the Toronto plant who are engaged on an hourly basis for the weeks ended March 24, 1934 and October 7, 1933, were 43¼ cents and 38½ cents respectively. The average base rate, not including bonus, paid to the same class of employee at the Edmonton plant for the week ended March 24, 1933, was 37 cents per hour.

Our examination of the records relating to payrolls at the Toronto and Edmonton plants indicates that none of the Company's employees are on piece-work, but in a large number of departments a bonus system is in operation whereby both foremen and workmen receive a premium for units produced in excess of a pre-determined standard. We note that in the departments operating under this scheme, practically every employee participates in the weekly bonus payment. We are informed that employees are guaranteed a 40 hour week to that extent no employee is required to "stand-by" in his own time. Our examination of the payrolls over a period did not disclose any evidence to the contrary.

At the Toronto plant the basis of employment for foremen is a 50 hour week and for workmen a 48 hour week. An examination of the payrolls for the weeks ended October 7, 1933, December 2, 1933 and March 24, 1934, disclose that, subject to a general increase of ten per cent on October 7, 1933, the rates were substantially the same as those given in the foregoing tabulation.

By Mr. Sommerville:

Q. I do not think you need to read that first part, about the scope of the investigation. It will be copied in?—A. All right.

The accounts of Swift Canadian Company Limited are maintained at the plants at Toronto, Winnipeg, Edmonton, Moose Jaw, New Westminster and Moncton, and at numerous branch houses, produce houses and other selling organizations. Each of the plants receive periodical reports from the branch houses, etc., in its district and the net results so reported are incorporated in the packing house books. The plants in turn submit monthly summaries of their operating results and financial position to the Toronto plant where the net profit or loss of the organization is recorded.

Our examination was confined to the records maintained at the Toronto and Edmonton plants and in preparing this memorandum we have made use of the summaries and reports received from the remaining plants without verification.

Q. You found in the Swift plants the same practice of accounting as you found in Canada Packers?—A. Yes, that is so.

Q. That is, the accounts being maintained by departments. You had in Swifts how many departments?—A. Over 70.

Q. Over 70 departments, and no consolidated statement of the operations?—A. That is so.

Q. In any one plant, or in Canada?—A. That is so.

Q. Will you just proceed?—A. Yes.

(*a*) To ascertain the net income earned, capital invested in the company after eliminating the various charges or credits to operation, if any.

Capital: On December 13, 1902, letters patent were granted under the authority of the Companies Act, 1902 (Dominion) incorporating J. Y. Griffin

& Company, Limited, with a capital of $500,000 divided into 5,000 shares of $100 each. Supplementary letters patent were granted on January 2, 1911, changing the name of the company to Swift Canadian Company, Limited, and increasing the capital to $1,000,000, divided into 10,000 shares of $100 each. The capital was again increased by supplementary letters patent on October 5, 1914, to $3,000,000 and on October 17, 1917, to $5,000,000, at which date all the shares were issued, the par value being $100. During the five years ended October 28, 1933, therefore, the capital of the company was $5,000,000 divided into 50,000 shares of $100 each, on which no dividends were paid. There were no bonds outstanding during the period.

Q. Throughout the entire five years, no dividends?—A. No.

Q. No bonds, and no interest on bonds?—A. No.

Q. And no interest on borrowed money?—A. No, that is true.

Q. They had a loan from the Chicago office during that period of the sum of $5,000,000?—A. Approximately.

Q. Approximately $5,000,000?—A. At one period.

Q. On which no interest was paid?—A. That is so.

Q. Will you continue?—A. In Exhibit "A" we submit a balance sheet of the company at October 28, 1933, prepared from the books of the Toronto plant and the monthly returns from the plants at Winnipeg, Edmonton, Moose Jaw, New Westminster and Moncton, without independent confirmation.

Q. Before you go farther, that balance sheet shows at that date, October 28, 1933, a surplus of $5,127,398.32?—A. That is so.

Q. And that was after they had paid back to the Chicago office the money that had been borrowed from that office?—A. Yes.

Q. The net position being left that they had this surplus in excess of the entire capital issue of the company?—A. Yes.

Q. Will you proceed?—A. Net Income: A summary of the operating results for the five years ended October 28, 1933, is submitted in Exhibit "B." We are informed that the company is controlled by Swift & Company, Chicago, although we are unable to substantiate this fact from the stock records since the capital stock is registered in the names of various individuals, and we were unable to secure information as to the terms on which it is held.

For this reason and in an endeavour to determine whether the numerous transactions between the two companies result in a loss to the Canadian company we have made an examination of the inter company account with Swift & Company, Chicago, maintained at the Toronto plant. If it were found that the Canadian company made sales to the affiliated company below the prevailing market price or purchased merchandise from them above the prevailing market price, this fact would partially explain the low percentage of net income to sales of 0·07 per cent for the five years under review, but no evidence of such a condition was found in the course of our examination of the Toronto accounts.

Q. That is the five year operations of this company showed an average of net income to sales of ·07 per cent, is that correct?—A. Yes, that is so.

We are informed by the officials of the company that sales to and purchases from the various affiliated companies are made at the prevailing market price that would be used in dealing with outside purchasers or sellers. Our restricted examination, however, did not permit us to determine the facts in this connection.

In reviewing the operations consideration was given to such controllable items of cost as salaries, repairs and depreciation and adjustment of inventories which might have an important bearing on the net income of the company as reported.

No items of sufficient relative importance were found to warrant adjustment of the earnings, but as our examination was restricted to the Toronto and Edmonton plants we are unable to say definitely that no such adjustments are required. Particular attention is directed to our remarks later on in this report regarding repairs and renewals.

The following comment is submitted on certain items included in the operating statement.

Sales: The company does not maintain any form of record from which the total sales of the organization as a whole can readily be tabulated. For the purpose of the annual Dominion income tax returns the company compiles a figure which, we are informed, represents sales to the public in Canada. This figure excludes, we understand, all inter-plant and inter-departmental transfers and also all transfers to associated companies in the United States and England. In the absence of any authentic total of sales we have accepted this figure without confirmation, and on this basis we have prepared a tabulation of the sales to the public in Canada, together with the percentage which the net income bears to such sales.

If the actual sales of the organization could be determined the resulting percentage of net income to sales would be lower than that shown in the following tabulation.

Period of 52 weeks ended:	Sales	Net income	Percentage
October 28, 1933	$24,359,178 91	$400,210 36	1.64

Q. 1·64 per cent represents the percentage of net income to the sales of 1933?—A. Yes.

Q. May I just at this point ask you if that percentage in Canada compares with the percentage of Swifts in the United States? I thought you had that figure readily available?—A. We will look it up, and give it to you.

Period of 52 weeks ended:	Sales	Net income	Percentage
October 28, 1933	$ 24,359,178 91	$400,210 36	1.64
October 29, 1932	25,006,885 38	364,407 09	1.46
October, 31, 1931	33,545,009 59	517,709 25	1.54
November 1, 1930	48,472,056 03	31,678 49	0.07
November 2, 1929	50,080,518 45	574,657 37	1.15
Total	$181,463,648 36	$124,429 88	
Average for period	$ 36,292,729 67	$ 24,885 97	0.07

Inventories: We reviewed the basis of valuation used by the Toronto plant in compiling the inventories as at October 29, 1932, and October 28, 1933, and found that in general the prices were conservatively based on estimated cost or market, whichever was lower. We are informed that no material change was made in the basis of pricing inventories at the Toronto plant during the five years under review.

Q. So that throughout the five years they had accepted as a basis of inventory whichever was lower, cost or market?—A. Cost or market.

Q. And they made no such deductions as half a cent a pound as we found in Canada Packers, or any additional deductions that were found in Canada Packers?—A. No.

Q. They adopted the same principle as Wilsils?—A. Yes.

Q. In making inventory valuation?—A. Yes. No information is available at Toronto regarding the basis used in pricing the inventories at the other plants as the instructions in this connection are issued direct by the officials of Swift & Company in Chicago.

Depreciation rates: The following average rates have been used by the company in computing depreciation on fixed assets for income tax purposes during the period under review. The information was secured by us from

the income tax returns, but we have not reconciled the figures with the books except in the case of the Toronto plant.

	Per Cent
Buildings..	2·33
Machinery..	4·14
Office Furniture, Fixtures and Equipment..	10·89
Delivery and Motor Equipment..	25·36
Branch House Buildings and Equipment (The asset value on which this percentage is based includes land, the book value of which is not known)..	3·34
Other Assets..	3·93

Repairs and Renewals: We are informed that the general policy of the company is to capitalize only those expenditures which will result in a saving or produce income of an amount which can actually be calculated and which will yield at least a nominal return on the investment. All other expenditures are charged to repairs. Renewals of complete units of the plant are, we understand, charged to the depreciation reserve, but the cost of renewing a part of a unit, even when the amount involved is substantial, is charged to repairs. In order to determine the effect of this policy on the repair costs of the company we made an examination of the jobs costing $500 and over, at the Toronto plant, which were charged to repairs during the five years under review, and in the following tabulation we show the yearly totals of items which might be considered as being of a capital nature and therefore charegable to fixed asset accounts or depreciation reserves, but which actually were classified as repairs and accordingly charged against operations:

Period of 52 weeks ended:	Amount
October 28, 1933..	$ 5,113 17
October 29, 1932..	10,680 19
October 31, 1931..	40,320 32
November 1, 1930..	62,115 85
November 2, 1929..	18,633 36
Total..	$ 136,862 89
Average for period..	$ 27,372 57

Executive Salaries: The salaries paid to the executives of the company during the calendar year ended December 31, 1933, were secured from the returns made to the Income Tax Department, and in the case of salaries paid at the Toronto plant were checked with the company's salary records for the year 1933.

By the Chairman:

Q. Give us the total amount for the three?—A. For three executives, the total is $28,840.82.

Invested Capital: In Exhibit "C" we submit a statement showing the relation which the net income bears to the average invested capital during the period under review, based on the annual balance sheets and profit and loss accounts prepared by the company. The invested capital is represented by the par value of the issued capital stock, together with the accumulated surplus.

On the above basis the percentage of net income to invested capital is as follows:—

Period of 52 weeks ended:	Average invested capital	Net income	Percentage to invested capital
October 28, 1933	$ 9,927,429 60	$400,210 36	4.03
October 29, 1932	9,915,837 68	364,407 09	3.66
October 31, 1931	10,362,309 06	517,709 25	5.00
November 1, 1930	10,595,820 62	31,678 49	0.30
November 2, 1929	10,287,078 20	574,657 37	5.59
Total	$51,088,475 25	$124,429 88	
Average for period	$10,217,695 11	$ 24,885 97	0.24

By Mr. Sommerville:

Q. The fact remains that of the $10,217,695.11, of average invested capital, $5,000,000 of that represents the original capital invested?—A. Yes.

Q. As shown by the capital stock issued; and $5,127,398.32 represents accumulated profits.

Q. They had accumulated profits in excess of the original capital invested?—A. Yes.

Q. Have you got that figure that you were looking up for us as to Swifts?—A. Swifts is 2 per cent.

Q. Swifts earnings in the United States for the period of October 28, 1933?—A. That is the return.

Q. Of Swifts?—A. Yes, but all the consolidated companies.

Q. Of the Swift Company?—A. Yes.

Q. What was your answer?—A. 2 per cent.

Q. All right, will you proceed?—A. Yes.

(*b*) To determine the spread between the price paid to the producer of livestock and the price received by the packer from the sale of the various products manufactured from livestock.

In the case of the Swift Canadian Co., Limited, a large part of the company's transactions are represented by the purchase, manufacture and sale of products which are not derived from livestock. The business is divided into numerous departments, each of which is engaged in the handling of a particular product or group of related products, and the accounting records of the company are designed to conform to this division and furnish separate operating results for each department. In the case of livestock certain products pass through a number of departments and in the process, products derived from other species of livestock are combined and sold as one finished product.

The company does not maintain any records from which the spread between cost and selling price can be ascertained, but to secure approximate net gains or losses for their own information the officials have "Killing and Cutting Tests" made from time to time and by the use of estimates of the net realization from each product they arrive at the estimated gain or loss on the sale of an average live animal. In Schedule "I" we submit a summary of a typical "Killing and Cutting Test" of 150 truck hogs bought on April 11, 1934, which shows that the average loss amounted to 15·84 cents per 100 pounds of live weight. As, however, these "tests" cannot be reconciled with the actual operating results of the company we feel that they are of little, if any, value in determining the actual net loss or gain on a live animal.

For the reasons stated above we are unable to determine the spread between the price paid to the individual producer of live stock and the price received by the packer from the sale of the resulting fresh and manufactured products, and we are therefore forced to substitute for this inquiry consideration as to whether the packer receives a reasonable or an excessive return (*a*) on the capital invested and (*b*) on the sales made to the public. The information necessary

to arrive at a conclusion on these points is submitted in the section of this memorandum dealing with invested capital and sales, the average return shown being .24 per cent on invested capital and .07 per cent on sales.

By Mr. Factor:

Q. Why do you call invested capital of $5,000,000 a surplus?—A. Because that might have been drawn out by the company, but was left in.

By Mr. Sommerville:

Q. In dividends. The shareholders have that amount invested. That is your explanation?—A. Yes, it is invested in assets.

(*c*) To determine the dressed cost of hogs, beef and small stock purchased through (1) direct shipments (2) stockyards or markets and (3) truckers, and the percentage which each of these classes bears to the total purchases.

The above information has been secured from the Toronto and Edmonton plants in connection with what are termed by the company "Mixed Medium" hogs (excluding the following grades: No. 4, Heavy, Extra Heavy, Stags, Cripples and Shops) and for the three periods of four weeks each ended September 27, 1933, December 27, 1933 and March 28, 1934, and is summarized below.

—	Direct shipments	Stockyards or markets	Truckers	Test lots, etc.
	$ cts.	$ cts.	$ cts.	$ cts.
Toronto—				
4 weeks ended Sept. 27, 1933*	9 83	9 49	9 44	9 74

*Average cost per 100 pounds dressed weight not including killing and dressing expenses and before deducting value of by-products.

†Percentage of total killed.

Q. In Edmonton they get 97 per cent of their entire kill outside of the stockyards?—A. Outside of the stockyards.

Q. And only 2·6 per cent in the stockyards?—A. Yes.

The current prices paid for hogs at the Toronto plant are based on the market prices for the bacon grade with the following differentials on or off the bacon grade:

Select—Premium of $1 per head above the bacon.
Butcher—Discount of $1 per head below the bacon.
Light—Discount of $1 per head below the bacon.
Heavy—Discount of $1.50 per head below the bacon.

Extra Heavy—Discount—of $1 to $1.50 per 100 pounds below the bacon.
Sow—Discount of $2.50 per 100 pounds below the bacon.
Stags—Discount varies.
The corresponding differentials in use at the Edmonton plant are as follows:
Select—Premium of 50 cents per 100 pounds above the bacon.
Butcher—Discount of 50 cents per 100 pounds below the bacon.
Light and Shop—Discount of $1 per 100 pounds below the bacon.
Heavy—Discount of $1.25 per 100 pounds below the bacon.
Extra Heavy—Discount of $2 per 100 pounds below the bacon.
Rough—Discount of $3.50 per 100 pounds below the bacon.
Smooth Sows—Discount of $2.50 per 100 pounds below the bacon.
All other sows—Discount of $3 per 100 pounds below the bacon.
Stags—Discount varies.
Cripples—Discount of $2.50 per 100 pounds below the bacon.

From the records maintained by the company it is not possible to determine whether the company gains an additional profit through the operation of the differentials before mentioned. After the hogs are dressed and cut they lose their identity in the plant, and the product is sold at the most advantageous market price.

The average dressed cost of all classes of cattle, veal, sheep and lambs at the Toronto plant for the two weeks ended March 31, 1934, are tabulated on the following page. Prior to this period the records maintained by the company did not show the distribution of the purchases under the required headings.

—	Direct shipments	Stockyards or markets	Truckers
	$ cts.	$ cts.	$ cts.
Toronto—			
Cattle (all classes)*	9 07	8 16	6 30
Calves " *	8 30	10 21	9 13
Sheep*	4 95	7 66	5 71
Lambs*	15 80	15 88	12 53

*Average cost per 100 pounds dressed weight including estimated killing and dressing expenses and less estimated value of by-products for the two weeks ended March 31, 1934.

Q. With reference to lambs, the stockyard lambs cost $3.35 per 100 pounds more than the truckers?—A. Yes.

Q. And they paid for stockyard sheep $1.95 per 100 pounds more than for truckers?—A. Yes.

Q. And $1.08 per 100 pounds more for stockyard calves than for trucker calves?—A. Yes.

Q. And for cattle of all classes, $1.86 per 100 more?—A. Yes.

Q. Will you continue?—A. Yes.

PERCENTAGE OF TOTAL KILLED

Lambs (42·6 per cent of lambs killed were transferred from the feed lot)†	9·3	47·7	0·4

† Average cost per 100 pounds dressed weight including estimated killing and dressing expenses and loss estimated value of by-products for the two weeks ended March 31, 1934.

86332—154½

The records at the Edmonton plant are not designed to furnish the foregoing statistics relating to cattle and small stock.

Q. In every one of these cases Swifts paid the full yardage charge, or the full charge on the purchase of direct shipments of cattle, calves, sheep and lambs, as you have given us?—A. That is so.

Q. 6 cents for hogs, 10 cents for sheep and lambs, 12 cents for calves and 25 cents for cattle?—A. That is so.

Q. So that in all of these prices, whether they buy direct from the trucker or stockyards, those charges are the same?—A. Yes, that is so.

Q. And that would mean that these net amounts that are paid in the stockyards in excess would be reflected in larger amounts to the farmers?—A. Yes, that is so.

Q. Will you continue?—A. Yes.

(*d*) To determine the hourly rates of wages paid by the company, and to prepare a tabulation giving the number of employees paid at each of the different hourly rates.

In the following tables we submit information in connection with the Toronto and Edmonton plants showing the number and percentage of the company's employees, not including office clerks, engaged at various hourly and weekly rates for the week ended March 24, 1934. In the case of the Toronto plant the wage rates include the regular bonuses, but the rates for the Edmonton plant represent the basic rates only aggregating $5,372.67, the bonuses amounting to $212.39 having been excluded.

Q. When you are referring to bonuses, just tell us what you mean by that? There is a system in operation in this plant?—A. Yes, the Bedoe system.

Q. There is a system in operation in this plant known as the Bedoe system. Have you referred to that in your statement?—A. Yes.

Q. What is that system?—A. May I read this?

Q. Yes?—A. Our examination of the records relating to payrolls at the Toronto and Edmonton plants indicates that none of the company's employees are on piecework, but in a large number of departments a bonus system is in operation whereby both foremen and workmen receive a premium for units produced in excess of a predetermined standard. We note that in the departments operating under this scheme, practically every employee participates in the weekly bonus payment. We are informed that employees are guaranteed a 40-hour week and to that extent no employee is required to "stand-by" in his own time. Our examination of the payrolls over a period did not disclose any evidence to the contrary.

By the Chairman:

Q. Before you leave that: the schedule which I have before me shows an hourly rate, and I notice that there is only about 3 per cent of the employees who are paid less than 30 cents an hour. Now, in that statement which you are speaking of, does this 30 cents an hour include the bonus?—A. These figures do include the bonus, yes.

Q. They include the bonuses?—A. Yes.

Q. Quite?

Mr. SOMMERVILLE: In other words, the wage scale here appears to be higher than any of the other plants you have examined; that is, Swifts.

The CHAIRMAN: There is a smaller number, with the exception of Hunnisett's, of employees in the lower paid categories.

By Mr. Sommerville:

Q. Yes, I see your average for the Toronto plant is 43¼ cents per hour, and the Edmonton plant is 37 cents per hour, not including the bonus in the Edmonton plant; is that correct?—A. Yes, that is correct.

Mr. FACTOR: The weekly wage at Toronto averages $18.31—no, you have not got the average.

The CHAIRMAN: The weekly list is down below that.

By Mr. Sommerville:

Q. That is the weekly rates and the bonuses?—A. No, the average on that would not be very informative.

Mr. SOMMERVILLE: If you will just copy the rates at this point, Mr. Reporter.

Tables of rates follow:

13 01– 14 00	1	·31
14.01– 15 00	1	·31
15.01– 16.00	2	·63
16.01– 17.00	2	·63
17.01– 18.00	2	·63
20 01– 25 00	15	4·70
30.01– 35.00	1	·31

The average hourly rates, including bonus, paid to all employees of the Toronto plant who are engaged on an hourly basis for the weeks ended March 24, 1934 and October 7, 1933, were 43¼ cents and 38½ cents respectively. The average base rate, not including bonus, paid to the same class of employee at the Edmonton plant for the week ended March 24, 1933, was 37 cents per hour.

At the Toronto plant the basis of employment for foremen is a 50 hour week and for workmen a 48 hour week. An examination of the payrolls for the weeks ended October 7, 1933, December 2, 1933 and March 24, 1934, discloses that, subject to a general increase of ten per cent on October 7, 1933, the rates were substantially the same as those given in the foregoing tabulation.

By Mr. Factor:

Q. Has there been any reduction in wages during the last three years?—A. I cannot say for certain.

By Mr. Sommerville:

Q. There was, at any rate, an increase in October 1933?—A. In October 1933.

By Mr. Kennedy (Peace River):

Q. Can you give us the total salary?—A. Of all, or executives.

Q. Both?—A. We have given you the executives.

Q. You have?—A. Yes, I have not the office staff.

By Mr. Sommerville:

Q. Then, with respect to the other plant examined, Hunnisett; this is a small plant recently built at Toronto?—A. Yes. My memorandum in connection with this plant is as follows:

MEMORANDUM RE F. HUNNISETT, JR.

In the following paragraphs we submit certain information prepared from the certified accounts of the auditors of F. Hunnisett, Jr., from the books and records and from information obtained by us from the management, without independent confirmation of the accounts.

The scope of our investigation, which is outlined in general terms in the Resolution of Parliament, may be divided into the following specific enquiries.

(*a*) To ascertain the Net Income earned on the capital invested in the business after eliminating extraneous charges or credits to operations, if any.

(*b*) To determine the spread between the price paid to the producer of live stock and the price received by the Packer from the sale of the various products manufactured from live stock.

(*c*) To determine the dressed cost of hogs, beef and small stock purchased through (1) direct shipments (2) stockyards or markets, and (3) truckers, and the percentage which each of these classes bears to the total purchases.

(*d*) To determine the hourly rates of wages paid by the Company and prepare a tabulation giving the number of employees paid at each of the different hourly rates.

In support of the information included in the memorandum we submit the following statements:

Exhibit "A"—Balance Sheet as at December 31, 1933.

Exhibit "B"—Condensed Statement of Operations for the year ended December 31, 1933.

Exhibit "C"—Statement showing percentage of Net Income to Invested Capital for the year ended December 31, 1933.

(*a*) To ascertain the Net Income earned on the capital invested in the business after eliminating extraneous charges or credits to operations, if any.

Capital:—The proprietor's capital as at December 31, 1932, is shown in the audited accounts as $7,216.24, from which should be deducted an overdraft in his current account of $1,124.48, making the proprietor's equity $6,091.76 at December 31, 1932. There was, however, a liability to Bankers at that date amounting to $121,239.45 which amount was secured to the Bank by a pledge of the assets of the business and a guarantee of the proprietor supported by his personal securities.

In Exhibit "A" we submit a Balance Sheet of the business at December 31, 1933, based on the audited Balance Sheet submitted to the proprietor.

Net Income:—A condensed statement of the operations for the year ended December 31, 1933, is submitted in Exhibit "B".

In reviewing the operations consideration was given to such controllable items of costs as salaries, repairs and depreciation and adjustment of inventories which might have an important bearing on the Net Income of the business, as reported.

No items of sufficient relative importance were found, however, to warrant adjustment of the earnings.

The following comment is submitted on certain items included in the operating statement:

Sales.—The sales for the year amounted to $1,180,511.75, the Net Income being $2,167.84, or ·18 of 1 per cent of the sales.

Inventories.—The inventories are stated to be valued at estimated market price and the basis of valuation appears to be the same at the commencing and closing dates.

Depreciation.—Depreciation in the amount of $4,440 was set up on the books as at December 31, 1933, the basis of calculation being approximately at the following rates:—

	Per cent per annum
Buildings	2
Machinery and equipment	10
Plant fixtures	10
Office furniture and fixtures	7½
Automobiles and trucks	16½

Repairs and Renewals.—The total expenditure on repairs and renewals during the year under review amounted to $1,878.27, which does not appear to be excessive.

Executive Salaries.—The total drawings of the proprietor during the year under review amounted to $8,600, which amount is shown in the accounts as "Management Salary".

Invested Capital.—In Exhibit "C" we submit a statement showing the relation which the Net Income bears to the average invested capital during the year ended December 31, 1933, based on the annual Balance Sheets and Profit and Loss Account as certified by the auditors.

On this basis the percentage of Net Income to Capital is as follows:—

	Average invested capital	Amount	Percentage to invested capital
Year ended December 31, 1933	$8,913 31	$2,167 84	24.32

In this connection it should be noted that the proprietor has borrowed a substantial amount from his Bankers to be used as working capital in the business, which amount if advanced by himself would be included as Invested Capital in determining the percentage which the Net Income earned represents on the Invested Capital.

(*b*) To determine the spread between the price paid to the producer of live stock and the price received by the packer from the sale of the various products manufactured from live stock.

In the case of F. Hunnisett, Jr., the transactions are represented by the purchase of live stock, the killing of same and the sale of fresh meats to retail stores, so that the spread is represented by the difference between the price paid to the producer and the selling price. This spread, however, covers all the products handled by the business and the records of the business are not designed to show the spread on individual commodities.

In common with other packing establishments, F. Hunnisett, Jr., does not maintain a cost system which would enable the actual cost of individual products to be determined.

In the following summary we submit particulars of the average selling price per hundred pounds of product sold during the year in comparison with the average dressed cost per hundred pounds after allowing for the estimated value of by-products produced.

—	Beef	Calves	Sheep and Lambs
	$ cts.	%	%
Average Selling Price per 100 pounds	7 44	8·92	12·27
Average Dressed Cost per 100 pounds	6 75	7·77	11·17
Spread between Average Selling Price and Average Dressed Cost per 100 pounds	0 69	1·15	1·10
Percentage of Spread to Average Dressed Cost	10·22%	14·93%	9·85%

The above figures do not include the costs of killing, cutting or handling.

The following table shows the average cost per one hundred pounds live weight of the purchases of beef, calves, sheep and lambs during the months of December, 1933, and February, 1934.

	Average Cost per 100 Pounde Live Weight		
	Beef	Calves	Sheep and Lambs
	$ cts.	$ cts.	$ cts.
December 1933	4 80	5 91	6 59
February 1934	5 00	7 76	7 82

The operations of F. Hunnisett, Jr., are restricted to the above classes of live stock, and do not include the handling of hogs.

(*c*) To determine the dressed cost of hogs, beef and small stock purchased through (1) direct shipments, (2) stockyards or markets, and (3) truckers, and the percentage which each of these classes bears to the total purchases.

In the case of F. Hunnisett, Jr., all purchases are made through the stockyards, and the following information has been secured in connection with beef and small stock for the year ended December 31, 1933:

	Average Dressed Cost per 100 pounds		
	Beef	Calves	Sheep and Lambs
Year ended December 31, 1933	$ 6 75	$ 7 77	$ 11 17

(*d*) To determine the hourly rates of wages paid and to prepare a tabulation giving the number of employees paid at each of the different hourly rates.

In the following table we submit information showing the number and percentage of the employees engaged at the various hourly and weekly rates current during the month of March, 1934.

Hourly Rate	Number of Employees	Per cent of Total
35 cents	4	10·52
40 "	2	5·26
47 "	1	2·63
49½ "	1	2·63
50 "	2	5·26
60 "	1	2·63
63 "	4	10·52

Weekly Rate	Number of Employees	Per cent of Total
$10.00	1	2·63
13.00	1	2·63
15.00	1	2·63
17.00	1	2·63
18.00	4	10·52
20.00	3	7·90
22.00	2	5·26
22.50	1	2·63
23.50	1	2·63
24.00	1	2·63
25.00	5	13·18
26.00	2	5·26

None of the employees are on piecework or under any bonus system, and we are informed that no employee is required to "stand-by" in his own time. Our examination of the payrolls over a period did not disclose any evidence to the contrary.

The basis of employment is a 50-hour week and an examination of the payrolls over a period discloses that the rates in force appear to have been uniformly maintained.

By Mr. Sommerville:

Q. From your report it is apparent that this small independent packer with 38 employees pays an average of 47¾ cents per hour?—A. That is so.

Q. That is the highest of any plant in Canada, without exception?—A. That is so.

Q. It buys its product on the stockyards?—A. Yes.

Q. Where he pays the stockyard charges and distributes the product in competition with the largest dealers in Toronto?—A. Yes.

Mr. Factor: And he owes his banker $127,000.

Mr. Sommerville: He is good enough to get his entire capital from the bank apparently.

Now we have the report of Burns & Company Limited, which has been forwarded by the auditors from Calgary. If you would like to have the whole story complete we have it here. We will finish with Burns.

The Chairman: All right, go ahead.

Mr. Sommerville: There is no one here to present it. It has been forwarded by the auditors who made the examination, Eric Richardson & Graves, Chartered Accountants at Calgary.

Mr. Senn: If there is nobody to question on it, why not take the brief in as read.

Mr. Kennedy (*Peace River*): Is there going to be anybody here to question about it?

The Chairman: Mr. Burns advised me over the long distance telephone that he would be here on Friday.

Mr. Sommerville: It will be entered in the record.

The Chairman: I think perhaps if the committee are agreeable we could have counsel for the committee read it, and we will incorporate it in the Minutes. There are some sections perhaps, which he could pass over with us, and he could read such parts as appear to be important and we will have it then spread on the record. You will have the whole of it on the record.

Calgary, May 23rd, 1934.

Special Committee on Price Spreads and Mass Buying,
House of Commons,
Ottawa, Canada.

Dear Sirs,—In accordance with your instructions we have made an examination of the financial affairs and the cost records of Messrs. Burns and Company, Limited, Calgary, Alberta, and now submit our report with supporting statements.

Statement I.—This statement shows live and dressed weights and average cost of hogs, according to the various sources of supply, for the months of September and December, 1933, and for March, 1934; also live and dressed weights and costs of beef and small stock for the weeks ended 30th September, 30th December, 1933, and 31st March, 1934.

The information for this statement was obtained from the Daily Reports of Kill which are prepared in the office from Warm Weights Reports of stock killed as recorded in the plant by the scaler. The purchases were also checked by a test of the Stock Purchase Vouchers for the periods under review. There is no segregation of purchases of live stock according to sources of supply on the books of the Company. We, therefore, were unable to supply this information with respect to Beef and Small Stock purchases as all this stock is charged from the Company Feeding Pens. The source of supply of hog purchases is indicated on the Killing Reports from which the figures submitted were compiled.

It must be specially noted that all Hog Costs at the Calgary Plant are on a "Packer Dressed Hog" basis, i.e. Head off and Kidney and Leaf lard out.

Practically all purchases of Cattle and Cows are made in small quantities and it is impossible to correlate them with the Killing Sheets. Sheep and

Lambs are usually purchased in car lots and a considerable number are fed by the Company before going to the Plant for killing. The purchase prices of Beef and Small Stock differ from the charges made to the Plant by the cost of buying, feeding and handling. The selling price to the Plant from the Feed Lot is arrived at daily by the Plant Manager and the Livestock-Manager and is based on the market price prevailing at the date of transfer of the Stock. The profit or loss on the Feed Lot is borne by the Livestock Department.

Hogs are charged to the Plant at purchase price plus 15 cents per hundred to care for cost of buying, feeding and handling. We have prepared Statement IA showing the average purchase prices from all sources for the periods tested and the average charge to the Plant during the same periods.

The percentages of the purchases from each source of supply to the total purchases varies considerably over the various periods. This is accounted for by periodic purchases from the larger shippers and co-operative societies.

During the course of our investigation of prevailing market prices for the periods being tested, we noted that practically without exception the spread in price between the Calgary and Toronto quotations was less than the freight from Calgary to Toronto. Officials of the Burns Company advise us that this is due to purchases by Eastern Companies in the Western markets at slightly higher than prevailing Eastern market prices after deducting freight charges.

Statement II.—This statement shows the differentials at which Hogs were purchased during the months of November 1933 and March 1934. We have used Bacon Hogs as a basis and it will be noted that the differential between selects, bacons and butchers is uniform. The differential for the balance of the grades is not constant and we are informed this is governed to a great extent by market conditions on "off grades."

The figures submitted for November 1933 and March 1934 would indicate that on heavy hogs a differential of from 65 to 75 cents was in effect in November 1933 and a differential of from 75 cents to $2 was established in March 1934. In regard to sows, the corresponding figures were from 85 cents to $1.75 in November, 1933, and from $2.50 to $3 in March, 1934. There can be no question but that the Company has benefited by these increased differentials. It has been able to purchase lower grades at considerably wider spreads. The number of these lower grades purchased is, however, not very great.

It is contended by Company officials that this variation in spread is necessary in order to compensate for the fact that the market value of certain cuts and by-products does not increase in value proportionately with the price of live hogs. A larger percentage of lard is invariably obtained from low grade hogs. They also contend that the difference in differentials as shown by our statement is an extraordinary one on account of the very unusual market price variation in hogs. The low point to which hog prices fell necessitated a narrowing of the differentials in order to make the lower grades of *some* value and that the return to present spreads makes the prices now being paid more in line with the actual value of the lower grade hogs in comparison with the higher grades.

The contention of the Company officials with regard to By-Product prices appears to be borne out by the figures given on Statement VIII. It will be seen from this statement that in September 1933 with the average Dressed Cost of Bacon hogs at $8.94 per 100 pounds, Cutting and Killing Lard Fats were worth an average price of $4.49 and $3.70 per 100 pounds respectively and in March 1934 the average Dressed Cost of bacon hogs had increased to $12.07 and the By-Products decreased to $3.84 and $3.21.

We are advised that the Hogs are graded according to the regulations under the Livestock and Livestock Products Act and the differentials in force applicable to Selects, Bacons and Butchers was fixed by agreement of representatives of the Producers, Packers and Government. The differentials on lower grades are fixed by the Company.

Statement III.—In order to ascertain if bonuses or premiums are paid to certain livestock shippers a careful test of prices was made of two days in each of the months of September 1933 and March 1934. The statement shows the prices being paid on the days tested.

We are advised that the following method is being used at the Calgary stockyards:—

When a shipment of hogs is received by a Broker the various Packing Companies and Commission men are requested to submit tenders. The highest bidder receives the hogs. This price is then used as a basis for the purchase of "Roader or Trucker" shipments. Only in exceptional cases does there appear any variation in the prices being paid for "Trucker" shipments after the price is set for the day. Higher prices are, however, paid to certain large country shippers. The explanation given to us for the payment of these higher prices is that in order to assure the Company of a certain steady supply the Company have found it is necessary to pay these shippers a small premium by giving the Calgary market price F.O.B. country points, shippers weights. We understand that these higher prices are paid on only sufficient hogs to guarantee the Plant a minimum supply.

The prices given on the statement for "Shippers" are the "Off Car" prices. The hogs or cattle are purchased in the Country at Country weights but are shown on the Company's purchase vouchers at delivered weights. The shrinkage in transit averages 7 per cent. The prices shown are, therefore, slightly in excess of 107 per cent of the F.O.B. Calgary price quoted to the producer.

The pricing of Purchase Invoices is done at the Yard Office. They are checked later at the General Office before payment is made.

Statement IV.—This is a comparative statement of Dressed Cost of Hogs and Beef and the Selling Prices to Retailers for the various sales shown. The information for this statement with reference to costs was obtained from the weekly Pork Cost Sheets and Beef and Small Stock Cost Sheets, and with reference to Selling Prices from the Weekly Output Record showing the amount of each product sold and the value. The figures obtained were checked by making a comprehensive test of sales invoices for the months of September and December 1933 and March 1934. In comparing these figures of costs and selling prices cognizance must be taken of the fact that only the best animals are killed for dressed meat which will account for some of the discrepancy particularly in the case of Bulls and Cows in which types there are a considerable number of lower grades.

You will note that we have used "Shoulders and Loins" in the case of Hog Products "Sold to Retail" and "Sides" for "Beef", "Veal" and "Lamb".

The test of prices to Retailers showed the following prices for "Sides" prevailed during the periods tested:—

	Beef cents	Veal cents	Lamb cents
September, 1933	5 to 6½	3 to 6	7½ to 10
December, 1933	4 to 7	4½ to 5½	7 to 12½
March, 1934	5 to 8	6½ to 9	12 to 14

Statement IV A.—We were unable to obtain a complete list of Consumer Prices. This statement gives the prices in force as advertized in local papers, for a small number of cuts only.

Statement V.—We have supplemented this statement by showing the increase in average hourly rates, and the percentage which this increase bears to the average hourly rate in force prior to the increase. This statement does not include the salaries of the various departmental foremen. A separate statement (*V* A) is submitted giving these in detail.

Statement V B.—This statement shows the various departmental wage rates in force prior to the increase in wages on 19th March, 1934, and the scale in force after that date with the number of employees receiving wages on the new basis.

Statement V C.—This statement gives a summary of the data presented on Statement *V* B., also showing the total number of employees under wage rate classification. (The total figures of employees under each rate would indicate that the increase averages approximately 10 per cent).

Statement VI.—On account of the fact that the records of the Company do not show an analysis of the weight of product sold we were unable to obtain the weight of the Pork Products sold. We have, therefore, taken the total production of those commodities as a basis of our comparison. The value of the sales was extracted from the Monthly Sales Recapitulations. The total value of Export Sales was obtained from the Summary of Export Sales to which the Export Account Sales were tested.

The variance in the percentage of quantities and amount is accounted for by the fact that the sales value of Export Sales is the C.I.F. value and only the better cuts of hogs are shipped to the Export Markets.

Statement VII.—This statement gives a monthly comparison between the high price paid for Hogs and the high price for A.C. Hams in Great Britain for the period from November, 1932, to March, 1933, inclusive. The high price received for Hogs was obtained by a check of the purchase invoices for the period. We were unable to obtain the invoices for December, 1932.

The high prices for A.C. Hams were obtained from the confirmations of cabled Sales Reports from the Company's Liverpool agents. The exchange rate was taken at the date the sale was cabled. You will note that only the sales for the month of May, 1933, were affected by the Stabilization rate put into effect by the Dominion Government.

We have also given the percentage of the spread between the Live Cost of the Hogs and the Selling Price of the Hams, using the Live Cost as a basis.

Statement VIII.—In our comments regarding the Hog differential costs, we quoted certain figures supporting the Company's explanation of the widening of the spreads. We have, therefore, prepared statements for the months of September and December, 1933, and March, 1934, to show how these figures were ascertained. The costs shown are a summary of the Company's Weekly Pork Cost statements. You will note that the Company do not include Casings and Blood as By-Products. We were advised that these were excluded on account of small value of the unprocessed casings in comparison to the processing cost and the impossibility of segregating the value of the blood as obtained from the various kinds of animals.

With reference to our examination of the financial records with particular regard to the refinancing of the Company in the year 1928, we have the following remarks to offer:

An appraisal of the assets of the Company was made early in 1928 by the Canadian Appraisal Company Limited and the report received was dated 24th March, 1928. These valuations were used as a basis for the sale of the Company by Mr. P. Burns through the Dominion Securities Corporation Ltd. to Burns and Company Ltd. A portion of the Assets were retained by Mr. P. Burns and certain Liabilities were assumed by him. We attach Statement IX which is a condensed Balance Sheet as at 31st December, 1927, showing the apportionment between Mr. P. Burns and Burns and Company Limited.

From these figures it will be seen that the net book value of P. Burns and Company amounted to $13,651,379.07 and net value of assets taken over and liabilities assumed by Mr. P. Burns was $3,406,673.27, leaving the net book value of the Assets and Liabilities taken over by Messrs. Burns and Company

Ltd. $10.244,705.80. To this amount was added the appreciation in value of the Assets as shown by the appraisal, amounting to $6.577,866.83 less General Reserve available for depreciation $1,592.858.90, net $4,985,007.93.

We submit the following figures showing the disposition of this increase:—

Purchase Price of 50,000 Common shares in P. Burns & Co., Ltd.		$ 9,671,001 35
Deduct—		
Par Value of 50,000 Common shares in P. Burns & Co., Limited	$ 5,000,000 00	
Dividend of 15% on Common stock of P. Burns & Co., Limited	750,000 00	
Surplus Account after deducting Dividend	916,679 07	
Liabilities on Ranch Real Estate assumed by Mr. P. Burns	632,164 04	
		7,298,843 11
		$ 2,372,158 24
Discount on Bonds (P. Burns & Co., Ltd.) written off		345,356 48
Commission on Preferred Shares (P. Burns & Co., Ltd.) written off		218,166 26
Sundry Accounts written off		436,477 26
Premiums on redemption of old issues of Bonds and Preferred shares		314,670 21
Adjustment *re* Hay and Grain at Ranches		51,051 00
Adjustment of Value of Fixed Assets disposed of—net		18,756 31
Carried forward		$ 3,756,635 76
New Financing—		
Discount on New Issue of Bonds and Preferred Shares		1,000,000 00
Proportion of Expenses payable by Burns & Co., Ltd		75,029 96
Adjustment *re* Bond Interest and Dividend on Preferred Shares		5,793 36
Losses applicable to periods prior to December 31, 1927—net		47,548 25
Consideration for transfer of agreement between Mr. P. Burns and Dominion Securities Corp., Ltd. (Paid by issue of 99,982 Common shares of Burns & Co., Ltd.)		100,000 00
		$ 4,985,007 93

The new Company was financed by the sale of $7,000.000 First Mortgage 5½ per cent Twenty Year Sinking Fund Bonds due 1948, $6,900,000 6 per cent Cumulative Redeemable Preferred shares, $99.997 Common shares and $3 Preferred Management shares, totalling $14,000,000. The sum of $12,900,018 was received from the sale of the above bonds and shares.

The total outstanding Funded Debt, Preferred and Common shares and Surplus of the Company before refinancing amounted to $13.651,379.07, and when the new Company was formed the Funded Debt and issued Capital totalled $14.000.000. The change of ownership, therefore, resulted in the reduction of the net book value of the assets and liabilities of the old Company by the amount taken over by Mr. P. Burns and an increase of $348,620.93 in the total Funded Debt and Capital Investment.

On account of the time consumed in completing arrangements of the refinancing and as there was no definite cut-off in the records of the Company we found it impossible to completely reconcile the schedules submitted without going to the extent of analysing fully all accounts. Time did not permit us to do this and we have, therefore, confined our examination to statements prepared by the Company's staff in conjunction with the Company's audited reports and statements. The valuations as given on the Appraisal Report were checked to our statements.

The refinancing of the Company resulted in increased Bond Interest and Preference Dividend Charges, details of which are as follows:—

		Annual Interest
P. Burns & Co., Ltd., Balance Sheet 31st December, 1927.		
First Mortgage 6½% Bonds (less redeemed)	$ 3,078,500 00	$ 200,102 50
7% Cumulative Preference shares (less redeemed)	3,906,200 00	273,434 00
Carried forward		$ 473,536 50
Burns & Co., Ltd.—		
First Mortgage 5½% Bonds	$ 7,000,000 00	$ 385,000 00
6% Cumulative Preference shares	6,900,000 00	414,000 00
		$ 799,000 00
Increase		$ 325,463 50

The increased value placed upon the Fixed Assets in the books of the new Company would naturally involve an increase in the annual provision for depreciation, thus increasing the fixed charges. Owing to the fact that lower annual rates of depreciation have been used by the new Company than were adopted by the old Company, this expected increase has not been reflected in the annual financial statements of Messrs. Burns and Company.

The following rates of depreciation were used in preparing the Company's financial statement for its fiscal year ending 31st December, 1928:—

	Per cent
Buildings:	
Calgary, Edmonton, Vancouver and Winnipeg Packing Houses	1½
Regina and Prince Albert Packing Houses	2
Other Buildings	3
Plant and Equipment:	
Packing Houses and Cold Storage	2½
Other Plants	8
Automobiles and Trucks:	
Acquired at December 31, 1927	25
Subsequent Additions	12½

No depreciation was provided in respect of Additions to Buildings and Plant during the year ended December 31, 1928, which amounted to $480,934.60 net.

We are advised that the Bondholders and Shareholders have recently approved a reorganization which will result in the cancellation of accrued Bond interest amounting to $774,457.30 and in a reduction of the Capital Stock by $4,299,300. This amount will be distributed as follows:—

Reduction in Book Value of:		
Investments in Subsidiary Companies		$ 765,068 87
Other Investments		146,198 28
Elimination of Deficit	$ 1,109,826 97	
Less Bond Interest Cancelled	774,457 30	
		335,369 67
Increase in Reserve for Depreciation		2,516,634 07
Reserved for Contingencies		536,029 11
Reduction in Stated Value of Capital Stock		$ 4,299,300 00

All of which is respectfully reported by,

ERIC RICHARDSON & GRAVES,
Chartered Accountants.

PURCHASE PRICES LIVESTOCK

—	Shippers per 100 lbs.	Roaders or Truckers per 100 lbs.	Stockyards per 100 lbs.
	$ cts.	$ cts.	$ cts.
1st September, 1933—			
Hogs—Bacon	6 70	6 10	....
Sheep	2 75	2 50	2 50
Lambs	3 75	3 00	3 50
Steers	....	2 50	....
Heifers	....	2 50	....
22nd September, 1933—			
Hogs	6 60 6 40 6 20	5 75	....
Sheep	2 50	....	....
Lambs	3 85	3 75	....
Steers	....	....	....
Heifers	2 35	....	....
2nd March, 1934—			
Hogs	9.40 9 45	8 90	8 90
Sheep	....	....	....
Lambs	....	....	6 00
Steers	4 25	4 25 3 75 4 60	....
Heifers	....	3 75 4 50	....
28th March, 1934—			
Hogs	7 70 7 25 7 20 7 35 7 45	6 75 7 10	7 40
Sheep	....	....	4 00
Lambs	6 25 6 50	....	6 50
Steers	4 25	4 00	4 00
Heifers	....	....	....

We are advised that a break in the price on the 28th March, 1934, necessitated the changing of the price on Truckers' Hogs during the day. This is an unusual occurrence.

Mr. Factor: I don't know what it means, I am sure. I received a number of complaints particularly from Toronto in reference to these preference shares. I don't know whether our committee has jurisdiction to deal with that or not.

The Chairman: There is no reason why we should not question Mr. Burns when he comes here regarding anything which appears in this statement.

Mr. Factor: I think it would be well to subpoena somebody from the Dominion Securities Corporation, which originally underwrote that issue and sold it.

The Chairman: I do not see any reason why we should not. Of course, I do not think we should make it our objective to inquire into the financial set-up, but in so far as that affects operations of the company, it is quite within our rights.

Mr. Kennedy (*Peace River*): It would seem as though the capital put in must have been put in with at least the intention of making it affect the price spreads, and in that way must have a bearing.

The Chairman: There is an important point, too; in a large concern, the effect which is shown upon the cost of the line of business.

Mr. Factor: You will remember when the motion for the bringing of this committee into being was discussed in the house, the Prime Minister did say we would have authority to investigate some of these.

The Chairman: Capital structures; quite so. There is no question about that.

Mr. Factor: Although I am not anxious to waste any time of this committee, I do feel in this particular issue of the preference shares, having received so many complaints—and I suppose many members of this committee have also—

Mr. Kennedy (*Peace River*): Yes.

Mr. Factor: I feel that we should have some one here.

The Chairman: Would you like to summon some one?

Mr. Factor: I would like to have the Dominion Securities Corporation appear hear to explain some of the pertinent facts.

The Chairman: We will ask them to appear on Friday. It is now after 5.30 and we have had a pretty strenuous day. We will adjourn until to-morrow morning at eleven o'clock.

The committee adjourned at 5.35 p.m. to meet on Thursday, May 31, at 11 a.m.

APPENDIX No. 1

Auditors' Memorandum re Canada Packers Limited

In the following paragraphs we submit certain information prepared from the certified accounts of the Company's auditors, from the books and records of the Company and from information obtained by us from the management without independent confirmation of the accounts.

The scope of our investigation, which is outlined in general terms in the Resolution of Parliament, may be divided into the following specific enquiries:

(*a*) To ascertain the Net Income earned on the capital invested in the Company after eliminating extraneous charges or credits to operations, if any.

(*b*) To determine the spread between the price paid to the producer of live stock and the price received by the Packer from the sale of the various products manufactured from live stock.

(*c*) To determine the dressed cost of hogs, beef and small stock purchased through (1) direct shipments (2) stockyards or markets, and (3) truckers, and the percentage which each of these classes bears to the total purchases.

(*d*) To determine the hourly rates of wages paid by the Company, and to prepare a tabulation giving the number of employees paid at each of the different hourly rates.

The accounts of Canada Packers Limited and its subsidiaries are maintained at the Head Office in Toronto, at the plants in Toronto, Montreal, Winnipeg, Hull, Peterborough and Chicago, and at the other points where branch houses, creameries and other related businesses are located. The plants receive periodical reports from the branch houses, etc. under their control and the net results so reported are incorporated in the plant books. The plants in turn submit monthly summaries of their operating results and financial position to the Head Office where the statements of the organization as a whole are consolidated. Our examination was confined to the records maintained at the Toronto and Hull plants and to certain operating statistics at the Montreal, Winnipeg and Peterborough plants. In preparing this memorandum we have also made use of certain summaries and reports on file at the Head Office.

In support of the information included in the memorandum, we submit the following statements:

Exhibit "A"—Consolidated Balance Sheet, Canada Packers Limited and its Subsidiaries, as at March 29, 1934.

Exhibit "B"—Condensed Statement of Operations for the Period from August 15, 1927, to March 29, 1934.

Exhibit "C"—Statement Showing Percentage of Net Income to Invested Capital for the Period from August 15, 1927, to March 28, 1928, and Six Years ended March 29, 1934.

Schedule "1"—Statement Showing Number of Employees and Percentage to Total Number Employed at the Toronto, Hull and Peterborough Plants for One Week in March, 1934, classified as to Hourly and Weekly Rates of Pay.

(*a*) To ascertain the Net Income earned on the capital invested in the company after eliminating extraneous charges or credits to operations, if any.

Capital.—Canada Packers Limited was incorporated under the Dominion Companies Act on August 13, 1927, with an authorized capital of 100,000 7 per cent cumulative redeemable preference shares of $100 each, and 200,000 common shares without nominal or par value. The Charter provides that the common shares shall not be issued for a considerable exceeding in the aggregate $2,000,000. At March 29, 1934, there were issued and outstanding 60,335 7 per cent cumulative redeemable preference shares of $100 each and 200,000 common shares with a stated value of $1,438,284.46, making a total capital of $7,471,784.46. The company owned as at March 29, 1934, 688 of its 7 per cent cumulative redeemable preference shares, and 698 of its common shares which are shown in the Balance Sheet at that date as investments. Preferred dividends have been paid at 7 per cent per annum from July 1, 1927, to March 31, 1934. No dividends have been paid on the common shares.

Canada Packers Limited is a holding company for investments in the shares of several wholly owned subsidiaries of which the principal are The Harris Abattoir Company, Limited, William Davies Company, Limited, Gunns Limited and Canadian Packing Company, Limited. At the inception of Canada Packers Limited the entire capital stocks of The Harris Abattoir Company, Limited, Gunns Limited and Canadian Packing Company, Limited, were acquired. The entire capital stock of The William Davies Company, Limited, was owned by William Davies Company, Inc., an American Company, and at the inception of Canada Packers Limited a majority of the shares of William Davies Company Inc. was purchased, all but six of the remaining shares being acquired subsequently. Thereafter an exchange of shares between William Davies Company Inc., and Canada Packers Limited took place whereby 60,404 Class "A" shares and 17,708 Class "B" shares of William Davies Company, Inc., were exchanged by Canada Packers Limited for 20,000 shares of The William Davies Company, Limited, leaving the remaining 10,000 shares issued by The William Davies Company, Limited, in the possession of William Davies Company, Inc. The last named company, therefore, owns 60,404 of its Class "A" shares and 17,708 of its Class "B" shares. A summary showing the consideration for and the basis upon which the shares of the various subsidiaries were acquired is shown below.

Book Value of and Consideration for Shares of Subsidiary Companies acquired as at August 15, 1927 and subsequent thereto.

Book Value of Shares acquired:		
The Harris Abattoir Company, Limited:		
Capital Stock:		
25,550 Common Shares of $100.00 each		$ 2,555,000 00
Surplus		2,117,949 69
		4,672,949 69
William Davies Company, Inc:		
Capital Stock:		
Class "A"—60,435 shares of no par value—stated value Class "B"—60,000 shares of no par value—stated value	$ 3,083,536 00	
Surplus	2,161,810 54	
		5,245,346 54
Canadian Packing Company, Limited:		
100,000 Common Shares of no par value, stated value		25,000 00
Gunns Limited and Subsidiaries:		
Capital Stock:		
3,000 Common Shares of no par value, stated value	$ 1,435,201 76	
Deficit	48,786 38	
		1,386,415 38
Total		$11,329,711 61
Consideration:		
Cash	$ 2,571,077 15	
6 per cent Second Collateral Trust Bonds	650,000 00	
66,703½ 7 per cent Cumulative Redeemable Preference Shares of $100 each	6,670,350 00	
200,000 Common Shares, without nominal or par value—stated value	1,438,284 46	
		11,329,711 61

In connection with the payment of $2,555,000 in cash to the shareholders of The Harris Abattoir Company, Limited, as part of the consideration for the acquisition of that company's shares, Canada Packers Limited borrowed $2,500,000 from its bankers and gave as security its 6 per cent First Collateral Trust 20 Year Bonds with a face value of $2,500,000. Of this loan $1,250,000 was repaid to the bank in each of the years ended March 27, 1930, and March 26, 1931.

At August 13, 1927, the inception of Canada Packers Limited, there were outstanding First Mortgage Sinking Fund six per cent Bonds of William Davies Company, Inc., and The Harris Abattoir Company, Limited, with a face value of $2,200,000 and $4,000,000 respectively, of which $79,000 and $125,000 were held by these subsidiaries. At March 29, 1934, these bond issues had been reduced to $1,350,000 for William Davies Company, Inc., and $3,242,900 for The Harris Abattoir Company, Limited, of which bonds Canada Packers Limited owned $615,200, and $1,057,400 which are shown in the Balance Sheet as investments.

The net reduction in the bonds outstanding and in the hands of the public from August 13, 1927, to March 29, 1934, amounted to $1,386,200 for William Davies Company, Inc., and $1,689,500 for The Harris Abattoir Company, Limited.

In Exhibit "A" we submit a Consolidated Balance Sheet of the company at March 29, 1934, based on the Company's tentative Balance Sheet which is subject to completion of the audit for the year ended that date.

Net Income:

A condensed statement of the operations for the seven fiscal periods from the inception of Canada Packers Limited, August 13, 1927, to March 29, 1934, is submitted in Exhibit " B ".

In reviewing the operations, consideration was given to such controllable items of cost as salaries, repairs and depreciation and adjustment of inventory values, which might have an important bearing on the Net Income of the Company, as reported.

The aggregate provision for repairs and depreciation appears to be liberal, representing as it does an amount of $6,134,288.86 for the five years ended March 29, 1934, or 51·85 per cent of the average depreciable value of the fixed assets. We submit below a tabulation of the repairs and depreciation charges for these periods.

	Repair Charges	Depreciation	Total
	$ cts.	$ cts.	$ cts.
Fiscal Year ended March 27, 1930	612,158 00	748,373 14	1,360,531 14
" " 26, 1931	465,384 00	766,950 17	1,232,433 17
" " 31, 1932	463,839 00	777,820 65	1,241,659 65
" " 30, 1933	350,165 00	748,997 01	1,099,162 01
" " 29, 1934	446,874 00	753,628 89	1,200,502 89
Total	2,338,519 00	3,795,769 86	6,134,288 86

The amounts of repair charges for the period from August 15, 1927, to March 28, 1928, and for the year ended March 27, 1929, have not been shown as the information for these periods had not been obtained up to the date of this memorandum.

If the annual provision for depreciation is maintained on the present basis it will result in the extinction of the book value of all the fixed assets, excluding real estate, within the next six and three-quarter years.

The following comment is submitted on certain items included in the operating statement:—

Sales:

In the following tabulation we summarize the Company's sales for the period under review, together with the percentage which the net income bears to the sales:—

Period	Sales	Net Income	Percentage
	$ cts.	$ cts.	
Period from August 15, 1927, to March 28, 1928	70,212,862 00	1,028,697 64	1·47
Fiscal year ended March 27, 1929	101,026,733 00	1,503,297 58	1·49
" " " 27, 1930	100,102,203 00	1,552,071 40	1·55
" " " 26, 1931	82,841,103 00	838,111 76	1·01
" " " 31, 1932	60,081,710 00	384,302 51	0·64
" " " 30, 1933	45,027,677 00	607,671 96	1·35
" " " 29, 1934	54,380,430 00	1,451,179 76	2·67
Total	513,672,718 00	7,365,332 61	1·43
Average per year	77,535,505 00	1,111,748 32	1·43

The figures for sales shown above were obtained from a statistical record of the Company which purports to show the sales to the public, but we cannot substantiate this figure owing to the fact that sales to the public and shipments to branches are combined in one amount in the Company's books of account.

Inventories:

We are informed that the inventories were valued at lower of cost or market at March 28, 1928, and that from March, 1929 to 1932, inclusive, the inventories were valued at cost less the following reserves deducted therefrom to reduce the valuation to what the Company considered a conservative basis:—

As at March 27, 1929	$586,268 95
" 27, 1930	688,618 75
" 26, 1931	686,268 95
" 31, 1932	686,268 95

On March 30, 1933 and March 29, 1934, the company changed its basis of valuation to lower of cost or market, with a further deduction of one half cent per pound on a part of the inventories of product at the main plants. Our computation of the amount of this deduction, based on the inventories of the Toronto plants at March 29, 1934 and March 30, 1933, is $80,405.97 and $63,536.22 respectively, based on a total inventory valuation of the product at the Toronto plant of $1,706,322.61 and $1,469.501.57 the deduction representing approximately 4·7 per cent and 4·3 per cent respectively. Applying the same percentages to the total value of the product at the main plants amounting to $3,932,414.49 at March 29, 1934 and $2,456,960.44 at March 30, 1933, we develop deductions of $184,823.48 and $105,649.30 for the company as a whole. In the opinion of the company's officials these deductions are warranted by conservative practice in view of the rapidly changing market prices for products.

An amount of $200,000.00, part of the General Reserve, was deducted from the total of the inventories as valued at lower of cost or market at March 30, 1933, thus making the inventory valuations $200,000.00 less than lower of cost or market. At March 29, 1934, no part of the General Reserve was used for this purpose, but a reserve of $45,414.77 carried on the books of the Chicago plant was deducted from the inventory.

Depreciation.—The following are the prevailing rates used by the company in computing depreciation on fixed assets:

> Buildings, 2½, 5 and 10 per cent; machinery, 10 per cent; delivery equipment, 25 per cent; office furniture, 10 per cent; trucks and autos, 25 per cent; creamery cans, 10 per cent.

The values on which depreciation is based are not uniform, some being cost and others appraisal values with subsequent additions at cost.

Repairs and renewals.—While the annual charges for repairs and renewals appear to be high we are informed that these expenditures are necessitated by the nature of the business.

Our examination of the accounts of the Toronto plant relating to repairs for the two years ended March 29, 1934, indicated that of a total expenditure of $341.789.00 during that period approximately $54,164.84 is in respect of charges which might be regarded as being in the nature of renewals and betterments.

Executive salaries and bonuses.—The salaries and bonuses of the five major executive officers for the year ended March 29, 1934, totalled $73,000.

Invested Capital:

In Exhibit " C " we submit a statement showing the relation which the net income bears to the average invested capital during the period under review, based on the annual Balance Sheets and Profit and Loss Accounts as certified to by the Company's auditors for the period from August 15, 1927, to March 30, 1933. For the year subsequent to March 30, 1933, we have adopted the Company's tentative Balance Sheet as at March 29, 1934, and Profit and Loss Account for the year ended March 29, 1934, both of which are subject to the completion of the audit for the year ended on that date.

On the basis of the Company's annual accounts the percentage of net income to the average invested capital is as follows:—

Fiscal year ended	Average invested capital	Net Income	
		Amount	Percentage to invested capital
	$ cts.	$ cts.	
March 29, 1934	11,928,282 79	1,451,179 76	12·17
" 30, 1933	11,637,494 49	607,671 96	5·22
" 31, 1932	11,634,800 77	384,302 51	3·30
" 26, 1931	11,578,447 09	838,111 76	7·24
" 27, 1930	11,056,261 45	1,552,071 40	14·04
" 27, 1929	9,918,379 84	1,503,297 58	15·16
Period from August 15, 1927, to March 28, 1928	8,605,676 12	1,028,697 64	*19·12
Total	76,359,342 55	7,365,332 61	
Average for period	10,908,477 51	1,111,748 32	*10·20

*Adjusted to Annual Return basis.

In the following tabulation we show the adjusted net income of the Company after the elimination of certain charges and credits which we consider arise from operations extraneous to the packing house and its related businesses and the percentage of the adjusted net income to the average invested capital of the Company.

Fiscal Year ended	Average invested capital	Adjusted Net Income	
		Amount	Percentage to invested capital
	$ cts.	$ cts.	
March 29, 1934	11,928,282 79	1,399,064 44	11·73
" 30, 1933	11,637,494 49	634,875 94	5·46
" 31, 1932	11,634,800 77	449,637 00	3·86

" 27, 1930	11,056,261 45	1,771,698 85	16·02
" 27, 1929	9,918,379 84	1,433,434 17	14·45
Period from August 15, 1927, to March 28, 1928	8,605,676 12	1,103,766 60	*20·52
Total	76,359,342 55	7,656,321 44	
Average for period	10,908,477 51	1,155,671 16	*10·59

*Adjusted to Annual Return basis.

In connection with the Company's major holdings in the capital stock of certain other companies which are treated as investments, the following summary shows the number of shares held and values at which they are carried on the books of the Company as at March 29, 1934, the original cost and the amounts written off the original cost:—

Name of Company	Number of shares	Book value March 29, 1934	Original cost	Amounts written off
	Common	$ cts.	$ cts.	$ cts.
Dominion Stores Limited	7,900	102,498 05	198,214 99	95,725 94
Stop and Shop Limited	6,822½	3 00	378,759 45	378,756 45
Folkard Canning Co., Ltd	439	1 00	43,900 00	43,899 00
	Capital			
Union Stockyards of Toronto, Limited	4,686	468,600 00	468,600 00	

In addition to the above investments carried in the Balance Sheet it appears that the Company owns 16,900 shares of £1 each of John Loudon and Company, Limited, a firm of meat importers of London, Eng., in respect of which we were unable to find any record of either the purchase of these shares or the income, if any, received therefrom.

At March 29, 1934, profits amounting to $191,116.22 which represent the net realized profits and losses on the purchase and sale of investments, had not been credited to surplus and remained in the accounts as a deduction from the book value of the investments.

In adddition to the foregoing the face value, $1,672,600.00, of the bonds of The Harris Abattoir Company Limited, William Davies Company, Inc., are carried in the books as $1,573,001.30, the difference, $99,598.70, representing a profit on purchases by Canada Packers Limited of bonds of its subsidiaries.

General Reserves:—In April 1928 the Company wrote up the valuation of the inventories from lower of cost or market, to cost and transferred the difference $586,268.95 to "General Reserve". From time to time additions to this reserve were made out of profits and by transfers of the surpluses in sundry minor reserves. At the end of each fiscal year from 1929 to 1932 the Company spread this reserve on the Balance Sheet as a reduction in the Inventories and Accounts Receivable and an addition to Accounts Payable. At March 30, 1933, the Company reverted to the policy of valuing the inventories at lower of cost or

market, and an amount of $615,000.00 was transferred to Profit and Loss Account from the General Reserve, which, before the transfer, amounted to $840,457.71. At March 29, 1934, the balance of the General Reserve, $225,457.71, was transferred to Profit and Loss Account.

In addition to the General Reserve the Company has other reserves of a comparatively minor amount, which it included on the Balance Sheets as deductions from the assets on which they apply or as additions to Accounts Payable.

As shown in the Balance Sheet at March 29, 1934, the Reserve for Income Tax amounted to $489,803.32, of which $430,000.00 was provided by a charge to operations during the year ended March 29, 1934. No final assessment has been received from the Income Tax Department for the fiscal years subsequent to March 27, 1930, and the Company has included in the amount of $430,000.00 a provision of $153,000.00 for adjustments in respect of depreciation and other charges which may be disallowed by the Income Tax Department.

(c) To determine the dressed cost of hogs, beef and small stock purchased through (1) direct shipments, (2) stockyards or markets, and (3) truckers, and the percentage which each of these classes bears to the total purchases.

The above information has been secured in connection with hogs for the months of September and December, 1933, and March, 1934, and is submitted in the following summary:—

	Direct Shipments	Stockyards or Markets	Truckers
Average Cost per 100 lbs. Dressed Weight			
	$ cts.	$ cts.	$ cts.
Toronto Plant:

March 1934	64·67		35·33

The prices paid for hogs are stated to be based on the market price for the bacon grade with the following differentials on or off bacon grade:—

Select—Premium of $1 per head above the bacon.

Butcher—Discount of $1 per head below the bacon.

Light—Discount of $1 per head below the bacon.

Heavy—Discount of $1.50 per head below the bacon.

Extra Heavy—Discount of $1 to $1.50 per cwt. below the bacon.

Sow—Discount of $2.50 per cwt. below the bacon.

Stag—Discount varies with the condition of the hog below the bacon.

Our examination of the purchase invoices for live stock showed that these differentials were being applied.

From the records maintained by the Company it is not possible to determine whether the Company gains an additional profit through the operation of the differentials before mentioned. After the hogs are dressed and cut they lose their identity in the plant and the price realized on the individual product cannot be determined.

Officials of the Company have stated to us that no bonuses or commissions are paid to truck operators delivering hogs or to Country Agents shipping hogs.

The average dressed cost of cattle, calves, sheep and lambs classified as to source are not presented as these costs are not comparable due to the purchases of cattle through the stockyards being generally of a higher grade than purchases from other sources. We submit below a tabulation showing the percentage which the number of head of each class of purchases bears to the total purchases

for the Toronto plant for a week in each of September and December, 1933, and March, 1934.

—	Percentage of Total Purchases		
	Direct Shipments	Stockyards or Markets	Truckers
	%	%	%
Cattle:			
September 1933	21	65	14
December 1933	30	55	15

March 1934	9	89	2

(*b*) To determine the spread between the price paid to the Producer of livestock and the price received by the Packer from the sale of the various products manufactured from livestock.

In the case of Canada Packers Limited a large part of the Company's transactions are represented by the purchase, manufacture and sale of products which are not derived from livestock. The business is divided into numerous departments, each of which is concerned with the handling of a particular product or group of related products, and the accounting records of the Company are designed to conform to this division and furnish separate operating results for each department. In the case of livestock certain products pass through a number of departments and in the process, products derived from other species of livestock are combined and sold as one finished product.

In common with other packing establishments, Canada Packers Limited maintains a system of accounts which does not permit the actual cost of individual products to be determined. To secure approximate profit or loss margins for their own information the officials occasionally have "test runs" made, but for ordinary operating purposes the Company estimates its net return per 100 pounds of dressed weight of hogs on a formula, the details of which are shown below for the week ending May 12, 1934.

Details:	Per cent of 100 pounds of dressed weight	Price per pound cents	Value
Hams	19.7	19.0	$ 3 74
Bellies	14.2	19.0	2 70
Loins	16.2	17.2	2 70
Shoulders	18.6	11.0	2 05
	68.7		$11 28
Cutting credit		$1 10	
Killing credit		0 20	1 30
			$12 58
Less operating cost of hog departments, including interest at 6 per cent on the capital employed			2 20
Net return per 100 pounds dressed weight			
			$10 38

On January 22, 1934, the Company made a special test on one hog of a good type to determine in detail the weight of product which could be obtained from the hog and to determine the yields by weight from processing certain cuts of the hog in the curing and smoking operations. Particulars of this test were furnished to us by the Manager of the provision department, and based on these figures and on information secured from other employees we prepared summaries which purport to show the selling value, purchase cost and processing expenses for the weeks ended December 14, 1933, and March 29, 1934. The original computations developed abnormal estimated net profits in both these weeks, but after advising the Manager of the Provision Department of the results shown he stated that certain of the valuations, yields and processing expenses which he had originally furnished to us should be changed. After giving effect to these adjustments net losses were developed of $1.15 and 96 cents on the hog for the weeks ending December 14, 1933, and March 29, 1934, respectively, after deducting the processing expenses which include approximately 42 cents for interest at 6 per cent on the capital employed.

In our opinion test runs are of little, if any, value in determining the spread due to the impossibility of reconciling the result of the test runs made by the Company with the books of account, and to the facility with which the results of such runs can be altered as shown in the previous paragraph.

We were unable to determine the spread on sales of beef due to the Company's method of purchasing cattle in ungraded lots and subsequently grading the dressed carcasses into some forty different classes, the costs assigned to each class being determined by application of arbitrary differentials. A similar condition pertains to the purchases of small stock which are graded into seven different classes.

For these reasons we are unable to determine the spread between the price paid to the individual producer of livestock and the price received by the Packer from the sale of the resulting manufactured products, and we are forced to substitute for this inquiry consideration as to whether the Packer receives a reasonable or an excessive return (*a*) on the capital invested, and (*b*) on the sales made to the public. The information necessary to arrive at a conclusion on these points is submitted in the section of this memorandum dealing with invested capital and sales, the average return based on the net income reported by the Company being 10·20 per cent on invested capital and 1·43 per cent on sales.

(*e*) To determine the hourly rates of wages paid by the Company, and to prepare a tabulation giving the number of employees paid at each of the different hourly rates.

In Schedule "I" we submit information showing the number and percentage of the Company's employees at the Toronto, Hull and Peterborough plants engaged at the various hourly and weekly rates for one week during the month of March, 1934.

The average hourly rates paid to all employees at the Toronto plants, excluding foremen, truck drivers and others who are paid on a weekly basis, for the weeks ended March 22, 1934, and October 12, 1933, were $39\frac{3}{4}$ cents and $35\frac{3}{4}$ cents respectively.

Less than 1 per cent of the Company's employees are on piecework or under any bonus system, and we are informed that no employee is required to "stand by" in his own time.

We were unable to determine from the payroll records whether or not employees "stand by" in their own time as the hours on which employees are paid are obtained from the foreman's time books and the time clock records are only used for comparison with the time books. Furthermore, we are informed that employees are permitted to "punch" the time clocks as soon as

they enter the plant, which may be previous to the time when operations actually commence. However, in the case of the killing floor gangs, the employees are not paid for delays in the commencement of killing operations where the Company considers itself blameless for such delays. An instance of such delays, given to us by an employee of the Company, is where rail shipments of live stock arrive late through weather conditions or the fault of the railroad companies.

During the course of our examination at the Hull plant we were informed that if killing floor operations were discontinued during the morning certain employees might be released and instructed to return during the afternoon when operations would be commenced again. For example, an employee might work from 8 a.m. to 11 a.m. and from 3 p.m. to 6 p.m., and only receive payment for the six hours actually worked on the killing floor.

The basis of employment is a 48-hour week and an examination of the payrolls at the Hull and Peterborough plants discloses that the rates in force during the year ended March 29, 1934, were substantially the same as those set forth in Schedule "I." The rates of pay at the Toronto plant were increased during the week ended October 19, 1933, which increase, taken on the payroll as a whole, represented approximately 10 per cent of the rates paid prior to that date.

HOUSE OF COMMONS,

Room 368, May 31, 1934.

The special committee appointed to inquire into price spreads and mass buying met at 11 a.m., Hon. H. H. Stevens presiding.

Mr. Norman Sommerville, K.C., and Mr. W. W. Parry, K.C., of Toronto, appeared as counsel for the committee.

The CHAIRMAN: Order, gentlemen. The minutes merely record the witness heard and certain documents filed, including the presentation of the report of Eric, Richardson and Graves, chartered accountants, of Calgary, on the Burns situation. We will declare the minutes approved.

Mr. SOMMERVILLE: I will file as an exhibit, they not having yet been filed, the six annual reports of Canada Packers, Limited, including the balance sheet for each year.

(Six annual reports of Canada Packers, Limited, filed, marked Exhibit No. 202.)

Mr. BELL: Are there no copies of them?

Mr. SOMMERVILLE: No, there are not. Those are the only ones. They were filed by the company.

The CHAIRMAN: I might say to the committee that Mr. McLean had intended to be with us to-day, and was going to be a witness, but one of his superintendents died and is being buried to-day. He was anxious to be at the funeral, so I took the liberty of excusing him to-day, and he will be here to-morrow. If we deviate a little from the routine that we had in mind, the committee will understand the unfortunate circumstances which made it necessary.

Now, Mr. Sommerville, you were going to call Mr. Moyer. Mr. Moyer is one of the smaller packers.

Mr. SOMMERVILLE: Yes, Mr. Moyer.

ELLIS MOYER, called and sworn.

By Mr. Sommerville:

Q. Mr. Moyer, you are secretary-treasurer of Moyer Brothers, Limited?—A. Yes.

Q. And you carry on the business of pork packing at St. Catharines?—A. Yes.

Q. Your business has been carried on by your father, your brothers and yourself?—A. Yes.

Q. For a period of upwards of forty years?—A. Yes, approximately forty years.

Q. You are one of the independent packers operating in the Niagara peninsula?—A. Yes.

Q. And you sell your product through the Niagara peninsula?—A. Yes.

Q. In Hamilton, St. Catharines, Welland, Niagara Falls, and all those various centres throughout that area?—A. Yes.

Q. You wrote a letter to the Hon. Mr. Weir in April, which Hon. Mr. Weir has sent to this committee, for investigation of the matter that you referred to?—A. Yes.

Q. Will you just be good enough to read to the committee the letter you wrote, indicating what the problem was that you had to place before this committee?—A. Yes. The letter was dated April 19, 1934, and addressed to the Hon. Thomas Weir, Minister of Agriculture. It is as follows:—

> Dear Sir,—The writer who is secretary-treasurer and manager of a small pork packing firm known as Moyer Bros. Ltd., located in St. Catharines, Ontario, desires to bring to your attention directly the present position of the above firm, and conditions affecting the industry as they see it.
>
> For thirty years approximately my brothers and I have carried on a pork packing business with varying results, having many ups and downs. In the beginning we slaughtered and cured about fifty hogs per week, and this was increased as time passed until our weekly operations amounted to 325 hogs. This was the limit of our capacity. About this time all over the country, many large packing companies were being formed, followed closely by numerous companies with chains of stores, after which we could see our little packing business going, going until now it is all but gone. The same having diminished until now we are back where we started as regards volume, but are very much worse off, inasmuch as the costs of operation are about double what they were then. In other words, if we would show any profit at all on our operations based on prices being taken for pork products at present, we could pay no wages at all. Surely your department has power to adopt some measure to prevent a continuance of these conditions.
>
> We are sure that powerful interests are and have for many years manipulated the live hog prices. We also know that large competitor companies would undersell us at every turn, and in our efforts to compete, serious losses have been sustained, the same reaching such proportions as to threaten our financial standing, and if continued longer will greatly affect our credit, of which we could always honestly boast.
>
> Then on top of the killing effects of the big packers' unfair activities, was the loss to us of hundreds of independent merchant customers who were forced out by chain stores, companies with whom we could do no business, at least at a profit.
>
> These and other causes have brought the packing industry to its worst state since we have operated, and certainly not many of the small companies can survive much longer. There has been no fair competition In years, just cut-throat and nothing else.
>
> At this point I would like to bring also to your attention just one of the many evils as practised by chain stores. I am enclosing herewith display advertisements of three companies featuring butter at less than cost by at least one cent per pound.
>
> This little business of ours has been sustaining through its weekly payroll from twenty to thirty families, and since 1932, our employees, ourselves included, who at that time accepted a 40 per cent cut in wages, have been struggling desperately to keep going and make ends meet. But that was impossible for any of us.
>
> We have as a firm, never aspired to become big business men, but only wished to live and let live, but big business will not let us do even that. We now find ourselves with a small packing plant, our own capital gone through no fault of ours, and are now working on a meagre credit of $6,000 from the bank, which in addition to requiring everything we have in this world as security, would ask more.
>
> The picture we now have to look at is indeed unpleasant. We believe that as Canadian-born citizens, we have the right to appeal to you for assistance to carry on. We do not expect, of course, that you could accept all of this as true and correct without first investigating, and we do ask that immediate steps be taken to investigate our case."

Q. You submitted with that letter three advertisements that you had referred to, showing sales of butter in your city; they are dated April 13, 1934, all on the same day, of three different firms?—A. Yes.

Q. One advertises butter at cost, $28\frac{1}{2}$ cents; another offers creamery butter at $27\frac{1}{2}$ cents and the other the best creamery at 28 cents?—A. Yes.

Mr. KENNEDY (Peace River): Were they chain stores, Mr. Sommerville?

The WITNESS: Two of them.

Mr. SOMMERVILLE: Two of them were chain stores. The third is an independent.

The WITNESS: A cash and carry shop.

The CHAIRMAN: Those advertisements will be filed.

(Three advertisements, dated April 13, 1934, filed, marked Exhibit No. 203.)

By Mr. Kennedy (Peace River):

Q. Do you know where they are getting their supplies of butter from?—A. I could not answer that. I believe that in the one case it was coming from a creamery belonging to Canada Packers, at Harriston.

Q. Were they selling it lower than you could afford to manufacture it?—A. Well, the cost at that time was $28\frac{1}{2}$ cents, as I remember it. I checked on it at the time.

By Mr. Sommerville:

Q. In your letter you say, "We also know that large competitor companies would undersell us at every turn, and in our efforts to compete, serious losses have been sustained, the same reaching such proportions as to threaten our financial standing." Have you found competition of the kind that you have described throughout the Niagara peninsula?—A. Yes.

Q. With your products?—A. Yes.

Q. Has that been intensified during the last two years?—A. Very greatly.

Q. To what extent have you found that competition acting in the matter of prices? For instance, how low were they selling as compared with costs?—A. Well, our selling list would almost always be as much as 2 to 3 cents a pound higher. They would break under us as much as 3 cents in some cases.

Q. Under those circumstances, did you buy wholesale from some of these large companies?—A. Yes, there were times when we would be short of certain lines of pork products of our own manufacture and we would purchase, almost always, from Canada Packers.

Q. And on wholesale terms?—A. Yes.

Q. Then what did you find in the area in which you were selling these products to your customers, in the Niagara peninsula?—A. In many instances it came to my attention where a small retail merchant had bought the same product from Canada Packers at less money than what we paid.

Q. At less than the wholesale price that you were paying?—A. Yes.

Q. And you found this condition general throughout the Niagara peninsula, particularly during the last two years?—A. Yes.

Q. Are there other smaller packing companies that operate also in the Niagara peninsula?—A. The nearest packers are in Hamilton.

Q. That is Duffs?—A. Duffs and Fearmans, and one in Kitchener.

Q. There are two plants at Kitchener?—A. Yes.

Q. What are their names?—A. Schneiders and Dumarts.

Mr. EDWARDS: There is Stratford.

Mr. SOMMERVILLE: Yes, Stratford have Whyte & Company.

The WITNESS: Yes, Whytes of Stratford.

By Mr. Sommerville:

Q. They also operate in the Niagara peninsula?—A. Yes.

Q. What would be the average kill of these various plants?—A. I believe their weekly kill is from 1,000 to 2,000 hogs each.

Q. Each?—A. Yes.

Q. Then you find these conditions prevailing in the Niagara peninsula; you say this cut-throat competition, selling below cost, has had the effect of cutting down your business very materially?—A. Yes, undoubtedly.

Q. And that has reduced your volume back to where you began, you say?—A. Yes, we are actually back where we began.

Q. Instead of operating to capacity or to the extent of 300 or 325 head, you are now operating at what?—A. We are down to as low as 75 hogs per week.

Mr. Kennedy (Peace River): Is the suggestion that they are making special prices to the customers?

By Mr. Sommerville:

Q. Are you in a position to say whether special prices are being made to your customers?—A. Well, I don't think that they are directly aiming at us. I think it is just the general rule that they have adopted, and instructions are given to their salesmen to get business from the largest retail merchants, where they might secure the greatest volume.

By the Chairman:

Q. Of course, there is nothing venal about that. But do you allege that the practice is to go into a territory where there is competition and sell goods at a lower price than they sell the same type of goods for in a territory where there is no competition?—A. I just don't quite understand your question, Mr. Stevens.

Q. Let me put it this way: You raise the point of them underselling you—

Mr. Kennedy (*Peace River*): Cut-throat competition.

By the Chairman:

Q. Yes, cut-throat competition, and they are underselling you, but it does not necessarily follow that because they undersell you there is anything wrong; the point I am getting at is this, if they undersell you simply to put you out of business and then sell the same products elsewhere at higher prices that would be, in my estimation, evidence of unfair competition, and I am asking you: Are you alleging such a condition as that?—A. Well, it appears that way. While we have been the smallest packers in business, I believe, we have been more or less a thorn in the side of all of them inasmuch as we produce and sell a high class pork product in our own small way, and I believe that it is more or less pride on the part of the larger ones to disallow us to carry on and take business away from them as we are in a sense.

Q. You are alleging that it is competition directed against you to put you out of business really?—A. Well, it appears that way to me; it has for some time.

By Mr. Factor:

Q. I have not yet heard any specific illustration of how they accomplish that fact. You said there was one case where a retailer got some goods at a lower wholesale cost than you. What about volume as compared to the volume you purchased?—A. Well, the volume would be very much less, of course, possibly from three to five times as great as any of the retail merchants I have reference to.

Q. What about that particular retail merchant that you had reference to?—A. Well, he was probably one of the best customers available in the town. There

are several cases that I have in mind where the credit of the retail merchant was good and all the packers were putting forth their best efforts to secure his business, and while this competition I admit was not aimed at us alone it still existed, and prices were cut and cut again until the lowest quotation finally secured the business, and that has been going on for a great length of time and it applies as I say especially to some outstanding retail merchants in the city.

By Mr. Sommerville:

Q. And throughout the Niagara Peninsula?—A. Yes, some of the strongest financially and largest buyers of pork products.

Q. Now, you operate your plant very economically over there?—A. Well yes.

Q. You and your brother manage the business?—A. Yes.

Q. And you yourself go out as well and canvass the trade?—A. Yes.

Q. And your executive salaries have been cut down to a pretty low figure?—A. Well, we are about on a level with some of our employees now.

Q. And you have had some of your employees for a number of years?—A. Yes.

Q. And you have been paying on an average how much an hour?—A. Well, at present it ranges from 25 cents to 75 cents per hour; that is the range. An average would be 45 cents.

Q. An average would be 45 cents?—A. Approximately 45 cents.

Q. And maintaining those families of these men in your neighbourhood?—A. Yes.

Q. There is no other packing industry in your neighbourhood nearer than Hamilton?—A. Well, not a full fledged packing house. That is, there are two small abattoirs, but they do no curing of meat.

Q. They are like butchers?—A. Yes.

Q. Killing?—A. Yes.

Q. You do not handle any beef products?—A. We do not slaughter.

Q. You limit yourselves to the pork products?—A. Yes.

By the Chairman:

Q. And you have been in the packing business for forty years?—A. Well, it began with my father about that time and it has been carried on by the family since.

Q. And you operated successfully up to the last few years?—A. Up to, well, about three years ago I would say, after which time we have consistently shown losses.

By Mr. Ilsley:

Q. What pork packers are selling their products in the territory covered by you?—A. There are Canada Packers to start with; they are the largest; then Swift Canadian; F. W. Fearman, Hamilton; John Duff & Son, Hamilton; Dumarts Limited, Kitchener; J. M. Schneiders, Kitchener; Whyte Packing Company, Stratford, and Whyte Packing Company, Toronto.

Q. Well now, do I understand it that these eight competitors of yours bid against each other for desirable accounts?—A. Yes, that is the case.

Q. And I suppose that competition is accentuated by the depression?—A. Undoubtedly so.

Q. That seems to be the reason for the lowering of the price to the retailer, does it not, the accentuated competition between the pork packers for business in your territory?—A. Well, I can see no good can come out of it. I feel sure that they must be showing losses as well on that particular product.

By Mr. Sommerville:

Q. In that territory?—A. Yes, in that territory.

By Mr. Ilsley:

Q. I wonder what is the motive behind the competition. Is it to try and eliminate certain weak competitors, so that they can get the price in the territory up to where it would be profitable?—A. It could be that.

Q. Is it a matter of pride; you mentioned "pride"?—A. As one packer manager expressed himself to me he said: It seems to me as though the industry is in the hands of madmen. That is his idea and I fully agree, because they have been carrying on, especially in pork products, with no real object in view, nothing definite, just to get the business at any cost.

By Mr. Sommerville:

Q. At any price?—A. Yes, at any price.

By Mr. Ilsley:

Q. That applies not to one but to the whole lot of them, does it?—A. Well, my personal opinion is that that condition is forced on the other packers by the largest of them.

Q. You mean the one largest?—A. Well, yes.

By Mr. Kennedy (Peace River):

Q. That is Canada Packers?—A. Well, that is my personal opinion.

By Mr. Young:

Q. On what do you base that opinion?—A. Well, of course cases have come to my attention where they have taken prices at a ridiculously low level, prices that we all know would show a heavy loss, and then they would go out and sell a smaller merchant at the proper price; in other words, there would be a spread in one salesman's orders varying up to 3 cents a pound.

By Mr. Kennedy (Peace River):

Q. In the same territory?—A. In the same territory.

The CHAIRMAN: That is the point I was mentioning a moment ago.

By Mr. Young:

Q. Can you give us specific cases of that?—A. Well, I would not like to mention any names in the matter.

Q. We would like to have them.—A. I have an idea it would affect our position materially to do that.

By Mr. Ilsley:

Q. This difference in prices, is it based upon volume of purchase?—A. Not exactly so, in some very small quantities, for instance, half dozen lots of any one pork product, and invoices have been shown to me where they have taken the lowest price for very very small quantities just apparently with an idea to get the business.

Q. Yes?—A. That apparently was the object.

Q. Take anything rather than lose the order?—A. Yes.

By Mr. Young:

Q. It is very difficult for us to investigate those cases and very difficult for Canada Packers to answer your charge unless we know the particulars.

By Mr. Sommerville:

Q. Perhaps you might give to the committee in confidence the names of some of these persons so that we might make some inquiry with respect to same; I do not mean giving them publicly now, but hand the names in later.—A. I could do that.

By Mr. Ilsley:

Q. Does this condition of price cutting obtain generally throughout the territory served by you?—A. Yes. I cannot speak for other territories, I can only speak for the territory served by us, the territory in which we operate; that is the Niagara district.

By the Chairman:

Q. Do you contend that you are efficient and able to produce the products at a reasonably fair price?—A. Yes. As our statement would show, our overhead charges are very light. Naturally, compared with the larger, we haven't any high-paid executives.

Q. How about your production and operation costs?—A. Of course, our operating costs have increased as the volume has reduced.

Q. Quite so.—A. And as I tried to point out, for a time we tried and did keep our volume, but in so doing we sustained losses that were too great and we could not carry it on.

Q. Could you supply us with some statements, your regular statements, or some statement showing your costs and so forth? Were you here yesterday?—A. No.

Q. Well, if you could confer with Mr. Parry—Mr. Sommerville's assistant—he will indicate to you the class of statement we want, and try to supply us with a few statements.—A. Yes.

Q. A similar statement to what we had filed yesterday from other packers.—A. Yes.

By Mr. Edwards:

Q. Do you make as complete a line of pork products as Dumarts and Schneiders, for instance?—A. No we do not. Pork products, as far as that was concerned, we practically do, but they make a great many lines, various lines of sausage that we do not make.

Q. Are these salesmen that they have on a commission as well as a salary basis?—A. I do not think so. I believe the Swift Canadian Company offer bonuses for certain volume.

Q. At the end of the year?—A. Yes.

By Mr. Kennedy (Peace River):

Q. Has there been any improvement in condition since the price of hogs tightened up?—A. There was a difference in January, just following the first of the year when the price of hogs had gone up very sharply, and at a time I believe when the export business was quite good and profitable, and as long as the export business paid the large packers I understand they were quite willing to raise their prices for home business, domestic sales.

Q. Was the cut-throat competition less, as far as you were concerned?—A. It really did not exist during the first three weeks of January, but then just as soon as the export market weakened then down went prices, there seemed to be no bottom, and while we were able to show a profit in the month of January we more than lost all of that in the month of February and the succeeding months.

By Mr. Young:

Q. You seem to be paying rather generous wages to your men. Do they have steady work at those rates?—A. Some of them, not all of them; some of the men are on part time.

Q. 45 cents an hour is the average?—A. Of course, we have a very small staff and, I think, a very efficient staff now; there are so few of them, and those who are with us are still the best among the staff that we formerly employed.

By Mr. Sommerville:

Q. And you have had them for some years?—A. Yes.

Q. Married men?—A. Yes.

Q. With their families living in St. Catharines?—A. Yes, sir.

By Mr. Factor:

Q. Is it your opinion that the Canada Packers in your territory sell below cost, below their cost?—A. They do in many cases. In fact, I know that according to the salesman who canvasses ourselves, he always furnishes us with his cost; that is their rule. A salesman is given a sheet showing his cost and he is expected to make a profit over that, and there were times, after some pressure, when he was selling at less than his cost, that is to us, and I am sure that he has done it with small retail merchants as well. But what I have found is that on their staff of salesmen,—there are three men I have in mind working in the Niagara district; one covers St. Catharines, one Niagara Falls, and one covering Welland and the Port Colborne district. The St. Catharine man does not seem to break prices so frequently or so readily as the other two, but I think I could get evidence myself any day where the Welland man and the Niagara Falls man have taken business from retail merchants away below our cost and I believe below their cost.

Q. Well, are there any instructions issued by packers to their salesmen with some fixed price that they are to charge for their products, or is it entirely left to the discretion of the salesmen?—A. Well, some of them at least—I won't say all of them—but some of them are given quite a lot of authority.

By Mr. Sommerville:

Q. Latitude?—A. Yes.

Mr. Kennedy (*Peace River*): This seems to be in line with Mr. McKenzie's statement.

Mr. Sommerville: Well thank you, Mr. Moyer.

Witness retired.

A. B. Shepherd, examination resumed.

By Mr. Sommerville:

Q. Mr. Shepherd, I think you have for us a statement that was being prepared yesterday; has that been typed?—A. Yes.

Mr. Sommerville: I want to examine Mr. Hutchinson on this.

By Mr. Sommerville:

Q. I wanted to have cleared up this question of costs of individual products in the packing industry. Perhaps you will be good enough to tell the committee just what is the general rule and what you know to be the practice in the packing industry with respect to costs of individual items and your further statement on that, Mr. Shepherd?—A. Dealing first of all with hogs in the packing industry, the operation of the hogs is known as joint products.

Q. The operations are known as joint products?—A. Joint products, yes.

Q. That is, the products of the hog constitute joint products?—A. In other words, a hog is bought as a hog then it is distributed into a number of different grades, and all those grades sell at different prices. I should have said "cuts" instead of "grades." The cuts sell at different prices, with the result that it is impossible to determine the cost of any particular cut. And in support of that contention I propose to read a paragraph of a pamphlet prepared by Mr. J. H. Bliss, late of Swift & Co., Chicago, entitled "Cost Methods in the Packing Industry."

By the Chairman:

Q. Where was this read?—A. This is a pamphlet prepared for the National Association of Cost Accountants.

By Mr. Sommerville:

Q. Of the United States?—A. Yes, and issued as one of their official publications. Mr. Bliss says this:—

> Being joint products (he is speaking now of hogs) it is impossible to figure the cost of each separately, though the cost of the whole group might be readily calculated.

And further, I have before me a book written by Howard C. Greer, entitled "Packinghouse Accounting," and it is prepared by the Committee on Accounting of the Institute of American Meat Packers. Mr. Greer says in regard to cost accounting:—

> Where markets are sensitive and frequent changes occur, the operator necessarily depends greatly upon his cost figures for information and guidance. The essence of the method of cost-figuring for joint products expresses the current market situation to the man who handles the merchandising transactions for such a business. Nowhere is this better illustrated than in the hog business of the packing industry, where tests or estimated costs are prepared in this form daily for the purpose of indicating the market relationships.

Now, that shows that there is no possibility of arriving at what might be the actual costs. The same condition applies in regard to beef.

Q. In regard to beef?—A. Yes.

By Mr. Factor:

Q. What is the object of splitting the industry into so many departments? You spoke yesterday of 70 departments. What is the object in doing that?—A. If I might read from Mr. Greer. He says:—

> The development of departmental accounting in the packing industry results directly from the character of the business and its transactions. The managers of packing companies handling various classes of live stock (cattle, sheep, calves, and hogs) and frequently having in addition allied industries, necessarily have to consider each division of the business as a unit. Moreover, the principal departments of a packing house establishment have the characteristics of separate business organizations in that these departments customarily buy and sell products and their

managers are held responsible for the conduct of merchandising transactions and the operations of their respective departments as though they were carrying on a separate and individual business.

I think that expresses it very clearly.

The CHAIRMAN: We are dealing of course, for the moment, with the Canada Packers, and Swifts, who are the two large packers in Canada. They copied the American system of packing house accountancy, as I understand it.

The WITNESS: Generally speaking; that is to say, there are certain differences.

The CHAIRMAN: They have adapted the American packinghouse accountancy system here.

The WITNESS: It is the same general system of accounting as is used in the States.

By Mr. Factor:

Q. Let me ask you this. Perhaps I should not put this question to you, but I have been worrying about it. Was the origin of the accountings motivated in any way by the large packing industries in the United States with the object, in case any investigation should arise, that it could not be investigated?—A. I do not think so. I think the system can be definitely stated as the only practical system that could be used from their standpoint. They must operate on department costs. You see, after all, it is no good to them to know the results of the operations of 70 departments in one figure.

Mr. SOMMERVILLE: They want to know the operations of each specific department of the 70 departments, so that they could put their finger on any trouble that would be indicated by those results.

The WITNESS: And the department managers are responsible for their own department.

Mr. EDWARDS: They have a very close running audit every day of the week.

The WITNESS: Well, controlled, not exactly audit, but close control.

Witness retired.

THOMAS A. HUTCHISON, called and sworn.

By Mr. Sommerville:

Q. Mr. Hutchison, you are an accountant?—A. Yes.

Q. A member of the firm of Peat, Marwick, Mitchell and Company, Toronto?—A. I am.

Q. In connection with the audit or examination of the packinghouse industry, you particularly had to do with Canada Packers Limited?—A. Yes, I did.

Q. You had a good deal of experience in the packing industry accounting, prior to that?—A. Several years.

Q. So that you are familiar with the methods and accounting system in force in those industries?—A. The general principles would be the word, rather than the system. The system might be different in different firms.

Q. In the examination of Canada Packers—perhaps I might ask you first of all—when the question was raised this morning about there being different prices quoted to different people, for the same product in the same town or city, did you make any observation of that condition in the books of Canada Packers?—A. Yes; there is no question of it.

Q. No question?—A. No.

Q. Did you take off a few samples in Hamilton and Niagara Falls during the month of May?—A. Yes.

Q. Is this the result (producing)?—A. This is the result we gave to you.

Q. This is filed as exhibit 204.

List of samples obtained from books of Canada Packers filed and marked exhibit 204.

Without giving the names of the parties which are available on the exhibit for the members of the committee, did you compare actually the same grade as shown on the books for the various prices?—A. Yes, I think we designate on that sheet the grade which the records of Canada Packers show they shipped.

Q. Take for instance, Niagara Falls, Ontario. On May 14th, they sell to firm A, one carcass of baby beef, good grade, at $10\frac{1}{2}$ cents a pound; firm B, the same day, one carcass of baby beef, good, $11\frac{1}{2}$ cents a pound; May 18, firm C, one carcass, steer, 550—what does that mean?—A. That would be the weight.

Q. 550 steer, medium grade, 9 cents; May 22nd, firm C—

Mr. ILSLEY: The same day?

Mr. SOMMERVILLE: Four days later. One carcass, 550 steer, medium, $10\frac{1}{2}$ cents. Then, let us take Hamilton. May 2nd, firm A, one hind quarter, 550 steer, fair—that is a definite grade?

The WITNESS: "Fair" would be a definite grade.

By Mr. Sommerville:

Q. $10\frac{1}{2}$ cents. Firm B, same day, 1 hind quarter, 550, fair, steer, $8\frac{1}{2}$ cents —a difference of 2 cents in that?—A. Yes.

May 2, same day, firm C, one hind quarter, heifer, fair, 12 cents; May 1, the day before, firm D, 2 hind quarters, heifer, fair, $10\frac{1}{2}$ cents—a difference of $1\frac{1}{2}$ cents; April 27, firm A, 1 side, 550 steer, fair, 9 cents; the same day, firm F, 1 side, 550 steer, fair, $9\frac{1}{2}$ cents; May 8, firm G, 1 front, fair, heifer, 7 cents; May 7, firm H, 1 front of heifer, fair, same grade, 10 cents—a difference of three cents in that respect; May 9, firm J, 1 hind quarter, medium, heifer, 12 cents; firm K, the same day, 1 hind quarter, medium heifer, $9\frac{1}{2}$ cents—a difference of $2\frac{1}{2}$ cents; May 9, firm L, 2 hind quarters, heifer, $8\frac{1}{2}$ cents; the same day, firm M, 1 hind quarter, heifer, fair, $11\frac{1}{2}$ cents—a difference of 3 cents; May 17, firm N, 1 front, 550 steer, fair, 9 cents; the same day, firm O, 1 front, 550 steer, fair, 7 cents; May 12, No. 2 account, 2 hind quarters baby beef, fair, $12\frac{3}{4}$ cents; 2 hind quarters baby beef, No. 1 account, fair, $10\frac{3}{4}$ cents.—A. That will be two steers for the same individual at different prices.

Q. Two steers to the same man at a difference of three cents?—A. Yes.

Q. Two hind quarters of baby beef here?—A. Yes.

Mr. KENNEDY (*Winnipeg*): How do you account for that?

Mr. SOMMERVILLE: Good salesmanship.

Mr. EDWARDS: All the traffic can bear.

By Mr. Sommerville:

Q. These are some sample indications?—A. Yes.

Q. That you took from them covering beef alone?—A. Yes.

Q. The same thing prevails with respect to other products?—A. We have some examples of it on hog products.

By Mr. Factor:

Q. Does that prevail throughout the dominion, or is that confined to this point?—A. I think it is particularly noticeable in eastern Canada, but it would cover the whole of Ontario and Quebec, anyway. The competition is more severe between salesmen at those points than it would be in other parts of Canada where there would be not as many salesmen going into one town.

By Mr. Young:

Q. Do their prices for beef products fluctuate with the price of cattle? If during the day the price of beef cattle dropped, would it be reflected that day in the beef?—A. No, I do not think it would necessarily be reflected as rapidly as that. I cannot say how rapidly the salesmen would be advised of the changes in the cost of beef.

By Mr. Sommerville:

Q. Now then, with reference to the lower grades of beef, they are called what?—A. Cutter and boner.

Q. Cutter and boner?—A. Yes.

Q. Did you find a wide variation in the prices at which these lower grades of beef, cutters and boners, were sold to different customers?—A. Yes, a fairly wide variation. Of course in these cases they are not all being sold in the same territory, and the freight differential would enter into it in each case, would enter into the difference in prices.

Q. The variation would run from what prices?—A. We have not prepared an analysis on that basis.

Q. Perhaps from the sheets that are before you you could give us the low price?—A. I think it would take me a little while to make that up. These are cutter and boner steers, cows, heifers, and bulls, and we cannot compare one with the other.

Q. Let us take the lowest grade. What is the lowest grade?—A. The lowest grade would be the bull, but I notice here there are cows, fronts of beef, boner cows, I should say, sold at $3\frac{1}{2}$ cents. That is the lowest price at which they were sold during the week ending April 19.

Q. What is the top price for cutters or boners?—A. I have here one at $4\frac{1}{2}$, another cow, boner cow front.

Q. I thought there were wider variations than that?—A. One cannot compare a boner cow with a boner steer, because they are two entirely different types of animals. Nor would it be fair to compare a front with say a hind, because there is a two or three cent spread between the two.

Q. The statement you have prepared, however, gives us some instances of the variations in prices of each of those cutters and boners?—A. Yes.

Q. Let us have them please, and we will then examine them.

By the Chairman:

Q. Is there any indication of the extent to which these cutters and boners go into the fresh meat retail stores as meat consumption?—A. All these sales during that week, I presume, go to retailers. They might go indirectly to fox farms, but on the face of the shipment records, they go to butchers who would be retailing.

By Mr. Sommerville:

Q. I shall just give some of the locations. There are about 10 different individuals at Hamilton, then Port Dalhousie, St. Catharines, Welland, Port Colborne, Nova Scotia and New Brunswick, Bonaventure, Quebec, Merritton, Ontario, Chatham, Ontario, Preston, Ontario, Guelph, Owen Sound, Kitchener, Midland, Waubaushene, Elmdale, Craighurst, Port McNicholl, Sturgeon Falls, Three Rivers, Quebec, and then there are about 20 more in Quebec, New Brunswick and Nova Scotia?—A. Yes.

By Mr. Factor:

Q. I suppose you cannot tell whether the retailer sells boner and cutter beef to the consuming public?—A. No, it would be impossible to tell that. There

is one case mentioned there, where I think they were sold—you will notice I have an asterisk there—to some city for relief purposes. That would be a clear indication they were used for human consumption.

By Mr. Sommerville:

Q. Does this cover all the sales of cutter and boner grades for the entire week?—A. All in the shipment records we examined. That was a certain class of shipments. I think there would be sales through their branches which we would not have seen.

Q. Shipments?—A. Yes; this is the Toronto plant.

Q. That would not cover all the sales?—A. Some of the shipments to their branches they might not have a record of.

Q. But it gives an indication of the trade in that particular week, April 12th to April 19th, 1934.

By Mr. Kennedy (Peace River):

Q. Did I understand you to say that some cutter bull beef has been going out for relief purposes?—A. Yes.

Mr. SOMMERVILLE: We have one case here of boner.

Mr. KENNEDY (*Peace River*): I wondered where some of it came from.

Mr. SOMMERVILLE: One front bull, bright in flesh; the next one, 3 fronts of bull beef, the next one two fronts of bull beef, and so on down the line.

By Mr. Ilsley:

Q. In those varying prices for beef that you have set out in the statement that Mr. Sommerville just read, are some of the prices below cost?—A. Some of them would be, undoubtedly.

Q. The last witness said that salesmen are supplied with a list indicating the cost price?—A. When I say " cost price " I should not say the cost, but the cost as they compute them; that is, they have what they call the beef cost record, on which they make a computation for their own purposes of the cost of beef carcasses. That includes the expenses, and these expenses include 6 per cent on the capital employed; and that is just a figure against which they compute the profit or loss on selling the carcass.

Q. I understood the last witness to say that the salesmen are supplied with something indicating the cost of the meat they are selling, is that correct?—A. I think I had better explain the method under which they retail, or their salesmen retail their products.

By Mr. Sommerville:

Q. If you will, please?—A. This is particularly true of hog products rather than beef. The salesman is given a price list which is made up each week. On that price list is the price the firm would like to obtain for their product. They don't anticipate they will obtain it, but they would like to obtain it. Against that list is set a code with letters designating the number of cents below the price listed on the price list which the salesman can sell the product at. That is the price which he is expected to obtain for that product. He must obtain that. Above that there may be a 3-cent margin to the retail selling price which is put on the selling price list.

By the Chairman:

Q. This is a margin of freedom in which he can use his judgment?—A. Yes, that is so. He might have hams, we will say, listed at 22 cents on the selling price list. The code would show that he could sell them down to 20 cents.

By Mr. Ilsley:

Q. Would he be permitted to get more?—A. Yes, I think so. I won't say definitely, but he is allowed to take what price he can get, anywhere between 20 and 22 cents. I would not say definitely he can take more than 22.

Q. You don't know that?—A. I don't think they could, because the retail trade would know if they are being charged.

By Mr. Factor:

Q. Is 20 cents below the cost, according to their system?—A. You can't say. In the case of hog products it is impossible to say whether it is below cost.

By Mr. Sommerville:

Q. Perhaps you will explain to the committee how that salesman operates in the matter of his own sales, the sales costs and what he gets?—A. Take this example I was quoting of the 20 cent price; anything the salesman can obtain over 20 cents is known as his margin. If he obtains 21 cents, he gets 1 cent margin a pound on selling this ham, I think I quoted. At the end of the week they add up all these margins which he obtained on all his sales for the week, and against that they apply his salary and travelling expenses and a certain proportion of overhead and operating expenses of the plant as a whole. He is expected to show a profit; that is, his margins obtained from selling should exceed those expenses which they charge him with.

Q. From your examination did they exceed that? In the tests that you took of the various weeks, did they exceed the margins that were set out, or the costs? —A. We didn't examine it from that point of view, and particularly not their individual salesmen. The best thing I could quote would be from this statement that you have in front of you. The car route selling department for the year ended March 29, 1934, made $11,907.13.

Q. Interpreted, what does that mean?—A. That would mean that the margins which the salesmen obtained exceeded the costs with which they were charged by $11,907.13.

Q. That is net?—A. Yes.

Q. But then that may involve a very large volume?—A. Yes, it would.

Q. That involves the volume of all the sales?—A. Well, all of the sales sold through the car route department.

Q. And that may involve heavy losses on one product and heavy gains on another product?—A. It might do so, yes.

Q. Have you any examples of that particular phase of it, of the car route selling department, reflecting gains in the one case and losses in another?—A. Well, I can quote some margin figures on provisions.

By Mr. Ilsley:

Q. Just excuse me a minute. Before you go into that, I would like to understand these margins. The sum of these margins to the salesmen is supposed to exceed what?—A. The expenses with which they are charged. Those expenses will be their salary, their travelling expenses and a proportion of the operating and overhead expenses of the organization as a whole.

By Mr. Sommerville:

Q. Charged to the selling department?—A. Yes.

By Mr. Ilsley:

Q. Suppose a salesman went down to the code minimum on every sale, what would happen to him?—A. He would be showing heavy losses all the time.

Q. Then he would lose his job, I suppose?—A. Well, I won't say that. They would want to know why he was showing heavy losses.

Q. He is given that discretion?—A. Yes.

By Mr. Sommerville:

Q. For instance, if he went down to the code and sold at the code, just showed the clearance that he sold at the code, there still would be a profit of 6 per cent in the product that had been sold?—A. If he sold exactly at the code price, his week's operations would show a loss on the entire amount of expenses.

Q. Of selling?—A. Yes.

By Mr. Factor:

Q. You heard Mr. Moyer's evidence this morning where he said that Canada Packers were selling pork products below cost in this territory?—A. Yes.

Q. From the books, have you got any illustrations to give us that would corroborate that?—A. I think we have already said that to determine the cost of an individual pork product is not possible, but that you could determine it in the total, that is for the total dressed hog carcass. But once they have broken it up into cuts, you can't determine the cost of an individual cut.

Q. How could Mr. Moyer tell that it is below cost of Canada Packers?

By Mr. Ilsley:

Q. Mr. Moyer meant their code minimum, didn't he?—A. He may have meant the code minimum. I would not like to say what he meant.

Q. That would be cost, including 6 per cent on investment, according to your computation.

Mr. SOMMERVILLE: They are calculated costs.

By Mr. Ilsley:

Q. Yes, that is the way I would understand it, jumping to a lot of conclusions in understanding it in that way. I understand that they fix the code minimum at what they consider to be their cost, including, as you state, 6 per cent on their investment?—A. Yes.

Q. And they don't let their salesmen go below that. If their salesmen had made all the sales at that, the company would be out. They would have 6 per cent on their investment, but they would be out the salaries and expenses to the salesmen?—A. Yes.

Q. The selling cost?—A. Yes.

Q. They would be out that?—A. Yes, the entire selling cost.

Q. They give him that discretion to enable him to grab some business from competitors. It would never do for him to do too much of that, but he can do some of it for the sake of getting business from competitors, is that it?—A. I would think it is a matter of personal incentive, in a sense. It makes the salesman try. He wants to try and show a profit on his own route, and makes him go out after the best price and obtain the largest volume that is possible.

By Mr. Factor:

Q. If he wants to get business, he will go down to the code?—A. Of course, if he goes down to the code all the time, he will show a loss on his route.

By Mr. Sommerville:

Q. But he may go down to the code in certain areas and make it up in others?—A. It was explained to me by some of the employees of Canada Packers. What I think he does is this: He might go into a butcher's and find that in order

to get business in bacon, he had to cut the price of hams. In that case he would cut on the hams and obtain his price on the bacon. The next man he went in to see might be the exact reverse. He might have to cut the price on bacon to get the price on hams.

Q. We find these variations that you have referred to prevailing, on the previous exhibit, in beef?—A. Yes.

Q. Where he had a wide variation?—A. Yes.

Q. And in some of these cases he may be below the margin, may vary as much as 3 cents a pound on beef?—A. Yes.

Q. Some of the same beef selling at 9 cents to one man and at 12 cents to another, on the same day, in the same town, the same quality?—A. Yes.

By Mr. Factor:

Q. There is no code in beef, though?—A. I would not like to say that. I was specifically interested in pork in certain of these inquiries. I didn't ask the conditions in the beef.

By Mr. Sommerville:

Q. Does not the same system prevail in all the live stock products?—A. The car route selling system prevails on all the products, but I would not like to say what code they use on the beef, just how they figure it.

By Mr. Ilsley:

Q. How much variation is there? Can you give us an idea of how much they can discriminate as between their customers in this way?—A. In the code?

Q. Yes?—A. Well, the margin runs from 1 cent up to 25 cents. That is the margin. But the 25-cent margin, of course, may apply on products sold by the ton or the hundredweight. It does not follow that any of these margins can apply to different quantities. That would be the difficulty there, in judging it. I can give you the way it runs: 1, 1½, 2—those are cents—2½.

Q. Per pound?—A. Well, it is per unit, whatever the price is given in. It might be a barrel or might be a ton.

By the Chairman:

Q. Those that you gave us this morning were on pounds?—A. Yes, they were pounds. That would be more likely on this first one I mentioned. 1 cent, 1½ cents, 2 cents, 2½ cents, 3 cents, 3½ cents, 4 cents.

By Mr. Ilsley:

Q. You are giving the difference between the list price and the code now, are you?—A. I am just giving the code. I have the code here. I have the amounts applied against each letter. The first letter is 1 cent; the second letter is 1½ cents.

By Mr. Sommerville:

Q. If the code had the first letter on it, it would mean a 1 cent margin?—A. Yes.

Q. And if it had the second letter, it would mean a 1½ cent margin; if it had the third letter, it would mean, as you state, a 2-cent margin?—A. I think I can give may be one or two examples of the spreads here. I have smoked meats here. On Maple Leaf hams, the week ending April 7, 1934, the margin was 3 cents.

By Mr. Factor:

Q. Between the code and the selling price?—A. Between the selling list price and this code price.

By Mr. Sommerville:

Q. That is, they had a leeway of 3 cents?—A. Yes.

Q. The salesmen had, on that product?—A. Yes.

Mr. FACTOR: Per pound.

Mr. SOMMERVILLE: Per pound, yes.

The WITNESS: I have here Maple Leaf sliced backs, 4 cents on this week.

By Mr. Ilsley:

Q. The effect of all that is just this, that a leeway is given, irrespective of volume altogether. Irrespective of the volume or quantity that the purchaser buys, the salesman is allowed to cut prices within a certain range there?—A. The salesman is really put in the position of a trader within his territory. I don't think the manager of the department or of the business concerns himself with the individual sales. He concerns himself with the results shown by the salesmen.

By Mr. Sommerville:

Q. The net result at the end of the week?—A. Of the salesmen, yes.

By Mr. Factor:

Q. Did you ever find any illustrations where they sold below the code?—A. Well, we never looked for any and we didn't find any. We might have noticed them if we had been specifically looking for them. They would not sell below the code without instructions from their head office or from the manager of the department.

Q. I think we had some evidence along that line from one of the witnesses. Now, going back to this exhibit that you have put in of the prices of beef sales for cutter and boner grades during the week of the 12th to the 19th, I observe that there are two grades. One is cutter and the other is boner?—A. Yes.

Q. And in this large list of sales of cutters, the prices range from $3\frac{1}{2}$ cents to 10 cents over these various customers who are buying cutters?—A. Yes.

Q. That may be affected by whether they are hind quarters or fore quarters?—A. And also whether they are steers, cows or bulls.

Q. That is for cutters?—A. It is hardly on the basis of comparison unless you break it down into the kind of animals and the kind of cuts. That could be done fairly rapidly, if you would like to have that done.

By Mr. Factor:

Q. You did give us an illustration of the same grade, and of the same animal being 3 cents and 4 cents?—A. $3\frac{1}{2}$ or 4 cents.

Mr. SOMMERVILLE: We will have that done later.

By Mr. Ilsley:

Q. Did Swifts have the same system of giving their salesmen leeway to trade?—A. I didn't examine the accounts of Swifts, and I could not tell you that.

Q. You don't know anything about other meat packers?—A. Well, I was specifically concerned with Canada Packers in this investigation.

By Mr. Sommerville:

Q. Looking at the sheet before us, this sheet has been prepared as showing departmental profit and loss account for the year ended March 29, 1934?—A. Yes.

Q. And in the first column it includes the interest charges that have been made to each of these departments by Canada Packers' head office, is that right?—A. Yes.

Q. And in the second column it eliminates the interest charges that have been made to the departments?—A. With the exception of an item you will notice at the foot, $382,000.

Q. With the exception of the item at the foot?—A. Yes.

Q. Just as an illustration to the committee of the difficulty of ascertaining the difference between the price paid for the live animal and the price obtained for the beef, will you indicate to the committee where the various parts of the animal are to be found in this statement?—A. Yes, I will. The beef department listed first includes the sale of the beef in carcasses and cuts. The by-products would include the handling of the hides, what they call tallow, edible tallow, obtained from the animals, and also fancy meats which would be livers, tongues and so on; and the casings include beef casings. The sausage would include some beef.

Q. So that if you show, according to this statement, a loss in the beef department, that covers only certain cuts of carcasses?—A. The beef department covers the carcasses and what are known as the beef cuts.

Q. And the by-products, which show a profit there of $549,000 contain these other parts of this same animal?—A. Yes, they do.

Q. And the casings department, which shows a profit of $200,000 odd, contains other parts of this same animal?—A. They do, yes.

Q. And the sausage and cooked meats department contain other parts?—A. Yes.

Q. So that if you wanted to reassemble the animal, you would have to get the parts from these various departments?—A. Yes.

Q. And the costs and the profits made on each of these departments would have to be taken back?—A. Yes.

Q. To ascertain what was the price obtained for the original animal?—A. Yes.

Q. Is not that the difficulty that exists in connection with the industry?—A. In certain departments it would be impossible. For instance, in the sausage department, if you sell sausages containing both beef and pork, you can't determine how much the beef was sold for and how much the pork was sold for.

By Mr. Factor:

Q. Take the profits from by-products and the casings. They total $749,000 odd of profit, and the loss on the beef is $813,000?—A. Yes.

Q. So that even taking the profits on the by-products and casings, it still shows a loss?—A. That is right. Of course, you should not take the whole of the casings. Those are casings from beef, sheep, lambs, calves and hogs. But it still shows a loss, as you say.

By Mr. Sommerville:

Q. But in that item of loss are interest charges?—A. Yes, interest.

Q. Then when these products are produced, they go to the sales department?—A. That is right, yes.

Q. And then the sales department handles the selling end?—A. Yes.

Q. And on that there may be, as I understand it, a loss in one variety of product and a profit on another?—A. I would not say exactly that. I would say that they obtain different margins on different kinds of products; and no one can determine the cost of selling beef as against pork when they are all sold through one agency or one department.

Q. Yes, but what did you find, for instance, in arriving at a net figure of $11,000 as a profit on car routes selling departments, as to profits in one branch as against losses in another branch of the industry?—A. I estimated that the provisions department margins in the week ending January 4, in the four weeks period ending January 4, 1934, and March 29, 1934, exceeded the average expenses

of selling by 55 cents a hundred pounds. That would represent 55 cents a hundred pounds profit or margin in that department, and that applied on the total sales of provisions through the car routes department would amount to approximately $100,000 during the whole year.

Q. Take the total meat and by-product departments, if you include interest charges it shows a loss of $189,000 odd, is that right?—A. Yes.

Q. And excluding interest charges, a profit of $308,999.37?—A. Yes.

Q. The difference being made up in the interest charges only?—A. Yes.

Q. In other words, the 6 per cent difference has accounted for the set-up?—A. For that change.

Q. And then would not the question of profit in each department depend upon the price at which that is transferred from one department to the other? —A. Yes, sir.

Q. So that you may have in the case that you have given us, of provisions, where you say the profits on provisions in the selling department for the year would amount to $100,000, does that not really mean that the selling department got those products at $100,000 less than their real value to the company? —A. Of course, that is a difficult statement to answer because you cannot say that it is an excess of the average margin over the average expenses.

Q. Of the selling department?—A. Yes, the average margin of the provisions department over the average expenses of the selling department as a whole. The trouble there arises in what are the costs of selling of provisions, that is, pork products, as against selling beef products.

By the Chairman:

Q. Well then, just follow that point of provisions. In your statement you show on provisions here a loss for that year of $138,000?—A. Yes.

Q. Now, is that loss— —A. That is after interest.

Q. After interest, yes. That loss then is at the figure that is arbitrarily fixed when it is passed on to the selling department?—A. Yes, certainly.

Q. And then the selling department took hold of the provisions, sold them, and made a profit of $100,000?—A. Yes.

Q. Would it be fair then to say that this is before interest was taken off, you deducted $100,000 from the $188,000 and you would get a net loss of $88,000 on provisions?—A. Yes, that is correct.

Q. So with interest eliminated it would show?—A. $189,000.

Q. It would be more than that. Take the selling department. Have you got that broken down there without interest?—A. You mean the $65,000?

Q. You gave $100,000 profit on provisions.—A. Selling through the selling department, yes.

Q. But how about it without interest?—A. You mean, there is interest at 6 per cent in the costs of the selling department?

Q. Yes.—A. Yes, this would amount to about 4 cents per hundred pounds, I think, which would represent about $8,000 or $10,000 for the whole year.

Q. There would be about $110,000?—A. It would not be more than that.

Q. Plus the $89,000, which would be about $200,000?—A. Approximately $200,000.

Q. In the provision department if you eliminate interest?—A. Yes.

Mr. Factor: There is one interesting item there, Mr. Chairman, the Fertilizer Department.

The Chairman: That shows a profit all across the board.

Mr. Factor: We had a gentleman here from the Fertilizer Association who painted a pretty blue picture to us about the fertilizer situation.

Mr. Sommerville: This is the Fertilizer at the Toronto branch which covers western Ontario.

Mr. FACTOR: Yes, the Fertilizer Department.

Mr. SOMMERVILLE: The Fertilizer Department, showed a profit with interest charges, of $73,790.99, and without interest charges $98,776.69.

Mr. FACTOR: If I remember the evidence correctly at that time, the president and secretary of the Fertilizer Association told us they had a loss of $100,000.

Mr. YOUNG: That is the commercial fertilizer.

Mr. FACTOR: What is this?

Mr. SOMMERVILLE: This is the same thing because you will remember the statement was made that the secretary of the Fertilizer Association of Ontario is Canada Packers representative.

Mr. YOUNG: What do they mean by "tankage"?

The WITNESS: So as not to mislead you too much, I ought to mention that the year 1933 showed a loss in fertilizer, and it is possible that the secretary of the Fertilizer Association was dealing with 1932 figures. That might mislead you.

By Mr. Edwards:

Q. You are speaking about the sales and the way the overhead was added to the cost of selling; the overhead and operation of the plant was added to the cost of selling.—A. Yes.

Q. Is that the general basis?—A. Well, this is a method of carrying on business peculiar to the packing business, that is, selling through a special department.

Q. Well, would not that have a tendency to show that the cost of selling was just that much higher; for instance, if a salesman thought he should have more salary and they say: This is what it is costing us to sell and he says look at the overhead and the interest charges.—A. I do not think you can say that. This interest charge and overhead charge, as I think we mentioned, is included in all these departments. It is just the general practice of the company to charge overhead, which includes interest, to every department, every operating department in the company.

Q. Is that the general practice of industry, manufacturing concerns particularly, where you bring the cost of your product, your overhead and so forth, the finished product to your salesmen and then from there on you add your selling cost?—A. It is hard to make a general statement of that kind. I think yesterday Mr. Shepherd mentioned that some manufacturing industries added interest into their costs and some did not. Therefore, you cannot lay down a rule on that. I would say that myself.

By Mr. Factor:

Q. Mr. Hutchison, this final analysis in this statement—just correct me if I am wrong—shows that the net profit before providing for income tax is $1,881,000 odd?—A. Yes, that is what it shows.

Q. Is that the net result of the operation of the Toronto plant, or what? —A. No, that is for the organization as a whole.

Q. The organization as a whole?—A. Yes, Canada Packers Limited consolidated profit and loss account.

Q. In other words, they made $1,881,179.76 for the year ended March 29th, 1934?—A. Before providing for income tax.

Q. Before providing for income tax and eliminating this interest?—A. Well, you notice at the foot of that sheet that the amount is the same whether they eliminate interest or not.

Q. Yes, and charge interest.—A. The interest figure remains in at the foot of that first page; it is added back.

By Mr. Sommerville:

Q. It means that the net profits were $1,881,179.76 after providing a sum of $750,000 odd for depreciation?—A. Yes.

Q. And before providing for income tax $430,000?—A. Yes.

Mr. YOUNG: And that is on a total turn over of how much?

Mr. SOMMERVILLE: $54,000,000.

The CHAIRMAN: Well now, are there any further questions? I do not think we will go on with another witness before lunch, if it is agreeable to the committee, and we will meet at 3.30 to hear the Swift man and another witness this afternoon.

The committee adjourned at 12.30 to meet again at 3.30 p.m.

AFTERNOON SESSION

The committee resumed at 3.30 p.m.

JOHN H. TAPLEY, called.

By Mr. Sommerville:

Q. Mr. Tapley, you are the manager of the Swift Canadian Company, Limited?—A. Yes, sir.

Q. And you have been for some years?—A. Yes, sir.

Q. During what period?—A. About 14 years.

Q. And their head offices are in?—A. Toronto.

Q. And how many plants have you in Canada?—A. Six.

Q. Located where?—A. Moncton, Toronto, Winnipeg, Moose Jaw, Edmonton and New Westminster.

Q. And each of these six plants is operated as a packing plant?—A. As a separate unit.

Q. As a separate unit?—A. Yes.

Q. You have not a consolidated statement of the operations of your company of all the plants in Canada?—A. Each one have their own statement and then they are brought into Toronto.

Q. That is, the net result?—A. The net result.

Q. But I understand there is no single consolidated statement in existence of all the plants?—A. That is correct.

Q. And then you operate your business by department?—A. Yes, sir.

Q. And you have about how many departments?—A. 70 or 80.

Q. And each department is operated separately?—A. Yes.

Q. And each department's accounts are kept in the department separately?—A. That is right.

Q. And then you just get the net result from each department?—A. Yes.

Q. And that is the packing house method by which your accounts are kept?—A. That is the general custom.

Q. I think you heard Mr. Shepherd this morning read the statement of Mr. Bliss of your company?—A. Yes.

Q. And do you agree with that statement?—A. I do.

Q. You have no means of getting the separate costs of the various components parts of an animal when it has been broken down?—A. That is right.

Q. And, therefore, your costs whether of hogs, or cattle or other live stock are based on an estimated basis, are they not?—A. The dressed costs are accurate; beyond that they are estimated.

Q. Yes, beyond the dressed costs then they are estimated based upon past experience?—A. The value of one particular cut depends on what you are to get for the other cuts in the same carcass.

Q. And those estimates are a sort of arbitrary rule that you use in fixing the prices at which the product is transferred to another department?—A. That is right.

Q. And then all those products pass through to your sales department, or to your export department, or your branch department?—A. That is right.

Q. And is sold in that way?—A. That is so.

Q. And then there is a profit reflected in the sales department, we hope?—A. We hope.

Q. Now, can you furnish the committee with a statement of the volume of your purchases of live stock during the past two years?—A. You mean the value?

Q. No, the volume, the number of heads of cattle, hogs, sheep and calves?—A. I have not that with me. I understood the auditors would naturally work that up when they were at our plant.

Q. I see. Well, will you send that in to the committee?—A. I will be very glad to. Do you want that in head or weight?

Q. We would like to have it in both head and weight.—A. Of all live stock?

Q. Yes.—A. At each of the plants?

Q. At each of the plants, yes.—A. All right.

Q. And if you will be good enough to indicate the proportions that have been bought by direct shipment, or by truck, or on the stockyard.

Mr. Factor: We have got that, have we not?

Mr. Sommerville: Not the total.

Mr. Young: Just hogs.

Mr. Sommerville: And then we had it for the particular plant in Toronto.

Mr. Young: For several plants, Winnipeg and Edmonton.

By Mr. Sommerville:

Q. I would like you to have a look at the statement that was put in by the auditors for Wilsill's plant showing the condensed statement of operations of the plant; I would like you to look at page 2246 of the evidence and ask you, Mr. Tapley, if you have a similar statement for your entire company's operations?—A. We may be able to give you one fairly close to this, but whether it would be exactly the same I would not be able to say.

Q. Made up from the nets of your various departments?—A. Yes.

Q. I see, but this is an exact statement of the entire operations, you will see, the total amount of your purchases, the total costs of your operations, the total gross profit.—A. Well, there are some items in there that it would be very difficult to get in just this shape.

Q. That is because of the departmental method by which you operate your business?—A. That is right.

Q. I just wondered whether you had that available.—A. That is the kind of statement that is very simple to work up where you have only one unit, but when you have a number of units it is quite difficult.

Q. And it is a matter of considerable expense?—A. That is right.

Q. And it is really of little use to you in your operations?—A. No use at all.

Q. You have got to have?—A. Each unit separately.

Q. Well, you buy some of your live stock on the stockyards at the various cities where your plants are?—A. Yes.

Q. And some by direct shipment?—A. Yes.

Q. And some by truck, do you not?—A. Yes.

Q. We have had some evidence here, that as the result of direct shipments when you have a large quantity coming in by direct shipment it places the packer in a position where he may stay off the market for a while. Do you agree with that, Mr. Tapley?—A. No, I do not.

Q. Well, what explanation have you for that statement?—A. I never heard of it before I heard of it in connection with these proceedings. All I can say is that in any of our operations we have never, as far as I know, set up the fact that we had surplus stock that would enable us to lay off the market.

Q. That is, you have never deliberately stayed off the market because you had surplus stock?—A. That is right.

Q. That is what you mean?—A. That is what I mean.

Q. That was not exactly the question I was asking you, Mr. Tapley. The very fact that you did have surplus stock would enable you, if you desired to do so, to stay off the market for a while?—A. If we wished to, I suppose.

Q. Yes, and that would have the effect of making the market a slow market, if the others were to do the same?—A. If everybody did the same thing then the market naturally would be delayed in opening, so to speak; trading would not start until later on.

Q. Well, we have had some evidence that frequently trading does not really start until say the afternoon of the opening day of the market?—A. That is not our experience.

Q. That is not your experience?—A. No. Our buyers start to buy the minute the bell rings, as close as possible to it.

Q. And are they keen buyers throughout?—A. It depends on the values and whether or not the results are profitable, or reasonably close to profitable. If they are bad then it might be a different thing; we either have to get higher prices for our product or lower prices for our live stock and then I imagine they would not be quite so keen.

Q. And would not their keenness be affected by the supply?—A. I do not think so, sir. I think the keenness of the buying would depend more on whether or not the business were profitable.

Q. Mr. Tapley, would you prefer to have all your buying done on the stockyards and where all the packers would have an equal chance at all the stock that is offered?—A. Our position on that is this: We are willing to buy live stock anywhere the owners wish to operate, either stockyards or direct. Naturally it depends quite a lot on the plant entirely. For example, we are situated adjoining the stockyard. The stockyard operations there fit into our business reasonably well; but take, for example, live stock east of Toronto which naturally might flow to Montreal where we have not a plant, then in that kind of situation I think we will probably be more interested in receiving receipts direct, because the natural flow of that live stock in that district would be away from us instead of towards the stockyards where we are located. Then you take another situation at Moose Jaw: If we had to operate our plant—as far as our experience has been—entirely by stockyard purchases there we would not get enough to operate the plant economically and we might have to close down, and in a situation like that I think our Moose Jaw management would have to go where the live stock is.

Q. But then would he not be in a position to buy other live stock on this stock market where it is offered?—A. No, I do not think so because he would have to buy to advantage at some point in the country where he would get a direct freight haul to his plant rather than a freight haul into some stockyard west of Moose Jaw, let us say, and then from that stockyard to Moose Jaw.

Q. Yes.—A. By the time he manufactured these animals into the finished product and shipped them to his markets in the east, or wherever they happened to be going, I think it would be economically unsound. I do not think he could compete.

Q. There is a stock market in Moose Jaw, is there not?—A. There is, yes.

Q. Well then, if all the cattle were offered in that district, or all the live-stock in that district were offered at the stockyards in Moose Jaw you would have the same conditions prevail as at Toronto.—A. If there was enough of it to carry on with and providing competitors were not buying live stock to better advantage somewhere west.

Q. Yes, but you also buy hogs at your Toronto plant; you buy western live stock and bring it in here, do you not?—A. Direct?

Q. Yes?—A. In a limited way.

Q. Where do you use the hogs that you buy in Alberta?—A. We do not bring any hogs from Alberta to Toronto.

Q. You use them in the west?—A. We use them largely in the west and we have some killed in Montreal.

Q. Western hogs killed in Montreal?—A. Yes, sir.

Q. Will those brought from Alberta to Montreal be killed for you?—A. That is right.

Q. That seems to be a long haul. Now, does that fit in with your argument that it is economically unsound if your hogs come from somewhere in Alberta and then to Moose Jaw?—A. Well, that is a direct haul to Montreal.

Q. Well, but it is a haul that has a charge of 1·14 per hundred.—A. That is the same as our competitors have to pay, so we are not at any disadvantage.

Q. All your competitors are at the same disadvantage, you say, but they have not the same advantage at Moose Jaw, or at least they have not got the same advantage as you have there?—A. The competition at Moose Jaw is very limited.

Q. You cannot have plants wherever your competitors are, at all the points, can you?—A. Not very well.

Q. Well now, from the standpoint of the farmer though, from your observations would it not be in his interest to have the live stock offered on a public market where all the packers and all the buyers might have an opportunity of buying that live stock.—A. It seems to me that is something for the producers to express their point of view on.

Q. Well now, you are being given an opportunity as a processor?—A. I have not got a very definite opinion on that, but I presume from the fact that they do ship direct it must be to their advantage.

Q. Well, does that necessarily follow?—A. Not necessarily.

Q. No, but it might be to your advantage if they ship direct.—A. It may be or it may be the reverse.

Q. Is it not a fact, generally speaking, that your dressed costs on direct shipments are less than your dressed cost on stockyard shipments?—A. I think in a general way it may be a little less, but sometimes we find it the reverse, and over a year's business I would think it would be fairly comparable, if you check grade for grade; when you check a month's operations it may be that the percentage might show in favour of the direct shipments, but I do not think that would be a very true comparison.

Q. It has been shown by the auditors statements, that for the four week periods in all the plants there seems to be a general uniformity in the experience that the direct shipments showed a lower dressed cost than those bought on the stockyards?—A. I think in a general way that is correct.

Q. And still lower costs in respect to truck hogs than stockyard hogs?—A. Stockyard hogs include truck hogs also.

Q. I mean direct truck hogs?—A. You mean truck hogs against all hogs received from the yards.

Q. Yes.

By Mr. Kennedy (Winnipeg):

Q. Does any other element enter into that increased price other than the matter of the price paid for the stock? Let me put it this way: As Mr. Sommerville pointed out, the auditors' statements appeared to show that stock purchased through stockyards the average price was higher than for those purchased through direct shipment.

Mr. Young: It does not show on the statement here.

Mr. Kennedy (*Winnipeg*): I think you will find it there. Now, what is the factor that makes that price higher, is it the price paid to the producer, or any other factor?

The Witness: Mr. Sommerville as I understand it, all the way through, has referred to dressed costs in making his comparisons. The live costs really have not the full bearing on it; your general condition of live stock might be higher or lower, and it depends on the yield.

By Mr. Sommerville:

Q. Yes, but you estimate on your dressed costs, you do not estimate on your live costs when you are dealing with your product.—A. I do not know what you mean by estimate.

Q. Well, you figure your costs on your dressed costs, on the basis of your dressed costs?—A. That is right.

Q. Yes. Now your dressed costs, in each case, take into consideration your yield and the price you paid for the product and the cost of your dressing.—A. Except hogs.

Q. Except hogs?—A. Yes.

Q. The cost of dressing is not taken into consideration.—A. Not dressed costs.

Q. But in the other products the same factors are taken into consideration, the original cost of the product, and the yield from that particular product?—A. That is right.

Q. Yes, so that then when they are on the rail you get to a comparable cost?—A. That is right.

Q. Taking those two factors into consideration?—A. Right.

Q. And that gives you a picture of just how these various purchases compare with one another when they are on the rail dressed.—A. If you are dealing with the same grade of live stock, yes.

By Mr. Young:

Q. In this statement here of your purchases for the period September, 1933, I notice at Toronto you paid 34 cents less for what you paid in the yard than for what you paid by direct shipment. In the same week at Edmonton you paid 20 cents more, and in December you paid 7 cents more in Toronto and 68 cents less in Edmonton. Can you explain how that came about?—A. That would depend entirely on the live stock and the yields and all these other things.

Q. You mean just the average outturn in grading of the hogs bought in the yard would be better this week and next week at the packing house?—A. That often happens.

Q. You sometimes pay higher prices at the packing plant than you do at the yard, and you say that would depend on the quality of the stock, but if the reverse is true, that you are paying higher prices in the yard than at the plant it would be attributed to the same cause, would it?—A. I think it depends a great deal on the condition of the animal and your yield.

Q. Do you pay a better price, other things being equal, for the stock you buy in the yard than what you pay direct at the plant?—A. No, I do not think so. We try to make our prices fairly close.

By Mr. Sommerville:

Q. Mr. Tapley, do I understand you to say that you pay as much for your direct shipment product as you pay for your stockyard purchases?—A. We endeavour to, yes, sir.

Q. Generally speaking?—A. Yes, sir. Our policy is to pay the market and we assume the market is fairly parallel. Now this might happen, when you are dealing for any shipment, you may go out and buy and in the meantime the market may change either up or down and that would have some bearing in trying to make a comparison.

Q. With reference to direct shipment at Toronto you pay the stockyard charge whether they go through the stockyard or not?—A. That is right.

Q. But that same situation does not exist at Edmonton?—A. No.

Q. And they are not comparable?—A. No.

Mr. YOUNG: What is this stockyard charge, 5 cents a head?

Mr. SOMMERVILLE: The regular stockyard charge is 25 cents a head on cattle.

Mr. YOUNG: What is it on hogs?

Mr. SOMMERVILLE: 10 cents; on calves 6 cents, and hogs.

Mr. YOUNG: Here is a difference of 34 cents per hundred pounds at Toronto for the period September, 1933, direct shipment 9·83, stockyards 9·49.

Mr. KENNEDY (*Winnipeg*): 9·42 and 9·46.

Mr. SOMMERVILLE: 9·49 stockyards and 9·44.

By Mr. Sommerville:

Q. How do you account for that difference that week, Mr. Tapley, or do you know?—A. No I would not know without checking the figures. It is just possible in making a comparison of that kind in respect of hogs that the costs of one system of buying may have more selects or more bacons and another may have more lights, and so on. You have different grades of live stock, and that is an important point.

Q. Well, but you get the same averages wherever you buy when you are buying in such quantities.—A. You may over a longer period, but whether for a week or not I would not be so sure.

Q. Well then, I understand your evidence now is that over the period of a year you pay as much for your direct shipment hogs as you pay for your stockyard hogs.—A. We may buy at the same price but it may work out on account of yield or something else.

Q. The price you pay for direct shipments, is that not based upon the price, that is, the published price on the public stockyard?—A. Sometimes, I do not think always.

Q. Is not that generally so?—A. No, I think the stockyard price registers the market rather than makes it.

Q. Well then, who makes the market if it is not made on the stockyard? It is either made on the market or outside the market?—A. It is probably a combination of both.

By the Chairman:

Q. Well, who is in the other side of the combination?—A. The various buyers bidding for their live stock or sending their quotations out to their drovers, or the market or both.

By Mr. Sommerville:

Q. Well who are the big buyers of live stock, yourselves, Canada Packers, Wilsils, Gainors?—A. And Burns.

Q. Burns, yes?—A. Hunisett.

Q. Well, Hunisett we will say is in a small way and in cattle alone, not in pork?—A. No.

Q. Do you say then that the market is made by these five big buyers outside the stockyards?—A. Some markets are made; a combination of both is my point. Take for example the various influences that enter into making markets, take the pool hogs in Alberta; they are all sold by sealed tender. Every buyer forms his idea of what he can afford to pay for hogs and he puts in his bid, so in that case you see the market would not have anything at all to do with it.

Q. Would it not?—A. I would not think so.

Q. Why is it then that you and somebody else put in a bid exactly the same on exactly the same day yet you are thousands of miles away from each other?—A. That does not happen very often.

Q. It does happen though, and it has happened lots of times?—A. It might happen at times. After all is said and done, they secured the hogs at 8 cents, let us say, if that is the prevailing market—it might be a cent or two up or down from that, but I suppose the average would be somewhere around 8 cents; then they would bid 8, 8.10 or something else, according to how badly they wanted them, and if they wanted to bid high enough to get them.

Q. Yes. Now, you are speaking of Alberta hogs. These bids are sealed bids that are put in for the Alberta hogs?—A. Yes.

Q. And each of these buyers put in a sealed bid?—A. Yes.

Q. Well, at the time the bids are put in you have a pretty good idea of market conditions in hogs?—A. The general market, yes.

Q. And there should not be very much variation in the bids on those hogs? —A. Unless one packer was a little more enthusiastic about the market, and was willing to take them at let us say an advance.

Q. Yes. Well now I have here a record of all the bids on Blind Man Valley hogs; we will take April 12: Burns 6.60, Canada Packers 6.60, Swifts 6.55, Wilsils 6.40; and they went to Burns as the high bid. Then the next week, April 26, Canada Packers' bid was 7.05, Burns 6.92, Swifts 6.75; is there as much difference as 30 cents a hundred when you are bidding for hogs—this is a direct market?—A. I would think so, at times.

Q. There is not a 30 cent difference when you go to the stockyard, is there? —A. This is what may happen: some packer may have information, or a feeling for example, that the export market looks pretty weak, is liable to go down immediately. I think he would be apt to have pretty low ideas on hogs if he was dealing with sealed bids.

Q. Remember this is a steadily rising market. Here we have May 3rd: Burns bid 6.30, Swifts 6.60, Canada Packers 6.25; is there a difference of 45 cents?—A. Apparently there was; apparently they were feeling pretty weak that week, by the looks of it.

Q. Who was feeling weak that week?—A. The one who bid 40 cents under.

Q. That would be Canada Packers then? Next week for hogs from the same place: Canada Packers 6.75, Swifts 6.25—you were feeling weak?—A. We got a cable or something.

Q. Or something, yes; of course it was something. Canada Packers got it. And then the next week: Burns 7.10, Swifts 6.75—a difference of 35 cents; you were feeling weak that week. Well, is there any coincidence in the fact that first Burns get it, then Canada Packers, then Burns, then Canada Packers, and then Burns that gets it?—A. No, I do not think so.

Q. None whatever?—A. According to my check up here. As a matter of fact we have not had Blind Man Valley hogs for about six to eight weeks.

Q. Not recently?—A. No.

Q You have been very weak on them?—A. Apparently.

Q. I am trying to find out about last year, when the market was strong. Let us take Ponoka's for the same period: April 12, Swifts 6.60, Wilsil 6.40; 20 cents difference there. They were the weak ones that week?—A. Apparently.

Q And Canada Packers bid exactly the same as you, 6.60; and Burns, 6.55. And they went to Swifts. Then the next week, Ponoka's: Canada Packers 7.05, Burns 6.95, Swifts 6.75—then they go to Canada Packers (that is for the 26th April). Then May 3rd: Swifts 6.60, Canada Packers 6.25, Burns 6.50—and they go to Swifts. And the next week, May 10: Canada Packers 6.75, Swifts 6.25—a difference of 50 cents a hundred—and they go to Canada Packers. Well, Mr. Tapley, could you not get nearer than 50 cents to the market when you were bidding outside the stockyards?—A. I do not think, on a sealed bid.

Q. You do not think you could; there is not 10 cents difference between you on the stockyards, is there?—A. No, possibly not; on a sealed bid it is everybody's guess as to what they can get the hogs for, providing they want them.

By Mr. Senn:

Q. Mr. McLean made the statement when he was before the committee that the price paid to the producer was based on the price received for export bacon; now, you say it is only a guess—which is correct?—A. On a sealed bid it is only a guess, and I do not see how else it could be.

Q. Then you have the price that you received for the finished product, particularly export bacon, you say it bears no relation to the price you paid to the farmer?—A. Yes, it bears some relation to that product, but it is not sold for a month or six weeks later. In buying hogs to-day we would have to figure out the situation to our own satisfaction as far as we could.

Q. Would you say then that Mr. McLean's statement does not give clearly your method of determining the price to the farmer?—A. My viewpoint on that is—regardless of Mr. McLean's statement—the price of hogs is arrived at from a combination of both markets rather than entirely export.

Q. You made a statement a while ago that you could not follow the dressed carcass down through the different departments to the finished article to show the spread clearly, did you not?—A. Nevertheless, you have got a general line on the domestic market.

Q. I know, but surely the price you received for the finished product must bear some relation to the price you paid. It seems to me that is the most important question of our whole investigation, as to how you determine the price to the farmer; that is what I want to know?—A. In the case of the export market, you understand, your product is not sold until about four to six weeks later. In the case of the domestic market, some of your product is sold fresh within a few days or a week, some of it is put into cure and not sold for thirty, sixty, or ninety days.

Q. Can you make any statement as to how you base that price to the farmer, as to the relationship between the price for the finished article and the price to the farmer; you surely do not just guess at it?—A. You use the last price that the grading was done at, whatever it was; you consider whether receipts are limited or if a market lacks strength—everybody knows about it, the sellers and the buyers, or the people offering these hogs probably, and they say we want 25 cents more for our hogs—or 50 cents, whatever it may be.

Q. You do not mean to tell the committee that when you buy a carload of hogs you do not know whether you are going to make a profit or a loss on them?—A. We do not know, I wish we did.

Q. Then you are just buying in the dark?—A. We just buy every day, because we are in business every day; and there is no packer I know of that absolutely knows whether this week is going to be profitable or not.

By Mr. Sommerville:

Q. We will all be in heaven if we made a profit on everything, would we not?—A. Close to it.

Q. Following up, May 10 I find the bids on Ponoka pool hogs: Canada Packers 6.75, Swifts 6.25—that is 50 cents above your bid. Then, on the next week: Burns bids 7.10, you bid 6.75 and Canada Packers bids 6.75. Is there any significance in the fact that both you and Canada Packers bid the same price?—A. I do not think so.

Q. Is there any significance in the fact that you alternate—that alternately you get the hogs?—A. None whatever.

Q. I observe here that on April 12 you got the Ponoka hogs, on April 26 Canada Packers got them, on May 3rd you got them. On May 10th Canada Packers got them; no significance, you think, in that?—A. No significance at all.

Q. Do you keep track of who gets all these hogs?—A. Yes, sir.

Q. Who gets them, and the prices paid?—A. If we miss them we make a little note of it, and note who gets them.

Q. Do you make a note of all the bids made on the hogs by the various buyers?—A. Yes, our people in the West I presume get that information.

Q. You keep a record of that?—A. We keep the memorandum of it, for no particular purpose.

Q. I beg your pardon?—A. For no particular purpose, except to keep posted.

Q. At any rate there are these bids outside of the stockyards that have the variations I have indicated, on what you call these sealed bids. Is it not a fact that very frequently you pay more for these hogs than you could buy the hogs for on the stockyards, after adding your freight?—A. Sometimes I think they are high, sometimes they may be low.

Q. Is it not a fact that generally speaking these hogs cost you more when you bring them to Winnipeg than hogs bought that day at Winnipeg?—A. I would not think so.

Q. How frequently, in your judgment, does that occur?—A. I would not know that without looking into it.

Q. Is it not a fact that you buy these Alberta pool hogs away from the markets and frequently pay high prices for them, in order to stay off the market and not raise the whole market on hogs?—A. I do not think so.

Q. Well, if you buy these hogs in Alberta and pay your $1.14 differential to bring them to Montreal, has it frequently not been your experience that they cost more than the hogs bought on the stockyards at Montreal at that time?—A. We buy very few at the Montreal stockyards.

Q. But for similar hogs bought on the stockyards? -A. I think sometimes they are higher, sometimes lower; I think they would fairly well average out over the year.

Q. On the occasions when they are higher, is not that because of the fact that you buy them away from the stockyards, and thus do not raise the stockyard prices on the whole of the hogs that are offered?—A. No, I do not think so.

Q. Of course, if you went to the stockyard and paid more for your stockyard hogs, that would affect the price of all hogs going to your plant, wouldn't it?—A. It might, yes.

Q. Is not that a natural assumption?—A. It may be, I don't know; that happens mostly I suppose in the West. If we went out and paid 25 to 50 cents higher for hogs at the stockyard, I think it would have its effect on all of the markets—yes. Likewise, I think if we paid a higher price for the pools it would have a general effect on the market.

By the Chairman:

Q. But before you leave us, Mr. Tapley: It looks strange to greenhorns like myself, that you three concerned—Burns, Canada Packers and Swifts—could go to the Blind Man Valley, and to this North pool, and bid week by week; and over a whole period of weeks and then find that the successful company—the one that secures the hogs—is more or less different each week; that is, you one week, Burns another, and Canada Packers another. Do you say that there is no understanding between the companies in that respect?—A. Positively not.

By Mr. Senn:

Q. Might I ask another question before you leave that: one of the former witnesses before this committee made the statement that at Toronto, or with respect to killings at the Toronto abattoir, there was a relationship of 68 per cent for Canada Packers and 32 per cent for Swifts; and he also made the statement that on a short market if Swifts were buying too many hogs, making it above that proportion, they would hold back a little to let Canada Packers get their share. Do you know anything about that statement, is there any truth in it?—A. Nothing to it at all.

By Mr. Sommerville:

Q. Is it a fact that on the Toronto market, the proportion of buying, as between Swifts and Canada Packers, is 68 per cent and 32 per cent or two-thirds and one-third?—A. No sir.

Q. That is not a fact?—A. No.

Q. Is that not a practice?—A. No, I think it works out—it may work out all the way from 25 per cent to 40 per cent.

Q. But on the average over a week's purchases?—A. It may be 32 per cent or 33, 34 or 31 per cent or something else.

By Mr. Young:

Q. What is the relative capacity of the two plants, Swifts and Canada Packers?—A. The total capacity?

Q. The relative capacity—is one twice the other exactly?—A. With their combined facilities on the spot, they are perhaps two to three times our capacity at Toronto.

Q. They buy two or three times as many hogs as you?—A. I do not know exactly what they do.

Q. I mean, are your purchases determined by your capacity?—A. No.

Q. They are not?—A. We are under packing house capacity, everybody has practically double the number of hogs slaughtered, at least.

Q. What are your purchases determined by, prospective sales?—A. Prospective sales, or the price of the product, determines how many hogs they want for the week, each department orders according to how they think the market is. If we think the market is going to be pretty good next week, or in England next week, we may be very active. Another time we might be losing money and not buy very high, or we would be slow—if we are losing money on this they would slow up—could not stand it.

By Mr. Sommerville:

Q. Mr. Tapley, you made the statement with respect to a laggy market that you either had to get your purchases lower or get better prices for your product?—A. Yes, sir.

Q. Now, what is there to prevent you large buyers because you do buy the vast bulk of the product—what is there to prevent you buyers going out on a

market that has been say bad, as has been described here, where the farmers were getting 2 cents to 3 cents a pound for finished steers of one thousand pounds weight in Alberta—and I think you recognize that is a very bad price, isn't it?—A. It certainly is.

Q. What is there to prevent you from going out and saying, the price that we will pay for that class of cattle is 5 cents?—A. My opinion is that the price of 3 or 4 cents—or whatever it may be—is probably caused by heavy receipts and surplus; and you arbitrarily put the price up to 5 cents or something else, and I think you would curtail consumption and immediately you would have a surplus of beef that would drop the price down to the old three or four cent price.

Q. Then, what you were saying is, that the consumer curtails consumption when you increase the price beyond 2 or 3 cents to the farmer on his finished product?—A. As prices advance, consumption we find goes down.

Q. You contend that the consumer wants the farmer to get two cents for his finished beef?—A. I do not, no.

By Mr. Factor:

Q. What relation has the price of the processed product to the live product; if you pay the farmer 2 cents or 3 cents a pound on a thousand pound finished steer, what does the product sell for?—A. You figure your dressed cost whatever it is—2 cents or 3 cents or 5 cents—and your dressed product sells in line with that—at a profit, if you can get it; if not, at an even break, or a loss—according to what you are able to do with it, according to the demand.

By Mr. Sommerville:

Q. In the event that you do raise the price of beef to 5 cents—?—A. Increased demand, or less receipts, as the case may be automatically raise the price.

Q. That automatically raises the prices; and that you think is the only method?—A. Is the only practical method that I can see, unless something could be devised to take a lot of surplus cattle out of the country.

Q. We will come to that in a few minutes. You did say, however, when you faced such a situation you had either to get your product at a lower price, or else get more for your finished product; and when you depress the price to 2 cents, you are making the farmer take the end of it that will be profitable to you in the sales to the consumer, are you not?—A. We are not making him take it, that is the market.

Q. That is making him take it?—A. That is, it is the selling price of the product that makes him take that low price.

By the Chairman:

Q. What proportion of the beef that is slaughtered is what you would call good or choice steer beef?—A. Maybe 25 per cent, very small.

Q. And what proportion would be the next grade, and what is the next grade?—A. The next grade is fair to medium, I suppose that might be another 25 or 30 per cent.

Q. All right, what is the next grade?—A. The next grade would probably be a matter of 15 per cent.

Q. What do you call that next grade?—A. Fair.

Q. What is the other 35 per cent?—A. There would probably be another grade in between that grade and these canners and cutters—they take about the tail end of the grade.

Q. What is the proportion of canners and cutters?—A. Offhand I would say 15 to 20 per cent.

Q. Now, just one more: you said a moment ago something about taking a certain proportion of cattle off the market. If we took 100,000 head off the market, would that make the difference that you were suggesting?—A. I think it would take nearer 200,000 head.

Q. That would be about 15 per cent of the number slaughtered?—A. Of the number of government inspected slaughtered.

Q. Yes?—A. You see, only about I suppose 50 per cent of the cattle go to government inspected houses.

Q. Quite so?

By Mr. Senn:

Q. That is what you would call country killings?—A. Yes.

By the Chairman:

Q. Now these canners and cutters, they are really not fit for the fresh meat market, are they?—A. They are wholesome.

Q. I suppose if you stew them long enough?—A. If you have got good teeth, they are a little tough.

Q. They really are not " fresh meat "?

By Mr. Young:

Q. What is the matter with tough meat, we have all eaten it?

The CHAIRMAN: Oh we get lots of tough meat, you can get lots of tough meat in all the grades other than perhaps " Baby Beef."

Mr. YOUNG: You cannot condemn meat because it is tough.

By the Chairman:

Q. I am not condemning it, I am experimenting with it. That would be about 15 per cent, therefore, if we could get rid of that lower class—the tail end, as you called it a moment ago—it would leave about what is required for the fresh meat market in this country; would you agree with that?—A. In general I think probably that would meet the situation, Mr. Stevens. I think you have to give some consideration to this, when you are dealing with percentages these canners and cutters are much lighter cattle—they would run only about 200, 275 to 325 maybe a side. The general butcher shop cattle run about 500 to 550.

Q. Yes?—A. But I think for the purposes of the idea you are developing there, that is correct.

Q. Now, you have good, choice and medium, about 50 per cent?—A. Probably.

Q. Why could not the packers—and the whole business is in the hands of Canada Packers and yourselves, and Burns and a few other small ones—virtually you control the packing business of the country, the largest portion of it—why could not the packers endeavour to raise the price of good cattle that come on the market, and work out a plan to use this refuse in a different way, and thus raise the price for good beef cattle?—A. I am just wondering how these other 15 or 20 per cent of " tail ends " could be used. It seems to me, you know after all in the purchasing public there are a good many classes, and that lower grade of beef is not just so good, it does fill a purpose for someone with small spending power.

Q. Yes, there is a lot to it; still it is not good beef, and it might help to get rid of it?—A. Possibly.

Mr. SOMMERVILLE: It has a very serious effect, undoubtedly, upon the general meat market.

By the Chairman:

Q. How about this red and blue label beef; have you had much experience with that; do you favour it?—A. Yes, graded beef, yes; I am in favour of it.

Q. Have you found it successful in handling?—A. Yes.

By Mr. Sommerville:

Q. Do you favour the grading of all qualities of beef?—A. No, I do not think so.

Q. Why?—A. I think the minute you put a third, fourth, fifth or sixth grade upon it—whatever it might be—the minute you put such grades on merchandise, it puts such merchandise out of business.

The CHAIRMAN: But it would stop that from competing with the good grades, the one and two?—A. Of course it would hurt the producer who owns that kind of stuff.

By Mr. Kennedy (Winnipeg):

Q. From the point of view of profit returns to the packer, is it as profitable for them to handle the poorer grades—the canners and cutters—as it is to handle the better grades?—A. I do not think it makes any difference.

Q. So that, from the packers' point of view you have no interest in eliminating the poorer grade from the market?—A. If it had a beneficial effect on the live stock industry and would help the producer, yes.

Q. I am taking things as they are, to get an expression of opinion from the packers' point of view as to profit returns on their business; is it desirable that the canners be gotten out of the way, or would you just as soon have them?—A. It does not make any difference to the packer; do you mean, are they more profitable than other classes of cattle—no, no difference to the packers.

Q. Just as profitable?—A. Maybe, maybe not; in a general way I do not think it makes any difference as far as the packer is concerned, if it would be beneficial for the live stock industry as a whole we would be glad to see something worked out to take them out of the way, and make a better market for what is left.

By Mr. Sommerville:

Q. Is it not a fact, however, that a substantial proportion of the cuts from these remnants—the 15 per cent called canners and cutters—do go into the market at fair prices, and interfere with the price of real good beef?—A. Not good prices. I think they go into circulation at probably pretty fair prices.

Q. Pretty fair prices. Then perhaps you could tell me what you think of these prices: here we have ten cents a pound for a cutter, that is a pretty good price for any kind of a cutter in the month of April?—A. You say the sale price was 10 cents a pound?

Q. Yes, the wholesale price?—A. Is that the hind quarter or what?

Q. That is the hind quarter?—A. Yes, it looks pretty good.

Q. Yes, for a remnant?—A. It looks pretty good. It may have been a poor cow or something like that. I could not say without some knowledge of the product or some knowledge of the value of it.

Mr. KENNEDY (*Peace River*): I venture to state that it cost the packer at least one cent a pound.

Mr. SOMMERVILLE: Well, live weight.

The CHAIRMAN: What date were you speaking of, Mr. Sommerville?

Mr. SOMMERVILLE: April 12 to 19.

By Mr. Sommerville:

Q. Here is another price. Cutter, $9\frac{1}{2}$ cents a pound, a hind, steer or heifer, so that you can have your choice?—A. What date is that?

Q. April 12, 1934?—A. That sounds like a pretty good price.

Q. Yes; and here is another one: steer hindquarters, cutters, $9\frac{1}{2}$ cents?—A. That sounds good.

Q. Here is another one, one front of beef, cutter, $8\frac{1}{2}$ cents; is that a pretty good price?—A. It don't sound bad.

Q. You are not extending yourself, Mr. Tapley?—A. I have not got the product in front of me. I can't tell.

The CHAIRMAN: I think Mr. Tapley is saying to himself that he wishes he could have a whole lot of them for his concern.

Mr. SOMMERVILLE: Yes.

By Mr. Sommerville:

Q. I see here 8 cents, 7 cents, $8\frac{1}{2}$ cents, 9 cents, 10 cents, $7\frac{1}{2}$ cents, 6 cents, $7\frac{1}{2}$ cents, $5\frac{1}{2}$ cents, $6\frac{1}{2}$ cents; they are pretty good prices for cutters?—A. On the average, they look good.

Q. If those prices were paid, they would compete with what were the better qualities of beef, would they not?—A. To that extent, yes, sir.

Q. Is there any suggestion you can make to this committee that will improve that situation? Because we have had the complaint that the retail trade has been bedevilled by just that sort of thing, that the cutters have been put into the retail stores, and have been sold at cut rate prices and other people demanding good beef for the same price. You have found that to be so?—A. I have heard that, and I have seen evidence of that, yes. But I have not any practical suggestion. These canners and cutters come in and they are made into beef. Some of them are boned out and made into sausage products of various kinds. The hind quarters are cut off and are sold generally to these people that do a lower class meat business, and there seems to be a demand for them. If something was devised to take them out of the way, out of these stores, naturally you would have to buy the next higher grade.

By Mr. Young:

Q. Would they be in a position to pay a higher price? I mean would the customer be in a position to buy the meat?—A. The higher priced meat? Of course, your purchasing power comes into it. If the other meat was taken out of the way, if they wanted that meat, they would have to pay for it.

Q. Suppose they didn't have the money?—A. They would have to buy the next higher grade or buy some other product, buy another product which is cheaper.

Mr. MULLINS: May I ask a question?

The CHAIRMAN: Yes, Mr. Mullins, what do you want to ask?

Mr. MULLINS: I want to ask the witness if it is not a fact that this class of cattle he is talking about got a better price when the old time exporter was on the market, the man who went down the line and took 200 or 300 cattle off the market for export? Was there not a better price for local cattle at that time?

The WITNESS: That is too far back for me.

Mr. MULLINS: It made you step up the line and pay a better price, is that not a fact?

Mr. SOMMERVILLE: Mr. Tapley says he is not in your class. He can't get that far back, Col. Mullins.

Mr. MULLINS: Oh, yes, he can.

By Mr. Senn:

Q. Mr. Tapley, when you were making your estimate of taking 2,000 cattle off the market to keep the market in line with domestic consumption, did you take into account our exports this last two or three years, or is that additional?—A. Additional to the export.

Q. It is additional?—A. Yes.

By Mr. Kennedy (Peace River):

Q. Mr. Tapley, a little while ago you said you would not grade this cutter and canner beef down to say Nos. 5 and 6, because it would hurt the sale of it?—A. That is in the stamping of it, dressed?

Q. Yes?—A. Yes, I did.

Q. Don't you think that the sale of a lot of that stuff as beef hurts the beef trade generally? A person buys that possibly thinking it is fairly good beef, and is sick of beef after that?—A. Yes, I think it would be apt to prejudice people against beef.

Q. By protecting that sort of stuff, by not putting the stamp on it, don't you think you are hurting the sale of the better class of beef?—A. If there is much of that class of beef going into circulation, into the homes, I think it has an adverse effect on the general beef trade.

Q. Don't you think the people who should be encouraged are the people who are purchasing the high class products? If there is any question of protecting one or the other, don't you think that the people who ought to be protected are the people who are purchasing the good product?—A. I think you have to face this kind of situation, Mr. Kennedy: Suppose some scheme was devised in, let us say, government inspected packing houses to take this low priced stuff off the market, or to have it marketed in such a way that it would be plainly indicated just what it is. It seems to me that the quality of that class of live stock that would come to market would not be through the regular marketing channels at all. It would come from the farm, the villages or somewhere and still have to be consumed. You would still get it in circulation, because half of your cattle now don't go through government inspected packing houses. They come farm kill or village kill or small town kill or something like that. I think that stuff would go right around you and still come into circulation as meat.

Q. There is another question I want to put in connection with the surplus of meat products in Canada. There is a surplus of about 10 per cent in hogs, I believe, and about 10 per cent in cattle, roughly. That is Mr. McLean's evidence. I think it was less than that, but put it at 20. We shipped last year to the British market about 10 per cent of what we were entitled to under the Ottawa agreement.

The CHAIRMAN: Of hogs.

Mr. SENN: Bacon.

By Mr. Kennedy (Peace River):

Q. All right, bacon and hams; it works out that way. Why could not the packers of Canada, a half dozen of them, get together and get out twice as many hogs and leave the market for the beef and the rest of the hogs that were left, because all meats are competing?—A. Well, that movement of hogs to the export market has, as everybody knows, advanced the hog market from that low level of a year or two ago up to a very substantially higher level.

Q. Why could they not have sent more hog products abroad or to the old country? The market was there. Why could you not have doubled the export, and have a market in Canada for that much additional beef?—A. In the first place, the quality of your hogs are not good enough yet to ship in the quantities you suggest. I think probably in the last year nearly every packer shipped about all he could, consistent with good enough quality to satisfy that British market.

By Mr. Senn:

Q. I suppose a considerable proportion of higher grade hogs are consumed in Canada, are they not?—A. Higher grade hogs?

Q. Yes, higher grade hogs that would be fit for the British market?—A. They want the best over there.

Q. I know, but don't you think that a considerable proportion of those hogs are consumed here, hogs that would be fit for that market?—A. You are suggesting, Mr. Senn, that the export percentage could be increased by taking another top off the balance of the hogs, let us say, and shipping them export?

Q. Yes?—A. I don't think you want to overlook the fact that the domestic market requires a good grade of bacon also.

By Mr. Sommerville:

Q. That is exactly what Mr. Senn was asking you. Is it not a fact that the domestic market takes a large proportion of the good hogs raised in Canada? —A. It takes its share, yes.

Q. What proportion, would you say? We had an estimate from Mr. McLean. What proportion, would you say, of bacons and selects are required for the domestic market?—A. Selects and bacons, the two tops—selects, bacon and butcher?

Q. Well, selects and bacons?—A. Selects and bacons?

Q. Yes?—A. 35 to 40 to 50 per cent.

Q. Yes, probably 50 per cent?—A. Yes.

Q. Mr. McLean's estimate was substantially higher than that. But it would be, you think, 40 to 50 per cent anyway—A. Yes, I think 40 to 50 per cent, probably.

Q. As a matter of fact, for your finished product in Canada you use selects, bacons, butchers and lights, don't you, for your domestic trade—A. The domestic trade gets the general run of all of our hogs.

Q. Of all of your hogs—A. Yes.

Q. Of all the grades—A. Of all the grades.

Q. We had evidence here that for the old country market you did ship some from selects, some from bacons, some from butchers and some from lights—some products from each of these. Is that not a fact—A. It is possible. I would think that the shipments from the lights would be remarkably small, because they would make a Wiltshire that is too light to be popular in the British market.

Q. But they make cuts, don't they? Don't they make a certain kind of hams that are desirable over there?—A. No. Hams from the light hogs would be entirely too light. The only call we get for hams is a much heavier hog than that.

Q. I think Mr. Wilson submitted to us the sizes and weights of the various grades that came into the English market, and gave us evidence to the effect that the lower weights could only be made from the light hogs, and that a substantial proportion did go over from those light hogs?—A. I think there must be some misunderstanding or confusion on that, Mr. Sommerville, because a light hog, I am sure, would not make the most satisfactory Wiltshire cut for the British market.

Q. They perhaps do not make the most satisfactory Wiltshire cut, but do they make Wiltshire sides from light hogs?—A. Broadly speaking, the British market do not want a Wiltshire side lower than 50 pounds.

Q. I don't care what you say or what the British market wants. Is it not a fact that Wiltshire sides from lights are shipped from Canada?—A. Very limited. As far as I know, we don't ship any. We may ship a few at some of our plants.

Q. You ship Wiltshires from butchers, bacons and selects?—A. A large percentage of selects would go, a smaller percentage of the bacons, and I would think quite a very small percentage of the butchers.

Q. Do you send any of the cuts from the heavies, for any purpose, to England?—A. There may be some hams and some heavy Wiltshires.

Q. If you are using heavies and butchers for the export trade, why are you taking the differentials of one dollar a head off these products that, as soon as they go into the killing room, lost their identity and go into export bacon?—A. Well, in the first place I don't suppose the percentage of butchers, for example, that would go as Wiltshires, would be very large; and you still have an extremely heavy percentage for your domestic requirements. Also, Mr. Sommerville, a certain percentage, as you probably know, of selects and bacons that are paid a higher price are not available for export on account of bruises or for other reasons. So while it is true there may be some butchers taken for Wiltshires, there are a lot of selects and bacons that are not suitable.

Q. Why take off the differentials when you are using them for the domestic trade, much of which is fresh pork trade?—A. A very small percentage of your trade is fresh pork.

Q. You find that to be so?—A. A very small percentage compared to the total.

Q. Why take off from the heavies the differentials, a substantial differential, when you are using such a proportion of them for the export trade?—A. I would say a very small percentage of them are export trade.

Q. Then, in the domestic trade you use them?—A. For the domestic trade we use whatever heavies we need.

Q. And for the domestic trade you use the lights?—A. Yes.

Q. As a matter of fact, the lights are desirable cuts for the fresh pork business, the ordinary butcher shop, are they not?—A. I think they are for some butchers that wish to buy their requirements in the whole hog form as a carcass. But compared to the total trade, the total domestic trade, that percentage is extremely small.

Q. I have never seen the difference, in a butcher shop, between a light and heavy when it came to a loin of pork, have you?—A. I don't think you probably see loins of pork made out of light hogs. They are made out of heavier hogs

Q. All out of heavier hogs?—A. I think in the great majority of cases

Q. We had evidence here of a demand for light hogs for cutting purposes, to make up into fresh hams and into loins?—A. I think, as I said before, that is a demand from butchers who like to handle carcass hogs. But the majority of the fresh meat trade call for their loins and shoulders and other fresh cuts out of heavier hogs, regular butcher hogs.

By Mr. Senn:

Q. Did I understand you to say that very few of the selects and bacon hogs go into the fresh meat domestic trade?—A. Quite a few of them, yes.

Q. You said there were from 40 to 50 per cent of that class of hogs consumed in Canada. Can you give us the percentage that is consumed in the fresh meat trade, your estimate?—A. Offhand, I would say the fresh meat trade might be 20 per cent of the total.

Q. As packers, could you not control that consumption and process it, so that it could be exported?—A. I don't think so.

By Mr. Kennedy (Winnipeg):

Q. From the point of view of profit return to the packers, is a higher or lower general market price desirable, or is it immaterial?—A. Higher, by all means.

Q. Let me get that clear. Then the higher the general market price is, the more profitable the business is to the packer?—A. Let me put it this way: The higher your general market is, the more favourable your expense ratio is to the value of your product. When products get too low, your expense, relatively, is too high; and that is very bad in any business, I think.

By the Chairman:

Q. Going back for a moment to these cutters and canners, I sent out for the market quotations in the *Mail and Empire* of April 12, and I find that cutters and canners are quoted on the live stock market that day at $1 to $2 a hundred. Now, having in mind that quotation for the live animal on April 12, I ask you what effect has it on the fresh beef market when the same class of beef, cutters, are sold on the 13th, 14th or 15th—I have others here—at 7½, 9½, 10, 8, 6½ and 6 cents a pound? What justification could the packer or processor give for a situation of that kind?—A. I think those quotations you are reading there, down to 6 cents, your low figure, are for a grade of animal higher than canner or cutter.

Q. I am advised that they are for the canner and the cutter.

Mr. SOMMERVILLE: That is what the evidence is. They are taken under that name from the records.

The CHAIRMAN: Yes, from the records.

The WITNESS: I can't check with that.

By the Chairman:

Q. The point I am getting at, Mr. Tapley, is that it looks to me as though the packing industry were buying those low priced animals, exceedingly low priced animals, and a substantial portion of the beef from them is going into the retail stores in competition with the better class of beef. Obviously no retail store—take the chain store which nowadays does so much of your distribution—can put on a display of this cheap beef and then expect to get a fair price for the good beef alongside of it, nor can the butcher next door to him expect to get a fair price for the higher grade even. Therefore I am asking this question of you: Does not that practice demoralize your whole beef market and result in the farmer getting for a finished steer a ridiculous price? For instance, choice steers paid only $5, which was very much better, or somewhat better than they were before that; but on April 12, steers, good and choice, were $5 to $5.60 in Toronto. Obviously the farmer is not getting anything near a fair return for that class of beef?—A. My opinion on that, Mr. Stevens, is that probably 75 per cent of those canners and cutters go into sausage meat. They are boned out as trimmings. Some of those trimmings, of course, are exported at various seasons during the year. We might say 25 per cent might find its way into the fresh beef trade, as you suggest. I think it would have an effect on the general level of the beef business, as you suggest, to that extent.

Q. We have records for one week here showing a very substantial portion, and they are sales to all sorts of people scattered all over the country. It is not a picked week or anything like that, but it does show a very large quantity of this class of beef being distributed as fresh beef. It strikes me, personally, as most unfair competition for the farmer who raises good beef. That is what I am getting at?—A. I would like to suggest, Mr. Stevens, in order to clear that point up, that a check be made—each packer could furnish it in a very short time, I think,—as to what percentage of these canners and cutters do go into the fresh beef trade; get the disposition of it, of all your canners and cutters, what happened to them, where they did go. Then we can find out exactly how much it is influencing the higher class trade.

By Mr. Kennedy (Winnipeg):

Q. Mr. Tapley, may you not buy on the classification of canner and cutter as a packer, and yet when you put it into the fresh beef trade it does not go into that classification at all?—A. A very great deal of it goes into the fresh beef trade as hind quarters, does not go in as side. It is not a grade at all. It

is just a hind quarter. The fore quarters and in many cases the whole carcass is boned out but if you come to some of these animals that have a little more quality than the worst of them, then the hind quarters are cut off and sold at quarters.

Q. Would the records of the packing company show just what disposition was made of all cattle purchased as canners?—A. I think so. But if the records as they stand now do not show that, then it would be a simple matter to ask the packer to start a record over a period, to see. Then everyone would have a clear idea of just how important that point was.

By Mr. Sommerville:

Q. Now, while we are dealing with the question of quality, you say that you are in favour of this grading of beef as red and blue label beef?—A. Yes.

Q. Why do you favour it?—A. Because I think it indicates to the housewife, in a very definite form, the quality of the beef. The average housewife, as most people know, is not always a good judge of beef in the butcher store. Some of them are and some of them are not.

Q. But this enables them to determine, or at least to find out whether the beef is good?—A. This enables them all, I think, if they wish, to know that it is good beef.

Q. That is for your blue label and red label?—A. Yes.

Q. Are all those labels put on by a government inspector?—A. They are either put on by a government inspector, or put on by an abattoir employee and checked or supervised by a government inspector.

Q. Are there any exceptions to that?—A. There may be, I don't know of any.

Q. Is it not a fact that certain chain stores have these marking machines themselves, and they put the red and blue label on their product?—A. If they do, it is done at the packing house. As far as I know, they don't, I think all that branding is done by the packer under the government inspector's supervision.

Q. That is, it is put on, you think, by the packer and the inspector goes about from time to time to inspect the carcasses, to see if a particular carcass bearing that label answers the requirements?—A. Yes.

Q. Of course, he does not examine all the carcasses. He can't do that?—A. He can't do that. In addition to that, these inspectors, I understand, go around the stores and shops and check the grading and branding as well.

Q. There is just one inspector in Toronto, is there not?—A. One, yes.

Q. There is one in Toronto, and he checks on the grades at the abattoirs at Toronto, and all the stores in Toronto?—A. Yes.

Q. And you never heard of any of the chain stores having these marking machines with which they put the label on themselves?—A. No, sir.

By Mr. Senn:

Q. Mr. Tapley, did you ever hear of a concern putting in their window: "We sell red label or blue label beef," and then they have five or six different qualities in their store. Presumably a customer comes in and expects he is getting either blue or red label beef and he may be getting another quality entirely?—A. Well, I presume there are stores that cater to several classes of trade and they will have some, let us say, blue brand beef and they will have beef not branded. They will have both in the same store, I think, yes.

Q. Don't you think that that practice is detrimental to the interests of the trade generally?—A. No, I would not think so. I think in the final analysis you have to depend on the reliability of your butcher.

Q. If you had all the brands of beef graded, the customer would have no difficulty in knowing what brand of beef he is getting?—A. That is true, but I think it would hurt the saleability of your lower grades. If that is satisfactory to the producer, of course that is another matter. But I am quite sure, in my own mind, that it would hurt the sale of those grades.

Q. You think it would not be in the interests of the producer himself to have all of these graded?—A. I don't believe your producers that have these other grades have come to the point yet where they could stand that kind of campaign.

By Mr. Sommerville:

Q. You have government graded poultry?—A. Yes.

Q. And the producers are getting the benefit of that?—A. Yes.

Q. And you have government graded eggs?—A. Yes.

Mr. KENNEDY (*Peace River*): And hogs, and wheat.

By Mr. Sommerville:

Q. You have government graded hogs?—A. Yes.

Q. And many other products are graded for the producer?—A. Yes.

Q. Why stop at beef? There is no government grading of beef of any kind, except the carcasses you have referred to as red and blue label, is there?—A. That is right.

By the Chairman:

Q. What would happen if we were to prohibit the use of these cutters and canners in the fresh beef trade, and say they could be used only for sausage or other purposes?—A. Nothing would happen as far as the packers are concerned. But as I pointed out to Mr. Kennedy a little while ago, I think, Mr. Stevens, that possibly might cause these lower grades, canners and cutters, to find their way to the market without going to the packing houses. As far as the packers are concerned, I don't think it would make any difference.

Q. You mean through local butchers?—A. Local butchers, and from the product of the village markets, et cetera.

Q. Is it not true in the business generally that the local butcher is finding the modern method of merchandising through the large packing concerns his chief competition?—A. Yes; or you might reverse that.

By Mr. Sommerville:

Q. You find that the little local butcher is still in existence?—A. Yes, we find that, and it is particularly so in the last two or three years. We find our toughest competition is these small butchers that buy a few head in the country and bring them in and kill them in the outskirts.

By the Chairman:

Q. Well, that is encouraging. But I want to get back to this point because, although I won't say I am convinced, I think it is rather impressive evidence, if you like, that the price of this lowest class of beef being retailed on the market as fresh beef is fatally affecting the price to the farmer for his decent beef. I can't help but be impressed with that thought. If it were defined in some way so that a person would know they are getting the most inferior type of beef when they were buying, it would not be so bad. You must know, from your experience in this, that when beef is displayed in a chain store, which is a large distributing agency to-day, the average buyer that goes in there cannot discriminate between a decent class of beef and the poorer class. It all looks about the same. Unless they are trained in choosing a type of beef,

they won't know it. Yet that one cent paid for these canners and cutters, or $1\frac{1}{2}$ and 2 cents in Toronto, has a substantial influence in setting the price for the best beef that goes in there, first class stock, well finished. Is that not correct?—A. I don't really believe that it has quite the effect that you seem to think, although I do think it has some effect. I don't see how it can help but have some effect. But as a rule, these cheaper cuts go to stores that cater to a different class of trade.

The CHAIRMAN: They cater to every class of trade. You can't tell me much about that, because I used to own them for many years. That class of store we are talking about, the ordinary chain store, is catering to every class of trade to-day.

Mr. FACTOR: He did say that only 25 per cent of the canners and cutters go to the retail trade.

The CHAIRMAN: Quite so. I am not saying that all the beef sold there is of that class.

Mr. KENNEDY (*Peace River*): As fresh beef.

The WITNESS: It has been my experience, Mr. Stevens, that the ordinary chain store does not buy that class of stuff at all.

By the Chairman:

Q. It does not?—A. No. That is not my experience or my understanding. I don't think the ordinary chain store buys canners or cutters.

Q. Where is it sold?—A. It goes to some of these co-called cut-throat stores, singles or two or three.

By Mr. Sommerville:

Q. Cut-throat butcher shops?—A. Yes.

Q. With all the electric lights and the high signs outside?—A. Yes.

Q. And cut up to look very attractive in the windows?—A. Yes.

By Mr. Young:

Q. May I ask a question there about these canners and cutters. From what kind of cattle are they made?—A. From what kind of cattle?

Q. Yes?—A. The poorest kinds that comes off the farm.

Q. I mean, they are dairy cattle, are they not?—A. Mostly dairy cattle, yes.

Q. And old breeding stock?—A. Dairy cattle or may be other cattle that have not been extra well fed, that didn't have much to start with; and they come on in with the others. But a good many of them are dairy cattle.

Q. Is it practical to stop people from raising them altogether?—A. That is a problem for the producer.

Q. Where you have dairy cows that have about outlived their usefulness the dairyman has to have some place to put them.—A. I would not attempt to give an opinion on that. I think that is something for the producer to grapple with, That is outside my line.

Mr. KENNEDY (*Peace River*): I think the evidence of an Edmonton dairyman was to the effect that it did not pay to haul them to market.

By Mr. Sommerville:

Q. Now, was there any statement that you desired to make to the committee in answer to any evidence that has been given, Mr. Tapley?—A. No, sir.

By Mr. Kennedy (Peace River):

Q. I would like to ask a question on the matter of hog products, or hams and bacons being shipped to Great Britain under the Ottawa Agreement. You said that you must hold a certain amount of the select bacon and hams for the

Canadian trade. Why must you hold that in Canada for the Canadian trade?—A. Because the Canadian consumer wants good quality the same as anybody else.

Q. There is nothing wrong with lights and butchers?—A. There is nothing wrong with them, no.

Q. Well now, don't you think then that in view of the very low prices, the ruinous prices we have had, that the packers might have done something more than they did to get rid of a greater amount of the bacon and hams especially view of the Ottawa agreements taking them off the Canadian market and leave a better market for the other kinds that are here?—A. I think the packers have done everything that they could.

Q. Did you ever consider that?—A. I think the packers have done everything they possibly could.

Q. Did you ever consider that question that I put to you, shipping a greater portion of bacon and hams to Great Britain and leaving less meats as a whole on the Canadian market?—A. I think the packers have considered that all the time, trying to get everything they possibly could providing the market in the United Kingdom is reasonably fair over there; it is to their advantage to do so. I know that has been our policy.

By Mr. Sommerville:

Q. Well then, you have been sending 50 per cent more selects out of the country than before you had the Imperial agreements; much more than that of bacons and selects?—A. You mean the export department?

Q. Yes?—A. I think it is much greater than that. As a matter of fact, I think it has been running about 35 per cent of the total government inspected kill within the last year or so.

Q. And what you have removed has been taken up for the domestic market; that was used in the domestic market?—A. That is right.

Q. And what you have removed has been taken up by the butchers, and lights, and bacons that you retained in this country?—A. And?

Q. And the heavies?—A. And the heavies and?

Q. Yes?—A. And some of the selects and bacons that are not suitable for the British market on account of being bruised or something else.

Q. I think the fact that you have removed such a large proportion to the export market has given you a better market domestically for butchers, lights and heavies; have you never considered the question of reducing the differential that you take off the bacons from the farmers since the Ottawa agreements came into effect?—A. Off the bacon?

Q. Yes, the differential is practically the same today as it was two years ago?—A. Virtually.

Q. Yes, and although there has been that big increase in the market you have not passed that back to the farmer in reducing the differential on the grades below the bacons consisting of butchers, lights or heavies?—A. I think the producers—

Q. You have not done that, have you Mr. Tapley?—A. May I answer that in this way: I think the producers have received for their lights, heavies and extra heavies a price in line with the realization price of the products.

Q. Yes, but it is the same differential?—A. It may be about the same differential, but as your export market raises your prices to a higher level your prices for the other go up likewise.

Q. And your price for the domestic product goes up likewise?—A. That is right.

Q. Then why not bring the farmer's differential nearer the realization price?—A. Well, the farmer's price did advance correspondingly with the product.

Q. Oh yes, his general price did, but why not reduce the differential when you had such an increased demand for these grades?—A. Well, there is a very small percentage in these hogs, not more than probably 15 per cent.

Q. 15 per cent?—A. That people buy.

Q. 15 per cent that people buy, but there is more than that, butchers, lights and heavies?—A. You mean lights, heavies, extra heavies, and sows.

Q. I am talking all the way down the line, I am not getting away from any of them, I want them all considered. You have been getting a better price for that product because of the Imperial agreements, have you not?—A. Yes, sir.

Q. Yes, but the differential has not been altered in the slightest on those grades which were brought up in price?—A. Practically none.

Mr. SOMMERVILLE: All right.

By Mr. Factor:

Q. Supposing there was no export market would you apply the differential domestically?—A. The differential below the bacon?

Q. Yes?—A. It applies anyway whether there is a big export market or not. As a matter of fact, the Canadian packers on account of the bad market in England had to go out of the export business for a year and a half or so and the differential still continued.

By Mr. Sommerville:

Q. But that differential had nothing to do with the export market at all, it was a differential fixed ten years ago, was it not?—A. The differential was initiated in the beginning as an incentive to producers to raise better hogs.

Q. That is, the differential at the beginning was initiated as an incentive?—A. That is right.

Q. But the differential below bacon was not initiated with that in view?—A. The differential below bacon?

Q. That was a penalty?—A. Dealing first with the butchers, it was intended to create a second grade there that would give a man something of the benefit of a better price because he did not quite reach the selects.

Q. Yes, but was it not a fact that you started with a differential of $2 for your selects?—A. Yes.

Q. And then that was reduced to $1, the premium?—A. Originally, I think, the premium for selects was on a percentage basis of 10 per cent.

Q. Yes, originally 10 per cent, then it was fixed at $2, and then it was reduced to $1.—A. By the Hog Conference.

Q. And at the Hog Conference you wanted all the premium taken off and the bacon hog made the premium hog, that was what the Hog Conference desired; that was the motion; we had it before the committee.—A. And have no premium for selects?

Q. And have no premium for selects?—A. I do not recall that. My understanding is from the beginning the idea was to give a premium for selects.

Q. However, at that time there was a change and a dollar was fixed as the differential premium on selects?—A. That was fixed—

Mr. KENNEDY (*Peace River*): The proposal was to wipe it out.

By Mr. Sommerville:

Q. Yes, the proposal was to wipe it out, and they succeeded in retaining a dollar. Now then, after that was it not a fact that the differentials below the bacon were put into effect to a larger extent to offset the premiums that were being paid on the select hog?—A. I do not think so.

Q. Now, let me get this clear: Was it not a fact that that differential was an arbitrary amount agreed upon by the packers and put into effect by the packers?—A. On the butchers?

Q. On the butchers, and lights, and heavies, sows, and extra heavies?—A. I think the packers—

Q. Fixed it?—A. Arrived at this differential, but it was not necessarily the same all over Canada.

Q. No, there are some very slight variations?—A. Yes, it is a local proposition arrived at by the packers.

Q. And the packer said: Here is the differential and this is the basis on which we will buy.—A. That is right.

Q. And the seller could not sell except on those terms; that was the fact, was it not?—A. Yes.

Q. And then that continued until the present time, with one exception at Montreal where flat rates were still in force until March; how much are they now?—A. I am not very familiar about the Montreal market.

Mr. Factor: I was wondering, Mr. Sommerville, is it possible to have the premium on selects and then abolish the differential and let the packers pay for what it is worth.

The Chairman: The same as they did in Montreal up until March.

The Witness: You are suggesting to do away with the discounts on butchers, for example?

The Chairman: Arbitrary discounts.

Mr. Factor: Yes, just keeping your premium and selects.

The Witness: It is possible, but it seems to me that in doing that you are taking away the incentive for the man to raise a bacon hog. You have got a bacon hog which has a certain quality value and then you have got a butcher hog on the same market that might sell right up against your bacon hog if you do that, and then you have two men bringing in hogs of different quality, both getting the same price for some reason or other; as far as the packers are concerned it is possible.

By Mr. Sommerville:

Q. Mr. Tapley, are you consistent? You want that penalty continued on the man who grows a heavy hog but you do not want it placed on the fellow who produces a canner or a cutter in beef cattle.—A. I do not object to it being applied to the man that produces a canner or a cutter. I think the man that produces a canner or a cutter should expect to get a low price.

Mr. Sommerville: He gets it.

The Chairman: But you did object.

By Mr. Sommerville:

Q. You objected to the branding because you said that would discourage the buyer, the housewife who would be purchasing?—A. I do not object to them branding; I based the viewpoint on the fact that I thought it would affect those producers that raised those animals. I do not object to it.

Q. At any rate, when this differential is applied there is no brand put on so that the purchaser can tell whether or not that has suffered the differential of $2.50 or whatever it is, whether it is only a differential of 50 cents.

By the Chairman:

Q. Why did the packers insist upon Montreal inaugurating this system of a differential below bacons?—A. I do not know; we do not operate there.

Q. You do not operate in Montreal at all?—A. Except in a limited way; we might buy the odd car, but I am not very familiar with the Montreal situation.

By Mr. Kennedy (Peace River):

Q. Mr. Tapley, do you not think the abolition of the $2 premium on hogs in 1927 or 1925 is one of the chief reasons for the shortage of the right kind of hogs bought for the British market?—A. You are suggesting if that had not been changed we would have had more selects?

Q. Yes?—A. I am rather doubtful of that although on paper it might appear that way; I will agree with you on that. The larger the incentive the more spur there should be to raise more of the better hogs.

Q. Now another question: Why is it that while Canadian bacon exported to the British market about the time the Ottawa agreements were signed was on a par with Danish bacon—there was very little spread—but after a short while there was quite a spread between Canadian and Danish bacon; what is your explanation of that?—A. I think that is fairly simple, Mr. Kennedy. There was a large volume of Danish bacon going to the British market and a small volume of Canadian bacon. Naturally they would sell pretty close together with that kind of supply situation. As soon as the quota went into effect the volume of Danish bacon became very much smaller while the volume of Canadian bacon was very much larger, so it is natural—

Q. But if the quality was up what difference would it make?—A. Well, they have their established trades, you know, they have their following, therefore, they are able to get a better price for it.

Q. Would you agree with Mr. Wilson who gave evidence here that some of the bacon going forward from Canada was not all that it should have been?—A. Yes, I think that is probably correct over the period, but I also understand now that the Canadian bacon going over is of very good quality and giving very good satisfaction, because the packers have gradually improved—

Q. There is no reason then why Canadian bacon should be at all below the Danish in quality?—A. I think it is largely a matter possibly of being patient to the point of finding an increased outlet for Canadian bacon, because after all is said and done each class of bacon in England has its following. We have got to create that following as I see it for the Canadian bacon in order to absorb these increased shipments. Quality for quality, there might not be much justification for a spread, Mr. Kennedy.

Q. There is another statement you made that I think rather needs some explanation. You said something about as the price went up there was less consumption of a particular article?—A. Less than what?

Q. I think you were answering Mr. Young and you said: If the price went up the demand for an article would fall off?—A. Yes.

Q. Is there a noticeable falling off in pork to-day?—A. In pork?

Q. Yes?—A. Yes sir.

Q. Will you tell me why it is then that I can get 7 or 8 cents from a farmer at Edmonton for pork and 4½ or 4·75 a pound for best quality beef steers?—A. I do not know quite the point you are endeavouring to develop.

Q. Well, the point is this, that the price of hogs has gone up, and the demand for pork has been at least sufficiently strong that there has not been any falling off?—A. Oh, on export it is very strong.

Q. No, domestic; 90 per cent is still sold in Canada?—A. I think your domestic demand will go down for your product as your price advances.

By Mr. Sommerville:

Q. We had Mr. McLean's statement and I think he said 90 per cent of the pork in Canada, of the hogs in Canada were domestically consumed?—A. He was referring to farm kill, butcher kill and farm kill.

Q. I do not know at the moment what the reference was.—A. I think so. I think that is what he was referring to. I would say the domestic demand at the moment may be 65 per cent.

By Mr. Senn:

Q. That is of the butcher kill?—A. Of the butcher kill.

By Mr. Kennedy (Peace River):

Q. The fact is that the increase in the price has not really destroyed the demand at all?—A. Yes it has.

Q. It has affected it very little.—A. As the volume of the product goes down accordingly your price is based.

Q. Then the price of beef ought to go up with it.—A. The price of beef has responded. I think that is one of the things that has helped the beef market, and the beef market I think will continue to advance.

Q. Well, as a shipper of beef cattle I have not seen it yet except in a very very slight degree.—A. I do not know about your experience.

Q. I still think the packers are buying just at rock bottom prices, for as low as as they can get, and using every pressure to keep the prices down?—A. I think, if you check up the market, you will find that your good cattle are probably 32 per cent higher than your medium.

By Mr. Sommerville:

Q. You have handed in to us a statement on the storage of eggs, butter and poultry by your firm; is this from the Toronto plant?—A. Yes.

Q. Will you be good enough to furnish us with a statement for all the plants?—A. I will be glad to.

Q. And if you will be good enough to furnish us with a statement of your monthly purchases, and your monthly sales?—A. The same kind of a statement you have there?

Q. No, I will show you the kind of a statement we have from another firm, so we can have them on the same basis?—A. I will be glad to do it.

Q. Now, with reference to the statement you have filed, it appears that in the year 1933 you handled butter to the extent of 527,915 pounds, of which your profits were $6,637.18; or an earning per hundredweight of $1·257 is that correct?—A. I presume so, if it is on the statement.

Q. That earning per hundredweight was after charging the regular storage charges into the butter?—A. That is right.

Q. And that statement of charges included your 6 per cent interest for the investment you had in the product?—A. No, we did not. We have a carrying charge per month which covers the cost of carrying the goods, which would include the storage stocks—interest for that particular product carried that month, insurance and cold storage.

Q. That would also carry part of your plant overhead?—A. No, it might be stored outside; I think most of it was stored outside.

Q. Does it carry part of your administration expenses?—A. That would be stored outside, most of it.

Q. Will you show us how your carrying charges are made up?—A. I have not got any definite break-up on it. I showed, in the margin there, the figure we use—an arbitrary charge of half a cent on butter.

Q. I see here you have an arbitrary charge of half a cent per pound per month on butter, you add that to your price, do you?—A. We add that to get the accumulated cost, month by month, so we will know what the up-to-date cost of the storage product will be.

Q. Now then for eggs, I find for the year 1933 you bought 11,266 cases, your earnings were $5,778.12, and your earnings per case were ·513—that is half a dollar a case on a 30-dozen case?—A. Yes.

Q. Then I find that on eggs you make a charge of 15 cents per case per month, is that a carrying charge?—A. Yes.

Q. Then your storage poultry; you handle 9,524 pounds of poultry, earnings $18,671.93, or earnings per hundredweight of $2·072. And in poultry you have half a cent a pound per month while in storage. Were your poultry shipments western poultry?—A. Some of them may have been; I think most of it probably was eastern shipments.

Q. Your sheet also shows the average price paid in each month for each of these products, and the average price for the product in each case?—A. Yes.

By Mr. Young:

Q. In regard to butter, Mr. Tapley, was your firm requested last fall to dump a quantity of butter which you had on the world markets in order to get rid of it and get it out of the country?—A. I do not know as I get that.

Q. I understand from the Minister of Agriculture that a request was made to large holders of butter in Canada that they dump a quantity of their butter on world markets?

The CHAIRMAN: Mr. Young, that is not a fair way to put it.

Mr. YOUNG: Well, how would you say it? Well, they exported it then.

Mr. FACTOR: Don't you like that word " dump," Mr. Chairman?

By Mr. Young:

Q. At any rate, they were requested to export a quantity of butter even if they took a loss, in order to create an artificial scarcity, and to create a price; is that right?—A. I am not very familiar with that, our produce man would be the one to answer that. I think some butter was exported, two carloads, but I do not know the details about it.

The CHAIRMAN: I think you had better get me to give evidence on that, I could give you some.

Is that all, gentlemen?

Well, Mr. Tapley, thank you very much; you have been a very patient and a very good witness, I think; clear in your evidence.

The witness was discharged.

The CHAIRMAN: Gentlemen, as I told you this morning, unfortunately Mr. McLean was called away but he will be here to-morrow; and I suggest that we start at ten o'clock to-morrow morning, if you will agree to come.

Mr. SOMMERVILLE: Mr. Burns will be here, and a wire has been sent to the Dominion Securities Corporation to have present a representative who is familiar with the Burns financing to answer the enquiries of the committee.

The CHAIRMAN: We will adjourn until ten o'clock to-morrow morning.

The committee adjourned at 5.30 p.m. to meet again to-morrow, June 1, 1934, at 10 o'clock a.m.

HOUSE OF COMMONS, ROOM 368,

FRIDAY, June 1, 1934.

The Special Committee appointed to enquire into Price Spreads and Mass Buying met at 10.30 a.m., the Chairman, Hon. Mr. Stevens, presiding.

Mr. Norman Sommerville, K.C., and Mr. W. W. Parry, K.C., of Toronto, appeared as counsel for the Committee.

The CHAIRMAN: Order gentlemen. The minutes of yesterday record the witnesses heard and certain exhibits filed. We will declare the minutes approved.

Now, Mr. Sommerville, who is your first witness?

Mr. JAMES A. LAW, called and sworn.

By Mr. Sommerville:

Q. Mr. Law, you represent Wilsil Limited?—A. Yes, sir.

Q. What is your position there?—A. General Manager.

Q. How long have you been with them?—A. Since 1930.

Q. Was there any statement you desired to make to the committee in connection with any of the evidence that has been given respecting Wilsil Limited? —A. I think not, sir.

Q. Your company operate single unit at Montreal?—A. They do sir,

Q. And they engage in both the domestic trade and the export trade?—A. That is correct.

Q. And you manufacture all kinds of packing house products?—A. That is correct.

Q. You buy on the Montreal stockyards, and also direct?—A. Very little direct.

Q. Your preference is for buying on the stockyards, is it not; that is your practice at least?—A. It is our practice anyhow.

Q. Perhaps you will give the committee the benefit of your judgment upon this question, as to whether or not you would prefer all the purchases being made on the stockyards, where all the cattle and all the livestock are available, and where all packers have an equal opportunity to bid for them?—A. I would think, all other conditions being equal, that would be an ideal situation.

Q. Yes, and in the interests of the farmer whose stock was being offered, would that not provide the conditions under which he could get the best price? —A. Well, he could feel in that case that he would get as much as his neighbour; I do not know that he would get the best price.

Q. At any rate, there would be open competition between packers, and there would be open selling on all the stock together?—A. That is right.

Q. As a matter of fact, at present the price of livestock, the only published price, is that which comes from the stockyard, is it not?—A. Published price, yes.

Q. And these public prices are the prices which given to the farmer might give him an idea of what values are on the stockyard?—A. Yes, sir.

Q. Then the existence of large quantities of livestock being suppressed and off the market must have its own effect upon that market?—A. Yes, I would think so; although at times when the run on the stockyards is small that may have a tendency to raise the price at that particular point.

Q. Yes, but if you have your stock all going to the yards, you would not have these fluctuations of light and heavy runs?—A. That is correct.

Q. And you would not have these variations between outside buying and buying on the stockyards?—A. That is correct, sir.

Q. Now, in the case of your company, will you be good enough to furnish us with a statement of your entire purchases of livestock for the past two years, by the various sources—that is, direct, stockyards and truck?—A. And divided into?

Q. Divided into the various classes of live stock?—A. Cattle, hogs, etc.

By Mr. Factor:

Q. What do you mean, "All other conditions being equal it would be ideal to buy through the stockyards"; what do you mean by, "all other conditions being equal"?—A. If all the packing houses were situated close to stockyards. There are packing houses at a distance from stockyards. I do not know just how it would affect us if we were in that fix, whether we would advocate buying on the stockyards.

By Mr. Sommerville:

Q. On the other hand, Mr. Law, if you have a packing plant adjoining the the stockyards, and 50 per cent of your entire supply comes into the plant alongside of the stockyard, in reality you are setting up a rival market alongside of the stockyard; is not that what it amounts to?—A. I suppose so, that would make that condition.

Q. And that must affect the stockyard?—A. Oh yes, undoubtedly.

Q. Then, what is the object of encouraging these direct shipments in this way; whereas formerly they used to come to the stockyard, what is the object from the packer's standpoint in encouraging shipments direct to his plant rather than getting them on the stockyard; did somebody start it, and the others had to follow to stay, or was it something that was done for price?—A. As long as I can remember we have had what you call f.o.b. buying; that is, certain drovers in certain portions of the country would have connections with a certain packing house; that drover would say on Thursday, what can I pay for hogs this week-end; he would be told, you can pay so much; and he would try to buy the hogs and ship them to his packer customer.

Q. Yes?—A. That I know has been going on for a long long time.

Q. When you get hogs in this way do you pay the drover a commission on what he ships to you?—A. Well, we do not; we have no drovers of that sort, we do not do it at all—but it is from past experience I am speaking.

Q. Then, your direct shipments; you buy them on other stockyards?—A. Or from Pools where we put in bids.

Q. Then, of course, your direct shipments that you buy on other stockyards do not go into the same class?—A. No.

Q. But when you buy on bids from the Pools, these bids are made for you by local agents?—A. We wire.

Q. You wire the bids?—A. Yes.

Q. Do you pay a commission on those hogs?—A. We do.

Q. To the agent in the area?—A. Yes.

Q. And is that the same commission as is paid to livestock men for the purchase of cattle on the stockyards?—A. It is the same.

Q. The same rates?—A. Yes.

Q. So the cost to you on that operation is exactly the same, as far as the commission man is concerned, as though you bought them on the stockyards?—A. Exactly.

Q. And as reflected in your dressed cost?—A. Yes.

Q. Now, Mr. Law, we had evidence yesterday of wide variation from week to week in the bids of the different packers on these Pool hogs. Can you give us any idea why this week, say, there should be 50 cents a hundredweight difference on bids on Pool hogs?—A. Well, so far as we are concerned, some weeks we feel good.

Q. Yes?—A. And we have not been able to get the hogs from the Pools for a few weeks.

Q. Yes?—A. In that case we may extend ourselves.

Q. Yes?—A. Other weeks we may have had a cable from England, the Domestic market may not be very good, and on the whole we are not feeling very good; our bid suffers in that case, some weeks we do not bid at all.

Q. But that wide variation of 50 cents a hundredweight you never find on the stockyards?—A. Well, that would be natural I think, because everyone knows what the other fellow is doing right on the market.

Q. Yes, but outside there is not the same knowledge?—A. Oh no.

Q. Now, we have had evidence that when live stock is weighed over the stockyard scale, the tickets are marked with the price paid, the grade of the livestock and the name of both the buyer and the seller?—A. That is correct.

Q. And that becomes known to the packing house buyer at once?—A. Yes.

Q. It is a general practice to keep runners?—A. Oh yes.

Q. And in this way the packers know what is going over the scales, and the prices being paid?—A. They are getting quick action.

Q. What would you think of that same system applying to a packing house, where the same information would be available to all others, to the general public and the farming community as well; there is nothing to prevent it applying?—A. You mean, if the individual packing house had to stick up somewhere the price it was paying for its particular lot of hogs?

The Chairman: Apply the same system as now applies to the stockyards.

The Witness: It would not do you any more harm there than it would in the stockyards, I would say; if they know what you are buying in the stockyard it is all right.

By Mr. Factor:

Q. How would you work it, have fellows running into the Canada Packers plant say?—A. Stick it up on your own place.

By Mr. Sommerville:

Q. Such information would be available to government officials, and others, the same as on the stockyards?—A. You might inform the government representatives at the stockyards what you are buying, and so on, if that were desirable.

By Mr. Factor:

Q. You mean, a daily report from the packing house to government representatives?—A. That would be all right, I would say.

By the Chairman:

Q. That would not match what happens on the stockyards?—A. No.

Q. If a packer for instance has 60 or 70 per cent of his hogs coming in direct, which is the usual thing, he buys 30 to 40 per cent or thereabouts on the market; you know what the other fellow is doing with his 30 to 40 per cent, but you do not know what is happening to the other 60 to 70 per cent?—A. Information comes in from the country too, as to what has been paid for hogs at various points. You would be surprised how quickly that information gets around.

By Mr. Sommerville:

Q. You are anxious to get that, all the packers are anxious to have it?—A. Not only the packers, but the man who is operating in the country—he gets a bid from one packer and the chances are he will phone another packer, I am bid so and so, how much do you want to bid at. Information like that gets around very quickly.

By Mr. Ilsley:

Q. Those are men buying in the country, how about the people who are selling?—A. Well, the drover usually has a certain number of farmers in a territory whose hogs he generally takes; that drover tries to do the best he possibly can for the farmers in his area, he has to.

By Mr. Sommerville:

Q. But he is not forgetting himself?—A. He would naturally be in it, he is trying to get the highest price possible.

By Mr. Ilsley:

Q. How do you know about that, how much the farmer knows about what the packing houses are paying for direct shipments; does the farmer know immediately, or almost immediately, what is being paid on direct shipments?—A. Oh, I think they do. I think that the Toronto papers generally show a price f.o.b. country points; they would have that the day after anyway.

By Mr. Kennedy (Peace River):

Q. A lot of the farmers would not get it until the week end?—A. That might be, far back in the country; yes.

By Mr. Ilsley:

Q. There are some places in the West where they are not getting it quickly?—A. A lot of them are securing it by radio now.

The CHAIRMAN: Those are stockyard quotations collected by the Department of Agriculture.

The WITNESS: Not necessarily, in Toronto the f.o.b. price is in the papers, and that is the price paid in the country station.

By Mr. Factor:

Q. You mean, by the packer?—A. By the packers, or their representatives.

By Mr. Edwards:

Q. Would it not be a fact that there would be a natural tendency on the part of the drover to do the fair thing by a group of farmers whose product he takes, because if he did not, he would only last so long, would he not?—A. Oh yes, because he has competition, and he has to get the best price possible for his farmers.

Mr. ILSLEY: In the farming community of which I am speaking, news of prices travels like lightening; take with respect to the purchase of farm products of almost any kind, and I was wondering if that was general throughout Canada. I am not speaking about live stock at all, but rather of such things as apples, potatoes and the like. The buyers make an offer, and almost immediately all the people in the vicinity know just about how much his offer is.

By Mr. Sommerville:

Q. That may be, in a seasonal crop; but with a day to day product, such as butter, eggs and live stock, the situation is different; they have got to be advised from day to day or week to week—there are variations?—A. You would be surprised how well they are posted, and how quickly that information gets back.

Q. At any rate, the farmer has no one representing him when the deal is made between the drover and the farmer in the country?—A. That is so.

Q. But on the stockyards he has a commission man thoroughly familiar with market requirements?—A. That is correct.

Q. Now then, if the packing house purchases were unknown to the commission men on the yard, would they not be in a better position to gauge the market than they are at present when he does not know what you have purchased outside of the market?—A. As a rule, they do know; not in our own case, but in other cases—the price is given probably two or three days ahead of time.

Q. I am not talking about price, I am talking about quantity?—A. If they could have a man checking up on that?

Q. Yes, but we have had evidence that very large quantities come by truck in some classes, and that this truck business is increasing?—A. Yes.

Q. And that because of the existence of that truck business buyers will remain fairly quiet on the early market, staying off until afternoon, until they know what is coming in by truck. This buyer has his knowledge of what the supply is, but the seller has not; is not that a fact?—A. I do not know just what the conditions are in other markets, in Montreal the volume coming by truck is not very great, and in the winter it is practically non-existent owing to road conditions.

Q. Then you cannot speak about that?—A. Not accurately.

Q. With respect to Montreal, can you tell me: we had some evidence here that in the month of March you were all being made to enforce the hog differentials on the Montreal market?—A. Yes, sir.

Q. What is the system that is working there now?—A. The same as is in existence all over Canada west of Montreal.

Q. Then you have been successful in having the hog differential apply on the Montreal market?—A. To a degree.

Q. To what degree?—A. I understand that there are some hogs still being sold flat, or approaching that condition, to some of the smaller operators.

Q. But your packing company, and the Canada Packers, at Montreal, insist on buying them only on the basis of the fixed differential below the bacon?—A. Yes, sir.

Q. And that has been in operation since March 12 last?—A. About that time I would say.

Q. And do you insist also on getting all the grades, you do not allow them to sell out the grade below bacon and then take the premium and bacon at their value?—A. No—well, that has been done, but it is not a general practice.

Q. You do not encourage it?—A. No.

Q. You discourage it?—A. Yes, sir.

Q. Why do you insist on them giving you all the grades, when as a matter of fact the most desirable grades are bacon and select, particularly for the export market?—A. Well, we are in the Domestic trade as well as the export; and I would like just to put in an idea: while we pay a dollar a head premium for selects that does not mean that that particular hog is worth a dollar more than the hog of the grade below.

Q. What do you mean by that; apparently that is a differential that is put on for that very purpose, showing that it is worth more and encouraging the farmer to grow more?—A. Well, the latter part of that is correct; the purpose of encouraging the farmer to grow a better class hog.

Q. But you say the select hog is not worth a dollar more than bacon?—A. Than the next grade.

By Mr. Senn:

Q. How much is it worth then?—A. I do not know that an exact figure can be put on that.

Q. Is it worth any more?—A. Oh yes, I would say it is.

By Mr. Kennedy (Peace River):

Q. Does that mean that selects should go down, or that bacons should go up?

By Mr. Sommerville:

Q. I was just going to follow that up. Mr. Law, does that mean that the select should go down, or that the bacon should go up to the same level as select?—A. No, sir.

Q. What does it mean then?—A. The whole proposition is that some years back the quality of hogs coming on the market was not good, and it was thought that some effort should be made to improve the quality of hogs in Canada.

Q. Yes?—A. Now, a method was devised—say roughly—of paying the man who produced a good hog a little more than the man who does not, and in that way tone up the general quality of hogs in Canada?

Q. Yes? —A. Because a certain differential has been placed on the different grades that does not mean, or could not mean I think, that those particular hogs were just exactly worth so much less or so much more.

By the Chairman:

Q. Would you say, Mr. Law, that a light hog or a butcher is worth a dollar less than a bacon hog?—A. No.

Q. Why do you insist on paying the farmer a dollar less? —A. For the reason that a certain system has been devised with an attempt to improve the quality of hogs, and we say we will say we will pay you so much more for an extra good hog, and so much less.

Q. But for its use a good butcher hog is just as good a hog as a good bacon hog?—A. No, there is a little difference —there is some difference.

Q. Well, for its use in the fresh meat trade?—A. Well, a pork loin from an average butcher might work out as well as a pork loin from an average bacon, but an average butcher hog is not as nice a quality as a bacon.

Mr. Sommerville: We are not talking about form, we are talking about uses.

By the Chairman:

Q. What is the differential with the heavy, for instance?—A. I think it is a dollar, I forget exactly; 50 cents a hundred, I think it is, on the heavy.

Q. It is more than that; oh my gracious, yes; it is a dollar and a half, or two dollars.

Mr. Sommerville: On heavies it is 50 cents a hundred.

The Chairman: Below what?

Mr. Sommerville: Below bacon—a dollar on a hog weighing 200 pounds.

The Witness: If it weighs 250, it is just so much more.

The Chairman: It is a dollar, is it?

By Mr. Sommerville:

Q. Let me see what it is in Montreal, it varies a little in different places. In Montreal your premium is a dollar a head of bacon on heavies; on butchers it is a dollar a head below bacon; on lights it is 50 cents per head below?—A. Per hundred pounds.

Q. I think they have got this incorrect—this table on page 2242 is 50 cents a hundred lower on heavies; then it is a dollar a head?—A. On heavies it would amount to probably $1.25 or $1.30.

Q. And on extra heavies it is $1.50, isn't it?—A. Yes.

By Mr. Senn:

Q. Do you really believe it is very necessary that we should have a larger percentage of bacon and select hogs?—A. If we are to get into the export market and improve our position there, it is very very desirable that we get a better hog.

Q. Do you think that this system of premiums and discounts is having a beneficial effect along that line?—A. On the quality of the hogs?

Q. Yes?—A. Oh, I think so.

Q. Why is it, it has been in vogue some 12 or 15 years, we only have a percentage of anywhere from 15 to 20 per cent of bacon coming to market yet? Do you give any reason why there is not a larger percentage to-day, if this system is working out satisfactorily?—A. No, I could not give you any reason; I might give you an opinion.

By the Chairman:

Q. Give us your opinion, we would like to have it?—A. This story is pretty wide spread, but for a few years the prices of all products were very low; and we know that for a few years we were out of the export market, and I do not think that the farmers exercised the care that they might have at that particular time owing to the low prices. But now that prices are higher and prospects look brighter I think there is very much keener interest amongst the producers in regard to improving the quality of the hogs; and I think we are getting very very rapidly—

By Mr. Senn:

Q. Mr. McLean made the statement when he was before the committee that there were certain reasons why the price of hogs had increased, and the hog industry was in a different position to-day; he also made an estimate of the value of the changes to the farmer. Have you read his evidence on that?—A. In a general way, I have heard it.

Q. Do you agree with him as to the reasons why prices on hogs have increased; that is, as a result of the Ottawa agreements?—A. Oh yes, there is no doubt about that; to-day the basic quotation at Chicago is 3·5 cents per pound, while at Montreal it is 9·25 cents.

By Mr. Ilsley:

Q. Those are different quality hogs?—A. The difference in quality would not affect the price, I would say, a quarter or a half cent.

Q. Just for information, do they not in the United States get some more money out of their hogs as the result of a processing tax or something?—A. The United States government collect from the packer a certain amount per pound for every hog that he processes, and that money in turn is used amongst the farmers for certain purposes, I think on crop reduction and so on, but if the American packer exports that product he gets back—

Q. But does not the fact that the packer is taxed for the benefit of the farmer to reduce his production reflect itself in the price that is paid in the stock market?—A. Well I don't think so. There is a certain fixed figure that the packer has to pay the government on every hog he buys.

Q. Yes, therefore he pays less on the stock market; the farmer gets part of that back through the price offered on the hog market and, therefore, the price offered on the market is, to some extent, influenced by the process tax, is that not right?

The CHAIRMAN: Lessened by the processing tax.

By Mr. Ilsley:

Q. Yes, lessened by the processing tax.—A. Well I do not know. That certainly is not the purpose of it.

By the Chairman:

Q. In other words every packer over there passes it back to the farmer? —A. No, he does not pay it back to the farmer.

By Mr. Ilsley:

Q. The government passes it on to some of the farmers?—A. Yes.

Q. Perhaps there is some answer to it, but if he has to pay a substantial sum to the government in addition to what he pays the farmer on the stock market and some of the farmers get that money then that set of circumstances means lowering the price that is offered on the market?—A. I would not say so, because if to-day the American producer or packer had free access to the market in Great Britain his market would open up.

By Mr. Senn:

Q. Could you tell us, Mr. Law, how substantial that tax is, and what it would mean per pound?—A. I know that on pork loins it is 5·15 per one hundred pounds.

Mr. SOMMERVILLE: That is on loins.

By Mr. Senn:

Q. Yes, but on the hog to the farmer?—A. On the hog it must be somewhere in the neighbourhood of two cents.

Q. And you say that is returned to the farmer?—A. Through some process the government has fixed.

The CHAIRMAN: To some farmers.

By Mr. Edwards:

Q. But the producer of the hog does not necessarily get it?—A. I would not say that.

Q. The same as the differential between the Chicago and Montreal markets, as I understood you the Chicago market is about three and one-half cents and the Montreal market nine and one-quarter cents, and that is due very very largely to the increase in exports?—A. Entirely due to our free entry to the British market at the present time.

By Mr. Senn:

Q. There is an opinion expressed quite frequently that the type of hog that is used in Denmark would be more suitable for the bacon trade, particularly for the export trade, than the type of hog that is raised in Canada. Have you any opinion to offer on that?—A. Well, the bacon producers in

Denmark for years and years have concentrated on producing a hog that will produce bacon that will satisfy the people in England, and their hogs are largely one type. It is a small country and they have very tight control on production and killing and everything else.

Q. They have very strong control?—A. Yes. In this country the hogs are not all of one breed or type; they vary greatly, and it would be a big task, I would think, to put into force any control that would make the farmer grow the accepted type of hog that is needed for the British market.

Q. Would that be as economical a hog to raise as the Denmark type of hog?—A. The system in Denmark, I think, has shown that the good hog can be produced more cheaply than something that is inferior.

Q. Well, there is quite a large question among the hog producers as to whether that type of hog should be introduced into Canada or not. Do you think that they should?—A. Well, yes, because as I say the market which at the present time is setting the value of the hog, is the market to which we should cater, and that is the English market; whether we ship 10 per cent or 15 per cent, that is the market that is setting the value, and that is the reason that the Canadian farmer is getting such a good price for his hogs to-day.

By Mr. Ilsley:

Q. On those figures do you say that these grades are comparable? I understand that they are not.—A. Within half a cent a pound I would say yes, because an American ham will sell in England within a shilling or so of the Canadian, and in some particular brands will sell for more than some brands of Canadian; and the American ham is a popular article in England.

By Mr. Sommerville:

Q. And that type of hog includes more than our grade of premium?—A. Oh, yes.

Q. It covers premium, bacon, and butchers, generally speaking?—A. Well, generally speaking, yes.

Q. So that the American hog that is their top price is practically the same as our top three grades?—A. Well, the buyers in the Chicago market—the price there as a rule is not paid with the regularity that we pay here. For instance, hogs here are 9 cents, everybody is paying 9 cents; at Chicago some particular load might be worth 3.40; another load might be worth 3.50, a little better type.

Q. There may be some slight variation?—A. Yes.

Q. But my point is, that in their grading their top price would come within selects, bacons and butchers?—A. I would think roughly that.

By Mr. Ilsley:

Q. I find in Mr. McLean's evidence, page 256, the following:—

> *By Mr. Kennedy* (Peace River):
>
> Q. About what grade of hog would the American live hog compare with?—A. We really have a type of hog, but it would be—the only hog that we have that is like it, is our sow, the fat sow, sows that have been fattened after breeding.

Have you any comment to make on that?—A. Well, I have operated on the other side, and the hogs on the average are fatter. As a consequence, hams sold on the American market, most of them are what are called skinned hams; a certain portion of fat and of what is left—

Mr. Sommerville: Rendered.—A. A good ham. The skin and fat, of course, as you say, is rendered.

By Mr. Sommerville:

Q. What is taken off is rendered and the balance sold as a good ham?—A. The hog is a fatter hog, no doubt, but the eating quality is quite all right.

By Mr. Ilsley:

Q. At page 255 of the evidence:—

> Q. That amounts to $2\frac{1}{4}$ cents a pound, on the hogs they sell?—A. I would rather you would not ask me for details of that, because I do not know.
>
> Q. That would make a difference of $3\frac{1}{2}$ cents a pound to be added to the price of hogs in Chicago?—A. I don't know that.

I think they are talking about the processing tax:—

> Q. $2\frac{1}{2}$ cents to be added to the price of hogs in Chicago that the farmer ultimately receives?—A. I doubt that is the case, but I would not want to say; I don't know.
>
> Q. You do not know anything about that. Do you know of the difference between the American hog and the Canadian hog? The price you quote here is for a Canadian select bacon hog. Is that hog known in the States at all; do they raise them?—A. No.
>
> Q. What kind of hog do they raise down there?—A. A fat back hog.
>
> Q. A class of hog that would not go over in this country.

That is a fact, is it that they do raise in the United States a fat back hog?—A. Well they do not term it in that way. Their regular run of hog will carry more fat than the regular run of Canadian hog.

By Mr. Sommerville:

Q. As a matter of fact, their regular line of top hog would be included in the three grades I have mentioned; many of our heavies would be included in their top run of hogs as well?—A. No. The hogs run up to, I would say 230 pounds or 240 pounds.

Q. However, you say that the differential on premium hogs was fixed with a view to encouraging the improvement of hogs?—A. Yes.

Q. That was under government auspices, that is for the premium?—A. I think that was provided in consultation with the swine breeders and with the government.

Q. So I believe. You say also that there is not the difference in value between hogs below the bacon that is represented by the differential of $1 a head or $1.50 or $2 a head that has been indicated by the Chairman?—A. I would not say it is the difference in value either way.

Q. But the differential below the bacon was a fixed differential, that is, put on by the packer as the basis upon which he will buy, and you say that is not on the basis of value but with a view to encouraging the production of better hogs?—A. That is the idea, sir.

Q. And in the meantime until that ideal hog is produced the packer gets the benefit of that differential?—A. No, sir.

Q. Well, if the differential does not represent the value of the hog, as you have just sworn, who gets the benefit of it?—A. In the first place, we pay a certain amount of money for a given quantity or weight of hog.

Q. Yes?—A. Now, what happens in between does not matter a very great deal to us. What I mean is, if the average run of hogs to-day are worth $9\frac{1}{4}$ cents a pound—

Q. Bacon grade?—A. No, to put through the plant, in that case the quotation for bacon hogs might be 9·25 or 9·35; I do not think that the application of the differentials makes an appreciable difference in the amount of money that actually passes to the farmer for his production of hogs.

Q. Do you not think so?—A. No.

By Mr. Factor:

Q. The farmer does get the $1 or $1.50 less which you say does not represent the actual difference in the value?—A. No, but for the hogs that he produces he gets a certain amount of money, and we pay a certain amount of money—

Q. Suppose the differential was abolished entirely and the farmer would only get a premium on select hogs, would not he benefit in the amount of money he received for his hogs?—A. If he produced a good proportion of selects he would.

The CHAIRMAN: But, Mr. Law, in Montreal, March 12, before you forced upon the stockyard trade the differential system, is it not true that the average price of heavies in Montreal was about 50 cents above Toronto and there was a drawing of heavies to Montreal even from the Toronto area?—A. Well, we have always had hogs come from the Toronto area; we have to pay for our hogs.

Q. We have had evidence here to the effect that there was a higher price paid for those below the bacon grade in Montreal than in Toronto?—A. No. We have always had to bring hogs to Montreal from sections west of Montreal.

By Mr. Sommerville:

Q. Then were you paying less?—A. We had to pay more than would be paid in Toronto, just like we would with wheat or anything else when it is brought east, it is increasing in value all the time.

Q. Oh yes, but this was quite different, in fact, it has been definitely stated in evidence that the prices paid for grades below the bacon grade were higher in Montreal than in any other yard in Canada?—A. That is correct.

Q. That is correct?—A. Yes.

Q. And they were sold on a flat rate?—A. No.

Q. The hogs were all sold on a flat rate before the 12th of March?—A. I would not be sure of that. Sows were not sold; extra heavies, I would not be sure of that, but so far as bacon and butchers—

Q. Butchers, bacon, lights and heavies?—A. Not always. I know that the bacon and butcher hogs were not differentiated between but the others were.

Q. Yes?—A. That would infer I think that in the Montreal neighbourhood there was the demand for a heavy hog so encouraging the shipment of these heavy hogs to that market.

Q. Now, Mr. Law, if you were not paying more for these grades below the bacon grade, why did you force on the 12th of March the Montreal market to come into line with all the other markets in Canada and force the differential upon them?—A. It was represented to us that our action in buying hogs flat on the Montreal market was detrimental to the general program of improvement of hog production in Canada.

By Mr. Ilsley:

Q. By whom, who represented that to you?—A. The Department of Agriculture.

By Mr. Sommerville:

Q. And who in that department?—A. Mr. Pearsall.

Q. With what result?—A. The result was that we fell in line with the other sections of the country.

Q. And it was solely because of that?—A. Yes, sir.

Q. Was it not at the instance of certain other packers who approached you with a view to having you come into line?—A. Well, I don't know, the other packers were interested in it too.

Q. But did not the invitation come from other packers to you to come into line and force the same condition upon the Montreal market that prevailed upon the other markets?—A. No, sir.

Q. Was there not a conference held for that puropse. With other packers in Montreal?—A. No, sir. After Mr. Pearsall's visit to us, yes.

Q. Yes. And as a result of this conference then you insisted that the differential take place on the Montreal market as on the other markets?—A. That is correct, sir.

Q. That is your statement?—A. Yes, sir.

By Mr. Kennedy (Peace River):

Q. Does the Department of Agriculture insist on that differential, or is it the premium on the selects that they insist on?—A. The premium is insisted on, but they do not specify what the differentials below are to be.

Mr. KENNEDY *(Peace River):* Exactly, I think that is the point.

By Mr. Sommerville:

Q. As a matter of fact, the Department of Agriculture have nothing whatever to do with the differentials below the bacon?—A. With that amount?

Q. With the amount of it?—A. No.

Mr. KENNEDY (*Peace River*): That is fixed by the packers.

By Mr. Sommerville:

Q. That is fixed by the packers?—A. Yes, sir.

By Mr. Factor:

Q. But the principle of applying the differential in the Montreal market was suggested by Mr. Pearsall?—A. Yes.

Q. Of the Department of Agriculture.

By Mr. Ilsley:

Q. Did you find that having no differential encouraged the production of poor hogs for market at Montreal?—A. Well, I do know that ten or twelve years ago when I first went to Montreal, the hogs marketed there were not very good, and I do know that they have improved.

Q. Without the differential?

Mr. SOMMERVILLE: Without the differential below the bacon.

Mr. ILSLEY: Yes.

Mr. SOMMERVILLE: When they were being sold on a flat rate.

The WITNESS: We paid them a premium for the selects at that time.

By Mr. Factor:

Q. I can see the advantage to be secured by the production of a better hog, but I cannot see how the application of a differential would encourage the production of a better hog?—A. Well, if you penalize a man you are going to make him do something different if possible.

By Mr. Kennedy (Peace River):

Q. Mr. Law, has not the matter of the premium policy of this country been fixed with the object of aiming at the production of that type of hog, and the other grades below bacon and so on are largely accidents; you just have them on your hands as the result of trying to produce a particular type of hog?—A. I would not say that because we know that years ago the hogs coming from the West were not a very good type, but now we are getting really good hogs from the West.

Q. As the result of the premium policy aiming at the type?—A. Well, I cannot say that it is just the result of the premium and no reflex from the penalty.

Q. My question is simply because of this fact that I think the spreads below the bacon, the penalties if you like to put it that way, are not a real factor in producing better hogs; it is the premium on the selects, and I think that was the idea in fixing the premium?—A. Well, as I said before, if you are going to pay a premium for a good article that infers, I think, a penalty for an inferior article.

By Mr. Sommerville:

Q. No, that is the packers' inference. The government's inference was: We will set a premium and therefore they will strive for the premium. And the packers said: We will put a penalty on and, therefore, we will discourage. Is not that the fact?—A. The combination has produced a better hog in the West.

Q. And more money for the packer?—A. Well, I would not say that.

Q. Let us see. During the last five years, you agree with the auditor that you carried into income reserve $714,336.68?—A. Yes, sir.

Q. And then your dividends paid were $68,000?—A. Yes sir.

Q. And your bonds redeemed were $143,000?—A. Yes sir.

Q. And that is an improvement of $925,336.68 out of operating in five years?—A. Yes sir.

Q. At Wilsil's?—A. Yes sir.

Q. That is pretty good work, is it not?—A. I do not figure it to be abnormal, it is reasonable.

Mr. KENNEDY (*Peace River*): Mr. Sommerville, I do not think you brought up the question of the advisability of separating the hogs in the different grades and selling them.

By Mr. Ilsley:

Q. About this question of hog differentials, it seems we will never leave it; but is it true that a farmer is likely to get as much for a butcher hog as a bacon? Is he likely to produce a butcher hog that will pay him better to-day, will he get more out of it?—A. I do not think so. I am not a breeder or a feeder, but my opinion is that it is just as cheap to produce a good hog as a bad one.

By the Chairman:

Q. Would you say a butcher hog is a bad one?—A. Not a bad hog.

Q. Well now, here is some evidence we have, Mr. Law; this is evidence from a Montreal seller, one of the Commission men, Mr. Donovan, I think it is, at page 814:—

> Q. Then your system in Montreal has been selling at a flat rate plus a dollar for the selects, or selling each individual grade as you saw fit, to the best buyer in each grade?—A. Right.
>
> Q. And that has been your practice steadily?—A. Yes.
>
> Q. And how does that compare with the system of selling for a fixed differential, in the return that it makes to the producer?—A. Well, I would say that it returns anywhere from $10 to as much as $40 or $50 per load more to the producer.
>
> Q. Perhaps you could illustrate that with some of your experience this very week. Take some of Monday's sales, Monday of this week, your own sales?—A. Well, on Monday of this week, I can state offhand that I had one lot of 46 hogs that were all butchers. The packer's price was 8 cents a pound for that bunch of hogs, but I sold them to a local butcher who asked for a bunch of butcher hogs, for 8½ cents a pound.

Now you see he got half a cent a pound for those 46 butcher hogs more than would have been given to him by the differential; at that time they were just trying to force the differential on the Montreal market; and he goes on:—

> Q. And on that load the producer got what?—A. Well, $46 instead of $1 a head cut. He got that dollar in there, half a cent a pound. They averaged about 200 pounds.

In other words, they got $1 a head more. Now, that is a tremendous amount to the producer. It may not mean much to a packer but it certainly means something to the producer, and what I cannot quite understand is why the packers insisted in Montreal, after Montreal had for years followed out the practice indicated here, that the differential below bacon should be imposed.

By Mr. Sommerville:

Q. Well, you agreed to do so and you did, in any event?—A. That is correct, sir.

Q. That is the only answer is it not, Mr. Law?—A. Yes.

Q. And it was a packers' differential that was put on?—A. So far as the lower grades are concerned.

Q. Now then, Mr. Law, in Montreal there are packers that do not engage in the general packing industry?—A. Yes, sir.

Q. And they cater to the local domestic trade?—A. Yes, sir.

Q. And they kill and supply fresh meat to the domestic trade in and about Montreal?—A. That is correct, sir.

Q. And if these men wanted to buy all the light hogs from a load they could not do so under the present enforced differential system?—A. Well I would not say that they could not.

Q. Well, it is mighty difficult for them to do so, let me put it that way?—A. Well, they are not divided up as they used to be.

Q. No, they are not divided up as they used to be because you insist upon having the whole load and not take the remnants after they have taken out the lights or the heavies, or the butchers, is not that correct, although the remnants of the load are of the very finest grades, the selects and bacons; you refuse to take them if they break up the load?—A. The remnants are what?

Q. I say that if they break up the load, if they were to give these local butchers the lights and the butcher hogs you would refuse to take the balance even if they were all selects and bacons?—A. Not necessarily, no.

Q. Well, but we have evidence here that you did for a whole week?—A. No.

Q. Well, a man came forward here and said that for a whole week his selects and bacons remained in that yard and he was being penalized because he had sold his butchers and his lights out of the load, and nobody would give him a bid, that is, no buyer for the packers, either yourselves or Canada Packers, would give him a bid on the selects and the bacon hogs that he had in the yard and they remained there from the one Monday till the following Monday, that is sworn evidence, is not that true?—A. I would not like to say, sir.

By Mr. Factor:

Q. Why do you present the argument if you are looking for a good hog, and under a system of that kind you will not purchase a better hog just because the lower grade is taken out?—A. Well, I have already said that the select hog is not worth to us the dollar extra that we have to pay on it.

By Mr. Sommerville:

Q. All right then, you get the bacon— —A. Nor is the butcher hog.

Q. —worth a dollar less?—A. It is not worth it to us, in my opinion.

By Mr. Kennedy (Peace River):

Q. Then how do you manage to make that statement in view of the evidence we have had here that they cannot trace through a particular load of hogs; how does the identity result there?—A. We figure to pay a certain amount for our run of hogs.

Q. But how do you say that the bacon is not worth a dollar more?—A. It may be worth part of that dollar, but I say the premium on select hogs will not be worth the full dollar to us as for the hog of the same weight.

By Mr. Sommerville:

Q. As a matter of fact, when these hogs are bought and paid for on the differential, the differential is applied only for the purpose of settlement?—A. That is all.

Q. And when the hogs go on the killing floor and are killed they lose their identity?—A. Yes sir.

Q. You do not then identify them as selects, bacons, butchers, lights, or heavies, or sows?—A. No sir.

Q. They go right through to the various rooms for the various cutting purposes, and for processing and such like?—A. That is correct.

Q. And do you agree with the auditors that it is impossible to get the exact cost of the various cuts of the animal when once it has been broken up?—A. Yes. There is a simple way of looking at that.

Q. But is that a fact?—A. Oh yes, that is a fact. Other manufacturers manufacturing by-products know what goes into anything they make. We buy a finished article and break it up and it is impossible, therefore, to work it down.

Mr. Factor: It was Mr. Hambly who said he could not get a bid on his bacon or selects for five days because the butchers had been taken out.

By Mr. Kennedy (Peace River):

Q. Has there been a noticeable falling off in the selects since the premium was reduced some years ago; the premium was reduced from \$2 to \$1?—A. I think generally in the country the quantity or the percentage of selects has increased; I think it has been increased.

By the Chairman:

Q. Before you leave that, I was a little bit perturbed a moment ago about Mr. Law's statement that they were advised by the Department of Agriculture to put in this system. I recall that there was some evidence on that before. I just want to call your attention to that evidence, Mr. Law, because I suggest to you that in the light of what you said you would like to reconsider your answer there. In this case Mr. Donovan was under examination, and it was in connection with the suggestion that Mr. Pearsall had written a letter or given some instructions as you suggest; and then the question was asked—I think by Mr. Ilsley—this is on page 820 of the evidence—and Mr. Donovan's answer was:—

> As I understand it, a member of the Department of Agriculture admitted to the Minister that it was his suggestion to the packer that the buying of these hogs flat had a tendency to decrease the number and deteriorate quality, and it was on his suggestion this new regulation was being put in force.

And then there are some further questions followed by examination by Mr. Sommerville:—

> Q. I want to follow that through. When it was brought to the attention of the Minister, I understand from you, that the Minister said that the Department of Agriculture was no party to any such arrangement?—A. No party to any arrangement to discount any grades of hogs.

Q. In other words, the Minister did not agree with any suggestion of any member of his staff; is that the fact?—A. You may take that conclusion. That is the conclusion we came to.

Q. And as a result you subsequently got this letter from Barton?—A. Yes.

Q. From the Deputy Minister, Dr. Barton?—A. Yes.

Q. Which cleared the air for you?—A. Yes.

Q. That you could sell your hogs on the actual grades on their own value?—A. Right.

Q. And that there was no differential as far as the department was concerned?—A. Yes.

Q. And that is the conclusion you came to as the result of your conference?—A. Yes.

By Mr. Factor:

Q. Although an official of his department did actually advise the packers to exact a differential?—A. Not advised them, but suggested that this differential would improve the quality and increase the quantity.

Now, that seems to indicate that subsequent to this so-called advice there was a correction from the Department of Agriculture which left Montreal free to make its own determination that did not force you to inaugurate this system of differential?—A. Well, sir, there are regulations which force us to settle for all hogs on the graded basis.

Q. The bacon premium?—A. The bacon premium—all graded right down.

By Mr. Sommerville:

Q. No, no. Where are these regulations now?—A. I think I can produce them.

Q. I would like to see them. I have never yet seen them, and I have been hunting for them ever since we opened this inquiry. You say there are regulations which require you to settle on the basis of grades?—A. Yes.

Q. That is, a statement that you shall settle on a grade; but the only regulation that fixes any differential really is that which fixes the premium of a dollar over the bacon, is that the fact?—A. That is correct.

Q. Under those regulations?—A. The government has not at any time fixed the amount of the differential on anything below the bacon grade.

Q. Quite; and you have never approved of any fixed differentials that the packers have imposed?—A. I could not say that.

Q. You do not know of any approval?—A. I do not know of any; and I do not know of any to the contrary.

Q. So that when you say you have settled on a fixed grade, you do not have to put a differential below bacons under government regulation; that is your own choice, is not that a fact?—A. I can get the regulations we have on the subject.

Mr. ILSLEY: There is a mystery in this matter because I see on page 821 that according to the narration of what went on at a conference the Minister of Agriculture appeared to think that the regulation required some differential below bacon. The evidence is this:—

By Mr. Sommerville:

Q. When this was brought to the attention of the Minister in conference, the Minister repudiated any such responsibility?—A. Yes.

Q. Or the authority of any member of a staff to do any such thing as that?—A. If you will let me explain a little further, I think we can clear this up. At the meeting with the Minister and the Deputy Minister and Mr. Pearsall, we got to the point that the Minister explained to his

> Deputy Minister and Mr. Pearsall and ourselves, that zero was as much a differential as 50 cents or a dollar. Zero was a numeral, and it was a differential, if you would, or one was a differential. Whether it was zero or $1 a hog, it was still a differential, and complied with the letter of the law...

A. Yes, that is right.

Q. They seemed to think they should put a regulation on according to the differential below bacon?—A. Yes, that is right.

Q. The answer continues:—

> ...Now, the Minister had an appointment; there was a caucus that morning at 11 o'clock, and it was 11.45 then. He left to go and said he would get in touch with us later. We came back to the hotel, and we did get in touch with Mr. Barton about it, and this is the letter. Then, the next day, after our meeting, I do know, the Department of Agriculture called in the packers from Montreal for another meeting, and then they gave us this letter after that.

The CHAIRMAN: Here is the letter on page 818. Just read that letter. I think that covers it.

By Mr. Ilsley:

Q. The letter says:—

> DEAR MESSRS. RYAN AND DONAVON:
>
> This will confirm my conversation with you to-day in regard to hog marketing in Montreal.
>
> It is understood that butcher hogs and other grades can be sold and bought separately, the option to sell any grade of hogs resting with the seller, and the option to buy resting with the purchaser.
>
> I am assured that the packers subscribed to this undertaking. In accordance with the hog grading regulations, differentials are required, but apart from the payment of $1 per head for select bacon hogs, this department does not determine the differentials.
>
> In the interests of the hog industry, this department feels that full advantage should be taken of the provisions for hog grading in Montreal, and the intention is that insofar as may be possible, every effort shall be made to make it effective, in order that the results obtained elsewhere throughout Canada may be reflected in the hog production districts served by the Montreal market.
>
> I gathered that you were in sympathy with hog grading, and I would request your cooperation in this endeavour to improve the hog industry—
>
> Yours very truly,
>
> H. BARTON, *Deputy Minister.*

That bears out what I say, that the Department does not determine differentials below bacon.—A. There is a differential.

Q. But they say there must be a differential?—A. Yes.

Mr. KENNEDY (*Peace River*): Not necessarily a fixed spread.

Mr. FACTOR: Not the amount; but the principle of differentials is apparently according to regulation

By Mr. Sommerville:

Q. Now, according to this letter the Minister had called in the packers from Montreal—yourself and Canada Packers?—A. Yes.

Q. And as the result of calling you in, which was because or a complaint that you were changing the system from the flat rate to the fixed differential method of buying.—A. Yes, sir.

Q. —as the result of that did you not agree that the hogs to be sold on the Montreal market in their own grades, each grade separately?—A. They had the option to sell them any way they liked—that is in various grades; we had the option to buy them.

Q. That is the full understanding of that arrangement?—A. I think you will find in that letter from Dr. Barton that the word is "option."

Q. You had the option to buy them. That is, the seller could sell in grades? A. Yes.

Q. And do you say that the full effect of that is that if he could find somebody to buy them in grades he could sell them that way?—A. Yes.

Q. But you would not buy them in that way?—A. We have since.

Q. Not very often, have you?—A. Well, I do not know how often.

Q. Not if you can avoid it; shall I put it that way?—A. Well, no, I do not say so.

Q. The practice is to insist.—A. To buy full loads.

Q. And not to take grades?—A. Yes.

By Mr. Chairman:

Q. And you refused, Mr. Law,—the packers refused on the occasion of the introduction of this system to purchase the separate grades from the Commission men when they separated them?—A. Well, for a day or two I guess there probably was a little pull between the two ends of the string.

Q. The sworn evidence is that you refused. On page 821 of the evidence I see these words: "We endeavoured to do that on Monday morning, but the packers refused to take them." And then the witness goes on to say: "After they refused on Monday morning, I immediately got in touch with Dr. Barton on the phone, and his department then got in touch with one of the packers in Montreal, and they came out in the market and bought 20 or 30 select bacons from one Commission man, and 40 from another, and 50 from another. That did not by any means clear up the market. They made a pretence of following the agreement." And then it goes on: "Since this happened, Wilsil's, who used to buy anywhere from 1,000 to 2,000 hogs on our market, in three weeks, have not bought 300 hogs." However, you say that has now all been cleaned up, and that you do?—A. Oh, we buy. We are not buying so many just now because of general conditions.

Q. Do you buy separate grades now, or in lots?—A. Mostly in lots, I would say. I think that matter has died down largely.

Q. It had to die down, did not not?—A. Things are moving smoothly.

By Mr. Sommerville:

Q. It had to die down because you refused to buy except on differential? —A. I think, perhaps, they have found out that the differential is not so bad after all.

Q. In other words they had succumbed, is not that what has happened? —A. No, I do not think so.

Q. They fought very hard against it?—A. Yes, they did; but they cannot—

Q. They cannot fight you packers?—A. They cannot tell us that 99 per cent of the country is wrong and only Montreal right.

Q. You were right for twenty years, and they wanted you to continue?— A. No. I would not say so.

Q. Well, for fifteen years then. Why did you have such a change of heart?—A. We may have been wrong for twenty years.

By Mr. Ilsley:

Q. What I cannot see is that you say that the grade of hogs, the type of hogs which were being supplied to the Montreal market was improving during this period, so there was no reason from the standpoint of the improvement of the hogs to put into effect or insist upon a differential system at all; it must have been for a different reason?—A. No.

Q. The department did not really insist on any differential below bacon; they said you could make it infinitely small, and, therefore, it must have been the packers that insisted on it in the face of a condition where the hogs were improving in quality. What did you do it for unless to profit yourselves?—A. I might explain. I think I mentioned when I was in the country ten or eleven years ago the hogs were of a fair quality; they are better now; but the quality of the hogs in the province of Quebec as shown by the records of government grading—the quality has not improved in anything like the degree it has improved in other parts of Canada.

Q. Oh, yes, but remember you are only referring to hogs that are graded and killed at the abattoirs in those records?—A. Graded at the stockyards.

Q. Or at the abattoirs?—A. Yes.

Q. And that the majority of the hogs in the province of Quebec are sold by men who kill their hogs and bring them in, and they are not included in the government reports?—A. No. Of course, that condition as a whole has always obtained.

Q. It obtains to a greater extent than ever I am told?—A. I do not know about that, sir.

Q. That is what I am told, and the evidence given here was that the quality of the hogs in Quebec had improved very substantially according to the Department of Agriculture in the province of Quebec?—A. I have not seen their figures.

By the Chairman:

Q. There is one other thing. Evidence was given to us that the Commission merchants in the Montreal Livestock Exchange used to sell a lot of hogs to the local butchers which constituted a very healthy competition for the packers; that was under the old system?—A. Yes.

Q. Then the packers, under this system, are forcing these butchers now—literally forcing, that is the evidence—I do not say it is right—forcing the butchers to buy their stuff now from the packers instead of going to the market and buying their supplies on the open market?—A. I do not think that is right.

Q. Are you selling to the butchers their fresh meat requirements?—A. The butcher shops. We sell to the butcher shops.

Q. The wholesale butcher?—A. They are still buying.

Q. They are now?—A. Yes.

Q. But the point was that for a time they were getting their supplies from the packers, probably not from you, but from the Canada Packers, and they were choosing them from the rail at cost, is not that a fact?—A. I have heard something of that sort.

Q. And that removed them from the competition on the Montreal market?—A. Yes.

Q. And now, under your system of insisting on getting the whole load, the local butcher cannot buy his lights or heavies or butcher varieties unless he takes the whole load; is not that the fact?—A. No. I would not say so.

By Mr. Sommerville:

Q. I do not know what else can be the result?—A. They are still buying the odds and ends.

Q. Odds and ends. That is perfectly true. You have put it well, I think, Mr. Law.

By Mr. Factor:

Q. Do you still favour the retaining of the principle of the differential below bacon?—A. Now, I happen to be in the packing business, but speaking from my own point of view, if I could I would return to the old system—that is, buying where, when and how you can.

By Mr. Sommerville:

Q. That is very fair; and let the farmer do the same?—A. He is a pretty good trader as a rule.

Mr. Factor: I think the farmer wants to do the same thing.

The Chairman: Is there anything further?

By Mr. Ilsley:

Q. There is a question or two I want to ask about the British market situation. The rise in price in Great Britain is due to what? Is it due to the shutting out of foreign pork products; is that it—placing all foreign countries on quotas?—A. Reducing the quantity which they can ship into England.

Q. Yes, permitting us to ship in two and a half million— —A. Hundredweight.

Q. Per year; and cutting Denmark and other exporting countries down to a smaller quantity than they have been accustomed to shipping?—A. That is correct.

Q. And that was done partly to encourage the production of hogs in Great Britain?—A. That was the avowed object of it.

Q. That was the avowed object. Is it having the effect of increasing the production of hogs in Great Britain?—A. I heard that the production this year will be greater than it has been for some time.

Q. Is it substantially greater? Do you know anything about the proportions?—A. I do not think the increase—it would appear large if it were half a million hogs.

Mr. Sommerville: Because of the English market.

The Witness: Yes.

By Mr. Ilsley:

Q. That would be a large proportion?—A. That would be a large proportion; that would appear to the average person over there as a big increase.

Q. There was a rapid increase in the price of bacon and ham, was there not, after the imposition of these prohibitions against pork products from foreign countries?—A. A funny thing, there was a very rapid decline.

Q. In the price of?—A. Bacon.

Q. Would you say there was an increase in the price of pork and a decrease in the price of bacon? -A. No, there was a rapid decline, a speedy decline in England in the price of bacon, after the quotas were first imposed. That was brought about, I think, by the anticipation in those countries of the quotas and they filled the country with bacon.

Q. That was a temporary condition, was it not?—A. For a month or two, a few months.

Q. But these high prices we are getting the benefit of did not set in until it was over, did they?—A. No. That did not start until last fall, I would say.

Q. The fall of 1933?—A. The fall of 1933.

Q. That is when this amount that they shipped in from foreign countries was reduced?—A. They began to get the effect of the application of the quota.

Q. I was going to ask you one or two questions. When this situation did reach normal, and the effect of this began to be felt, the price of bacon and ham increased in Great Britain, did it?—A. Yes.

Q. Substantially?—A. Yes, quite a bit.

Q. Did that have any effect on the consumption in Great Britain; did it fall off?—A. Yes. It got to a certain height, then we got a rapid decline after that reached the peak.

Q. Do you know the proportion of the decline?—A. From 90 shillings, I think, to 68 shillings. 90 shillings was the top price. We slipped back to 68 shillings in a few weeks.

Q. What was that attributable to—the falling off of demand?—the falling off of demand as the production of hogs increased rapidly in Canada?—A. The supply is very short at the moment, but the information we have is that breeding has been very general and we look for more hogs in the future.

Q. That is high prices. How permanent is that condition likely to be? That is a difficult question, but you have a falling off in consumption and an increase in British production and an increase in Canadian production and that eventually will, no doubt, result in a lowering of prices, will it not?—A. That has always been the—if you pay a high price you increase production; cut the price and you cut production.

Q. So that the farmer would be well advised to consider this situation temporary?—A. If the farmer can watch the swings and get in the right swing.

By Mr. Kennedy (Winnipeg):

Q. Referring to what is known ordinarily as the Ottawa agreements and the increase in our pork exports under those agreements to the old country, how do the exports for the first four months of this year from Canada to Great Britain compare with the exports for the same period a year ago?—A. I have not got the exact figures, but I would say that they would be much higher.

Q. Do you know how much?—A. I have not got the figures.

Q. Would they be substantially higher?—A. Substantially higher.

Mr. Edwards: Nearly three times higher.

The Witness: There are figures available here.

By Mr. Kennedy (Winnipeg):

Q. Is the increase in the exports due to the operation of the agreements, in your opinion?—A. Oh, entirely.

Q. Now, Mr. Ilsley asked you to express a point of view as to how long this improved condition existed—whether it was only temporary or not. Is there any reason to believe that the tendency will not still be along the line of improvement?—A. The agreement, I believe, is for five years, and if the British consumer is willing to saddle the load and pay the high price for bacon, we should have a good time at the expense of the Americans and other people.

Q. And under the operation— —A. Of the quota system.

Q. Under the present operation of the quota system are we having that good time?—A. But if the English consumer wakes up and says, "No, I will not pay twice the price for bacon; I can buy it for half," there may be trouble.

Q. But our exports to Great Britain, under the operation of this agreement, are continually increasing?—A. Oh, yes.

By Mr. Ilsley:

Q. The consumers, you say, may wake up; what about the producers in Great Britain? The tendency of the consumers in other aspects has been to agitate for quotas against the colonies. Is there any tendency to do that against bacon?—A. There is a tendency in Great Britain to complain that the shipments from former shipping countries have been reduced and that Canada has been given a large quota, and that the result has been a large increase in the price of bacon—that is, the Englishman's breakfast bacon.

By Mr. Kennedy (Peace River):

Q. Mr. Law, do you think we could have avoided some of that if we had shipped a greater amount of bacon to Great Britain?—A. Avoided some of the—

Q. Complaint?—A. In regard to the—

Q. In regard to the price of bacon, if we had shipped a greater volume?—A. I think everyone is struggling to ship every side they can.

Q. Now, were you here last night?—A. Yes.

Q. I was asking Mr. Tapley some questions why the packers did not ship more pork products under the Ottawa agreement than they did?—A. I know in our case we have been struggling to ship every pound we could, because on a rising market you cannot help but make a little money.

Q. You said a while ago if the United States could get into the British market they would use a lot of pork products?—A. Yes.

Q. But their pork products do not compare with our bacon and select grades. So why could not the packers of Canada get out more of the pork products from Canada during the last year compared with what the United States people would ship to Great Britain if they could?—A. The United States people ship a lot of different cuts. They have not been shipping any great quantity in the Wiltshire sides; they have shipped lots of hams.

Q. Why could you not do that?—A. We do.

Q. You do not ship as many as you could?—A. Yes.

Q. Well, what place would the United States get in the British market if they could get in?—A. If they could exceed their quota they would swamp us for the particular cuts they ship.

Q. Would they cut you out altogether?—A. Not altogether, but the price would come down.

Q. The point I am making is this: that the Canadian packers were not confined to bacon and certain kinds of hams; they surely could have shipped a great deal more to Great Britain under the Ottawa agreement than they did last year?—A. I do not know. I told you as far as I know in our own case we were shipping every pound we could, and I think most other packers were doing the same.

Q. Did the packers ever get together to see how much they could send, with the object of relieving the pressure or over-supply of beef or pork on the Canadian market?—A. Yes, I remember in one case—I think it was the British government asked that the Canadian government should give them an estimate of the amount of stuff which might be shipped in a given period, and the packers were called in to help the department in estimating the amount of bacon or pork products that would be available in that period.

Q. The amount of bacon?—A. Bacon and pork products. That covered all the subject.

Q. You say there is no more available in Canada to ship than what you did ship last year?—A. I do not know. We shipped all we could that was suitable.

By the Chairman:

Q. Supposing you had run the Canadian market short? You could have run the Canadian market short and left a little larger field for beef?—A. Well, we think that did take place. Of course, we know that the pork we shipped out was not eaten in Canada.

Mr. SOMMERVILLE: Of course, that is—

The CHAIRMAN: I think that is fairly clear.

By Mr. Sommerville:

Q. At the same time the price of beef, the finished steer that was produced in Alberta, was still selling at as low as $2\frac{1}{2}$ and 3 cents for some of the finest stuff ever produced?—A. In the west.

By Mr. Kennedy (Peace River):

Q. Are you a member of the Industrial Development Council for Canadian Packers?—A. Yes, sir.

Q. Now, I get a pamphlet issued by the Industrial Development Bureau, and you have this phrase on it all the time, "Interlocking halves of the livestock industry, the packers and the farmers." It seems to me that the packers have simply passed back to the farmer the catastrophe of falling prices, and there is not a packer that has come here before us who has demonstrated in any way that he really tried to size up the situation and do the best he could. Maybe you can tell me that I am wrong there, and submit some evidence, but I cannot think of any that has been submitted yet. I do not think you looked at this thing from the standpoint of helping the farmer at all, at least I cannot see it?—A. I do not know if the farmer goes out of business we may go out of business.

Q. The farmer is likely to go out of business first.

By the Chairman:

Q. The claim has been made, Mr. Law,—very definitely by packers—that one of their chief concerns is the welfare of the farmer. Now, Mr. Kennedy has asked a very proper question; tell us something that the packer has done to indicate his solicitude for the welfare of the farmer?—A. Well, I do not know, we are always struggling for supplies, especially in the hogs at the present time.

By Mr. Sommerville:

Q. Mr. Ilsley reminds me that we imposed the hog differential; that is doubtless in their interests. Is there anything else you have done to meet the situation that Mr. Kennedy has raised?—A. I do not think I can point specifically to anything.

Q. Because really nothing specific has been done?—A. Well, we are packers, you know; we are working our own job every day.

Q. That answers a lot of questions. By the way, will you be good enough to file with the committee not only that information in volume per head but also in pounds?—A. Head? And pounds in value?

Q. Yes. Will you also submit to us a statement showing the quantities of your exports to Great Britain and the profits made upon them?—A. It would have to be approximate; we do not segregate in regard to profits.

Q. Cannot you tell what you made on your shipments to Great Britain?—A. Not accurately.

Q. Cannot you tell the spread between what you paid for that product and what you sold it at in Great Britain?—A. What we pay for hogs, and what we got for the cuts; we can give you that in detail at any time we got so much for hogs and bacons.

Q. You cannot tell us the exact costs?—A. No.

Q. Of those cuts? Give us that information?—A. We will make it as intelligible as possible.

Q. And your profit on the operation?—A. Yes.

Q. Then, you have filed with the committee a statement of your traffic in butter, cheese and eggs?—A. Yes.

Q. I see here from January 28th, 1933, to April 21st, 1934, you bought butter to the extent of 873,913 pounds?—A. Yes.

Q. You sold 863,832 pounds?—A. Yes.

Q. You filed with us a statement that you paid $194,960.18 for it, and sold it for $202,009.59?—A. That is the gross sale price and the purchase.

Q. What were the carrying charges added per month?—A. None.

Q. None added per month?—A. We do not really carry butter. We buy it from hand to mouth.

Q. You do not carry it in storage?—A. No.

Q. You do not buy it in the spring and sell it in the fall?—A. No.

Q. You bought $16,241 worth of cheese and sold that same cheese for $17,936.80?—A. Yes.

Q. You bought $76,297.29 worth of eggs and sold them for $85,093.45?—A. Yes.

Q. Any carrying charges there?—A. No carrying charges or expenses of any kind in there.

Q. Then they are both gross and net?—A. Gros profit, and other charges have to come off that.

Q. You said a few moments ago you shipped over as many cuts as you could to Great Britain?—A. Yes.

Q. Those cuts would be Wiltshire sides, hams, and bacons?—A. Wiltshire side is the main—

Q. The main——A. —article shipped. Then we shipped hams.

Q. Anything else?—A. Backs, shoulders.

Q. You shipped as many as you possibly could from the product that you bought?—A. Yes.

Q. Some of those cuts would be from the selects and some from bacons?—A. Yes.

Q. Some would be from butchers?—A. Yes.

Q. Some would be from lights?—A. Not many.

Q. The lighter hams?—A. Very few of those.

Q. Or lighter backs?—A. Not so many; not much light stuff for export.

Q. Some would be from heavies?—A. Yes.

Q. And would some of it come from extra heavies?—A. Yes.

Q. Would some of it be from sows?—A. A little.

Q. And from the heavy sows you would get some cuts also?—A. It would be a few hams.

Q. So that for the English market you supplied these cuts from all the grades below bacons?—A. Yes.

Q. Upon which the differential did apply?—A. And of course from the higher grades, too.

By Mr. Factor:

Q. I should like to ask you this: Your operations last year and the year before were profitable, were they not?—A. Not the year before.

Q. Last year?—A. Last year.

Q. I notice that you have 370 employees in your plant?—A. Yes.

Q. And that the average hourly wage is $31\frac{1}{2}$ cents, the lowest wage of any packer except the Canada Packers at Hull?—A. Yes.

Q. Will you give me some explanation as to why the rate is so low?—A. That is the average rate. I think perhaps we have more people on straight time or weekly rates.

Q. I will give you the weekly rate. The weekly rate $20 to $25, 15·41 per cent; $25 to $30, 12·70 per cent; $30 to $35, 1·89 per cent; $35 to $40, ·54 per cent. In other words, there are 28 per cent receiving from $20 to $30 per week.—A. As I say, there may be a greater percentage of our people on straight time than in some other plants.

Q. What do you mean?—A. Weekly wages.

Q. This gives you the percentage of the weekly wage; 28 per cent of the employees get around $30 a week, between $20 and $30.—A. That is what I say. You see, our hourly rates are lower than some other operators. I say that perhaps if some of our people who are working on a straight weekly wage were converted into an hourly rate, it might improve the hourly rate, I don't know.

Q. You have 257 working at an hourly rate and only 113 on the weekly wage?—A. That is a big percentage, I think.

Mr. HEAPS: Is that larger than any others?

The WITNESS: I cannot tell you; I fancy it might be.

By Mr. Sommerville:

Q. We have the weekly rate for the Canada Packers, Toronto. There we find 11·75 per cent are on the weekly rate, and 88·25 per cent on the hourly rate. At Hull, Canada Packers, 80 per cent on the hourly rate and 19·20 per cent on the weekly rate; Canada Packers, Peterboro, 78 per cent on the hourly rate, 21 per cent on the weekly rate; Gainers Limited, 90 per cent on the hourly rate, and 9 per cent on the weekly rate; Swift Canadian, 81 per cent on the hourly rate and 18 per cent on the weekly rate; Swifts, Edmonton, 90 per cent on the hourly rate, and 9·1 on the weekly rate; Wilsils, 69 per cent on the hourly rate and 30·54 on the weekly rate.—A. I think that is how it works out.

Q. Your percentage is higher because in your salary list 60 per cent are on the weekly rate, and 39 per cent on the hourly rate. Notwithstanding the hourly rate of your 257 employees, the average seems to be a very low one, 31 cents, when you take into consideration that covers some people who are making as much as 50 to 55 cents an hour. Here are 10 per cent of your employees who are earning 20 cents?—A. Those are girls.

Q. Here are— —A. Those are girls.

Q. Is there any minimum wage law applied to the packing plants in Quebec?—A. Yes.

Q. What is the rate?—A. Up to a week ago, it was $18\frac{2}{3}$ cents. I think now it is up to 20 cents in Montreal.

Q. Montreal?—A. Yes.

Mr. HEAPS: How many hours a week?

The WITNESS: It used to be 55, now it is 50.

By Mr. Heaps:

Q. They have cut down the hours and increased the salary rates of pay?—The hourly rate, yes, the minimum hourly rate.

Q. But they are getting about the same, $10 a week, as before?—A. About that.

Q. Assuming they are working a full week?—A. Yes.

Q. How often do they work a full week during the year?—A. We endeavour to give them a full week all the time.

Q. How many months in the year do they work?—A. Twelve months.

Q. Do they get 12 months full pay?—A. It is a very small variation.

By Mr. Sommerville:

Q. Approximately full time?—A. Approximately. We try to do that, yes.

Q. The extent of your business enables you to give them practically full time employment?—A. Yes.

Mr. HEAPS: Have you many there working on piece work?

The WITNESS: None at all, I do not think.

By Mr. Kennedy (Winnipeg):

Q. Can you tell me if this recent increase in the minimum wage of the female employees arose from a change in the rates or regulations?—A. I think it was perhaps a change in the application of the regulations by Mr. Francq.

Q. There is a provision in the law for an increase or a reduction?—A. Yes.

Mr. FACTOR: Can you tell me how many male employees you have working on an hourly rate?

The WITNESS: Well, I cannot.

Mr. SOMMERVILLE: Of the 257 how many would be male employees, and how many female employees?

The WITNESS: I cannot tell you from memory.

Mr. FACTOR: Can you tell us approximately?

The WITNESS: If I saw the sheet.

Mr. SOMMERVILLE: The sheet just gives the percentage. Ten per cent are at 20 cents an hour.

The WITNESS: These are all girls, 22 cents—that would leave about probably 88 per cent male employees.

By Mr. Factor:

Q. Of that 257 are male employees?—A. About that.

Q. Even giving them an average of 31 cents, their average would be higher— —A. You have a greater average to work that out on.

Q. What would be their average pay per hour? Can you tell me approximately the average pay per hour of the male employees?—A. It would probably pick it up a couple of points, I think.

Q. About 33 cents an hour?—A. I think so.

Mr. HEAPS: $16 per week.

The WITNESS: About that.

Mr. FACTOR: Do you think that is a fair wage to pay a married man? Most of them are married men.

The WITNESS: I don't know.

Mr. SOMMERVILLE: They have been with you for some time?

The WITNESS: Our employees have been there mostly a long time, family men.

By Mr. Factor:

Q. And earning $16 a week if they work a full week's time? I should like to get your reaction to that. Do you think that is a fair pay for a concern that has made a profit in 1933, a depression year, to pay their working men?—A. Well—it is a matter of general conditions in the neighbourhood.

By Mr. Sommerville:

Q. Why should you come down to the general conditions in the neighbourhood which are so bad, yet the profits are the best you have ever had in your history? Can there be any recovery for this country if companies that are making the largest profits in their history are bringing the level of wages down to the conditions in the neighbourhood?—A. Well, I do not know that we brought them down.

Mr. HEAPS: Has there been any reduction in the pay?

The WITNESS: No general reduction. There may have been some little—there may have been a few adjustments, a few instances.

Mr. HEAPS: What do you mean by a few instances?

The WITNESS: A few men, a few particular jobs that were changed.

The CHAIRMAN: You did not make a general percentage reduction in your wages?

The WITNESS: No.

Mr. HEAPS: Any reduction in salaries in the past five years?

The WITNESS: No, I do not think so.

Mr. HEAPS: Of the executive or any other employees?

The WITNESS: No.

By Mr. Kennedy (Winnipeg):

Q. Let me pursue this a little further, in reference to the reason for the increase in the minimum wage of females, to what do you attribute that recent action?—A. There were some extremely low paid people, low rates being paid in the Montreal district.

Q. That has been in existence for some time?—A. I think—

Q. To what do you attribute the recent action in raising the rate of wages? —A. There was some inquiry, I believe, into some particular industry, and those rates came out, and they were very very low.

Q. You mean it was due to the exposure of conditions?—A. I think so.

Q. By reason of evidence brought out by this committee?—A. I do not know whether it was this committee or some other one; I forget which it was.

Q. It was because of the result being made the subject of the inquiry?—A. That is the idea.

By Mr. Heaps:

Q. How long has there been a fixed minimum wage for female employees in the packing industry in the province of Quebec?—A. We have been observing it for at least a couple of years. I do not know how long prior to that there had been. I know it was not applied to the packing industry at the start.

By Mr. Sommerville:

Q. When the rate was increased from 18 cents, you increased it to 20, as required under the minimum wage law?—A. No, ours has been 20.

Q. I understood from you there had been an increase in your plant—it had been 20 cents?—A. We were a little above the minimum at that time.

By Mr. Kennedy (Winnipeg):

Q. Have you noticed any change as to the more energetic enforcement of the minimum wage law in your province within the last month or so?—A. I have not noticed it, but I would think the officials connected with the enforcement of the act are attending to their jobs.

Q. They are attending to their jobs?—A. I would think so.

Witness retired.

J. S. MCLEAN, called and sworn.

By Mr. Sommerville:

Q. Mr. McLean, you are the president of Canada Packers, Limited?—A. Yes.

Q. In order that we might have the record complete, your company is a holding company?—A. Yes.

Q. And it holds all the shares or is the owner of a number of different companies?—A. Yes.

Q. The Harris Abattoir Company Limited?—A. Yes.

Q. The Harris Abattoir Western Limited?—A. Yes.

Q. Gunn's Limited? Gunn's, Langlois and Company Limited?—A. Yes.

Q. Canadian Packing Company Limited, William Davies Company, incorporated, William Davies Company Limited, Ontario Fertilizer Company, Limited?—A. Yes.

Q. Some of these companies have subsidiaries, have they not?—A. Yes.

Q. You operate now six plants?—A. Yes.

Q. One at Toronto?—A. Yes.

Q. Which is a consolidation of the Harris and the Gunn's plants?—A. Yes.

Q. One at Montreal? Was that a consolidation?—A. Yes, of the Davies and the Canadian Packing.

Q. One at Winnipeg?—A. Yes.

Q. Which is a consolidation of the— —A. It is the former Harris plant.

Q. One at Hull?—A. Yes.

Q. One at Peterboro, and one in Chicago?—A. Yes.

Q. Then, you have branch houses located at Toronto, east and west markets, Timmins, Ontario, Sault Ste. Marie, Sudbury, London, Windsor, Ottawa?—A. Yes.

Q. Quebec, Halifax, Saint John, Sydney, St. John's, Newfoundland, Cornerbrook?—A. That is in Newfoundland.

Q. Charlottetown, Montreal south market, Montreal Hotel supply, St. Paul, Atwater, Mile End, Place Viger—where is Mile End?—A. Mile End is in the east end of Montreal.

Q. Place Viger, Peterboro, Hull, Rutland, Winnipeg market, Moose Jaw, Saskatoon and Fort William?—A. Yes.

Q. Then you have creameries—

Mr. Ilsley: These houses are retail establishments?

The Witness: These are branch wholesale houses, selling agencies.

By Mr. Sommerville:

Q. They are selling agencies in the districts in which they are located? —A. Yes.

Q. Then you have creameries located at the following places: Chesley, Clinton, Grand Valley, Shamrock, Shelburne, Walkerton, Wellington, Wiarton? —A. Yes.

Q. Then, you have— —A. I do not recognize "Shamrock." That sounds more like one of our brands. I do not think there is a—

Q. I beg your pardon. It was given to me as one of the places.—A. I think it is a mistake.

Q. There are seven creameries?—A. I think that is all.

Q. In addition to these, you have cold storage plants at Toronto and Montreal?—A. Yes.

Q. Then you have a wool polling plant at Toronto?—A. Yes.

Q. And you have canning companies?—A. Yes.

Q. How many canning companies?—A. We really have no canning company.

Q. Canning plants?—A. A canning plant at Picton, in which we are interested. We have a controlling interest in the Folkard Canning Company that was mentioned the other day. Folkard is a man who was formerly a canner himself, and with whom we took an interest. His plant was burned down and we supplied the money to build. Then, we have two other canning plants, one at Brantford and one at Peterboro, in our own packing plants.

Q. And then you have fertilizer plants at Toronto and Montreal?—A. And Saint John, New Brunswick.

Q. Do you operate any other company than these?—A. No.

Q. Or have you a controlling interest in any other company?—A. No, I do not think so. All our business is just the business that is a continuation of the four companies which merged into Canada Packers.

Q. Yesterday we had some discussion, and the auditors gave us evidence as to the system of keeping packing house accounts?—A. Yes.

Q. By which all your accounts are kept in departments?—A. Yes.

Q. You have, I think, something like 70 or 80 departments?—A. I think that probably is too many—I do not know—

Q. Whatever it is, 60, 70 or 80?—A. I should say about 40.

Q. I beg your pardon?—A. I think it is about 40.

Q. Whatever it is.—A. It is a large number.

Q. Do these departments exist in each of the plants?—A. Yes.

Q. I mean the packing plants?—A. Yes.

Q. Each of the plants would have these 40 odd departments?—A. Not necessarily all of them, but most of the plants have most of the departments.

Q. Each of these departments makes a departmental return?—A. Yes.

Q. Of the net result of their operations every four weeks?—A. Every week.

Q. Every week?—A. There is a complete accounting return every four weeks, but we have an estimated profit and loss each week.

Q. Would it be possible, or can you produce from the method of your accounting, a consolidated profit and loss statement for your entire operations, similar to the schedule which I show you here? -A. Well, it can be done; we have never done it, but we can produce it.

Q. Let me just understand that. It can be done, but it would be difficult?—A. You mean all these 40 departments?

Q. Yes, and all the company's operations?—A. We have never attempted to do it, because it would be of no value to us.

Q. Would you be put to a great expense in producing that consolidated statement now?—A. At the present time, yes. If we built that up as we went along, when we started in to do it, it would not cost very much to build it up week by week.

Q. Do you agree with the statement of the auditor and of Mr. Tapley and Mr. Law that you cannot get the exact cost; the breakdown system of each of the cuts of hogs, we will say, is an estimated result you get from certain test runs?—A. I should like to answer that question carefully, Mr. Sommerville, just because in the last few days I think that the system of packing house accounting has been made to appear or did appear—nobody had any objective in doing it, but it did seem to me there was a confused impression given as to packing house accounting systems. I think the packing house accounting is a very accurate, meticulous, and illuminating record of packing house operations.

Q. I do not think there is any doubt in anybody's mind, Mr. McLean, it is an excellent system for a person operating the business. What was difficult for the one on the outside to understand is, that in the breaking-down process, your system is different from the ordinary manufacturing system?—A. Not only that, but what I feel is this, I feel that perhaps members of the committee do not understand that any information that you wish about the vital processes of our business is available immediately from our records. I do not think you could ask a question that would not be deducible from our records with a very slight effort. For instance, about this consolidated profit and loss business that has been discussed, it would not be of the least value to you if you had it.

Q. That is what I understand. Most manufacturing firms have it?—A. Yes.

Q. In this case it was different, and that is why there was the question asked in order to understand the difference?—A. Exactly.

Q. In your system of accounting you have those departmental results?—A. I think what this committee is interested in, is a statement of the total cattle operations, for instance. Now, that is all available in our records, and in everybody else's records.

Mr. Kennedy (*Winnipeg*): Easy access.

The WITNESS: Easy access. And the total hog operations. Now, it is true what you were saying a moment ago, that nobody can tell from our records what the exact cost of a ham is, or a side of bacon, because the hog is different from other animals. It is cut up into a large number of cuts, and the only accurate information you can get is the total result on the sale of all the cuts. That is accurate, but I cannot tell you what the exact cost of a ham is, or the exact price of a side of bacon.

By Mr. Sommerville:

Q. Therefore we cannot get the exact spread on each of those cuts?—A. No.

Mr. KENNEDY (*Winnipeg*): Those gross returns are easily obtainable.

The WITNESS: And they are accurate.

Mr. KENNEDY (*Winnipeg*): That is what I cannot understand.

Mr. SOMMERVILLE: I am going to show you how easily available it is.

Mr. KENNEDY (*Winnipeg*): You do not mind my interrupting?

Mr. SOMMERVILLE: No; but I am going to follow it through.

By Mr. Factor:

Q. Is it possible, from your records, which you say are illuminating, to obtain a statement showing the amount of business done, the amount of profits on products sold, how much was paid for material, that is, the live product, how much labour went into it, and the other expenses, showing the net profit?—A. Yes.

Q. It is possible?—A. Yes, quite simple.

By Mr. Sommerville:

Q. Do you mean the gross or the net?—A. Both, everything.

Q. You mean the gross and net?—A. Yes.

Q. Why was it not given to our auditors when they were endeavouring to get it for weeks?—A. They were working on this idea of consolidated statement. We do not keep that at all, and it was not possible. Mr. Shepherd's statement was just an exact statement of the facts. It would take a long long time and would be an almost heartbreaking job to rewrite all our records, because it is a record that is of no value to us.

Q. Let me take that record that you have here. Here I show you departmental profit and loss account showing how your net operating profit of $1,747,725 was obtained. You will observe in that departmental profit and loss account you divide it into meat and by-product departments?—A. Yes.

Q. Now, the very first item is beef; that is a department, is it not?—A. Yes.

Q. That, in this statement, shows a loss of $813,912.70?—A. Yes.

Q. That would indicate that there was a loss in the beef department?—A. Yes.

Q. That, of course, includes the interest which you charged into that department at the rate of six per cent on the amount invested?—A. Yes. All our accounting is done on that basis.

Q. The next department is the by-products department, and that shows a profit of $549,270.82?—A. Yes.

Q. Some of those by-products come from beef?—A. Practically all of them.

Q. So that you would have to add your by-products department and your beef department together?—A. Exactly.

Q. To get the result from that?—A. They are really the same department, but sub-divided for quite simple reasons.

Q. But in your departmental results you show profit and loss?—Exactly. The $831,000 odd is not profit or loss on beef. Those departments all have to be grouped together in order to get the total result of the beef operations. Those subdivisions are made for quite simple reasons. The results of the beef operations are kept in actual practice, and that is the way we use those accounts, from the grouping of that group of accounts.

Q. Let me see, Mr. McLean. Does not that by-products department also include by-products from sheep, lambs and calves?—A. Yes, but the value of those by-products, and the quantity of them, is quite minor.

By the Chairman:

Q. They made a profit of over half a million?—A. Yes.

Q. They can't be very minor?—A. Well, what I say is the value of the by-products from the sheep, lambs and calves.

Q. Oh, yes? A. The by-products account is almost entirely the account of hides and tallow and so on.

By Mr. Sommerville:

Q. Then, the next department is casings?—A. Yes.

Q. That also includes beef by-products?—A. Yes.

Q. Beef casings?—A. That is correct.

Q. And it includes casings from other live stock?—A. Yes.

Q. So that they are mixed together in that department, and produce a net result?—A. In the case of casings it is not so true as it is in the by-products that they are minor. The sheep casings are much more valuable per pound, you see, than beef casings. For that reason, this casings department is carefully analyzed, and the profits divided as between beef casings, sheep casings and lamb casings, and also outside casings which we buy.

Q. With regard to the next department, the sausage and cooked meats department, there is some beef that goes in there?—A. That does not go in this group.

Q. That is the way in which it is set out here?—A. Oh, I see.

Q. It does not make any difference but that is the way it is set out?—A. That is true. All the product that is used in the sausage and cooked meats is transferred into it from other departments.

Q. From other departments?—A. Yes.

Q. And the price at which those are transferred from the other departments will affect the profit and loss of the department from which it is transferred?—A. Yes.

Q. And to which it is transferred?—A. Yes.

Q. Then all of these products, along with many other products from other departments, go into a selling department?—A. Yes.

Q. And in the selling department, some of it may be for export?—A. No, the export stuff does not go through the selling department.

Q. Then some goes into an export department?—A. Yes.

Q. And some goes into a selling department by car routes?—A. Yes.

Q. And some goes into selling through branch houses?—A. Yes.

Q. So that in each of these departments they show their profit or loss on that particular product?—A. That is true.

Q. And in each of these departments they have the products from other live stock than beef?—A. Yes.

Q. You get a net result, then?—A. Yes.

Q. And it may be that in your selling department you have a profit of $100,000 in beef, and a loss of $90,000 in hogs and the net result may be $10,000?—A. That, as a theoretical proposition, is quite possible. Actually, it is not.

Q. Actually what happens is that on some products you lose money, on some products you make money, and the net result is shown?—A. The figures are not so important as that. On any one commodity there would be a loss one day and a profit the next. As a matter of fact, the basis of transfer or the practice is to transfer at practically the market value less the selling cost, and that is pretty well known. In day to day operating, one knows that pretty well. You can see from this statement just how that does work out. The result on the selling department was $16,000, was it not, on total sales of $54,000,000?

By Mr. Factor:

Q. Including interest charges?—A. Yes.

By the Chairman:

Q. Why would you relate $16,000 to $70,000,000?—A. $54,000,000.

Q. There is no reason, is there?—A. No, I am wrong on that, Mr. Stevens. I should relate it to the value of the product that goes through these selling departments. It would not be $54,000,000, but perhaps nearer half of that, or perhaps less than half of that. At any rate, it is very small. The total objective of the system is to make these just clearing departments, and as a matter of fact, they are. Perhaps I can't prove that to you, but I know it, as an operator.

By Mr. Sommerville:

Q. That is, because of your experience you estimate what each department ought to do?—A. Yes.

Q. Take, for instance, your costs. You will add a figure that you estimate to be the figure?—A. Yes.

Q. That you hope in future the market on by-products will produce and the market or cost of your selling will result in?—A. Yes.

Q. And your condemnations may result in?—A. Yes.

Q. And certain other elements?—A. Yes.

Q. And because of that, it is an estimate?—A. Yes.

Q. Until you get to the final result?—A. Yes.

Q. And the final result is reflected in the net profit at the end of the year? —A. Yes.

Q. Is not that the exact situation?—A. Yes, it is. I am just trying to make this absolutely clear to you, Mr. Sommerville. There is one thing I should have said in connection with the by-products account on which, as Mr. Stevens points out, there is a very large profit of $549,000. The by-products are mostly hides, tallow and other offal from cattle. Hides are a thing which we take off to-day and sell perhaps in less than six weeks, but more likely eight weeks from to-day. We always have to estimate. We always have to play safe on the price. The price at which we credit the hides to the beef is a very important thing for us, because it helps to determine what our estimate of the cost of the beef is. If the market to-day is, say, 10 cents a pound on hides, we probably transfer those hides at 9 cents or 8 cents a pound, just because we are not sure they will be 10 cents two months from to-day. By reason of that system, by reason of the fact that we do play safe on these products, we always show a very substantial profit on by-products account, which as you see from the explanation, has to be linked with the beef.

Q. But when you play safe, we will say you transfer those hides at 8 cents?—A. Yes.

Q. That is to say, the beef department got credit for those hides at 8 cents?—A. Yes.

Q. When eventually they bring 10 cents?—A. Yes.

Q. But in the meantime they have been given credit at 8 cents, and their costs are based upon an 8 cent return?—A. That is correct.

Q. And therefore the cost of the beef department is made up of an estimate on hides and on tallow?—A. Those are the two indefinables.

Q. And several other products, that have to be sold in the future?—A. Well, the other products have a more immediate market.

Q. You therefore have a reserve, shall we put it, in your figure of playing safe?—A. Yes.

Q. You have a reserve that adds, for the time being, to the cost of the beef to the beef department?—A. Yes, exactly.

Q. Eventually it will all wash out in the net profit that is returned at the end of the year?—A. Yes.

Q. But in the meantime the price that is charged on your beef is a price based upon this calculated or estimated amount?—A. Yes.

Q. And not upon the actual or net amount?—A. No.

Q. From day to day?—A. It is a safe price because we can't know what the actual price is going to be. The product won't be sold for two months.

Q. Suppose you are giving a price, as you say, to the beef department. We will say you add, for the purpose of argument, $1.35 as being the estimated costs of the beef department's operations?—A. Yes.

Q. $1.35 a hundred?—A. Yes.

Q. That is the estimate. Then on that estimate you will expect the operator to improve or better that condition in the actual net results, will you not?—A. Well, by operator do you mean "salesman"?

Q. I mean the man who is operating the beef department?—A. Yes.

Q. If his costs are put at $1.35?—A. Well, he always sells the beef for as much as he can.

Q. It is not the selling department I am thinking of. I am thinking of the beef operating department, where your processing is done, or where it passes through?—A. Well, I don't think I understood your question then.

Q. Well, when you give this estimate, I think you said this estimate is a safe estimate?—A. Yes.

Q. And the operator who gets it in his particular department will get the net result eventually?—A. Yes.

Q. And he is expected to beat that estimated result in his operations?—A. Yes.

Q. To so operate as to improve on it?—A. The whole system of record and of accounting is to put every man on his mettle all the time.

Q. Then it is true, apparently, from this statement, that is impossible at the time to get your costs in each of these animals?—A. Yes.

Q. And each of these cuts or each of the groups as you go along, except the estimated cost?—A. Yes, we get the cost on each animal. Of course, it is not an accurate cost. We never actually sell our beef at the cost. If you took the trouble to examine our beef sales record, you would always see a minus margin, as we call it.

By the Chairman:

Q. May I just interject there. I don't want to get away from the thread of this, but I think it is apropos. You have shown a loss here of $813,900 on beef?—A. Yes.

Q. I understand this, of course, is a composite statement for the whole year?—A. Yes.

Q. Made up of your twelve monthly reports, or thirteen?—A. Thirteen.

Q. I understand that that loss is consistent throughout those thirteen reports. That is the report I get, or the advice?—A. Yes, that is correct. It would vary some.

Q. If this system of accounting that you adopt is for the purpose of informing you, what is your reaction when you see in the first week, the second week, the third week and so on, these losses disclosed in your beef department?—A. Well, you see, Mr. Stevens, we never consider that beef department except in conjunction with the other departments.

Q. I understand that. But I am asking you what your reaction is to the persistent and steady losses in that department?—A. Well, we are sending out letters constantly to our salesmen. The chief executive works with the head of the department, and the head of the department works through the sales department. We are constantly putting pressure on our salesmen to get better prices for the product on which we are losing money.

Q. All right. The next item, your by-products, shows a profit of $549,000; and I understand that is as consistently profitable?—A. Yes.

Q. Does that not indicate to you—at least, it would to me; I may be stupid and dense—that you are not allowing your beef department a fair return on the products that are passed on from, say your by-products department, such as hides and tallows?—A. I don't think that necessarily follows.

By Mr. Sommerville:

Q. Perhaps instead of the word "fair," the word "full" would be better, not allowing full returns?—A. No, not even that. We consider results in these departments together. The actual result of the beef operations is the combined result of these departments, and that is accurate. That is the real result.

The CHAIRMAN: Yes, plus a portion of the casings.

By Mr. Sommerville:

Q. But you leave out selling?—A. I beg your pardon, selling does not affect it in the least.

Q. Selling does not affect it in the least?—A. No.

By the Chairman:

Q. Leave selling apart. You sell them casings as well?—A. Well, I am including casings in this statement of mine. These accounts all have to be grouped together. The beef results are actually grouped every week. We examine these accounts very carefully at the end of each week. We have taken all them.

By Mr. Factor:

Q. You don't worry yourself if one department shows a consistent loss from week to week?—A. Yes, we do. That is what the purpose of the whole system is, to get immediately after the departments that are not doing well. We have at the end of each week, when we put these various accounts together, an accurate picture of what the result from that week of our beef operations is.

By the Chairman:

Q. I am just going to make one observation. Frankly I can't agree that it is an accurate picture. You may think it is, but I certainly do not; because if you show consistently a loss on beef whereas your by-products show an abnormally large return, it would indicate that the allocation was not accurate. You may say it is accurate, but it certainly does not appeal to me as accurate?—A. I think you are probably failing to get what I say on our beef operations as against this account which we just call beef account. These three combined

accounts, beef, by-products, casings, barrel beef—four accounts, but barrel beef is not important—those three combined accounts each week give us an accurate picture or an accurate statement of what our beef operations have been.

Q. I will grant you that. But if the object is in keeping this system of department accounts in separate compartments—you do that?—A. Yes.

Q. If the object is to get an accurate picture of the cost of that department and the returns to it, then I say at once that inasmuch as two of these show an unusually high profit, and another one shows a calamitous loss, it indicates that there is not a proper allocation. You may just simply take one off against the other and say really they are accurate?—A. In practice, as I have said, we do combine them. There is an object in keeping them separate, in keeping the by-products account, because within that account we charge up the number of hides that go in and credit the number of hides that go out, and keep a balance. We have got to do that kind of thing.

By Mr. Ilsley:

Q. What is the object in debiting it so little for what comes to it from the beef department?—A. I beg your pardon?

Q. What is the object in charging so little for what it receives from the beef department?—A. It is just simpler to do it that way. As a matter of fact, these three departments are one.

Q. "It is just simply to do it that way" is not very satisfactory. What is the reason for charging so little for those products which they obtain from the beef department?—A. I don't think I understand your question.

Q. You said a few minutes ago, I think that for hides worth 10 cents a pound you perhaps charged 8 or 9 or something; and the records show that this by-product department was a very profitable department, made a big profit, and the beef department made a corresponding loss. Mr. Stevens' problem,—and I think it is shared by the rest of us—is why you don't charge that by-products department more rather than group the three together and think of them together?—A. They could all be operated as one department without any differentiation, and the result would be actually the same as what we do.

By Mr. Sommerville:

Q. Is that correct?—A. The only advantage in having the different departments is to make it easier to check the movements and keep the record of your by-products, hide sales, etc.

By the Chairman:

Q. Let me put this to you, Mr. McLean. Is this a fair statement of this system, that you have fixed a definite or arbitrary price for, we will say, by-products and casings?—A. Yes.

Q. And you are satisfied with those, in connection with the beef. You have, on the other hand, fixed what shall be allowed to the beef department for things that pass to these other departments, and then you say to your beef department: "There is the basis; now, you get results that will put this in the black"?—A. Well, that is the situation.

Q. Is that correct?—A. Yes, that is right. The beef department know exactly. It is the beef department who put all these values on. They are the people who operate all three accounts.

Q. That is correct, is it?—A. Oh, yes.

Q. All right. If your beef department were to turn those red figures into black, who would pay for that? I am not going to disturb by-products, casings or barrel beef. We will just leave them alone?—A. Well, that is purely a hypothetical question. It never occurs.

Q. It will be paid for one way or another, either less for the farmer or more for the consumer?—A. It is a purely hypothetical question.

Q. All right, call it a hypothetical question or whatever you like, that is what would happen?—A. It would be accounted for by the fact that we made a very large profit on our beef operations.

Q. Quite so. But mark you, you have already said that that is the object. Those are the instructions to your beef department?—A. Yes, that is our object in every department.

Q. Quite so. Then the only person who could benefit from the application of that system would be the packing house establishment?—A. Well, Mr. Stevens, I don't think that helps to clarify what actually takes place. What I am maintaining is that, in the system of accounting that we follow, we know accurately each week what the result of our beef operations is. That is the object of this, of our method of accounting, and we achieve it.

By Mr. Factor:

Q. The Chairman's point is you just turn the red to black in the beef department, retaining basically the other three items?—A. But you see, we don't do that at all. These three, together, constitute one. If you have any objection to this, we could just make one account. It would be exactly the same thing.

By Mr. Kennedy (Winnipeg):

Q. Just referring to your beef account that appears in the red, has that ever shown in the black?—A. No.

Q. Even with the most efficient management, under the present grouping or distribution of the departments did you ever anticipate that that beef account would show in black?—A. We know that will always be red.

Q. You know that will always be red?—A. Yes.

By Mr. Sommerville:

Q. Do you agree with Mr. Tapley?—A. I am not sure it is the best way—excuse me for interrupting—I am not sure at all, as an accountant, that that is the best way of doing that.

Mr. KENNEDY (*Winnipeg*): No, I would not think so.

By Mr. Sommerville:

Q. But, as an operator?—A. No, I am not sure as an operator. We have discussed it many times. But at any rate our object is to put pressure on our salesmen to make a profit on the beef department. I want to make that clear, that we are trying to make a profit.

Q. Then you agree with Mr. Tapley, that when that condition exists you must either get a profit at one end or must buy your cattle cheaper at the other end?—A. Naturally.

Q. And with that condition there is constant pressure then on the beef department, the beef department head, to accomplish one purpose, namely to produce a profit?—A. Yes.

Q. And he can only produce his profit by either selling for a little more or buying for a little less?—A. Exactly.

Q. That is the result?—A. That is the case in every business.

Q. Well, yes it is, but when there is this pressure weekly of the red figures, it may have a very definite result on the price of beef?—A. The figures may not be red. It quite frequently happens we have a profit on the three accounts.

Q. On the combined accounts?—A. Yes.

Q. Now, you stated to us that these first four accounts correctly reflect the beef situation. That is right?—A. Yes.

Q. How can that be, Mr. McLean? As I understand it, the by-products include by-products from other live stock besides beef--sheep, lambs and calves?—A. Modifications are made for those, or that is hardly correct. The by-products of sheep, lambs and calves are sold at less than of the cattle. The by-products of the sheep, lambs and calves are charged into that by-products accounts much more nearly at their market value, or as exactly at their market value as is possible, and that is possible.

Q. But they are in there?—A. They are in, but they are charged in at their market value and they are sold at their market value. So that the fact is that the by-products account, the profit or loss that it shows, belongs to cattle.

Q. In other words, those four totals do not represent the actual results at all?—A. Oh, yes, they do.

By Mr. Chairman:

Q. What portion of the casings is sheep casings and lamb casings?—A. Casings, as I have already explained, is divided. The casings account is a pretty important account.

Q. Of course it is?—A. And sheep casings are pretty important because they are more valuable than beef casings. So we follow through each week carefully and analyse the source.

Q. But this $200,000 includes both?—A. Yes, and that is divided, in our practice. I don't know what this figure is because I have not seen this before, but if that is the total result—

By Mr. Sommerville:

Q. It is the net result of your casings department?—A. If that is the case, there would be a memorandum in the casings department, showing how much of that attached to beef. At least, I am sure that is the case. The auditors who have been there would know about that.

Q. Those four figures apparently include other live stock products, and as they are presented they cannot reflect the exact beef situation?—A. True. I am not saying that these figures are accurate to a cent or to a dollar. What I am saying is that when we have our record at the end of each week, we know that these records are accurate to, say, within a tenth of one per cent, or they are correct to the point that we need them correct as operating figures, and they are correct for any purposes whatever, certainly correct.

By Mr. Factor:

Q. That is not Mr. Sommerville's question. Mr. Sommerville's question is that it does not reflect the exact beef situation because you have included in it, even in the casings to a considerable extent, the products of sheep and lambs? A. No, the profit on casings is divided as between beef, sheep and lambs.

By the Chairman:

Q. Yes, but they are included in this figure?—A. They may be.

Q. This is your department of casings and your department of by-products, and it shows certain figures in both cases that include sheep, lambs and calves; and in the casings, sheep and lambs?—A. If they are in that figure, then this is not the figure that the beef department would use. They would have the division.

By Mr. Sommerville:

Q. Let us leave beef, then, because we cannot agree upon that?—A. I am sorry I have not convinced you.

By the Chairman:

Q. There is not any question about it being divided in your books, but what we are pointing out is that the department results which are here set forth show casings $200,000 and by-products $549,000, which in both instances include sheep, lamb and calf products. Therefore the four figures do not reflect the beef situation. That is what we are pointing out?—A. I hope I am not labouring this too hard, but I do want to make this clear to you, Mr. Stevens. So far as by-products are concerned, everything other than cattle are unimportant. The by-products of sheep and lambs, because that is the only other thing—there are practically no by-products from calves—are quite unimportant and are charged into an account at their actual value, not at an estimated safe value. But I submit that in the case of cattle, especially cattle, the net result of that by-products account properly belongs to cattle.

By Mr. Factor:

Q. Are they less valuable than beef by-products?—A. Oh, yes.

Q. Less valuable?—A. Yes, much less. You see, from beef there is sold a large amount of tallow and hides, tongue, heart and liver.

Mr. SOMMERVILLE: Sweetbreads.

The WITNESS: Forefeet, shanks and glands, which are quite valuable.

By Mr. Sommerville:

Q. You have your hides, and similar organs from your calves, sheep and lambs, have you not?—A. Well, but they are a lot smaller.

Q. True, but they have their proportionate value?—A. Yes.

By Mr. Ilsley:

Q. Why don't you do the same thing with the beef products?—A. I beg your pardon?

Q. Why don't you treat the beef products the same as you do lamb, sheep and calf products? Why don't you put them in at the true value instead of at the safe value?—A. Well, because there is not an immediate market, you see. True, I am not saying that the way we do it is the best accounting practice. What I am saying, and what I still maintain, is that when you combine them you have got the same result as though you did follow a different system.

Mr. SOMMERVILLE: Let us see whether that follows through or not.

The CHAIRMAN: Well, it is one o'clock, gentlemen. Let us have a little surcease from our labours. We will adjourn now and meet this afternoon at 3.30.

The committee adjourned at 1.00 p.m., to meet again at 3.30 p.m.

AFTERNOON SESSION

The committee resumed at 3.30 p.m.

(Continuing the examination of Mr. McLean :

By Mr. Sommerville:

Q. Mr. McLean, dealing with the departmental profit and loss account which we were discussing this morning and which is still before you, perhaps we can get a picture of the situation by taking the Provision department that is referred to. The Provision department is shown in your departmental account as showing a loss of $138,546.09?—A. Yes.

Q. That is in the red?—A. Yes.

Q. I understand that covers your chief operation in hogs?—A. Yes.

Q. And the auditors advise us that they computed interest charge to this department as $228,397.74?—A. Yes.

Q. Deducting that from the results of this department, that would leave a result of $89,851.65 of a profit?—A. Profit, yes.

Q. Now, those products are sold to the sales department?—A. The domestic products are.

Q. And the auditors advise that through your Car Route department, the Provisions department sales exceeded the average selling expenses by $100,000 on the Car Route sales of your provisions?—A. I do not know where they got those figures from. I would be very surprised if that is correct.

Q. Here is the examination they made—that the margins obtained by the Provisions department from the Car Route department exceeded the average selling expenses by $100,000?—A. Well, that would be gross, would it?

Q. No, that is the amount by which your salesmen exceeded the margins?—A. You see the Provisions department gets the product at a certain price, then they sell it, and the expenses of the Car Route department—I should have said the Car Route department—their expenses are deducted.

Q. Are deducted from other sales?—A. Yes.

Q. And the evidence of the auditors was that the margins exceeded their average selling expenses by $100,000 on the Provisions department?—A. I have not heard that evidence. I cannot comment on it.

Mr. Factor: And the whole selling department and the Car Route only shows $65,757.

Mr. Sommerville: Because it is a net figure; they may lose on something else.

By Mr. Sommerville:

Q. Now, if there is any such profit as $100,000 on the sale of the provisions through the Car Route department then that would increase the profit in that department to $189,000?—A. Not unless it was—are you sure that statement was given in evidence?

Q. It was given in evidence yesterday?—A. That there was a net profit on provisions in the Car Route department of $100,000?

Q. Yes.—A. I do not think it can be right.

Q. This is the way in which the evidence was given. The auditors were indicating that the statement in your selling department, the total selling profit of $16,232.30 was a net figure?—A. That is correct.

Q. After deducting profits in various departments, after taking over the profits in various products, the losses in certain others—on that in order to get at the true picture you had to know what your profits were on each of these in order to figure them back to the products themselves. Now, then, they said that for the month of March they took the actual sales of provision products day by day and took from that the average cost of selling those provisions, and on that basis they would show a profit of $100,000 during the year?—A. Well, of course, they just multiply by 13, do they?

Q. Multiply by 13 on a four weeks period?—A. That would not be a very safe way of doing it in any case, and I am inclined to doubt whether those figures, even on this basis, would be arrived at.

By the Chairman:

Q. You were indicating that you were very proud of your system, and you indicated that you could tell immediately without any trouble at all how each of these composite items were made up. Perhaps you have in your records with you how that $16,000 is made up?—A. No, I have not; but we use the sale departments as a clearing department, there is never profit or much loss in those.

By Mr. Sommerville:

Q. I have to be exact now. The auditors yesterday, in order to have the figures complete for the year, checked up on the total profit on volume and the volume was 19,252,064 pounds sold through all departments?—A. Yes.

Q. That quantity of provisions were sold through the Sale department and the total profit on that account was $100,110.73—A. Yes. Is that net or gross?

Q. That is the excess of the margin over the selling cost. That would be net, would it not?—A. No, wait a minute—I think you will find that is gross, Mr. Sommerville.

Q. What would you take from gross?—A. The selling cost. Would you give me those figures again?

Q. The average margin obtained was 116½ per 100 pounds?—A. Yes.

Q. The average expense of selling was 64 cents per hundred pounds?—A. Yes.

Q. That leaves you— —A. Fifty-two.

Q. —fifty-two and a half cents per 100 pounds as the excess over selling cost that was obtained. That would be net?—A. Yes. That is correct; that is net.

The CHAIRMAN: That gives you what?

Mr. SOMMERVILLE: That gives you a total profit in that department of $189,851.65 without interest charge. That is $100,000 plus $89,000 without interest charge in the Provisions department?

The WITNESS: What is the $89,000 you are speaking of?

By Mr. Sommerville:

Q. The Provisions department has charged against it, according to the auditors for that year, $228,397.74?—A. Oh, yes.

Q. For interest; and if you deducted that from the charges to the Provisions department instead of showing a loss it would show a profit of $89,000?—A. That is correct.

Q. And the profit on the selling department being $100,000 for provisions would leave $189,000 profit for provisions, would it not?—A. No, no; because your method of arriving at that is not a sound method at all. I would like, before passing any comment on these figures—I would like to have an opportunity of checking them. This was probably done in our office, and it was not mentioned to us at all.

The CHAIRMAN: It is taking your own system and your own figures.

The WITNESS: But I have not got so much confidence in our own system in the hands of other people.

The CHAIRMAN: That may be sound. I will agree with you there. But we have some reasonable confidence in our auditors.

The WITNESS: Well, here is the reason I say that—I am just trying to be helpful and to get the facts.

By Mr. Factor:

Q. Mr. McLean, do you dispute that net amount per 100 pounds?—A. I would not pass an opinion on it at all until I have an opportunity of checking their computation. You could not ask me to.

Mr. KENNEDY (*Winnipeg*): Certainly not.

By Mr. Sommerville:

Q. Mr. McLean, perhaps we may leave it at this, that the net figure shown in your Sale department here as profit is the result of a great many items on

either side of the balance sheet in that department, losses and gains? A. I say this to you, Mr. Sommerville, I am finding out that I know less about our system than I thought I did, but I would be very surprised if there are any large losses like that or any large profits like that. I am willing to make any check you ask me to with the auditors in order to obtain the facts.

Q. But you remember that through these departments in Toronto you had $24,000,000 worth of sales?—A. Yes.

Q. On $24,000,000 worth of sales you are bound to have entries of large amounts on each side of the balance sheet in that department?—A. Yes, but the basis on which we run those sales departments—we may have slipped in working our own system, but I would be very surprised if in any single department there were a figure anything approaching that, either of profit or loss.

Q. My only point for drawing it out is to indicate that on this department's profit and loss statement it would indicate that there were just $16,000 charged in that department, whereas there may have been hundreds of thousands charged in beef or made in beef and hundreds of thousands lost in something else?—A. I have discussed this several times with Mr. Sheppard who is a much more experienced accountant than I am in general accountancy, but who is much less experienced in packing house accountancy—remember, I, myself, began my career as an accountant, and I think I am a pretty fair one—and Mr. Sheppard and I do not agree, but I am willing to check with the books in front of us. You must not ask me to take a position here on figures I have never seen. It would have been quite possible, when they were making that computation, to ask us to check them.

Q. I am not asking you now to accept a figure one way or the other. I am asking you if that is not the result of this net figure that is shown?—A. Yes.

Q. And so, in order to get a picture of any one of these Provisions departments or Beef departments or any one of these departments, you would have to go through all of these and build them up?—A. No, I do not think so. I think if you went through one or two of these—as I have said there may be a small profit or loss which has no significance on the total year's results.

Q. A $100,000 figure?—A. I am not accepting that—

Q. It has a substantial significance?—A. I have not admitted that figure; I would like to check it.

By the Chairman:

Q. Before we leave that statement, I would like to ask Mr. McLean one or two questions. This statement—you have it before you—shows under "Creameries" a loss of $38,000?—A. Yes.

Q. A loss of $38,000 is the correct figure, is it?—A. Yes.

Q. I would like to ask this question: the creamery business is not essentially a packing house business, and seeing a loss of that character, what is the purpose of the Canada Packers persisting in the business, and why not leave it to the creamery companies to handle their own line of business if it is not a profitable line for you?—A. That is a perfectly fair question. We inherited those creameries with one of the companies, the Gunn company. They owned those creameries, and they had been a produce house before they were a packing house, as you know. The ownership of these creameries goes back many years, and the creameries have not been universal money losers, but last year was a very bad operating year in the creamery business. I think if you will make enquiries throughout Ontario you will find that all the creameries lost money. I do not think that that is the proper solution for that kind of a situation anyway. When a department loses money, the proper thing to do is to try to put it on a basis where it makes money, and that is what we are trying to do. I spent a great deal of time on these creameries in the last year. It was a very unfavourable operating year.

Q. That is your answer.

Mr. FACTOR: Canned goods.

By the Chairman:

Q. Yes. Let me take canned goods. Now, canning vegetables and fruit is not a packing house business. Here again you show a loss of $51,553 in that operation?—A. Yes.

Q. Now, again I put to you the same question: why should a huge organization such as yours step out into the canned goods field and suffer a loss which must be reflected in the rest of your business in competition with the canning companies of the country, and there is not a very healthy condition there, as our inquiry discloses?—A. No. I think I can answer that question too.

Q. I hope it is a more effective one than the last one?—A. Well, in the case of our business, our business is distributing foods and our system of distribution is by car routes.

Q. Distributing foods?—A. Yes.

Q. All right. Packing house foods, I would say?—A. At any rate, we have car routes which, as you know, consist in this: a car starts in, say, on the Canadian National line east of Toronto. It may start in at Port Hope, run along and stop at Port Hope and Cobourg and Trenton and those small places. It is a refrigerator car, and it stops at each of these towns. We run them once a week or twice a week, and that lends itself to the distribution of other goods that need the benefit of refrigeration. Now, for many years we have handled canned goods just as a part of our business because we keep a traveller working in that district and he can sell more product than we have in just meats, and it is a useful help in paying his expenses to add canned goods and butter and eggs and similar lines to his meat lines. In that way we got into it.

Q. Yes, but you make a loss of $50,000; and here is what I am bringing to your attention and this concerns this committee very vitally: in the evidence that was before us last week in connection with canned goods we found that the grower of the produce—of tomatoes, peas, corn and such like—was being paid in some cases prices that were unfairly low, so much so that there was some haste to correct those prices after the inquiry had gone on for a day or two. This operation of yours with a loss of $51,000 must have contributed in a measure to depressing the prices which the grower got for those goods. Can you tell me, as a business man, if an operation that shows a loss of $50,000 is a healthy operation in a main industrial operation, namely, canned goods industry in this case?—A. I cannot agree with your deduction at all. Perhaps the year before—I do not remember the figure—but this year we are going to make some profit out of canned goods.

By Mr. Sommerville:

Q. Will it be on the basis of tomatoes at 25 cents a bushel, which is the contract price, and the growers say it is impossible to grow them at that price and get anything out of them?—A. Don't ask me to speak about that, because I do not know.

Q. That is the evidence we had.—A. I would not, of course, maintain a department on which year after year we lost money, but every department occasionally loses money; our beef department is the heaviest loser of all this year.

By the Chairman:

Q. Now, just to indicate that I am not alone in this matter, I have before me complaints from producers and from those in the canned goods business protesting against the type of competition that they get from the packers. You must

remember that the Canadian packers are a very powerful organization. If necessary you are able to do things that the ordinary capital of an ordinary canning concern would not possibly permit them to do; and it strikes me as a most unfair form of competition for you to branch out into lines of business which conceivably you would not be as expert at as those in the canning business and suffering a severe loss which must be reflected in either lower prices on livestock or in some other way, and at the same time perpetrating a form of competition which is complained of by those with whom you yourself compete?—A. I do not not think you would find any producer who would object to our being in the canned goods business; and as I said we must not take it for granted because we have a loss one year we have a loss every year, and if you are basing your point on the fact that you make a loss that is not a substantial basis because on the whole we have made a profit.

Q. What are you going to pay for tomatoes this year?—A. I do not know.

Q. Well, you ought to know by now—contracts are made?—A. I cannot inform you right away, but I can get the information for you, but I do not know of my own knowledge; I have not any idea.

Q. It is an important part of your business; it must be. That is something that I think should be determined?—A. I have been in England six weeks. I probably would know if I had been at home.

By Mr. Sommerville:

Q. Is it not a fact on your statement that you find it a convenient way of using car space when you are sending it from town to town and filling up your car with canned goods?—A. Yes.

Q. You would be sending your car out with a certain quantity of beef?—A. Yes.

Q. And you would carry your canned goods in the same car, helping out in the matter of freight?—A. Yes, exactly.

Q. Does that not give you an advantage in the matter of competition over those who are in the same business, because that is one of the complaints we have?—A. Suppose it is? Is there any crime in that?

Q. I just wanted to get your views on it.

Mr. KENNEDY (*Winnipeg*): I would not think so.

The WITNESS: It is an advantage that we probably share with the purchaser if we have an advantage. It has not been very disastrous to the average canned goods producer—we are a very small factor in the canned goods situation.

By the Chairman:

Q. It does not take a very large proportion of the business operated at a lost to effect the general standard of the whole industry; you know that, as a general principle.—A. Now, the canned goods situation—I know something about it because it has been discussed a good deal. My opinion is that the average price that we get for our canned goods is considerably higher than the price that the competing canned goods companies get, and if that is so we cannot have done much damage to their business.

By Mr. Sommerville:

Q. Then, there would be no complaint from them?—A. You see, I am in the dark as to your complaints. I do not know what they are.

Q. Another complaint that has been brought to our attention by the fruit growers is the fact that Canada Packers in selling their fertilizer will sell the fertilizer to a producer of fruit crops and agree with him that if he buys the

fertilizer they will market his product for a cent a basket or a sum that is very much smaller than any other commission merchant in the town can handle, and when your carload of fruit goes to that town it means that every fruit merchant will be very seriously affected and fruit growers are affected, and the price of their product comes down until your product has been consumed. What do you say as to that?—A. I have never heard of that. We have a long calendar of sins, but that is a new one.

Q. Apparently they are growing from day to day?—A. I do not think I have any comment to make on that. I should think it is mostly imagination.

Q. They gave us some very practical evidence, sworn right here last week, Mr. McLean?—A. Is that so.

Q. Yes?—A. Well then, if there was definite evidence I will look up the facts and give you our comments on it. I did not know that.

Q. Will you be good enough to give us the total of your live stock purchases in Canada, of the various grades—I mean the various kind of cattle, hogs, sheep and calves?—A. Do you mean the total number.

Q. The total number, and the value, in pounds?—A. I could not give you that. I have a statement, but I do not think it gives you completely all that you ask for. You must not expect me to tell you this information out of my head.

Q. I am not asking you that, I am asking you to furnish it?—A. Oh, certainly. I have a statement which I thought would interest you, in view of the discussion the other day, it was simply on the point that we have been discussing to-day, to substantiate my claim. I can tell you exactly what were the Canada Packers operations in cattle, hogs, sheep and calves.

Q. If you would be good enough to just tell me the volume?—A. I do not think the volume is on it. However, I will prepare that statement for you if you wish.

Q. I would like to have the volume, just as we got it from the other companies?—A. Yes.

Q. And the price paid the various grades?—A. Will you write me a letter saying exactly what you wish, or shall I take it down now.

Q. Mr. Parry will give you a statement. Now, I think you said when you were here before that you got what you could for a product, and charge a reasonable amount for processing a product; and the balance went to the farmer. Is there not a very substantial variation in the amount that you get from your customers?—A. I would say, no.

Q. Because yesterday we had the evidence of the auditors to the effect that there were wide variations in exactly the same product on exactly the same day in the same town; and the evidence of that was submitted in the case of two cities only; In Niagara Falls a carcass of baby beef at 10·5 cents to one man, and on the same day to another man a carcass of good baby beef at 11·5 cents; on the same day a hind quarter of a fair steer at 10·5 cents to one man, and on the same day to another man 8·5 cents; a fair heifer hind quarter to one man 12 cents, and on the same day to another man 10·5 cents; a front quarter of fair heifer, to one man 7 cents and to another man 10 cents; a hind quarter of medium heifer, to one man 12 cents; and to another man 9·5 cents; and two hind quarters of fair heifer, to one man 8·5 cents, and to another man on the same day 11·5 cents. These prices that I have indicated are all given on the same day in the same town, to two different customers. How do you account for that wide variation of as much as 2·5 to 3 cents in a product? If that variation could go back to the farmer, if there is room for that variation, I am sure he would be happy to have the extra 2 cents?—A. I do not think—that was reported in yesterday's paper, and the only—I am not able to check. You see, these auditors have abstracted information from our business without checking it with us. Now, I am sure these things must be wrong.

By the Chairman:

Q. We had sworn evidence, Mr. McLean, some time ago, and you had ample opportunity to check that evidence, which indicated that your firm would approach the customer of a competitor and undersell them. Here is the differentiation in price in the same town on the same day which would seem to indicate that practice?—A. The only answer I am able to give to that is, that we were unable to identify—Niagara Falls was mentioned, and we have only two customers in Niagara Falls who use baby beef. What was the date of that, was it May 10th, or May 14th.

Q. May 14th, yes?—A. I have a report here—I will not mention names.

Q. We are not mentioning names?—A. In any event I have not permission, I intend to call the customers and ask permission to give their names here and the facts—on May 10th, that was one of the dates, wasn't it?

Q. No, May 14?—A. May 14: I have not got the particular customers. Wait a minute, till I see. The one case that was mentioned in the paper, at any rate, was this: one at 11·5 cents, and another at 10·5. Now, the figures were not right, the figures were 11 cents and 10 cents, and they were two different grades of beef—it was 11·5 cents and 11 cents—the actual figures. The order came in 10·5, and that is done in many cases, perhaps 50 per cent of the cases, the price was raised to 11 cents. You see, because we book all orders for beef subject to approval of head office. We usually confirm it by telephone, whether it was done in that case or not I do not know. But in that case where your officer reported the sales of the same grade of beef in the same town on the same day at 11·5 cents and 10·5 cents, the facts were these:

By the Chairman:

Q. You are giving us May 10 though, on your card there; that is not the date, the date we quote is May 14?—A. So far as—I am certain these facts are not facts, do you see?

By Mr. Factor:

Q. They ought to be, they are sworn?—A. I am quite sure the auditor believes it, but you see the auditor has not—might easily make a mistake.

By Mr. Sommerville:

Q. We have had about 20 cases reported?—A. I submit to you that it is not a fair thing to recite, to submit these cases here without first checking them with us.

Q. But they are taken from your record, from your own books?—A. I am willing to stake my case on it. We will check back on these particular cases he has reported and if he is not wrong I will come here and tell you that. I am certain he is wrong.

By Mr. Sommerville:

Q. Before checking you will say he is wrong?—A. Yes, I will.

Q. I would prefer you would wait until you checked?—A. I would have preferred he had waited till he had checked.

Q. He has checked?—A. No he has not, not with us. We have checked in one case, the facts he gave—as reported.

By the Chairman:

Q. Tell us the case, what case is that?—A. Both baby beef. Here I have got May 10, baby beef 11 cents. May 10—yes, there it is, the same date and the same customer—baby beef 11·5—that is the case so far as we—

Q. Wait a minute, we have no such case, so you have not checked our case, Mr. McLean.

By Mr. Ilsley:

Q. This case had better be checked by Mr. McLean and let him tell us?—A. Of course.

By Mr. Sommerville:

Q. Is there any variation?—A. A variation such as that is absurd, Mr. Sommerville. Beef is sold on a margin—our average—I am not saying that there is no variation at all, of course; but the margin, the variation of 2 cents a pound to anybody who knows the beef business—you have only got to mention it to know that there is a mistake somewhere.

By the Chairman:

Q. Are your salesmen forbidden to make any change or variation in price?—A. Oh no.

Q. How can you say then so positively that this is absolutely wrong?—A. Because, you see, if we sold the same grade of beef to two men on a difference of 3 cents a pound, we would be treating one man very unfairly.

Q. Of course you would?—A. We would not do it. You would not build up a business by that kind of practice.

By Mr. Sommerville:

Q. You might build up your business at the expense of your competitors by that practice?—A. By selling beef too dear.

Q. No, by selling a man lower than the average price at which it can be sold by your competitor; and that was the charge that was made here—at least that was the statement made.

The Chairman: The complaint.

By Mr. Sommerville:

Q. The complaint, at an earlier period?—A. You do not make profits by selling any product below cost.

Q. You have not made profits on beef, you have lost $889,000?—A. So has everybody else. I imagine we have done as well on the beef business as anybody last year.

Q. Then we had evidence yesterday that you had a printed sale price that is given to the salesman?—A. Yes.

Q. And then there is a code with that?—A. Yes.

Q. And that code shows the margin in which he can vary that price?—A. Yes.

By the Chairman:

Q. Is that correct?—A. Yes.

By Mr. Ilsley:

Q. Would that be for all products?—A. That is universal practice in the packing business. Every deal is a deal. It is not like selling watches or iron, every deal is a separate deal practically.

By Mr. Sommerville:

Q. That is when you are selling, when it comes to buying it is all bought on a different basis?—A. Every deal is a deal in buying.

Q. You think that is so?—A. Yes.

Q. The farmer would like to think that?—A. The farmer knows that.

Q. There is, however, you say, a variation allowed the salesman; a discretion in the sale of beef?—A. Oh, yes.

Q. And do you say that the margin allowed on beef is not as great as that allowed on pork?—A. Oh, it is a difficult question. The margin on beef—as a rule beef is sold on an extremely narrow margin. In any year where a packing house finishes its year with 10 cents a hundred pounds—that is ·1 cents a pound profit—it has done well.

Q. On the average?—A. Yes.

Q. Now, I am asking you a question: is there not as much margin allowed the salesmen proportionately on beef as on pork products?—A. I am sorry, I do not understand that question.

Q. Is there not as much latitude allowed the salesman in the adjustment of his margin in the case of beef as there is in the case of pork?—A. Oh, I do not think I could answer that question; remember, you are asking me a lot of questions about phases of the business I have no contact with whatever.

By Mr. Factor:

Q. There is a code, Mr. McLean?—A. There is a code.

Q. What is the margin in the code?—A. You could easily tell that by getting a price list.

Mr. SOMMERVILLE: We had evidence yesterday that the margin on pork products—certain products named—ran up to 3 cents, wasn't it?

Mr. KENNEDY (*Peace River*): Yes.

Mr. SOMMERVILLE: Some 3 cents or 4 cents a pound margin; as much as 4 cents on some products, some pork products. That is a large margin, is it not?

The WITNESS: Yes, it is. I am very much surprised at that.

By the Chairman:

Q. I would like to ask this question, Mr. McLean: You see, we are asking you—you are suggesting that perhaps it is not fair—we are asking you questions, and you say you are not familiar with that phase of the business; yet a moment ago you definitely challenged the auditor's statements on figures, and you did it with a great deal of confidence, you said positively it could not be so?—A. I did.

Q. Now you say you do not know enough about it to tell us what the standard margin is?—A. I think these two statements are quite compatible and consistent.

Q. I will tell you something: I am learning something about big business now, I thought I knew something about business, but really I begin to think I know nothing about it?—A. Do not be unfair to me.

Q. I think this, Mr. McLean: I think you as head of the business surely would know the normal practices going on from day to day as well as what you said in your evidence about what these figures disclosed a moment ago; one is routine, the other specific?—A. You forget there are 4,000 people in that business, and there are 120 people in head office, and this practice—

By Mr. Factor:

Q. You are branching off to a speech again. Mr. Stevens asked you a simple question?—A. Do you want me to stop speaking.

By the Chairman:

Q. No, no, Mr. McLean; you got away from my point: what is your practice. It must be one of the important factors in the whole business—the latitude

your salesmen should be allowed. I think if there is one thing in the whole business that you would have a correct estimate on, that is the one thing. If it is a little too wide it is a very dangerous thing, but if it is too narrow it would stilt your business?—A. I do not know the object you are seeking; or the facts you are trying to bring out here. I would like to be helpful to you.

Q. Is that all the answer you can give me?—A. I would like to be as helpful as possible. I will try to give you as much of everything as I can.

By. Mr. Ilsley:

Q. I think our object is just this: you send your salesman around, and you give them a latitude or a leeway within which they can trade with customers; and it would appear, as the evidence stands at present, that they discriminate between customers in the same city on the same day. They treat one man unfairly, as between these two customers; and we want to find out, I think, if these cases are not cases that would appear to be unfair trade practices perhaps—unless there is some explanation of it. If your salesmen are going to deal with two traders in one town, selling one man at 11 cents and another man at 8 cents—and on pork selling one man at 22 cents, and another at 19 cents—then one of these men naturally in the circumstances is being treated unfairly.—A. Well, let us put it on the lowest ground, Mr. Ilsley; do you think that a firm could do that without the knowledge of it being divulged—do you think it would be good business.

By Mr. Young:

Q. But it is divulged. There are several witnesses came here, yesterday we had a man who said he had been in the packing business for forty years in St. Catharines, and that is the thing they are up against all the time, they are meeting that sort of thing in the whole Niagara peninsula—chiefly from Canada Packers selling at a price which they believe would be below cost, from their knowledge of the business?—A. All I can tell you gentlemen is that we try to sell all the time for a price above cost.

By the Chairman:

Q. Wait a minute now; we will take your own statement this morning, $831,000 you say you lost in beef?—A. No.

Q. Well, it is $742,000 before you add the interest?—A. No, $831,000 less $749,000.

Mr. SOMMERVILLE: Oh, but you are including casing products from the others too.

By the Chairman:

Q. Your beef goes from your beef to your selling department, is that right? —A. Yes.

Q. Then it is sold?—A. Yes.

Q. Take the right hand column on your statement, and the top figure; there is a loss on beef of $742,000?—A. Yes.

Q. Coming down to your selling department, you had a profit there of $70,000?—A. Yes.

Q. The total profit is shown there?—A. Yes.

Q. Take the total profit from that department and deduct it from the loss, it will reduce the loss on beef by the amount indicated?—A. Not at all. The result on our beef department was $742,000 less—$648,000 and $215,000, is $800,000.

Q. Excuse me, that is by-products, casings, etc. I am talking about beef? —A. So am I.

Q. You told me just a moment ago that you sent beef direct to the selling department; is that correct?—A. Of course it is correct.

Q. Whatever you make in your selling department would be taken off the loss shown in the beef department?—A. I see the point you are making. Here is the answer to it: we charge beef to the selling department—at the cost of the department—by taking these three together, do you see. Now, I told you that half a dozen times this morning, we consistently treat our beef—

Q. When we asked you this morning why you did not credit back to your beef department some portion of the by-products which show a profit of $648,000, you said that was not general at all, you have not done that at all?—A. You misunderstood me.

Q. I did not misunderstand you; when we brought that into question and said to you, why not credit your beef with a larger measure of what you charge against it, a half at least, you said that was not good business.

Mr. Ilsley: I do not know; he said maybe they ought to change the present system, I think.

The Witness: I said that for all practical purposes our method of treating this is as though we had just one kind instead of three.

By the Chairman:

Q. You said that in these products were products from sheep, lambs and calves as well, and that in that item in casings of $215,000 a very substantial part was sheep casing?—A. What I am saying now has to be modified to that extent.

Q. Yes. You could still take that and you would show a loss?—A. No.

Q. All right then; let me take it the other way, how much of the by-products is beef?—A. I told you this morning, 90 per cent of it at least. I would not say—practically all the profit on by-products is beef.

Q. How can it be, Mr. McLean?

Mr. Kennedy *(Winnipeg):* That was not his evidence this morning.

By the Chairman:

Q. No, it was that a portion of the by-products came from sheep, lambs and calves; but you said the major portion was beef?—A. No, I attempted to make myself clear, and perhaps I did not: I said that because the volume of product that went through the by-products was so overwhelmingly beef, that we charged the by-products, the sheep and lambs, at the actual value into the by-products account; so that your profits shown in the by-products account—

Q. You are saying that now?—A. That is what I said this morning.

Q. Not about casing?—A. That is different—that is always divided as between beef, and sheep and lamb.

By Mr. Sommerville:

Q. The larger portion sheep?—A. I do not know which would be the larger portion—I said sheep casings we have more than beef casings.

By the Chairman:

Q. Would half of it be beef?—A. I could not tell you, but that division is kept up all the time you see.

Q. Could you estimate—you must know?—A. Well, say half—it would be at least half.

Q. All right. $748,000 on these two branches, less $742,000 on the other? —A. Yes.

Q. That leaves us then with beef with practically no profit at all?—A. Yes.

Q. Now then, we come back to the point disclosed in this statement here; and I ask you on the face of that does it not indicate, in face of the evidence given here yesterday, that you were selling actually below cost in that competitive areas?—A. I would not say at all that there were not individual sales made below cost. There are lots of them. There are so many factors that enter into the business—the strength or the weakness of your salesmen is the chief factor, and there is the activity of the competitor. Of course, when you break even on the department, it must mean that a great deal of the beef is sold at a loss.

By Mr. Factor:

Q. There is a code on pork products?—A. Yes.

Q. And the margin between the code and the selling price varies up to as much as 4 cents on pork products, as I understand it?—A. I say, I am surprised if there is any product on which there is a 4 cent margin.

Q. We have the sworn evidence of Mr. Hutchison, and he produced his code.

By Mr. Sommerville:

Q. Just look at that price list, and the code, Mr. McLean. Looking at the price list, opposite each of the items there is a letter—that letter I understand signifies the code. Now, you need not mention the letter, just signify by referring to it as the first letter, the second letter and so on?—A. Well now, I do not know at all what this thing is. Perhaps Mr. Hutchison could come and explain it to me.

By Mr. Factor:

Q. What is this other white book, is that your sales code?—A. This is what the salesmen carry.

By Mr. Sommerville:

Q. This is issued by your company?—A. I judge it is.

Q. And the printed sales list?—A. This is our sales list, I think.

By the Chairman:

Q. Mr. McLean, do not say you think it is. Would you mind looking at it and just telling us, is it, or is it not?—A. Well, sir, you think that I know about this, and I do not. If you would ask me—this is Canada Packers Limited, Toronto, May 21.

Q. Is that your company?—A. Yes.

Q. Let us, for goodness sake— —A. Don't be unfair to me, Mr. Stevens; because I am trying to give you this information, and to give you all the information I can. If you were to have shown me that and asked me if it was our price list, I would say I did not know.

Q. Now, Mr. McLean, please: the auditor that went into your company by the request of this committee produced to us a price list which is said to be yours; will you please look at that and tell us whether it is or not?—A. I am certain it is, if he has brought it in.

Q. That is all we want to know?—A. You must be fair to me, Mr. Stevens; you are implying that I am not trying to be helpful to you.

Q. No, I am not. I am just asking you straight questions?—A. If anybody had shown me that and asked me if that was our price list, without checking at the top of the page, I would not have known whether it was our price list now or the prices of five years ago.

By Mr. Sommerville:

Q. Can you tell us what the code letters indicate?—A. I do not know a thing about it, but I will ask Mr. Hutchison.

Q. Do you know the words that make up your code?—A. Yes ————. Would you mind having Mr. Hutchison explain it, so I will not be at a disadvantage. I think that is correct—the letter here (indicated) is 4 cents a pound on a 35·5 cent product, which is a high-priced product.

Q. But the latitude is— —A. 4 cents a pound.

By Mr. Factor:

Q. Have you a similar code in connection with beef?—A. I will have to ask Mr. Hutchison, I do not know.

Q. Here is a case where the auditor, and the president do not know; it is getting more interesting as we go along. Perhaps it is so complicated that even the auditor cannot explain it?—A. I think you are overlooking the fact that I am trying to give you all I know about this. There is nothing on the price list to indicate that there is a code; but whether they have any locally or not, I do not know. You can easily get that.

Q. You have just said, for us to be fair to you; why do you not be fair to the committee? Do you mean to tell me that you do not know whether there is a leeway given to the salesmen in the sale of beef?—A. I know, as a matter of fact, that there is a variation with the sale of beef. You see, every carcass of beef has its own value. There are no two carcasses of beef that are the same, and if you are a butcher buying beef, or a packing house salesman selling beef, you know that there is a general average price for a general quality, and there are infinite variations.

Q. I know that, but on the same grade of beef is the salesman given a latitude, and how is that latitude given?—A. It is given—the price—apparently there is no code letter on that price; but in practice there is a latitude constantly in beef.

Q. For purposes of illustration, take an order on baby beef; what is the latitude given there per pound?—A. It would be very much less on baby beef than on other grades, because baby beef is a very definite quality and is scarcer in quantity.

Q. What is the latitude, say, on— —A. Those facts that were reported about that sale, the one case in which we were able to check up, I do not think the facts were as reported.

The Chairman: You do not think so? I must not let you get away with that. You did not check any of the cases we gave here. You checked one on the tenth.

The Witness: I do not know whether we did or not. We had no opportunity, because you did not tell us.

The Chairman: You have stated two or three times you had checked them, and it was not right. We are finding out you have not checked them.

By Mr. Sommerville:

Q. The reason for asking these questions is to find out whether or not there is the latitude. You say the price the farmer is paid depends upon what you get, less what you require?—A. Yes.

Q. What you get then, is the factor that is dominant?—A. Yes.

Q. That is the important factor?—A. Yes.

Q. If there is a latitude of 2 or 3 cents a pound to the salesman who sells, one would think that there would be a greater latitude to the salesmen who buy, or the buyer who goes out to buy from the farmer.—A. I am not sure I can make

that plain to you, Mr. Sommerville. You see on the product in any day or in any week, the margin between the cost and what we sell it at is a very narrow margin. The value of any quality of beef is very clearly defined, and while there might be or appear to be a wide latitude; in practice, there is nothing approaching that, and you would find that on any definitely defined quality of meat, any kind, I do not care what, if you averaged to-day's, to-morrow's and the next day's, it would be almost identical.

Q. You are talking of the total purchases?—A. Yes.

Q. That is not what we were talking about. We were talking about the highs and the lows?—A. There is the same operation anywhere we buy. We do not buy all our cattle at the same price.

Q. Your total production, Canada Packers, probably is greater than all of the big packers put together?—A. No, I do not think so.

Q. Your total sales last year were $54,000,000?—A. Yes.

Q. Would that not be equal to Swifts, Burns, Wilsils and Gainers together?—A. No; I should think it would be less than Swifts and Burns, but I am not sure.

Q. Less than Swifts and Burns together?—A. Yes.

Q. What proportion of the whole trade of Canada in packing products do you handle?—A. We estimate that our proportion of the organized packing trade would be, I think, about 25 per cent, probably—it is a guess.

Q. Of the organized packing trade?—A. Of the organized packing trade, which handles about 50 or 60 per cent of the total livestock.

Q. When you refer to the organized packing trade, it includes all the small packers, does it not?—A. All these smaller packers and Gainer's and the Kitchener houses and the Hamilton houses.

Q. I am talking about your position with respect to such houses as Swift's, Wilsil's, Burns, and Gainer's. They are, next to yourselves, the largest packers in Canada, are they not?—A. No.

Q. Are they not?—A. No; there are several who, I think, would be larger than Gainer's.

Q. Perhaps so, but who are they? The next one to you is Swift's?—A. Swift's.

Q. Do you know what their total volume was last year?—A. No, I do not.

Q. Who is next to Swift's?—A. Burns; remember, I am guessing, now, but I am sure those two are right. After those, I should think the two Kitchener houses would come in.

Q. The two Kitchener houses?—A. Schneider's and Dumarts, and the Whyte's of Toronto, and then probably Gainer's, and the Union Packing company and two or three of the western packing companies, Winnipeg. They are all guesses, now.

Q. I am asking you what would there be to prevent you going out on the market and saying to-morrow, the price of choice steers will be 8 cents, whereas to-day the price is 7 cents, and thus giving the farmer an extra cent on his choice steer?—A. I wish we could do it, Mr. Sommerville.

Q. The farmer would be willing.—A. Yes, he would. The best way to answer that is to say, what is to prevent us, instead of paying 7, why not pay 14?

Q. Well, it would be hoped that you would get up higher than 7, because we were down to 2 cents last year?—A. Yes.

Q. And gradually we are getting up now. What is the price now, about 5 cents, is it not?—A. Yes; in Toronto it is better than that.

The CHAIRMAN: For choice the price was $4.75 to $5.75?

The WITNESS: Yes.

The CHAIRMAN: Choice

The WITNESS: Yes.

Mr. SOMMERVILLE: Yesterday?

The WITNESS: Yes.

Mr. KENNEDY (*Peace River*): Byers' experimental station at Manyberries, Alberta, says is cost 6 cents to produce.

The WITNESS: I think he is high.

By Mr. Sommerville:

Q. What is there to prevent you saying instead of \$5.75, you will make it \$6.75 to-morrow? Or going out in the market and taking the choice steers at that price?—A. Because if we did that, we would lose a cent a pound on the product.

Q. You would lose a cent a pound on the product?—A. Yes.

Q. That would be dependent on the price at which you sold it?—A. Yes.

Q. That is more than taken up in the margin you allow on the sales, in the latitude on the margin, is it not?—A. I do not understand what you mean.

Q. That cent a pound is more than taken up on the latitude you give to the sales man who goes out with the product to sell?—A. I see what you mean. We sell that beef for all that we can get from our customers for it. I think you will believe that we get all we can. We have the reputation of trying to do that.

Q. Yes?—A. And if we went out and paid a cent a pound more it would mean we would sell beef for the same price, and we would lose the extra cent we paid. We have got to buy beef on the market.

Q. You will sell it having in mind what you paid for it. You will sell it for that much more, would you not?

By the Chairman:

Q. What fixes the price of beef on the market to-day?—A. I think you and I would have the same view on that. Perhaps you can explain better than I. I cannot tell you; but I know there are conditions that do fix it. I know if you go out to sell beef.

Q. What I am curious to know is, on what principle do you determine the price of beef? Now, I have a list here which is dated April 9th.—A. Yes?

Q. I notice in the same list there is another date, April 6th, April 7th and so on. Are these issued every day?—A. I do not know, I would not have thought they would be.

Q. Can you tell me how long it is good for?—A. If you asked our sales manager, the man in charge of our salesmen, he could give you all this information.

By Mr. Sommerville:

Q. The beef one is published every two days, I am told, and the pork price list every week?—A. I should think they issue new ones in an active market to register the changes in the prices; if there were no changes in the market they would carry along.

Q. The price list issued for the different products would be issued to register the changes in the market?—A. Yes.

Q. The market would regulate the sales price? I thought you told us a little while ago the sales prices regulated the market?—A. If I did say both of those things, they would be consistent with each other.

Mr. FACTOR: What was the price yesterday for choice beef?

The CHAIRMAN: Choice steer? I have them here for the whole year. Choice steer, \$4.75 to \$5.75 for May 31st.

Mr. FACTOR: What would that product sell as a processed product say, a certain portion of it?

Mr. SOMMERVILLE: Choice steer?

The WITNESS: $4.75.

By Mr. Factor:

Q. At what would it sell to the consumer?—A. Well, you tell me again I do not know much about my business, but I will try and guess at that. It would kill at about 52 per cent, say 50 per cent. to make it easier; that is 9½, and the by-products would be worth about 1½, so the beef would be about 8 cents a pound.

Mr. FACTOR: What would be the price of choice steer, last year, Mr. Sommerville?

The CHAIRMAN: I have not got it back that far; I have it back to February 10th.

Mr. KENNEDY (*Peace River*): Was there not a statement yesterday that beef was selling around 10 cents?

The CHAIRMAN: Cutter.

By Mr. Sommerville:

Q. On the basis of $4.75 you say that a choice steer would sell at about 8 cents a pound?—A. Yes; I mean it would dress about 50 per cent, which would make the price $9.50. Then you subtract about 1½ for the offal.

Q. There is something wrong there, because some of the cutter and boner stuff we discussed yesterday must have been bought for around 1½ cents a pound, and it was selling around 8 and 9 cents a pound.—A. I just heard about that this morning.

Q. It was taken from the records?—A. When you were taking some from our records, why didn't you let us check them up so we would be prepared to answer the question?

Q. You can check them up, Mr. McLean. This is just a memorandum showing the prices obtained for the cutters and boners?—A. Yes.

Q. And it is taken for the week of April 12th to April 19th?—A. If they got any cutters or boners at 10 cents a pound, it is wrong.

By Mr. Kennedy (Peace River):

Q. On this point of maintaining the packers' spread between the consumer and the farmer, is it not just as easy to maintain the spread if you pay the farmer a reasonable price as if you pay him 2 cents a pound for it?—A. If you got an outlet for it. The price we pay is determined entirely by the outlet that exists. Our duty to the farmer is to work to get the highest price possible all the time for the product.

Q. It is pretty hard to see that in the face of what the farmer has been getting.—A. I think we discharge that duty pretty well.

By Mr. Ilsley:

Q. You do the other too, don't you; you get what you buy from him as low as you can?—A. Yes, on every deal, of course; but remember, that does not imply any unfair attitude or any lack of sympathy on the part of the packer to the farmer.

Q. I am inclined to agree with you. I do not see why all the witnesses heard at this inquiry have tried to run away from that idea that they sell as high as they can, and as low as they can. It is a sort of universal trait in human nature?—A. That enters into the sale in every deal. If the price is say,

8 cents a pound, the farmer who is selling hogs tries to get $8\frac{1}{8}$ or $8\frac{1}{4}$, and the buyer who is buying tries to get it for $7\frac{1}{8}$ or tries to buy at $7\frac{7}{8}$ or $7\frac{3}{4}$. You see, that pull between the buyer and seller is anything that affects the interests of either; the interests of both of them are involved in having a general price level high enough to make the industry profitable to the farmer. Now, we are just as much interested in that as the farmer is, and while it is true we try to buy cheaply, the margin by which we try each to influence the other's prices, is a very narrow margin, and has no effect on the broad principle or the broad basis in which both our interests are identical.

By Mr. Factor:

Q. The price of beef has improved in the last six months?—A. Yes.

Q. What about the price that the consumer pays for the meat, has it gone up?—A. Yes, it has advanced.

Q. It has?—A. Yes, it must have.

Q. That is what I want to find out, whether or not it has; I did not notice it myself?—A. If you check up the records, you will find it has.

By Mr. Kennedy (Peace River):

Q. When the price rises to the farmer, it rises to the consumer?—A. Yes, it must.

Q. Has the consumer been able to buy, say, in the last few months, any more beef or less beef than he did two or three years before that, 1931 or 1932 when the price was so low?—A. I judge I am answering your question. You see, last year when the price of beef was so low, the consumption took a tremendous swing away from hogs, which were advancing, and the price of beef was low. That always happens. The cheaper meat is, the more of it is used, and that tends itself, to automatically correct the situation.

Q. Is there a lessening consumption to-day of beef and pork at the advanced prices to what we had a year ago when prices were low?—A. In our own case, domestic consumption, domestic sales of provisions, pork products in the year, in our year which ended March, 1934, so we will say the year 1923, to make it simple, was about 30 per cent less than in the year 1932, when hogs were so low.

Q. Pork?—A. Yes.

Q. The prices of both are up to-day, has that decreased the consumption of total meat products?—A. I really cannot answer that question.

Q. I think that is the question. This argument about pork alone or beef alone does not touch the problem. My point is this, that it would seem to indicate from some of the answers that fears are expressed or implied that if you raise the price to the farmer, the demand would drop off. If we accept that, we might as well go out of the farming business right now, finish with it? —A. I do not think anybody seriously—there was a time 20 years ago when the whole attack on the packing industry was because prices were too high. Since 1929 we have pretty well got away from that.

Q. The other extreme was brought along?—A. Yes.

Q. What would you think of a minimum price on good hogs and good cattle?

Mr. Sommerville: One grade.

Mr. Kennedy *(Peace River):* That would prevent your competitor from buying under it?

The Witness: You are asking a question, what you are suggesting might be done, I think, by some authority, either governmental or by association in the industry.

By Mr. Kennedy (Peace River):

Q. A minimum price on the best quality?—A. Fix our own prices. I have got to answer that in a phrase, I do not think it could be done.

Q. You do not think it could be done?—A. No.

By Mr. Sommerville:

Q. You would still be on the same basis on which you are selling to-day, having taken into consideration your cost?—A. Well, you see——

Q. Would you not?—A. If we were an importing country such as Great Britain, it could be done; at least it could be started. Their plan is working out pretty well so far, but there are already difficulties in sight.

Q. In this country which is a beef country, and we have already had a statement and 97½ per cent of the beef raised is consumed here— —A. That is not correct.

Q. That was your statement?—A. No.

Mr. Kennedy (*Peace River*): 90 per cent anyway.

The Chairman: Just about 98.

The Witness: I will tell you what the statement was, you need not look it up. It was that last year 2½ per cent was exported.

The Chairman: Yes.

The Witness: That is a different thing. You are phrasing it in a way I did not mean.

By Mr. Sommerville:

Q. It was 95 per cent.—A. Well—

Q. Because last year's shipment was larger than other years.—A. Canada's normal surplus of cattle is about 250,000 to 300,000. That is the number we used to ship to United States, I think, over an average of five years before we were cut off there, our shipments to the States were 250,000 a year. That is what is the matter with our beef market; we have lost the American market.

By Mr. Kennedy (Winnipeg):

Q. Will you allow me a question?—A. Yes, sir.

Q. With reference to Mr. D. M. Kennedy's suggestion about the solution of a minimum price fixed for a definite grade, suppose such action were taken, would not it be very readily evaded by off-gradings or buying at off grades, whether real or imaginary?—A. There would be a thousand ways of evading it. You see, half of the beef sold in Canada never sees the packing house, it is killed in the farmer's yard, or in the villages.

Q. Apart from that, assume that it all goes through the packing house, it occurs to me— —A. Yes?

Q. —I do not know anything about those evasions, but it occurs to me it would be the easiest thing in the world to evade such a law?—A. Yes, it would be.

Q. And not only from the point of view of the packing people who are buying, but from the point of view of the producer who wants to make a deal. He could readily evade it by saying, we will sell you such and such a grade?—A. Yes.

By Mr. Kennedy (Peace River):

Q. Would government grading of cattle prevent that?—A. Government grading could not prevent people doing the things they wish to do. Remember, if the things were sound in themselves it could be done. It is because I do not think it is sound in itself, my opinion is that it could not.

Q. If you had a minimum price for a certain type of steer, I do not think the average farmer would be anxious to sell that steer at a lower price?—A. He

might very well be, if there were more steers of the type in the country than could readily be consumed.

Q. I never saw a farmer yet who tried to sell his produce at a lower price than the market price.—A. That is not the point. Do you wish me to continue?

By Mr. Sommerville:

Q. I want you to give an answer you think is right.—A. Suppose there were a thousand steers of that type in the country or community, and only 900 could be consumed, every farmer would know that only 900 steers could be sold, and that he might have his steer left on his hands, and as he would say, that won't be very good for me, he would say I had better shade the price a quarter of a cent. It would be in his interest to do that, if the situation were as I have described. The farmer would act in his own interest just as—

By Mr. Kennedy (Peace River):

Q. Even if he did shade it a quarter of a cent, that would be nothing to what he is shaded now. He is shaded now about 5 cents?—A. The price has been extremely low.

Q. Terrible.—A. It is not the packer that has made it low. Each packer is just as anxious to see a high price for steers as the farmer is.

By Mr. Sommerville:

Q. You were just saying there was a surplus of beef in this country?—A. Yes.

Q. Are there any shipments of cattle in this country from any other country?—A. No.

Q. Are there any shipments of quarters of cuts of beef? Are you contemplating importing beef from Australia?—A. There are shipments into the ports of frozen beef for ships' supplies.

Q. That is to say, do you buy Australian beef?—A. Yes.

Q. And bring it in?—A. Yes.

Q. And it is the ports of— —A. Montreal, Saint John.

Q. And Vancouver?—A. No; we do not operate there.

Q. You bring it in from Australia?—A. Australia and New Zealand.

Q. You bring in frozen beef?—A. Yes.

Q. And then you sell that frozen beef to ships sailing out of those ports?—A. Held in bond at the port.

Q. Is not that a supply that should be filled from Canada and help to relieve this surplus that we have in Canada?—A. Well, it depends on your view, whether it should be excluded or not.

By the Chairman:

Q. As a friend of the farmer, do you think that is good practice?—A. I do not think it a fair question to ask me.

Q. I think it is a very pertinent question, myself.—A. I do not think it is; I do not think it is fair.

Q. You have said, Mr. McLean,— —A. I said we do it.

Q. —that you are just as much interested in the farmer's welfare as he is?—A. Yes.

Q. You said that several times?—A. Yes.

Q. You know that there is a surplus of beef in this country; you know the farmer is getting a very very low price for his beef; I am asking you, if you think it is sound Canadian business to encourage the bringing in of frozen beef from other countries who happen for the moment to be able to sell it cheaper than we can, into this country, and deny the Canadian farmer the

chance to supply the market?—A. I do not think it is my duty to protect the Canadian farmer; if he needs the protection, it is yours.

Q. Quite so.

By Mr. Kennedy (Winnipeg):

Q. Just on that point, if you did not do it, what competition would you be up against in the matter of frozen beef for ships?—A. If we did not bring it in, somebody else would.

Q. It is a question of competition in trade?—A. Yes, because everybody in the ship supplying business handles it, because it is recognized; it has always been done.

By Mr. Factor:

Q. I suppose we have to buy something from Australia?—A. Yes, we buy and sell them all we can. Mr. Stevens made a treaty with them; he might suggest we cut that off.

By Mr. Ilsley:

Q. Let me put it this way: If the government, because it wants to trade with Australia, won't prevent this product coming in, do you think there is any duty devolving on you to stop it?—A. I would admit, it is an arguable point. I will just say that we have not considered it, and I have told you the facts about what we did, and you can form your own opinion as to whether we considered anybody or otherwise.

By Mr. Kennedy (Winnipeg):

Q. You say that if you did not do it, your competitors would?—A. Yes.

Q. Let us go a step further. Suppose it was made impossible for you or your competitors to bring in that frozen beef?—A. Yes.

Q. For shipping from ports, would it improve the condition of the farmers in this country?—A. Oh, the percentage of it is infinitesimal.

Q. It is?—A. Yes, not important.

By Mr. Ilsley:

Q. It might annoy Australia and perhaps cause them to stop buying from us?—A. Yes, it might. There are two sides to any question, but we are moving more and more towards economic nationalism. It is not my function here to tell you gentlemen what is the right thing to do, except so long as it is perfectly legal and it sounds to us as a perfectly proper thing for us to do and we have done it.

By the Chairman:

Q. You were saying a moment ago that one of the difficulties was that the export of beef had been prevented into the United States by that heavy tariff two years ago?—A. Yes.

Q. And that was one of our problems?—A. Yes.

Q. Therefore, anything in the world that we can do to encourage the export of beef or beef products, should be encouraged?—A. Yes.

Q. And ships' stores is an export of beef products?—A. Yes.

Mr. ILSLEY: Providing we do not sacrifice other national and imperial interests?—A. You would put that in, would you not?

The CHAIRMAN: I would put the Canadian interest first.

By Mr. Kennedy (Peace River):

Q. What is the reason Canada did not ship more pork products to the British market in the last year, since we had that agreement?—A. You asked

that this morning. I think Canada shipped every pound of pork product, I would say offhand, that she could spare last year. You see, our own domestic consumption was reduced about 30 per cent.

Q. Suppose you raise the price of pork products domestically, would it not cause a swing to beef, and increase the market so far as beef is concerned, and other meat products?—A. Well, there is another thing to add to that, that the bacon, the pork products that we did ship out, were so heavy that we were getting down into the grade that the Englishmen did not want,—the English market does not readily take,—we have only got a narrow fringe of the best hogs in Canada.

Mr. FACTOR: A narrow fringe?

The WITNESS: Comparatively, 20 per cent.

Mr. FACTOR: The farmer has been encouraged to produce better animals?

The WITNESS: Yes.

By Mr. Kennedy (Peace River):

Q. Don't you think it was a mistake to reduce the premium on hogs which was done some years ago? If we had retained the premium of $2 a hog instead of $1 as it has been since 1925 or 1926, we would not have a larger volume of select hogs in Canada?—A. I am glad you asked me that question, because I was very interested in the discussion this morning. I think one thing you have got to keep in mind in fixing differentials, either up or down, is that you must not get too far away from intrinsic values. If you do get too far away from intrinsic values for this market or the export market, then you create a situation in which there is a temptation immediately to violate the differentials. I think the practice of buying hogs on grade is sound, and I think it has resulted in a more rapid improvement in our hogs than we would otherwise have had. I think the differentials down have contributed just the same as the premium, but if you make them too wide, I think you do more harm than good.

In regard to another phase of that, if I may speak on my own now—you have not asked me about that—in regard to a problem that was discussed this morning, it seems to me the answer to a good many of the phases of that subject of differentials that were discussed this morning is this, that by and large all the hogs that are produced in Canada will command a certain price no matter under what system they are bought. That price will be determined by the outlet for the product. Whether you have differentials or buy flat, or whether you have wider differentials or narrower ones, all the farmers will get for all the hogs that will be produced will be practically the same, no matter under what system of buying.

By Mr. Sommerville:

Q. I think you explained that to us before. Let me point this out to you: Why is it that you will not let the farmer sell the lower grades, and you take the higher grades?—A. Mr. Law explained that this morning and explained it very clearly. He said this, and it is a fact: In actual practice the premium you pay for the select hogs is rather more than the superior intrinsic quality of those hogs justifies, and therefore it is only fair that, having paid the premium for the higher grade hogs, you get the advantage of the differential on the lower grades, which is again rather more than the intrinsic inferiority justifies.

Q. Yes, but the premium on your select hogs is a dollar a hog?—A. Yes.

Q. On the very first grade, butchers, the differential is a dollar a hog?—A. Yes.

Q. And the next grade, lights, a dollar a hog?—A. Yes.

Q. And the next grade, heavies, $2 a hog?—A. Yes.

Q. Don't you see that your differentials below the cost more than offset any dollars that you pay on the smaller proportion above the scale of the bacon hogs?—A. That is right, because there is more difference in intrinsic value.

Q. Yes, but don't you agree with Mr. Law this morning, who said that as soon as they go through the killing room the hogs lose their identity, and you make them up either as Wiltshires or as cuts, hams or bacons, from each of the grades for the old country market, and some from each of the grades for the domestic market?—A. Mr. Law didn't say that at all, and if he seemed to say that it was because he didn't understand your question, because it could not be—Mr. Law could not say that. He is a very experienced and very competent packing house man. These hogs are not worth the same when you cut them up and get them into the packing house.

Q. I said they were made up for export purposes?—A. But they are not.

Q. Then Mr. Law was telling us what was wrong when he said they made them from some butchers— —A. No, but—

Q. Now, wait a minute. Mr. Law's sworn statement, when he was given an opportunity, was that they made up Wiltshire sides from butchers?—A. I am very doubtful if he said that.

Q. Well, you do?—A. No, I don't.

Q. Canada Packers do not make Wiltshire sides from butcher hogs?—A. I don't think there is a single butcher hog goes into a Wiltshire side; and if it has, it has been because it is wrongly graded. Wiltshire sides are shipped entirely from exports and bacons.

Q. From exports and bacons?—A. Yes.

Q. Selects and bacons?—A. Selects and bacons.

Q. Wiltshires sides are?—A. Yes.

Q. All right, that is the experience in your plant?—A. I should think it is everywhere.

Q. Don't you make hams, bacons and shoulders from your butchers, lights and heavies?—A. Oh, yes.

Q. And they go to the English market?—A. Well, I should think there would be hams that would go out of the butchers.

Q. And out of the heavies, some of them?—A. No—well, there might be heavy hams. There is another trade in heavy hams at a lower price.

Q. And some of the lighter cuts from the light hogs?—A. Well, I should think there would be very few light cuts.

Q. Then there is another phase of the differential. Is it not a fact that there are a number of butchers who would buy these lower grade hogs for the domestic market if they could buy them without having to buy the entire series of grades, selects and premiums?—A. I suppose there are.

Q. If they were bidding on those grades at their own value, there would be more competition when you buy those grades?—A. They actually do get them. If there are butchers for that class of trade, they do get them. I don't know just how they get them, but they get them.

Q. That is notwithstanding the demand that you get all grades throughout?—A. That is a perfectly fair demand.

Q. I am not questioning your demand. But notwithstanding your demand, you say they do get them. As a matter of fact, they get some products from the packers, don't they?—A. Oh, yes, no doubt of that.

Q. One of the reasons for it being that they cannot get enough of these grades to kill themselves, and they buy the product then from the packer who has killed?—A. These are men with small businesses, and I should think that probably it is more profitable for them to buy the product.

Q. They apparently did engage in competition for those lower grades up until the last few years, and it has become increasingly difficult, according to the evidence here, for them to get those lower grades because of the insistence that

the packers get all the grades?—A. Well, I doubt if that is the case, but I don't know the individuals you are speaking of.

Q. Well, the evidence was given us here by the commission men who sell, and who are familiar with the conditions?—A. I see.

Q. There is another phase of it. We were dealing with the question of cutters and boners yesterday. We had a list supplied us of cutters and boners shipped to all parts of the country, Ontario, Nova Scotia, New Brunswick, as well as Quebec, at apparently as high as $9\frac{1}{2}$, 10, $6\frac{1}{2}$, $8\frac{1}{2}$, $8\frac{1}{2}$, $9\frac{1}{2}$, 8, 10, 6, $7\frac{1}{2}$, $6\frac{1}{2}$, 7, 6, 5, $6\frac{1}{2}$, $8\frac{1}{2}$ and 7 cents?—A. Yes.

Q. Now, if these cutters, which Mr. Law described as being the lowest grade —15 per cent of the lowest grade—go into the fresh meat trade, do they not interfere with the sale of good beef?—A. Oh, yes, they would displace it.

Q. They would displace good beef?—A. Yes.

Q. At the prices that are quoted, does that not seem to be a very large price for cutters?—A. It is possible it might be a cutter—there are also cutter steers and cutter heifers, and this might be the hind quarter of a loin of a cutter steer or a cutter heifer.

Q. Well, they are cutters?—A. Well, in the ordinary nomenclature of the trade, a cutter is a cow that is finished and just a grade above a canner. A canner is a cow that is practically just skin and bones, you see. A cutter is a rather higher grade.

Q. When you say a canner, is that the same as a boner?—A. Yes.

Q. Sometimes called a boner?—A. Yes, boner or canner.

Q. I see a number of boners that have gone in the same way, 4 cents, $3\frac{1}{4}$, 5, 4, 4, 6, $8\frac{1}{2}$, $3\frac{1}{2}$, 5, $4\frac{1}{2}$, $6\frac{1}{2}$, $6\frac{1}{2}$, 7, $6\frac{1}{2}$, $4\frac{1}{2}$ cents. Now, boners being the lowest grade going in, would still further displace good beef in the fresh meat trade? —A. Yes.

Q. Is there any suggestion you have to make to this committee as to how the lower grades could be removed from the fresh meat trade and thus give a better opportunity to the farmer who has a better grade of stock for sale?—A. Well, that point was raised. I was speaking with Mr. Stevens the other day, and that was the first time I had heard that suggestion. I don't think that an offhand opinion, under conditions like these, is the best way to get the value of whatever opinion I have got on it. It would be quite a shock to those who wish to sell boners and cutters to say that we no longer wish to buy them; and it would also be a bit of a shock to those who wish to buy that stuff. For instance, in the city of Montreal there are a good many butcher shops that use pretty inferior beef. However, it might well be worth considering whether or not that inferior beef should be removed out of the domestic trade at a time when we have a surplus. But as to the technique of working that out, as I told you, I had never thought of it until Mr. Stevens mentioned it to me the other day.

By the Chairman:

Q. May I ask you this: What goes into oil and shortening and stuff like that?—A. Well, shortening is made in Canada, in actual practice, almost entirely from vegetable oils, cottonseed oil and peanut oil.

Q. What about oil? Is that taken from your fats?—A. No, the oil is that cottonseed oil and peanut oil. We sell some oil as well as selling shortening that is produced from the oil.

Q. What class of stuff do you put into your rendering plants and fertilizer and so on?—A. All the animal fats that come off the killing floor are selected and all rendered. The higher grades of the beef fat are made into edible tallow, and the lower grades into inedible tallow and grease.

Q. For soap, and so on?—A. Yes. The higher grades of the hog fat are made into lard, and the lower grades again into grease. The two lowest grades,

the lowest grade of beef fat and the lowest grade of hog fat are mixed into what is called packing house grease.

By Mr. Sommerville:

Q. There is one other subject that has been raised during this last two days, and that is the question of the wage scale at each of the packing plants. Observations by Mr. Heaps were directed to the question of the wage scale in the Hull plant. Some 25·6 per cent of your employees there were paid 19 cents or less, and 17.60 per cent were paid 15 cents per hour?—A. Yes.

Q. In view of the fact that last year was the most profitable year in the history of Canada Packers since it was organized seven years ago, the question is asked: How do you justify a wage scale as low as that scale, Mr. McLean?—Well, to be quite frank with you, I don't feel so very proud of those wages.

By Mr. Ilsley:

Q. They comply with the law, do they? I didn't think they did?—A. Yes, they comply with the law.

Q. I am speaking about the female labour in Hull?—A. Yes. I am told by our Hull manager that they are in line with the wages paid in Hull. But in spite of all that, I must admit to you that I don't feel very proud of them.

By Mr. Sommerville:

Q. Of course, even if they are in line, they are in line with a condition that is a desperate one at the present time, in unemployment in this country?—A. There is just one thing I would like to say on the other side, and that is that although our wages at Hull are lower, and quite considerably lower than in Toronto, the efficiency of our labour in Hull which we measure, I think, pretty accurately, is such that it costs us more to have the same operations done in our Hull plant than it does in our Toronto plant. If it had not been for that situation, those wages would have been raised long ago. I knew those wages were low.

By Mr. Factor:

Q. Mr. McLean, 80 per cent of your employees in Hull get an average of $28\frac{1}{4}$ cents per hour?—A. Yes.

Q. Do you consider that is too low?—A. Well, I consider it is a very low wage.

Q. What is there to prevent you from increasing those wages? I mean, you are a leading man in the city. What is there to prevent that?—A. I have been in correspondence with the manager of our Hull plant for some months, long before this came up, long before this committee began, and the wages question came prominently to my attention. I stated that I could not understand why our plant operations cost more in Hull than they did in Toronto, although our wages are so much lower, and asked him to try and elevate his plant efficiency to a point that would enable him to raise his whole wages. We have not succeeded yet in doing that.

By Mr. Sommerville:

Q. But if he is being criticized for the cost of his product in Hull, he is not likely to raise wages?—A. Oh, yes, you see, if we can raise the efficiency of his work. He would like to raise their wages, too, and we are anxious for him to do so.

By the Chairman:

Q. Do you apply the Bedaux system there?—A. No, we have no such system anywhere.

Q. You don't use it at all?—A. No.

By Mr. Factor:

Q. Go back for a moment, if you will, to the Toronto plant. You have got 1,191 employees there, and their average hourly wage is $39\frac{3}{4}$ cents. What is their weekly time? What time do they work?

Mr. SOMMERVILLE: 48 hours, Mr. McLean says, in the Toronto plant.

The WITNESS: Yes.

Mr. FACTOR: That is a weekly wage of what?

Mr. SOMMERVILLE: $17.50.

By Mr. Factor:

Q. That is not very adequate pay for the kind of work they have to do, is it, for married men?—A. Well, these conditions are determined, Mr. Factor, by the average rates that prevail in the community and by the rates paid by our competitors; and I think they compare quite favourably with the average of the rates paid in Toronto.

By Mr. Sommerville:

Q. Here is your competitor, Hunnisett, who pays 47 cents, and your competitor Swift pays 43 cents. Those are your only competitors at Toronto?—A. Yes.

Q. That is 10 to 20 per cent more?—A. Yes. Our rates are the same as Swifts, except that they have bonuses under the Bedaux system. In the case of Hunnisett, the average rates are not comparable at all because Hunnisett has only a fresh meat plant and he engages a higher class.

By Mr. Factor:

Q. They only have 38 employees?—A. Yes.

Q. But you are one of the leading citizens in Toronto. How can a married man with a family exist on a $18 a week wage?—A. A great many of them do.

Q. Considering the kind of work that they do in the packing plant—I was through one of them at one time—what do you say?—A. It is not unpleasant work, and the conditions are very good. I don't know when you were through, but I think if you went through our plant in Toronto you would think that the men worked under very good conditions.

By Mr. Kennedy (Winnipeg):

Q. Mr. McLean, may I have your attention just for a minute?—A. Yes.

Q. I think the point of view was put forward, either by you or one of the others in connection with this inquiry into the packing business, that there is a certain amount of suspicion between the farmers and the packing interests?—A. Yes.

Q. And that they had not been able to get together?—A. Yes.

Q. And that it would be desirable, in the interests of both, if that feeling could be eliminated?—A. Yes.

Q. That is a sound principle?—A. Yes.

Q. Just transpose that to the relationship between your employees, for instance in the Hull plant, and your company. You have intimated that if they could be brought up in their scale of efficiency, then they might be paid a higher wage?—A. Yes.

Q. What would you think of this idea—and I am not trying to tell you how to run your business, but it is a theory—what would you think of the idea of say where they are poorly paid, or paid such low wages, if they were brought together and as a company you said to them, "We don't think you can live on these wages. We are going to raise all your wages, but we will expect you to do

better for us." Don't you think that would have an appeal to the people? Don't you think you would get more out of them?—A. I think so. I think that is exactly what we should have done at Hull.

Q. If you put it the other way, and instead of saying, "It is true you are getting low wages, but, unless you can give us more efficiency, you are not going to get any better pay", you appealed to the other side of them and said, "Here, we are going to raise your wages and we will expect you to be more efficient", it would be better. Do you agree with that?—A. Yes, I do. To tell the truth, I am a little ashamed of this Hull situation.

Mr. KENNEDY (*Winnipeg*): I think that is a very frank statement to make.

By Mr. Sommerville:

Q. With reference to the Toronto situation, with a wage of $18 or $17.50 a week as has been referred to by Mr. Factor as the average wage for such a large number of employees, 1,050, you say that is in keeping with the wage in the locality, and one has to keep in mind the wages paid by competitors?—A. Yes.

Q. You are better off in that respect by considerable than your competitors, Mr. McLean; but you have made ample provision out of your profits this year, as you have for each of the last seven years, for very large depreciation allowance in connection with your plants, $750,000 a year. According to the auditors, that depreciation allowance, if continued for six and a half years or six and three quarter years on the same basis, will entirely wipe out all the depreciable assets of the Canada Packers. That is an extremely generous depreciation allowance that will do that in six and three-quarter years, is it not?—A. Yes.

Q. Is there not something that could be done by way of revising your depreciation allowance, and doing something for the human element in the plant by way of increasing the wages of the men who are in your employ?—A. I am glad you are giving me an opportunity to refer to that. Canada Packers, when it was formed, took over, as you mention, twelve packing plants. As a matter of fact, there were really only ten packing plants. Part of the plan in taking them over was to close several of them and to link up others. We took them over at a valuation. You will see there is a discrepancy between what we paid for them and what we carry them on our books at, $5,000,000.

Q. Nearly $6,000,000?—A. Appraisal surplus.

Q. Appraisal surplus of nearly $6,000,000?—A. I maintain that is a perfectly valid asset. We bought this business. The transaction that occurred actually was this, that Harris Abattoir Company bought the three other businesses. The three other businesses had not been making profits for a number of years, and for that reason we bought them cheaply; and it is quite a proper thing to set up assets on that basis. Having succeeded in making profits, using those plants so as to make a profit, we have increased their value. That is a principle that applies in every business. If you buy C.P.R. stock to-day, you can get it at $16.50 a share because it is not paying dividends, but if it starts to pay dividends next year it will worth $30 or $40 or $50 a share, and it will be a perfectly proper profit. So that I don't think it would be a fair thing to eliminate that time of appraisal surplus, which is exactly what you have said, the difference between the value and cost. In regard to depreciation, we are going to change our depreciation. The only sound business practice when Canada Packers was formed was to depreciate on the scale that we did, because we knew that we had to close up several of the plants; and the largest and most expensive plant of all is absolutely dark, namely William Davies plant in Toronto. No other practice would have been sound, as I am sure you will admit yourselves, and we had to follow the depreciation practice that we did. But we have got to the point now where we propose to lessen our depreciation. We have not done that at the present time, or up to the present time. I am not sure

we will do it this year, but if we do not do it this year, we certainly will do it next year.

Q. I don't see how such a depreciation practice could possibly be permitted to continue, that would wipe out the entire plant in six and three-quarter years? —A. No.

Q. Because you have spent in that time in repair charges on the plant some $2,500,000?—A. That also was necessary. Those plants were very much run down.

By Mr. Factor:

Q. Mr. McLean, going back to the wage question, in the year ending March 29, 1934, did you operate full time?—A. Pretty well.

Q. Pretty well full time?—A. Yes. In some departments we did not, but in most of them I think our employees had pretty well full time.

Mr. FACTOR: I just wanted to get at the actual earnings of these hourly employees.

Mr. SOMMERVILLE: In what plants?

Mr. FACTOR: In the Toronto plant.

By Mr. Factor:

Q. The hourly rate does not necessarily mean that they actually earn that? —A. I think you can check that by the figure Mr. Sommerville already has. I think you told me our average wages were $17.25 a week.

By Mr. Sommerville:

Q. I think they reckoned it roughly at $17.50, that is the average rate?— A. No, but you had the average. You remember when I was here last you gave me that figure. It was $17.

Q. For a few weeks?—A. No, that is for the year, which would mean that they worked practically full time.

By Mr. Factor:

Q. In the operating year ending March 29, 1934, you made a net operating profit of $1,747,000——A. Yes.

Q. I wanted to get at the actual earnings paid to the Toronto employees during that year?—A. Yes.

Q. The hourly rate will not represent the actual earnings of those employees?—A. Well, I think it works out at about the actual full time.

Q. You mean they were employed full time?

Mr. SOMMERVILLE: Yes, in a limited number of cases.

The WITNESS: I think you have that figure. Your auditors had supplied you with that the last time I was here.

Mr. SOMMERVILLE: I don't think so; just for one department.

The WITNESS: I will be glad to get that for you, but I think I can tell you that that is a fact.

By Mr. Factor:

Q. About $17; I mean, that is the actual rate?—A. For the actual time worked. You will see that in certain seasons of the year—in the fall, for instance—we have a good deal of overtime.

By Mr. Sommerville:

Q. I have got it here. The average wage per week to these 1,239 employees is $17.20, including the wages paid to foremen?—A. Yes.

Q. But we are getting away from this question of depreciation. You are saying that you are depreciating upon the values that were being carried in the books of the companies that you acquired, and you thought that was good practice. The point is it is not what the assets were worth but what you paid for them that should be the basis of depreciation that is charged against your annual earnings?—A. I don't agree with that.

Q. You don't agree with that?—A. No.

Q. All right then, we will just agree to differ?—A. Yes.

Q. Then in addition to that, you had been and are carrying—and it doubtless adds to your overhead—substantial buildings that are not really required at the present time in connection with the operation of Canada Packers?—A. Yes.

Q. And these buildings and equipment amount to the sum of, I think it was said, some $3,000,000 or $4,000,000 at least?—A. Yes.

Q. So that for the efficient management of the operations of your company you could really do without $4,000,000 or $5,000,000 of assets?—A. Yes.

Q. Which at present add to the overhead?—A. Yes.

Q. And are charged against profits of your company?—A. Yes.

Q. This year, in addition to the profits of about $1,800,000?—A. No, $1,400,000.

Q. Well, let us take the $1,400,000 then. You have deducted an amount of some $450,000 for an allowance towards income tax?—A. Yes.

Q. That is not in respect of this year, but in respect of some past years?—A. That came up when I was here the other day, so I looked up the facts. I have them here.

Q. I mean, it is being charged against this year's operations?—A. Yes.

Q. Whereas it was an item in respect of some adjustments on past years' income tax?—A. Yes, it can't be done in any other way.

Q. I am not complaining about that. I am just intimating that that is an amount that is three times what was charged for income tax in previous years?—A. No, you were a little wrong both ways on the figures. The way this situation has arisen is this: That income tax is always two or three years behind your operations. The Income Tax Department is always two or three years behind.

Q. I would think they would be longer than that?—A. We made in previous years what we considered the proper set-up or proper reserves for our income tax, but owing to changes in the law and owing to interpretations of the Income Tax Department these allowances that we had set up in previous years were not sufficient.

Q. Probably owing to depreciation allowances that were not allowed?—A. That has arisen just recently. In the year ending March, 1929, we set up $112,000 and the tax we actually paid was $181,000; and for the year ending March, 1930, we set up $132,000 and the actual tax was $196,000; and for the following year we set up $71,600 and the actual tax is $151,000. The completion of these assessments has been within the last fiscal year and we had to make up the discrepancy. That accounts for the very high appropriation in this year.

Q. You paid those amounts, did you not, in each of those years?—A. Oh, no.

Q. They have been paid, have they not?—A. We paid, when we sent in our income tax return at the end of each year—we send the cheque for the sum that we estimated was due. They are these sums I have given you.

Q. And these have been calculated as additional amounts?—A. Yes.

Q. So that you had $1,400,000 odd and $400,000 odd income tax and $753,000 for depreciation. Then there was—I do not know the amount of your bonus distribution this year that did not take place the previous year—what amount did you distribute in bonuses?—A. I do not know. I forgot to look that up. I remember I mentioned $122,000.

Q. For Toronto and Winnipeg?—A. I was surprised it was that high. I think that is too high, and I think that the total amount was about $140,000. It was completed while I was away.

Q. $140,000 of bonus distribution among executives and heads of departments?—A. Our whole staff.

Q. And a number of your staff?—A. Yes.

By Mr. Kennedy (Peace River):

Q. I would like to ask you about the future of the British market. We have a big quota and you have not been able to take advantage of it to more than one-tenth?—A. Forty per cent. The quota amounts to roughly two and a half million hogs a year and this year we will export at least one million hogs which will be 40 per cent, and I expect this year will be more than that. However, there is a great deal of leaway yet. But I am glad of the opportunity of getting whatever publicity is possible here for this English situation because I believe it is very important in our hog industry. I have just come back from England. You see the great thing we require to improve our British hog industry and our Canadian hog industry, which is exactly the same thing, is a better hog. We are selling our product for 5 shillings and 6 shillings less than the Denmark product. That is a very important issue. I told you when I was here last that it amounts to $12,000,000—6,000,000 hogs at $2 a hog is $12,000,000 a year. That is going to become very much more important when this Ottawa treaty expires in two years, because there will be undoubtedly then a revision of the treaty and if our hogs are not as good as the Danish hogs I am afraid our hog industry may be thrown into a very serious situation, and I do think that the knowledge of the fact—the comprehension of that should be broadcast to the Canadian farmer to show the urgency of this problem of improving the hogs.

Q. The last day you were here I remember mentioning to you that a great many of the farmers felt you were drawing down a tremendously large salary for these hard times. I wonder if it would not be a good thing if you told them what it was?—A. Well, nobody else has been asked that question.

Q. Yes, we were getting the salaries from the executives?—A. Why am I honoured especially?

Q. You were one of the chief propagandists for the packers among the farmers, and a great many of them think that Canada Packers is leading the drive for prices and controlling the situation and getting a big rake-off?—A. I haven't any objection to telling you my salary. I would like to correct one statement that I made to Mr. Kennedy. I told him—

The CHAIRMAN: You are at liberty not to do it unless you like.

The WITNESS: Thank you very much. Mr. Kennedy said it was a common report that my salary was $50,000, and I said my salary was a good deal less than half of that, and that was reported. Now, that was the case when I was here before, but as the result of a better year that we had, and as a part of the general bonus distribution, my salary was increased for last year's operations to $25,000; it had previously been $20,000.

By Mr. Sommerville:

Q. That is salary plus bonus?—A. Yes.

Mr. FACTOR: After listening to the salaries in connection with the tobacco business you cannot shock us.

The WITNESS: I do not make any apology for my salary. I think I earn it.

By Mr. Kennedy (Peace River):

Q. There was another statement you made the first time you were here and it was that the packing industry was generally in a rather bad way. Would you still say that in view of the records?—A. I decidedly would.

Q. You would?—A. Yes, wouldn't you?

The CHAIRMAN: I do wish that a good many other industries were able to show as good a return.

Mr. KENNEDY (*Peace River*): I wish I could pay myself a salary and allow for depreciation. If I could pay myself a salary I would not worry if I got depreciation or anything else.

The CHAIRMAN: Now, gentlemen, we must try to get along.

By Mr. Ilsley:

Q. Just a question. There are two of these auditor's statements—two portions of the auditor's statements that Mr. McLean has challenged?—A. Yes.

Q. He indicated that he desires to challenge them?—A. Yes.

Q. Now, I would suggest that he send in what he has to say about these prices for boners and cutters and canners. And also about those margins between the code and the list price.

The CHAIRMAN: Will you do that?

The WITNESS: Yes.

The CHAIRMAN: Now, we have one witness, and I think we will call him for a short time. With regard to the witness whom we are about to call, I think it ought to be understood that we are not here sitting in judgment on the dispute between the claims of different classes of shareholders of the company concerned. All we want to know in connection with it, as I understand it, is the reason for the expansion to this new sphere which has been achieved in the capital structure of Burns. We are not investigating disputes between classes of shareholders of Burns.

Mr. FACTOR: Oh no.

Mr. KENNEDY (*Peace River*): We want to get the facts, Mr. Chairman, regardless of what they may be.

The CHAIRMAN: However, having that in mind I suggest that we keep that thought before us.

Mr. FACTOR: Can we do that in 20 minutes, or do you want to sit until we finish.

The CHAIRMAN: As for myself, I cannot sit later than six, or a few minutes after.

Mr. FACTOR: I do not think there is any hope of our getting through.

The CHAIRMAN: We will go on for twenty minutes.

ARTHUR F. WHITE, called and sworn.

By Mr. Sommerville:

Q. You are from the Dominion Securities Corporation?—A. Yes.

Q. And you have knowledge of the business of P. Burns Limited?—A. Yes, sir.

Q. And the Dominion Securities Corporation have charge of the reorganization of that company in the year 1928?—A. Yes, sir.

Q. At that time what was the position of the old company, as far as its stock structure was concerned; and what reorganization took place?—A. Would

you permit me, sir, to supply to each member of the committee a very concise statement of the whole transaction, which I think we could go over very quickly.

Q. Yes?—A. Sir, may I say at the outset that we have been intimately associated with the Burns Company and its financing since 1909. Since that time we have on several occasions furnished the company with additional working capital, required for its expansion, by the issue of bonds and shares. We have watched this company grow from gross earnings of very small figures, to as high as $1,400,000. Now, some time in 1927 Mr. Burns indicated a disposition on his part to retire, due to his advancing years, and sell out. Naturally he spoke to us about that. Our conversations lasted over a year.

Q. Relating to the terms on which he would sell out?—A. There was no disposition on his part, or on ours, to rush it. However, as these conversations developed into what you might call negotiations, this is the transaction as it finally developed. There had, so far as we know, never been an appraisal made of the assets; so we stipulated that an appraisal must be made, and you will see illustrated here on the left hand under assets, the first item, the result of the Canadian Appraisal Company's estimate of the replacement value new of the whole fixed assets.

By Mr. Factor:

Q. What do you mean by, "the replacement value new"?—A. That is exactly as stated in there.

By Mr. Sommerville:

Q. That is, without any deductions for depreciation in the years in which they have been in use?—A. That was the move that we made in our effort to establish the value of these assets.

Q. But, Mr. White, at this point might I ask: is that the usual basis of valuation, appraisal value new, on buildings that have been in use for so many years, and against which there had been written off so much depreciation?—A. With your permission, if you let me go on, you see what we have dealt with as we proceed. I will be prepared to enlarge on it later, if I have not satisfied you in the meantime.

Q. The net result of the appraisal showed an increase over the amount at which the assets were previously carried on the books of the old company of $4,860,608?—A. Right.

Q. In other words, those assets were written up by that amount, I suppose, as a result of that appraisal?—A. I will come to that in a moment, gentlemen, if you don't mind. The fixed assets, consisting of real estate, plant, machinery and equipment at replacement value new appraised by the Canadian Appraisal Company, less purchase money mortgages amounted to $10,845,464. The net liquid assets were $4,366,339. Investments in shares and securities of, and advances to other companies, and other assets, amounted to $586,268.

Now then, on an investigation of the whole situation, we found that there were a lot of assets there—certain other assets, consisting of ranch lands, buildings, cattle, town and city property, etc. which was subsequently purchased by Senator Burns (subject to certain liabilities amounting to approximately $632,000 which were assumed by him), and who paid therefor in cash the net amount of $4,038,837. That was for that particular group of assets.

Q. He paid in?—A. To the company.

Q. To the new company?

By Mr. Kennedy (Winnipeg):

Q. In other words, he purchased them back from the company?—A. Right. So, now you have that on the one side.

By Mr. Sommerville:

Q. Or was it that these assets were taken out and that property sold at so much?—A. It would be the same thing.

Q. Was the operation a cash operation, or was it effected in this other way? —A. I wonder if you would let me complete this.

By Mr. Factor:

Q. That is a very important question, did Burns pay to the new company that amount of cash?—A. Exactly as I have said.

Q. Paid in actual cash?—A. Yes. This statement is put together by us, but I am submitting it subject to the approval of the auditor, Mr. Shepherd. Now, you have that body of assets which we dealt with in our efforts to arrive at a valuation of this business.

Q. I cannot get this $4,000.000 figure. Was it in the prospectus? Was that four million dollar figure which you say Burns paid in cash for these assets shown in the prospectus which you filed with the Secretary of State?—A. I think the whole transaction was described completely in the statement in the prospectus.

Q. I have a copy of the prospectus here, but I cannot see anything of any item in here in which Mr. Burns paid cash into the company of $4,038,000. I wish you would point it out to me, have you a copy of the prospectus?—A. Well, sir, might I continue on this particular——

Q. No.

The CHAIRMAN: Well, Mr. White, we want to let you continue; but, frankly, we have our own way of running things; and if there is any pertinent question asked I would rather you tried to answer it. It would be better to get it as we go along.

The WITNESS: Well, as part of this whole transaction which I am reviewing with you in detail, Mr. Burns paid into this company, exactly as I have said, $4,038,837.

By Mr. Factor:

Q. Will you show me in the prospectus where that transaction is set out? —A. I do not think there is any reference to that in the prospectus, sir.

By the Chairman:

Q. Perhaps I do not understand this statement myself; will you make this clear to me, Mr. White: you have here an item described as "certain other assets, consisting of ranch lands, buildings, cattle, town and city property, etc. which were subsequently purchased by Senator Burns, and who paid therefor in cash the net amount of $4,038,837. Do I understand that you include that property in the assets of the company at the time of reorganization?—A. Not in the new company, sir.

By Mr. Sommerville:

Q. You are referring to the old company?—A. Yes.

By the Chairman:

Q. It was part of the assets of the old company?—A. Right, sir.

Q. It is included in that $10,000,000 above there?—A. No, sir.

By Mr. Factor:

Q. Well then, why do you draw this into the picture? It was retained by Mr. Burns. It was part of the assets of the old company, and was not included

in the assets of the new company?—A. Well, my endeavour to date, sir, has been to explain to you the transaction, and all the angles of it, and this is one of them. I am not endeavouring to confuse the situation in the slightest.

Q. No, I am not saying you are?—A. At this moment I am endeavouring to go over with you the steps that we took to try to appraise in our own way the value of Mr. Burns' holdings, which he was desirous of selling.

By the Chairman:

Q. Did you have an appraisal made of these items I have just read?—A. I doubt it, sir. But they were taken over so far as we know, at book values.

By Mr. Sommerville:

Q. Perhaps this may clear it up, in order to make the transaction ready for turning over to the new company——A. Yes?

Q. —$4,038,837 was retained by Mr. Burns through some transaction between him and the old company?—A. Right.

Q. That would leave then, the assets to go into the new company, exclusive of those which were so retained?—A. Right.

Mr. KENNEDY (*Winnipeg*): And the money in their place?

The WITNESS: Exactly.

Mr. FACTOR: No.

The WITNESS: Money in its place.

By Mr. Kennedy (Winnipeg):

Q. How did Mr. Burns pay the $4,000,000, in cash?—A. Sir, in a transaction of this kind, you bring both the old and new company together, and at a certain stage all of those transactions take place, which I am endeavouring now to place before you. You will find later on where I tell you how much money Mr. Burns received, he turns around and passes back to the old company $4,000,000 of the money, and takes back those assets. Is that clear? Now, we had before us that analysis of those assets as outlined there on the left hand side. Now, the old company had at that time, first mortgage bonds of $3,078,500 outstanding, preferred stock, $3,906,200 outstanding. Now, the difference between the two sets the assets and liabilities, applicable to $5,000,000 of common stock, which Mr. Burns held, of those his interest was $12,852,208. That was where we started. That was what you might call the book value of his holding.

Q. Of his holdings?—A. Yes, based on the appraisal.

Q. The new appraisal?—A. Yes.

Q. Would you just comment a little more fully on that last item, the $12,000,000 odd?—A. Well, that is the difference between the analysis of the assets and then liabilities in the hands of the public; so that the balance of the assets accrued to the benefit of the common shares, all of which were held by Mr. Burns, practically all.

By Mr. Sommerville:

Q. Against all those assets there were outstanding securities in mortgages or preferred stock, $6,900,000?—A. Yes, sir.

Q. Against $19,000,000?—A. Yes, leaving a balance of $12,852,000.

Q. Said to be applicable to the common stock holdings in the company?—A. Yes, sir.

Q. Now then, that was the book value of the holdings?—A. And it became our problem to appraise the value of those holdings as expressed in securities which were to be sold to the public, securities of the new company. Now, the negotiations resulted in our buying those assets, the book value $12,800,000, for, as I have said in the last line, $9,671,000.

By Mr. Factor:

Q. Did you actually pay that?—A. Yes.

Q. You made an agreement for the purchase of Burns and Company?—A. Yes.

By Mr. Kennedy (Winnipeg):

Q. When you say "you" do you mean Burns and company?—A. In order to carry out the transaction we undertook to organize a new company to take over the assets of the old company.

By Mr. Factor:

Q. Did Dominion Securities Corporation limited actually agree to purchase the assets of Burns and Company?—A. A part of the procedure, what our real function was, and I will show you later, was to purchase the two blocks of securities which were issued by the new company.

Q. I know that you sent out a letter, I believe, on May 12th, in which you notified the public you purchased the assets of Burns and Company. What I would like to know is, did Dominion Securities Corporation actually purchase Burns and Company?—A. Yes, we acted as the promoter of the new company for the purchasers of the old company. I think, if I remember rightly, the reason we sent that letter out was that the securities then in the hands of the public, bonds and shares, were, as part of this arrangement, to be called. We did not want any client selling them at lower than the price they were going to receive as a result of this transaction.

Q. You did not actually underwrite any of the you actually purchased the business of Burns and Company?—A. Only as a step to complete the transaction.

Q. I understand.—A. I viewed our function in this whole transaction as selling to the public in a new form, Mr. Burns' holdings. That is the essence.

Q. It may not agree with the public's estimate.

Mr. Ilsley: You certainly in the letter write as though you had bought the Burns company.

The Witness: Part of the transaction; we quite admit that.

Mr. Ilsley: When you wrote that letter, you were owners of the Burns company?

The Witness: Owners of the shares.

By Mr. Sommerville:

Q. This is the letter Mr. Factor refers to?—A. That is quite right. We say, "it will be to your advantage to retain your P. Burns and company limited securities, whether bonds or preferred until you receive from us full particulars." That was really the reason behind that letter?

Mr. Ilsley: You had better read the letter.

Mr. Sommerville: The letter was addressed to the shareholders of the old company, and is dated May 12, 1928. It is from the Dominion Securities Corporation and is as follows:—

> We have purchased the business of P. Burns and Company, Limited. There will be a rearrangement of the capital structure, which will necessitate calling for redemption $6\frac{1}{2}$ per cent first mortgage bonds at 104 and accrued interest on the first July next, and formal notice of this call has already appeared in the press. The 7 per cent preferred stock will be redeemed at 105 and accrued dividends, and the notice of call in this connection will appear later. It is our intention to make a public offering

at a later date of the first mortgage bonds and preferred stock. It will be to your advantage to retain your P. Burns and Company, Limited securities, whether bonds or preferred until you receive from us full particulars of the new financing.

Yours very truly,

DOMINION SECURITIES CORPORATION, LTD

(Sgd.) K. M. PRINGLE.

By Mr. Factor:

Q. That letter, would imply that you had purchased the entire business of Burns and Company, all the assets?—A. Through the purchase of common shares.

Q. Including these other assets you have put in here at $4,038,000? —A. What we actually purchased were the common shares of the company.

Q. You merely purchased the common shares of the company?—A. Yes.

Q. It was not an actual purchase of the business of the company?—A. That is the same thing sir.

Q. Was there an agreement made for the purchase of the company?—A. Yes, on that we would be very glad to—

Q. Would you furnish Mr. Sommerville with a copy of the agreement?—A Yes. Now, to continue. As I say, we finally negotiated with Mr. Burns a price of $9,671,000, for shares of a book value of $12,852,000.

By Mr. Kennedy (Peace River):

Q. That was paid to Mr. Burns?—A. Yes, and he in turn used $4,000,000 of that cash, of the $9,000,000 he obtained to purchase those assets, as set out, those assets which I refer to on the left hand side.

Mr. SOMMERVILLE: Speak a little louder so we can hear you.

The WITNESS: Mr. Burns received $9,671,000 of which he used $4,038,000 to purchase those assets which we considered non-essential to the business.

The CHAIRMAN: There was no actual cash passed in the transaction until after the second securities were sold?

The WITNESS: All part of the one clearing, sir, to carry out the transaction—Mr. Lash corrects me, in that Mr. Burns furnished the money, the $4,000,000 prior to the completion of the transaction.

The CHAIRMAN: Come right up beside Mr. White, Mr. Lash.

Mr. J. F. LASH: The transaction was completed by Mr. Burns. He took over all the assets for that money before we sold the shares. It was a stipulation.

The WITNESS: We agreed with Mr. Factor to file the agreement.

By Mr. Kennedy (Peace River):

Q. That is, he furnished the money to pay himself?—A. Furnished the money to purchase from the old company at $4,000,000.

By Mr. Factor:

Q. You mean before the new company sold the mortgage bonds?—A. Right.

Q. And the preferred shares?—A. Right.

By Mr. Kennedy (Winnipeg):

Q. Would it be correct to state the situation about that $4,000,000 in this way, that when arrangements were made for the new company to acquire the old company of P. Burns & Company, including these ranch properties and all that,

at the same time there was an understanding that Mr. Burns himself would repurchase these particular items here for $4,000,000 odd?—A. Yes.

Q. And that was worked out?

Mr. LASH: Not quite accurate. Might I say that the situation was this: An agreement was entered into by Mr. Burns with the Dominion Securities Corporation. One of the terms of that agreement was that there should be purchased by Mr. Burns or by someone, these assets, these buildings, ranch lands and various other things that were of no use in the business, for $4,000,000 odd, before the Dominion Securities became liable to purchase the common shares from Mr. Burns. Mr. Burns furnished the $4,000,000, paid that cash into the old company. The assets were transferred to him, and the statement on the front page must be regarded, so far as what the new company took over, as being $4,000,000 of cash replacing those assets which were purchased by Mr. Burns.

Mr. KENNEDY (*Peace River*): I think that is, as I intimated. It was not an afterthought. The re-purchase of those $4,000,000 of assets was part of the picture from the beginning.

Mr. LASH: Yes.

Mr. SOMMERVILLE: As soon as Mr. P. Burns paid this amount of money, then the liability of the Dominion Securities became absolute and the money was borrowed from the bank and paid to the company.

Mr. LASH: I don't know where Mr. Burns got his money. He paid to the company.

Mr. KENNEDY (*Peace River*): Are we going to adjourn?

The CHAIRMAN: Gentlemen, we have had a pretty tough day.

Mr. KENNEDY (*Peace River*): Yes, I think we have had enough to-day.

The CHAIRMAN: I think we had better adjourn, and we will meet on Monday morning at 11 o'clock.

The commitee adjourned at 6.05 p.m., to meet on Monday, June 4, at 11 a.m.

HOUSE OF COMMONS, ROOM 368,
June 4, 1934.

The Special Select Committee on Price Spreads and Mass Buying met at 11 a.m., the Hon. H. H. Stevens presiding.

Mr. Norman Sommerville, K.C., of Toronto, and Mr. W. W. Parry, of Toronto, appeared as counsel for the committee.

The CHAIRMAN: The minutes of the last meeting indicate the witnesses heard and the exhibits filed. I declare the minutes approved.

Mr. KENNEDY (*Peace River*): Has the report on the investigation into the rubber footwear under the Combines Investigation Act been dealt with?

The CHAIRMAN: No, I do not think that has been officially dealt with yet. There was some indication, I think, of that, but I will make further inquiry to see if the situation has changed.

Mr. ILSLEY: There is a report?

The CHAIRMAN: There is a preliminary report, but it is not filed or published. I will inquire to see what shape it is in.

On Friday evening when we adjourned we were hearing Mr. White of the Dominion Securities.

Arthur F. White recalled.

John F. Lash called and sworn.

By Mr. Sommerville:

Q. Now Mr. White, we had I think, reached the close of sheet 1 of your memorandum *re* Burns and Company, Limited, down to the point where according to your memorandum, the assets that stand behind those shares were assets valued as above indicated at $12,852,208?—A. Meaning, sir, that on the basis of the appraisal we had paid Mr. Burns $3,181,000 less than the book value of the assets.

Q. On the basis of the appraisal, Mr. Burns was paid $3,181,000— —A. He was paid $3,181,000 less—

Q. —less than the book value of the assets?—A. Of all of the assets.

Q. That would mean what?—A. Will you have just one more look at that. The net liquids of course we paid dollar for dollar.

Q. You paid dollar for dollar for the net liquid assets?—A. $4,366,339. Investments at their accrued value $586,000, consisting largely of advances to their subsidiary companies.

Q. Was that the amount on which they were carried on the books of the old company?—A. Offhand, I would think so, sir. The amount is not there, but it is the net amount after Mr. Burns paid in cash the $4,038,000.

Q. The $4,000,000 odd?—A. That was already there in the form of cash.

Q. That was cash that Mr. Burns paid in for those assets?—A. Yes.

Q. $10,845,464 were fixed assets?—A. Right.

Q. That value of $10,845,464 was the value after the new appraisal by the Canadian Appraisal Company?—A. Yes.

Q. Those assets were formerly carried proportionately on the books of the old company at $5,984,856; that is right?—A. That is right, the difference between the two.

Q. To that was added the increased value given by the appraisal company of $4,860,608?—A. $10,845,000.

Q. Making $10,845,000, which was the appraisal company's value?

By Mr. Ilsley:

Q. Let me ask a question or two about that. You take a company like the Canadian Appraisal Company, what sort of certificate or appraisal did they sign; is that here?—A. We can very easily get it sir.

By the Chairman:

Q. Of course, the weakness in that appraisal, I think—correct me if I am wrong in this suggestion—the weakness of that appraisal is its replacement value new.—A. Yes?

Q. Do you consider that a very sound method?—A. Well sir, in setting out to appraise the value of a going concern, would you not agree with me the first thing you must do in the absence of anything of that nature is you must get an appraisal. You may decide to pay more, or you may decide to pay less.

Q. I agree with you.—A. At any rate, we had to have something. Now, they are reputable people; they gave us this appraisal, and that was one of the main considerations in the transaction. It established the value of the business, with nothing to the contrary at that time.

By Mr. Ilsley:

Q. Did you tell them to make their appraisal on the replacement value new; were those your instructions?—A. Yes.

Q. What sort of a certificate did they sign; did they agree with you as to principle?

Mr. LASH: May I read it?

Mr. ILSLEY: Yes, please.

Mr. LASH:

CANADIAN APPRAISAL COMPANY LIMITED

Head Office,
1260 University Street,
Montreal.

The Canadian Appraisal company, Limited, a corporation organized, created and existing under and by virtue of the laws of the Dominion of Canada, with its Head Office in the City of Montreal, in the province of Quebec, by its duly authorized officer, hereby certifies that it has caused an appraisal to be made of Packing Houses, Creameries, Retail and General Properties and Sundries, properties of

P. BURNS & CO. LIMITED, CALGARY, ALTA.

as in evidenced by a certain appraisal invoice. That the *Replacement Value New* of such properties as of December 31st, 1927, is eleven million, seventy-five thousand, three hundred and seventy-four and 14/100 dollars ($11,075,374.14)—consisting of—

Packing Houses	$ 8,296,595 10
Creameries	973,779 35
Retail and General Properties	1,785,205 99
Sundries	19,793 70
	$11,075,374 14

which figures represent a true and correct appraisal of said properties to going concerns on said date and according to its best knowledge and belief.

Q. What is that again?

Mr. LASH:

> Which figures represent a true and correct appraisal of said properties to going concerns on said date and according to its best knowledge and behalf.

Mr. ILSLEY: What does he mean by that? They start out by saying "replacement value new."

Mr. LASH:

> Which figures represent a true and correct appraisal of said properties to going concerns on said date and according to its best knowledge and belief.

The CHAIRMAN: As if new.

Mr. LASH: As if new.

By Mr. Sommerville:

Q. The value of those premises to a going concern was the same as if it was absolutely new throughout.

Mr. LASH: That is the implication.

Mr. SOMMERVILLE: That is the statement.

Mr. LASH: That is the statement.

Mr. HEAPS: What is the date?

Mr. LASH: March 24, 1928.

Mr. KENNEDY (Peace River): Some of those buildings were put up as far back as 1909?

Mr. EDWARDS: That would hardly be a correct statement.

The WITNESS: May I go a little further; the auditors said they would like to have a further survey from the appraisal company, giving their estimate as to depreciation. The new company through the Dominion Securities made the best estimate it could as to what should be allowed off this from the point of view of getting down to taking care of obsolete things and so on. There was set up a general reserve available for depreciation in the new company, amounting to $1,700,000 odd. The extraordinary thing is that the appraisal company, when asked by the auditors for their estimate as to what was the proper depreciation to allow, was within $137,000 of the same figure that was set up by the board of directors of the new company; their estimate was $1,800,000 odd.

By Mr. Kennedy (Peace River):

Q. What was the reserve before that?—A. $1,700,000 odd was set up by the board of directors of the new company as being the proper thing to take off, and the appraisal company came within 5 per cent of their estimate.

By Mr. Ilsley:

Q. The figures you gave add to $11,000,000 something?—A. $11,075,374.

Q. Then, some deduction was made to bring it down to $10,845,000?—A. I think that deduction was to purchase many mortgages, the net amount. This was appraised without showing charges against it. There were some outstanding mortgages.

Q. Yes?—A. So it brought it down to the $10,000,000.

Q. $10,845,000?—A. That is the net figure.

Q. That is the replacement value new of the property?—A. Yes.

Q. When this value was given as a going concern?—A. On said date, on March 24, 1928.

Q. Does not that imply as Mr. Kennedy and others have said, that an old plant is just as good as a new plant?—A. Yes.

Q. To a going concern?—A. Yes.

Q. Is that so, as a matter of common sense?—A. After all, the properties had been well maintained. Senator Burns operated them very efficiently and had kept them well maintained, on my understanding, all the way through.

By Mr. Kennedy (Peace River):

Q. Does it imply during the 20 years that some of those buildings were up, that there was no progress in the improvement of buildings in connection with the packing industry?—A. It is such a simple layout, the packing industry, anyway. The main thing is really, the machinery for carrying carcasses and that sort of thing; the rest of it is a lot of vats.

Q. Were there reserves written off to take care of increase in appraisal value? —A. I am afraid I do not get your point.

Q. There is a certain amount of reserves set aside each year to take care of—

The CHAIRMAN: Mr. Kennedy has referred to the old company before the refinancing occurred.

Mr. KENNEDY (*Peace River*): When you added the value or increased the appraisal value, were their additional reserves set up to take care of them?

Mr. LASH: The new company set up $1,700,000 odd as reserve against $10,845,000.

Mr. SOMMERVILLE: Mr. Lash, you were sworn with a view to assisting Mr. White. Mr. White, was it not a fact that in the old company against those assets at their then value, the former value, there was already set up reserves of $1,660,-000?

The WITNESS: That must be available on the records; I am not familiar with it.

The CHAIRMAN: What date is that balance sheet?

By Mr. Sommerville:

Q. On the balance sheet of December 31, 1927, the fixed assets are shown at $9,865,177.36 less depreciation of $3,177,767.93, or a net figure of fixed assets of $6,687,409.43; then out of those assets $4,000,000 were taken, approximately, by Mr. Burns leaving $5,000,000 of assets and these $5,000,000 odd were written off the $10,000,000 as replacement value new; but what was done with the former allowance for depreciation which amounted in the old company to $3,177,000?—A. Well, at some point, Mr. Sommerville, you disregard the old company and its books. This is a new company started up with those valuations, as I have set out; nothing happened there for depreciation.

By the Chairman:

Q. You see Mr. White, our difficulty, if I might state it, and I think it is my duty to reflect the problem before this committee, is this: we are dealing with the question of price spreads and the cost of doing business, whether those costs in different lines of activity are fair, and we are specially instructed by parliament, in a general discussion that preceded our appointment, to keep in mind the capital structure of various organizations that are doing a large proportion of the business of the country and particularly so in connection with livestock industry. Now, the question that naturally intrudes itself upon one's mind is this: In view of what has occurred in connection with P. Burns and Company, was the new capital structure a fair set up, so as to continue an efficient organization—nobody questions the efficiency of the old P. Burns and Company, I do not think so, at least —was the new organization fairly capitalized to continue an efficient packing

organization such as had previously existed, so that the public on the one hand, and the grower and the producer on the other, could receive a fair deal in connection with the business done by that particular company. Consequently I find myself, and I presume from the questions that have been asked by several members of the committee, that they are in the same position, a little puzzled to justify an appraisal on a new basis of $10,800,000 less an arbitrary set up depreciation account of $1,600,000 in the face of the book value of the assets, less the depreciation set up over a period of years, amounting to about $5,500,000, or under $6,000,000. We find, naturally, at least I do, and I think from the questions asked by some members of the committee, that they are in the same position, we find it a little difficult to reconcile these two situations.—A. Well, sir, does it not really all arise from what we considered the value of the business in 1928? That, unquestionably, as compared with 1932, was too high.

Q. You asked me a question upon which I had not contemplated offering an opinion, but from the very numerous letters we have received, we find that very fact is called into question, the set-up that you represented in the new organization, presented to the public, is called into question. I am not now calling it into question, but you put the question to me and I am answering it in that way.

By Mr. Heaps:

Q. May I ask how they appraise the value of a business?—A. Well, sir, there are so many factors entering into it. The first thing we did was to get an appraisal of the fixed assets. There was nothing of that nature in existence. Then comes the long record of the company, and how we viewed its future in the light of its past, the management, and its location. All these things enter into it, and as we reviewed the value of the old company and its assets as set out here in this memorandum, we felt that we were paying a fair price for that business when we paid Burns $3,180,000 less than the statements outlined on those appraisals.

Q. May I ask this further question: In creating new capital structure for a company, is not the primary factor that is taken into consideration. Its earning capacity more than anything else?—A. Oh, earnings, in my humble judgment are the greatest factors.

Q. Then the physicial value is not an important factor?—A. I would almost go so far as to say I would disregard it in valuing the securities to be set up against a company that has a long record—

Q. Your new capital structure then would be created more with a view of its future earning capacity than anything else?—A. The future, plus a very careful study of its past record.

Q. The earning capacity would be the important factor?—A. In my judgment.

Mr. Ilsley: You might be right about that. Perhaps you do not pay too much attention to that. Is it not palpably ridiculous for an appraisal company to say an old plant is as good as a new plant for purposes of a going concern?

Mr. Sommerville: When selling to the public.

The Witness: I am sorry I can't give you specific instances. I can get them. But there are several of companies in existence a long time, where their properties had actually been fully depreciated; where on a purchase by a new group they were established at the then value of the buildings and equipment.

Mr. Kennedy (*Peace River*): You can't give them, you say.

By Mr. Sommerville:

Q. They were established at the then value. The objection here is that they were carried on the books of the company, the old company, at the then value; but in the revaluation that was made for the purpose of carrying this transaction

through, they were valued at replacements value new, which is quite a different proposition. As a matter of fact, Mr. White, I think you have already stated that the appraisal company made the valuation on the basis of new buildings on instructions from Dominion Securities?—A. Yes.

Q. So that they were not just sent in with a free hand to appraise at whatever they thought was a fair value?—A. You are getting rather far afield, are you not? You are not suggesting for a moment that we sent the appraisal company in with instructions to give it a value?

Q. No, I don't think so?—A. I prefer you to question them rather than me on that.

Mr. LASH: May I interject?

By Mr. Ilsley:

Q. You said you told them to give it at replacement new?—A. Yes.

Mr. LASH: The agreement with Mr. Burns was that unless Canadian Appraisal Company showed an appraisal of the company's assets at replacement value new, of at least $10,500,000, there was no deal. Their appraisal, when it came through, was $10,800,000.

Mr. KENNEDY (*Peace River*): Is the committee going to get the agreement?

Mr. SOMMERVILLE: Yes, it is to be forwarded to us. It is in the form of letters.

By Mr. Kennedy (Peace River):

Q. With regard to that question of reserve account, I note in the report of the committee at page 2394, dealing with the question of the write-up, "to this amount was added an appreciation in value of the assets as shown by the appraisal, amounting to $6,577,000 odd less general reserve available for depreciation $1,592,000 odd." This was the actual reserve in existence, was it?—A. In the old company.

Q. Was it in addition to this you say that a reserve was set up totalling $1,000,000 and something when the bonds were written up?

Mr. SOMMERVILLE: No.

Mr. LASH: No, because in the new company valuation which had to be determined for it, they set up a reserve against that.

By Mr. Kennedy (Winnipeg):

Q. Mr. White, when the new company was organized and the securities offered to the public, would it be fair to state from the public's point of view, they had in their minds, in buying the stock, the high standing and good name that P. Burns & Company had so long enjoyed?—A. That would be a factor.

Q. Would it not be a very important factor?—A. Probably.

Q. I have no interest one way or another. You say "probably." In view of what you said about looking carefully into the past of the company and its records, it seems to me it would have?—A. All I can say is we felt that—we have been associated with this company for over twenty years. We have done all their financing. They have been highly successful. We had every faith in the Burns' situation.

Q. From your experience, that is a tremendously important factor so far as the public is concerned?—A. I would think so.

Q. The general reputation for probity and honesty of dealing and the goodwill it has throughout the country?—A. Yes.

By Mr. Edwards:

Q. It is important, having regard to the possibility of carrying on a profitable business?—A. Yes.

Q. Under the new management?—A. Yes.

Mr. Kennedy (*Winnipeg*): I have in mind other concerns which enjoyed a similarly high reputation, and when reorganized their stock sold to the public; while their old reputation may have been such, the securities did not show it.

The Chairman: Have you a copy of the prospectus that was issued?

Mr. Lash: What do you refer to?

The Chairman: When the issue was made?

Mr. Sommerville: The issue of the new company.

Mr. Lash: You mean the bonds and preferred stock of the new company?

Mr. Sommerville: Yes.

Mr. Lash: These were all bought by the Dominion Securities Corporation, which subscribed for the total amount of bonds and total amount of preferred stock. Then, at a subsequent date, they made an offering to sell those to the public, so that it does not affect the capital structure in any way, I do not think. The capital structure was set out here and all issued to the Dominion Securities Corporation. At a subsequent date they sold to various people.

The Chairman: It was sold to the public. I would like to see the prospectus that was issued to the public when the securities were sold to the public.

The Witness: Many are available. I have just these two here.

Mr. Sommerville: This is the preferred shares. Have you one on the bonds?

The Witness: It is bound in that file. I will get it out. Would you like to read from that now?

Mr. Sommerville: Yes.

By Mr. Kennedy (Peace River):

Q. Mr. White, have you got a statement of the amount the assets were written up? Was there any goodwill?—A. Why do you say "written up"? It was a case of buyer and seller coming together.

Q. All right, depreciation, is it?

Mr. Sommerville: Appreciation.

By Mr. Kennedy (Peace River):

Q. In which there was appreciation in value. I suppose "written up" would be a fair explanation of the transaction? They must have been?—A. Except that that implies that we wrote it up without any foundation. That is the only part I don't like.

Q. If you could just explain that?—A. In the memorandum which I submitted on Friday we stated very completely the difference between the two values.

Q. Was there any question of goodwill there?—A. No.

Q. No goodwill at all?—A. No, sir.

Q. This was an appraisal of the various packing plants taken over, and creameries?—A. Creameries and packing plants. We treated them as if it were a straight deal between buyer and seller. I think a very simple illustration is if I have a house and it stands on my books at $25,000 in 1928, I think I would be very unlikely to have sold it for its bare cost or what it stood at on my books.

Q. When these bonds and so on were offered to the public, was it made plain to them that certain assets had been taken out of the company; that ranch lands, for instance, would be taken out?—A. We referred to that in the circular. We gave the value of the assets.

Q. That is the memorandum?—A. This is the circular. Oh, yes. Shall I read it?

Q. Yes?—A. "These bonds and the preferred stock presently to be outstanding are to be issued to finance the acquisition by the new company of the assets (except certain extraneous assets) and undertaking of the predecessor company, and for general corporate purposes." Mr. Burns had treated this company as his own. It was almost a private company. He had office buildings; he had investments in oil companies; he had his ranch lands, cattle and so on, all of which were, in our opinion—the opinion of the management—not essential to this business. So we said to him as a condition of this transaction, "Take those out and replace them by cash."

Q. And that is the reference to it in your prospectus?—A. Right.

Q. What about the balance sheet of December, 1927? Was that ever shown or published in connection with the advertisements?—A. Well, it is always a problem with us how much you should put in a prospectus, as to the size of the thing itself. We boil it down as much as we can, and still we come out with four pages. We state here, "A copy of the appraisal statement of the Canadian Appraisal Company, and a copy of the audited statement of earnings and balance sheet of the company may be seen at the offices of this corporation in Toronto and Montreal." We spread on the prospectus what we believe are all the essential facts.

Q. But you didn't put the balance sheet of 1927 on?—A. We put no balance sheets on. I don't think it has been a practice to put balance sheets on. We would be very glad to do it.

Q. Do you think it was a reasonable thing that you should have, in fact, to go to Toronto or Montreal to see this, and you are offering this stock all the way from Vancouver to Halifax?—A. Well, if you put it that way, perhaps not. But you must bear in mind that that is the way we have conducted business for thirty-five years. We are willing, at all times, to go into any phase of it. We were never asked those things at the time of issue, unfortunately.

By Mr. Ilsley:

Q. I have two or three thoughts on this, and I certainly don't pretend to know much about these prospectuses or capital structures. You sold the securities to the public in the new company on the basis of the fixed assets of the old company being worth $10,845,465,, didn't you?—A. In that regard we state: "The assets of the company as at December 31, 1927, after giving effect to present financing would have been substantially as follows: Fixed assets, consisting of plant, machinery and equipment at replacement value new, appraised by the Canadian Appraisal Company as at December 31, 1937, less purchase money mortgages, $10,845,464.

Q. Did you say anything further than that the replacement value new was $10,845,464?—A. I have read you just what we wrote.

Q. I know; but I thought I saw in something around the table here that you went further, and you said that was the best basis that could be obtained for getting the present value. Was there not something like that in one of these? Yes, this is what I saw. This is a communication from the Dominion Securities Corporation, Limited, to the preferred shareholders of Burns & Company, Limited, dated March 3, 1934.

Mr. Lash: Just a couple of months ago.

Mr. Ilsley: Yes.

By Mr. Ilsley:

Q. It reads: "First, asset position; that the fixed assets acquired by the new company, consisting of real estate, plant, machinery and equipment, were shown at their replacement value (new) without indicating an allowance for

depreciation. The replacement value new was used as giving the fairest test of the value of the property, and we would point out that the balance sheet upon which the new company acquired the business of the old company showed a general reserve available for depreciation, etc., of $1,723,078. This reserve also appears in the subsequent balance sheet of the new company, so that this discloses the net asset position as shown by the company's books." Now, my question was whether, in offering the shares to the public—not in 1934, of course, but the time when the new company was incorporated—you represented that $10,845,464 as being a fair value on the fixed assets of the company?—A. Well, sir, our representation is as I read it. It is all that was issued. This is the prospectus.

Q. That would convey the impression, would it, that that was a fair value of the fixed assets? Perhaps you can't answer that?—A. We would stand by the statement we made.

Q. All it says is that it was the replacement value new?—A. Right.

Q. Did you, anywhere in your prospectus literature or circular, say that the assets stood on the books of the old company, at $4,860,608?—A. No.

Q. Whether leaving that out was technically or legally correct, was this not morally and in essence something that you should have communicated to the purchasers of these securities, the fact that the assets to which you are attaching a figure of $10,845,000 stood on the books of the old company at $4,860,000? What do you think of that?—A. It is so hard now to say what you should have done in 1928.

Q. I can understand that, but what I don't understand is this: How in the world has the replacement value new of the assets any relation at all to the real value of those assets?—A. Well, sir, would you mind telling me what you would have valued that plant at?

Q. I would not mind, if I could. But certainly I could not have told you that?—A. How would you have gone about it, then?

Q. I would suggest—not knowing much about these things—if you were going upon a physical valuation, I should certainly have taken the value now, less depreciation. I should think that was sensible. If you were taking it on the earning basis, I would not have had appearing in it at all physical value new or replacement value. Why in the world don't you go on one principle or the other. You take the most favourable figure, the replacement value new for the old plant, which had no relation whatever to its value then as is shown by the fact that it was carried on the books at $4,860,000?—A. It is so easy now to say what one should have done in 1928. I know of nothing, sir, which can change the practice of bringing buyer and seller together at any given time and have them deal with respect to the conditions which exist at that particular time. It is happening every hour of every day. While I would like to do anything I can to assist in improving conditions, I have been brought up in a hard school. In 35 years experience I have never found that you can bring buyer and seller together, and have them deal in any other way than the conditions which happen to exist then; not what they were ten years ago, or what anybody thinks they may be ten years from then.

Q. This was not a question of buyer and seller?—A. Certainly it was.

Q. It is a question of the public. You were just serving as an intermediary?—A. I admit that.

Q. You were not in the position of a seller who had to take his medicine if he paid too much?—A. That is right.

Q. You were passing the whole thing on to the unsuspecting public. You put a figure down that anyone would think was the value of the assets; and you put down $10,845,000 for assets which you knew were carried on the books of the company at $4,860,000? Was that right?—A. Carried on the books of the old company had nothing whatever to do with it.

Q. What had something to do with it? Replacement value new had nothing to do with it; otherwise you come to this ridiculous position, that the old plant is just as good as a new plant, which is not sensible. Is that not right?

By Mr. Kennedy (Peace River):

Q. Would you say that was a common practice or that it had been done? I understood you to make some statement a while ago, with regard to replacement value new, to the effect that there were several other companies that had followed the same practice?—A. No. What I said then, sir, was that the depreciation reserve set up at any one time in any company's books is not necessarily part of the basis upon which any one should go in and buy those assets.

Q. Is this the only case on record, so far as you know, where that principle is applied, of appraisal value new?

Mr. Ilsley: Replacement value.

By Mr. Kennedy (Peace River):

Q. Yes, replacement value new?—A. All kinds of methods are employed in valuing assets.

Q. Is this the only case where that method was used?—A. I would not be in a position to answer that question.

By Mr. Ilsley:

Q. What about your own practice?—A. Have you done this thing with other companies, put in replacement value new as the value on your prospectuses?—A. I don't know whether we followed that practice or not.

Q. Can you think of a single other instance where you followed that?—A. I can't say offhand.

By Mr. Senn:

Q. Mr. White, you made a statement to Mr. Heaps a short time ago that the earning capacity of a concern should largely determine the value?—A. Yes, sir.

Q. What relationship exists between the replacement value new of this company and the earning capacity of the company at the time it was taken over?—A. It had no bearing whatever on the earning power. It didn't change in any way.

Q. Was the replacement value new a fair reflection of the earning power of the company at that time?—A. The two factors are totally different.

By Mr. Heaps:

Q. Would it show the profits on the basis of the valuation that was put on the concern?—A. No, they are quite different.

Q. Well, would it have shown the profits?—A. No.

Mr. Kennedy (*Winnipeg*): Of course they are different.

The Witness: Oh, I am sorry, I didn't quite get your question, Mr. Heaps.

By Mr. Heaps:

Q. What I meant was this: On the basis of your valuation, which was over $10,000,000, and on the earning capacity of 1927, would it have shown a profit on that valuation?—A. Yes, sir.

By Mr. Senn:

Q. In other words, it would pay dividends on that valuation?—A. Yes, it did.

By Mr. Heaps:

Q. May I go a little further: Was not the earning capacity the main factor determining the capital structure?—A. Right.

Q. That was the usual custom in the year 1927 up to 1930?—A. Yes. We set out here the earnings for the $4\frac{1}{2}$ years prior to the date of the financing.

Q. And it would have shown the profits on the basis of that?—A. Right.

Mr. KENNEDY (*Winnipeg*): I suggested that, instead of speculating as to the relationship, we should get spread on the record just what the earning of P. Burns & Company were before this sale to the public.

The CHAIRMAN: Yes, I was just going to ask him that question, Mr. Kennedy.

By the Chairman:

Q. Mr. White, I have before me a prospectus of the Dominion Securities Corporation, dated May 16, 1928, offering $6,900,000 of shares of cumulative preferred shares of P. Burns & Company. May I ask if these were fully taken up by the public?—A. Yes.

Q. It was all absorbed by the public?—A. Yes.

Mr. SOMMERVILLE: The bond issue was all absorbed.

By the Chairman:

Q. And the bond issue which preceded it was absorbed?—A. Was sold.

Q. It preceded this?—A. Bear in mind we are dealing with these things all the time. We happen to be the largest holder of the preferred shares ourselves at the present time, but at that precise moment they were sold.

Q. Yes, they were sold. Let me follow this financial set up as it appears on your prospectus?

Mr. KENNEDY (*Winnipeg*): Is that dated?

The CHAIRMAN: It is dated May 16, 1928.

Mr. HEAPS: What was the value of the shares?

The CHAIRMAN: The issue was $6,900,000.

Mr. HEAPS: Dollars?

The CHAIRMAN: $100 par value and accrued dividends, to yield 6 per cent.

By the Chairman:

Q. In the first place, you show these assets, about which we have had considerable discussion, on a new appraisal basis of $10,800,000, to give the round figure; liquid assets of $4,300,000, and investments in shares and securities of and advances to other companies of $586,000 or a total of $15,723,000. To put it in round figures, you took from that $7,000,000 for mortgage bonds. That leaves the assets at $8,700,000. That is correct, is it not?—A. Yes.

Q. Which $8,700,000 of assets for the security of these preference shares includes the valuation above referred to of $10,800,000 that is fixed assets. Now, the next paragraph shows the earnings of the company available for preferred stock dividends and depreciation. In other words, the earnings I am now about to refer to are before depreciation?—A. Yes.

Q. That is true, is it not?—A. Yes.

Q. Then the average earnings for four years and six months ending December 31, 1927, are $576,000 per annum?—A. Where is that figure, sir?

Q. On your prospectus here?—A. I am sorry, I have the bond one and you have the preferred stock one.

Q. The average annual earnings for four years and six months, ending December 31, 1927, before depreciation, was $576,000. That $576,000 then would indicate all that was available to pay interest on the $8,723,000 and to provide depreciation, is that right?—A. Yes.

Mr. LASH: No, it was not. I think that was after bond interest.

The CHAIRMAN: I know, but I have eliminated that.

The WITNESS: You have taken bond interest out.

The CHAIRMAN: I have eliminated bonds. The bonds are taken out of the $15,000,000. The amount left is $8,723,000; so that this $576,000 was available for depreciation and interest on $8,723,000.

Mr. LASH: I can't quite get that figure, because $7,000,000 of bonds, and $6,900,000 of preferred stock makes $13,900,000.

The CHAIRMAN: What is that?

Mr. LASH: I can't get that figure. The par value of the bonds was $7,000,000. The par value of the preferred stock was $6,900,000. That makes only $13,900,000 between them.

The WITNESS: That is right.

The CHAIRMAN: The bond interest is to pay interest on $6,900,000. You are right. I was speaking of the assets. $8,700,000 is the assets.

By Mr. Ilsley:

Q. How much did your company make out of this floatation and reorganization?

Mr. SOMMERVILLE: Mr. Ilsley, we will come to that shortly.

By the Chairman:

Q. Well now, what I am coming at in this is, out of these average earnings of $576,000 there was $414,000 to pay interest on the $6,900,000 preference stocks? —A. Dividends, sir.

Q. Which would leave you $162,000 for your complete depreciation and reserve charges?—A. Yes.

Q. Is that correct, that out of the average earnings for four years it called for a provision of $414,000 to pay interest on the preferred stock, is that right? —A. That is right, sir.

Q. And that would leave on the past history of the company $162,000 to take care of all your reserve and depreciation?—A. Right.

By Mr. Sommerville:

Q. And in the previous year, 1927, the old company charged depreciation on its assets of $343,953.78.

Mr. LASH: That is right.

The WITNESS: And in the year before $286,191.74.

By Mr. Sommerville:

Q. The year before $286,191.74.

Mr. LASH: Yes.

By Mr. Sommerville:

Q. That is, on valuations of $4,000,000 less than the new valuations?—A. Right.

Mr. LASH: There is a further explanation that should come there. In the $4,000,000 of assets which were taken over by Mr. Burns were included a large

number of depreciable assets against a considerable portion of which depreciation should be charged and was not all charged against the assets that were taken over by the new company.

By the Chairman:

Q. Now let me ask Mr. White this question: As—shall I say the promoter of this proposal—would you consider in the light of these figures, first, of the valuation of the property, the book reserve set up after depreciation, and the amount of depreciation actually provided for in previous years, that the amount of $162,000 was ample for depreciation reserve and would justify the issue of such a large amount of preferred stock to the public in that corporation, and especially on a valuation on a new replacement basis?—A. Not if you put it that way, sir, but the earnings were improving. The earnings in December, 1927, were $1,065,000—

Q. You say the earnings in 1927 were what?—A. I am reading from our prospectuses. I have the bond one and you have the preferred one.

Q. I am assuming that the bonds were all issued?—A. Yes.

Q. And I am analysing what is left for the preferred stockholders in this prospectus.—A. We are reading from two different prospectuses, but the earnings for 1927 were $1,065,000.

Q. The language used here is, " earnings for the year ending December 31, 1927, $646,660."

Mr. Lash: After bond interest charged.

The Chairman: Well, in the paragraph above it refers to this succeeding paragraph as " available for preferred stock dividends and depreciation."—A. Right, but after bond interest.

Mr. Lash: Bond interest is already taken out.

The Witness: I am reading, sir, from the bond circular which has the first claim on the interest.

By Mr. Sommerville:

Q. It may have been included in these assets after providing for the new financing.—A. That is right. The gross earnings in 1927 available for bond interest, depreciation and profits taxes, after giving effect to the present financing, were as follows:—

Average annual earnings for the 4 years ended December 31, 1927	$ 991,558
Earnings for the year ended December 31, 1927.	1,065,618

Q. Gross?—A. Gross. Now, that was sufficient to pay all these charges. Depreciation in 1927 was charged by the old company; that was $341,000.

By the Chairman:

Q. What was the interest rate on your bonds?—A. 5½ per cent. Then in 1929 we charged depreciation $281,000, and in both these years we had ample earnings to take care of these charges.

Q. Well, take the year that you mention—1927—with earnings of $1,000,000, you have not got there interest on bond interest of preferred stock and not more than half enough to provide the depreciation as provided in the previous year?—A. Are you sure you are right on that?

Q. I think so.—A. I have not got the figures here before me.

By Mr. Sommerville:

Q. Take 1927, the earnings in themselves would not have been sufficient to provide for $385,000 of interest on the new bonds and $414,000 of dividends

on the new preference shares, making a total of $799,000 and also provide for depreciation upon the $10,000,000 of fixed assets at which the assets were appraised as new?—A. It leaves $266,000 from your own figures.

Q. It leaves $266,000?—A. Yes.

Q. And $266,000 you think is sufficient depreciation allowance upon assets which are taken over at appraisal value new and which, in taking them over, are increased in value by 80 per cent on that basis?—A. 80 per cent I do not agree with at all.

Q. Well, let us clear that up then. They were written up from, or revalued from $5,980.000 to $10,845,000, and that is an increase of $4,860,000 on a previous valuation of $5,980,000, or 80 per cent.—A. All right then, if that is 80 per cent.

Q. Well, $4,800,000 on $6,000,000 would be 80 per cent?—A. Right.

Q. And it is only $16,000 short of $6,000,000?—A. Yes.

Q. Do you think then that is a sufficient depreciation—$260,000—to set up on fixed assets of $10,000,000 which had been taken at appraisement value new, and which had in the operation been increased by 80 per cent over the previous value of these same assets in the old company?—A. In the first place, the rates of appraisal are set out in the information tabled with you by the auditors last Thursday. It seemed to me to be adequate. On top of that there has been spent from $125,000 to $150,000 a year. Now, there is very little in a packing plant that is rapidly depreciable. There is no intricate equipment at all to speak of.

Q. We have had the evidence to the contrary from packing plant after packing plant, and we had one big plant alone that was spending $450,000 on the average every year in repairs and they say that was the amount that was necessary because of the rapid depreciation.—A. I heard you say yourself that you thought it was a bit high.

Q. I agree with you.—A. But seriously, sir, it is nearly all buildings, vats and so forth. It is not like a textile mill or a paper mill where you have a lot of intricate machinery.

By the Chairman:

Q. You are not arguing for a very considerable amount on repairs and replacements?—A. Sir, I would say that the most serious problem to consider, if you are approaching a question of this kind, is not so much depreciation, but the thing that we all have to guard against—you would not necessarily call it obsolescence, but we have right in Toronto a plant—as a matter of fact it is the William Davies Company plant—completely shut up; that is the thing we have to fear or guard against more than anything else, a change in conditions which would make a plant less valuable than it was before.

Q. I agree with you in that, but Mr. White, in this set-up you have here you have apparently given no consideration to that, and I entirely agree with your analysis.—A. On the other hand, this plant has been there for over forty years, or the Burns plant has been in existence for over forty years, and we have to guard against any change in conditions which would make that plant less valuable than it is now.

By Mr. Sommerville:

Q. Mr. White, following this just a little further, the auditor's report at page 2394 of the evidence indicates that the old financing of P. Burns Company, the funded debt on preference stock was as follows:—

> First mortgage $6\frac{1}{2}$ per cent bonds of $3,078,500 outstanding with an annual interest charge of $200,102.50; and 7 per cent cumulative preference shares outstanding amounting to $3,906,200 with an annual interest charge of $273,434, or a total of fixed charges for bond indebtedness and

preference shares of $473,536.50; those were the annual fixed charges, and the total amount sold of common stock was $6,984,000.

—A. How much?

Q. $6,984,000. Now, under the new financing these assets which were reduced by $4,000,000 taken out by Mr. Burns in actual quantity are the first mortgage $5\frac{1}{2}$ per cent bond issue of $7,000,000 and a 6 per cent cumulative preference shares of $6,900,000, or total obligations against them of $13,900,000 against $6,900,000, an increase of practically $7,000,000 in securities against them.—A. May I interrupt not $7,000,000 of securities against them; you cannot ignore the old company's stock.

Q. No. Perhaps I should say senior securities?—A. Right.

Q. The fixed charges then which the new company would bear would be on its First Mortgage $5\frac{1}{2}$ per cent bonds, $385,000 a year, that is correct?—A. Correct.

Q. And on its 6 per cent cumulative preference shares, $414,000 a year, or a total fixed charge— —A. Not a charge, if I may interrupt. I know what you are driving at though.

Q. A total obligation?—A. Correct.

Q. Of $799,000.

By the Chairman:

Q. When they are cumulative preference shares why do you say it is not a charge?—A. It is an obligation, it is not a charge. I mean as compared to bond interest.

Q. I know, but it is a pretty narrow interpretation of what is a charge. It is cumulative and it stands there as a charge.

Mr. LASH: Only against the common shareholders.

The CHAIRMAN: Quite so, and against the bonds.

Mr. LASH: No.

Mr. SOMMERVILLE: No, out of the earnings; it must come out of earnings.

The CHAIRMAN: In the case of depreciation.

Mr. LASH: Only as against the common shareholders, so it is not a charge.

Mr. SOMMERVILLE: Legally that is so.

By Mr. Sommerville:

Q. So that the increased amount to be paid by the company on its bond and preference shares by the refinancing was $125,463.50?—A. If you compare the two in that way.

Q. Well, that is the way in which they are returned to us by the auditor.

By Mr. Kennedy (Peace River):

Q. Is there anything wrong with that comparison?—A. In connection with the earnings of the old company, the surplus earnings accrued to Mr. Burns' holdings of common stock.

Mr. SOMMERVILLE: And in this case the surplus earnings of the new company would accrue to the holders of the common stock.

Mr. LASH: And the preferred.

The WITNESS: First to the preferred.

Mr. LASH: First to the preferred and then to the common.

Mr. SOMMERVILLE: It was the same in the old, first to the preferred and then to the common?

Mr. Lash: You take some from the common and give it to the preferred in the new set-up, that is the only difference.

By Mr. Sommerville:

Q. And you were the holders of the common shares, all the common shares?—A. About 60 per cent.

Q. I mean you got them all?—A. At the outset.

Q. Then the auditor who is examining reporting to the committee adds this paragraph, and I should like to have your comment on it:—

> The increased value placed upon the fixed assets in the books of the new company would naturally involve an increase in the annual provision for depreciation, thus increasing the fixed charges. Owing to the fact that lower annual rates of depreciation have been used by the new company than were adopted by the old company, this expected increase has not been reflected in the annual financial statements of Messrs. Burns & Company.

A. What is the date of that?

Q. That is the auditors report.—A. You mean just recently?

Q. Made for the committee on May 23rd by Eric Richardson & Graves of Calgary. What observation have you to make to the committee, if any, on that?—A. My observation is that for the first two years after the new financing the earnings were satisfactory and adequate. Following that they suffered in common with all other companies.

Q. Yes. You say they were satisfactory and they did pay the bonds and the preferred?—A. Yes.

Q. But the point the auditor makes is, that if you had charged the same rates of depreciation as the old company had then there would not have been sufficient to pay the preferred shares.—A. That is his opinion on depreciation. I have never known any two men to agree yet on depreciation charges.

Q. It is not a question of opinion; it is a question of whether the same rate was used, that is all; it is not a question of opinion at all.—A. You can understand why the old company probably charged high rates because the matter of taxes would be involved.

By the Chairman:

Q. I should have thought, Mr. White, when you took the valuation on a new replacement basis that you would have felt it necessary to set up then a larger depreciation than the old.—A. That is a matter of opinion, Mr. Stevens.

Mr. Lash: $4,000,000 of depreciable assets pretty nearly went out, you see.

Mr. Sommerville: Yes, but $5,000,000 of depreciable assets—

Mr. Lash: That is only a replacement.

Mr. Sommerville: $5,000,000 of depreciable assets an increase of $10,000,000 of depreciable assets.

By Mr. Sommerville:

Q. Then, Mr. White, the old company got $19,000,000 for its assets?—A. That sounds high. Is that right?

Q. Well, is it not a fact?—A. I see what you mean. No, they did not get that. On top of page 2 it shows the correct figure.

Q. The assets of the old company were $19,836,000?—A. Yes, an equity of $17,200,000 was purchased for $9,671,000.

Q. That is the $12,852,208, an equity in these assets, but the new valuation was purchased for $9,671,000?—A. Right.

Q. Or $3,181,000 less than the old company—A. Less than the valuation.

Q. Less than the valuation of the book value on the company's books?—A. Yes.

Q. Now then who got the money that was paid for the assets?—A. You have set out at the top of page 2 the requirements, to pay the purchase price of the common shares of the old company $9,671,001.

Q. Wait a minute now:

> To carry out the transaction and acquire the assets of the old company free from encumbrance cash had to be provided:
>
> (a) To pay the purchase price of the common shares of the old company at the above figure.. .. ..$ 9,671,001?

—A. Right.

Q. That is, $9,671,001?—A. Right.

Q. Then:

> (b) To pay the redemption price of the outstanding balance of First Mortgage bonds of the old company (in addition to sinking fund monies available for that purpose.. .. .. $3,190,398.

—A. Yes, that includes the premium.

Q. That included the amount that had to be paid for premium?—A. Yes.

Q. To redeem the bonds at 104?—A. Yes.

Q. Well that is my recollection. That was the amount that had to be provided, and then:—

> (c) To pay the redemption price of the outstanding preference stock of the old company.. .. .. $4,161,450

And that included also the amount for premium of 5 per cent to redeem the outstanding preferred shares. That is making a total amount that required to be made available of $17,022,849; that is correct, is it not?—A. Yes.

Q. Now, $9,671,001 that was paid for the equity in the common shares?—A. Yes sir.

Q. And that was paid to whom?—A. To Mr. Burns.

Q. To Mr. P. Burns?—A. Yes.

Q. And out of that he would require to pay $4,000,000 odd for the assets which he had taken over?—A. He had already paid that.

Q. Yes. Then, that would leave five million odd for the company itself, including the five million odd to Mr. Burns for his equity?—A. Exactly.

Q. And that went out of the old. No, no money went out of the old company. That was for his shares in the old company, and that amount was paid out of the new company?—A. Yes, sir.

Q. In fact, all of these moneys, the seventeen million, were paid out by the new company.

Mr. Lash: The bonds and preferred stock of the preferred company were redeemed by the old company; but with moneys furnished, first as to about four million dollars by Mr. Burns for the assets he took over, and second the proceeds of the preferred stock and bonds of the new company.

Q. Yes. Now then, proceed—if you will just tell us how this money was provided?—A. Shall I read that sir: "In order to meet these payments, there were required funds additional to the available cash in the old company which was applied in redemption of its bonds and preferred stock. The additional moneys were raised through the issue of securities of the new company as follows:—

BURNS & CO., LIMITED (NEW COMPANY) CAPITALIZATION

5½ Per Cent First Mortgage Bonds due 1948		$7,000,000
Annual Interest Charge..	$385,000	
6 Per Cent Preferred Stock (100 par value)		6,900,000
100,000 shares of Ordinary stock without par value .		100,000
		$14,000,000"

Now, we paid 92·8 for the bonds, the 5½ per cent bonds.

Q. For the words seven million of bonds at $5\frac{1}{2}$ per cent you paid the sum of?—A. Whatever 92·8 on that amount would be.

Q. I thought perhaps you might have had that figure?—A. I am sorry, I did not. Then for the \$6,900,000 preferred stock we paid 92·80.

Q. Yes, you paid the same price for each of these issues?—A. Yes, sir. Now, just to go back to the top again; the premium on the old bonds, the old preferred, amounted to \$367,000 odd.

Q. The amount required to pay off the bonds and preferred shares of the old country by way of premium amounted to \$365,000 odd?—A. \$367,000 odd.

Q. \$367,000?—A. Yes.

Q. Now, 92·8 of seven million is \$6,496,000?—A. Now, the discount on the new security.

Q. Wait a minute, just let us get this figure correct; the net amount that went to the old company—\$6,496,000 is the figure I think, is that not correct?—A. Approximately one million dollars on the face value. Is not that set out in your own auditor's report?

Q. This is just the bonds first—?—A. All the bonds.

Q. On all the bonds you have \$6,496,000, that is correct?—A. That is correct.

Q. And that meant that the Dominion Securities had bought these at a discount below par value?—A. Yes, sir.

Q. Of \$504,000 on the bonds?—A. Yes, 7.20.

Q. Now then six million nine hundred thousand of preference shares purchased at 92.80 would amount to—

The CHAIRMAN: What did they sell at?

Mr. SOMMERVILLE: 92.80—that would be about 700,000 less.

The WITNESS: \$6,403,200.

By Mr. Sommerville:

Q. Yes, and that meant that the discount of Dominion Securities was the sum of \$596,800?—A. I did not get that question, Mr. Sommerville.

Q. The discount below par on the preferred shares was \$596,800?—A. Right.

Q. That would be right.

The CHAIRMAN: Figure that \$6,403,200, leaves \$497,000.

Mr. SOMMERVILLE: \$496.800, yes. Oh, I beg your pardon; four million—\$496,800—that is just one million eight hundred.

The WITNESS: That is a figure that is in your own auditor's report.

By Mr. Sommerville:

Q. And that is what it cost the new company to finance themselves in that particular way?—A. Right. By way of discount.

Q. Now, what other cost was there to the new company for financing in this way?—A. No other cost at all.

Q. We have the auditor's report, proportion of expenses payable by Burns Company Limited \$75.029.96?—A. That may be right, sir. I was going over here roughly a million dollars discount, \$367,000 premium on the old securities, general reserve available at present \$1,723.000; which roughly approximated that spread of \$3.181,000. Now, there may be some expenses such as you mention there which our—. Have you any other items of cost, because I think we can make them jibe.

Q. Now, you had them comparing in exactly the same way in the auditor's statement. The entire cost, according to the auditors, were: discount on bonds of P. Burns Company Limited written off \$345,356.48?

Mr. LASH: That is the old company, and I quite agree with Mr. Factor's remark on this item, I do not know what it is all about; this is the old company and apparently a capital item in its book.

By Mr. Sommerville:

Q. I see, yes. Well then, next was premiums on redemption of old issues of bonds and preference shares, $314,670.21.

Mr. LASH: That is included in those items that make up the seventeen million that was required to complete the transaction.

By Mr. Sommerville:

Q. Then, the new financing costs were the discounts on the new issue of bonds, and on the preferred shares, as we have had indicated, one million dollars?—A. Right.

Q. Then, proportion of expenses payable by Burns Company Limited, $75,029.96; then, adjustment re bond interest and dividends on preferred shares of $5,793.36?—A. That is—what did you say that amount was?

Q. $5,793.36. Then, losses applicable to purposes prior to December 31, 1927, $47,548.85; what was that?—A. I could not say, there were a lot of inter-company items here, just at the tail end of the adjustment.

Q. Then, provision for the transfer agreement between Mr. P. Burns and Dominion Securities, paid by the issue of 99,982 common shares of Burns Company Limited, the new company, of a total value of one hundred thousand.

Mr. LASH: You see, there are really the one hundred thousand shares in there. They have taken one item off, the 18 shares that were issued to the applicants for the incorporation of the new company, that makes up the $100,000.

Q. I quite see that, that is the explanation. Then, do you still own the common shares, Mr. White?—A. No, sir. When the company began to experience some difficulties—I have forgotten the year, in 1931 and 1932—Mr. Burns subscribed for additional common shares, if I remember rightly somewhere around $100,000. I am sorry I did not have those figures. I did not know they were relevant. I can easily get them. We, in order to facilitate that transaction, turned over the 60 per cent of the common shares that we held without consideration.

Q. To Mr. Burns?—A. I imagine they went to him. Our agreeing to that was part of the transaction.

By Mr. Kennedy (Peace River):

Q. What is the effect of this writing down; the reorganization and the writing off of four million dollars with respect to common shares.

Mr. SOMMERVILLE: Might we have that just a little later. We will come to refinancing.

By Mr. Sommerville:

Q. I just want to ask you now, what did the company do with the money it received from you?—A. These three transactions at the top of the memorandum, is that not right?

Q. That is, out of seventeen million twenty-two thousand eight hundred and forty-nine are the three items that we have referred to?—A. Yes, sir.

Q. Did it have any other money available then?

Mr. LASH: That was the total amount required for the transaction: There was the four million of cash, which had been paid in by Mr. Burns to the old company and which was used for the purpose of the redemption of the old company's bonds and preferred stocks, and paying for its liability; and the

balance of the money beyond the four million odd that was available from that source was raised by the issue of the bonds and preferred stock of the new company, making a total of seventeen million.

The CHAIRMAN: That is, something over eighteen million was actually raised.

Mr. LASH: No, the company had some assets and they sold these to Mr. Burns for four million cash, and in addition to that there was this twelve million nine hundred that was raised, making approximately the seventeen million that is required to pay for this.

The WITNESS: Might I just observe that I think what you are driving at is this: the new company started off after this financing was completed with liquid assets of $4,393,000 as against $4,366,000 which this memorandum required—I think that is what you mean, what other monies did they have on hand on the completion of financing.

Mr. SOMMERVILLE: I want to know what they had on hand.

The WITNESS: $4,393,000 net, of liquid assets after the completion of the financing.

By the Chairman:

Q. As a matter of fact, Mr. White, after you got through with the complete refinancing of the new company, which now takes the place of the old P. Burns Company, it had no additional cash available for the purposes of the company?—A. It had practically the same net liquid assets as the old company to start them with.

Q. Virtually, the same liquid position?—A. Exactly.

By Mr. Sommerville:

Q. The old company had net liquid assets amounting to $4,366,339?—A. The old company, yes.

Q. And the new company started with net liquid assets of—?—A. $4,393,000.

Q. And the new company started with outstanding senior obligations of some fourteen million?—A. Thirteen million nine hundred thousand.

Q. For which they received twelve million nine hundred in cash?—A. Right.

Q. And the Dominion Securities received a million dollars?

Mr. LASH: Oh, no.

Mr. SOMMERVILLE: They had the securities for a million dollars less than—?

Mr. LASH: Less than their par value.

Mr. SOMMERVILLE: Less than their par value, yes. And that amount would be one million dollars and that would cover the expenses of handling and brokerage commission to the Dominion Securities in selling the securities.

The WITNESS: That was our gross spread.

Mr. SOMMERVILLE: Gross spread, yes. And the net result was then that they started out with increased charges or obligation, whatever you wish to call them, of $325,000. Now, perhaps you will just finish the statement.

By the Chairman:

Q. It seems to me, Mr. White, that there was what you might call, "much ado about nothing," wasn't there?—A. How do you mean, sir.

Q. I simply mean this: after all of this marvellous refinancing and reconstructing of the company, the company is not only in no better position to start anew, but with much heavier obligations, and in a much weakened operating position, as far as the financing operation is concerned?—A. Yes, sir, if you want to put it that way.

By Mr. Sommerville:

Q. And with four million dollars less assets?—A. Is that the case, I don't think so.

Mr. Lash: Cash went in for those; no, no.

The Chairman: They were washed out.

Mr. Heaps: Were not those in the original books in the appraisal of the old company?

Mr. Sommerville: Yes.

Mr. Kennedy (*Winnipeg*): They were paid for in cash.

By Mr. Sommerville:

Q. They were paid for in cash. Then, a lot of these bonds were taken up by the old bond holders, were they not, Mr. White?—A. That, I cannot say, sir.

Q. I mean, there was an offering?—A. Naturally they would be offered the new security. We have had clients on our books holding Burns Securities for 20 years.

Q. And the net result was that the bondholders who took the new bonds over gave up $6\frac{1}{2}$ per cent first mortgage bonds of three million dollars and took $5\frac{1}{2}$ per cent first mortgage bonds on the same assets or fewer assets to the extent of seven million.

Mr. Lash: That is hardly fair, they sold their old bonds and received cash for them. What they did with the cash afterwards was their own business.

Mr. Sommerville: I say, if they bought bonds of the new company.

Mr. Lash: There would be the difference between the premium—an additional amount if they took the same par value.

Mr. Sommerville: Perhaps you had better put it this way, the bondholders of the old company had three million dollars worth of bonds on the securities and assets of the old company.

Mr. Lash: Right.

Mr. Sommerville: And the new bondholders had seven million dollars worth of bonds.

Mr. Ilsley: On four million dollars less assets.

Mr. Lash: No, on the same amount of assets.

Mr. Ilsley: How do you make that out?

Mr. Lash: Because the cash went into the old company. It paid off the old bondholders.

Mr. Ilsley: May be that is right; but there were ranches and buildings and all sorts of things.

Mr. Lash: Instead of that, many of these assets had continuous losses—there was one item of $40,000 for taxes—

Mr. Ilsley: But still, they were assets.

Mr. Lash: Those assets went out, and they were replaced by cash which is a pretty good asset.

Mr. Kennedy (*Winnipeg*): If you can hold it.

Mr. Sommerville: Then, the preferred shareholders of the new company, which took preferred shares, or all of them, would get 6 per cent preferred stock instead of 7 per cent preferred stock in the old company; and they would get $6,900,000 of preferred shares instead of $3.900.000. And they would get these shares subject to existing mortgages of $7,000,000 in the new company, as against $3,000,000 in the old company—that is about the net position.

Mr. Lash: Practically.

By Mr. Sommerville:

Q. Now, how is the company doing, Mr. White?—A. I have not the figures before me. They have had a vast improvement the last—their earnings, they started to turn about eight months ago or ten months ago.

Q. And what has been the reorganization that took place?—A. I am sorry, I have not those details here; in substance—

Q. We have the last balance sheet in the auditor's report?

By Mr. Kennedy (Peace River):

Q. Was the control in connection with this reorganization in the hands of the bondholders and the shareholders?—A. Not at the time.

Q. Or, was the control in the hands of the management?—A. The control was in the management, vested in their management shares, which were used for the sole purpose of appointed directors, who in turn appointed managers.

Q. I notice the evidence here says, we are advised that the bondholders and the shareholders have recently approved the reorganization?—A. Yes.

Q. It was approved after it was done, is that it? The reorganization was carried through by this management control first and then submitted?—A. No, no.

Q. What is the meaning of it?—A. There was a bondholders' committee, of which one of the officials of the Mutual Life was the Chairman, and there were other members—I have just forgotten who they were.

Q. Members of the bondholders' committee?—A. Yes.

Q. And the whole thing was worked out by them in conjunction with—?—A. With representatives of the preferred shareholders, and approved at a meeting of the bondholders and preferred shareholders. I think at the preferred shareholders' meeting there were some 238,000. Only 200 shares voted against it at the bondholders' meeting. It was approved by the Superior Court of the Province of Alberta some three or four weeks ago.

By Mr. Sommerville:

Q. And, what is the re-organization that did take place then; can you explain it?—A. I am sorry, Mr. Sommerville; I did not know I was going to be asked that. But in substance, the bonds remain the same as they were under this plan; with, I think, 3 per cent guaranteed, and then the balance of 2½ per cent or something like that as an income bond; and that the preferred shareholders own now some 95 per cent of the company, subject to these bonds.

Q. And have the preferred shareholders now voting rights, or are they vested entirely in the common stock still?—A. This bondholders' committee like the idea of management preferred shares. There are five of these, and I understand that of these three were issued to the nominees of the bondholders' committee, and the others to the nominees of the holders of the preference and common shares. So that in the sense of having the right to nominate the holders of these shares, the preferred shareholders and the bondholders control the company.

Mr. Kennedy (*Peace River*): And took a sacrifice.

Mr. Sommerville: Mr. White says that the bondholders now appoint three nominees to the management control, and the preferred shareholders nominate two, making five.

Mr. Lash: I think that is correct. It may possibly be that there are still only three.

The Witness: That is all a matter of record. I am sorry I have not got it here.

By Mr. Sommerville:

Q. At any rate, the bondholders and the preferred shareholders together make the nominations for management control?—A. Right.

Q. Now, of the bonds, the Dominion Securities still hold a substantial quantity?—A. We have no bonds, Mr. Sommerville. We have something less than six thousand shares of preferred; we are the largest holders of preferred.

Q. Six thousand out of sixty-nine thousand?—A. Yes, sir, they stand in our books I think at 89.

Q. Yes, and then the auditor reports to us that as a result of the new financing—at least, there is the balance sheet—the auditor says, "We are advised that the bondholders and shareholders have recently approved the reorganization which will result in the cancellation of approved bond interest amounting to $774,457.30 and in a reduction of the capital stock by $4,299,300. This amount will be distributed as follows: reduction in the book value of: investments in subsidiary companies $765,068.87; other investments $146,198.28; the elimination of deficit $1,109,826.97, less bond issues of $774,457.30, leaving a deficit of $335,369.67; increase in reserve for depreciation $2,516,634.07; and reserved for contingencies $536,029.11; or a reduction in the status value of the capital stock of $4,299,300. Can you tell me which of the holders of which security took the sacrifices that were necessary to bring about this reduction of $4,399,000?—A. The bondholders cancelled interest of $774,000 according to this statement.

Q. That would leave about $3,500,000 still to be taken care of by somebody?—A. By the preferred.

Q. That would be taken care of by the preferred. What happened to the common stock?

Mr. LASH: Reserve for contingencies, that is included in there and increase in reserves for depreciation. Those things are just book figures. They have exactly what they had before, and on the question of this set-up I cannot see that these people have lost that. The preferred shareholders now have got, I think I am safe in saying, practically 98 per cent of the ownership of the business subject to the bonds. They had before merely their preferred stock and the ownership of the business went to the common shares. The common shareholders have, in effect, given up everything except about 2 per cent of the equity, and the balance goes to the preferred shareholders; so that they own a great deal more than they ever did in the operation of a going concern.

Mr. SOMMERVILLE: Have they voting rights?

Mr. LASH: Through these management preferred shares now they have the right to nominate.

Mr. SOMMERVILLE: The preferred shareholders do not vote in the meeting of the company; the common shares still do all the voting?

Mr. LASH: No, the management—

Mr. SOMMERVILLE: The management preferred shares would be the only voting shares?

Mr. LASH: For the purpose of electing and removing directors. On any other matters—I do not know the exact details—but on other matters the preferred and common shareholders I think both have the right to vote now.

By the Chairman:

Q. I notice in this balance sheet, January 1, 1934, the depreciation account has been restored to $5,000,000. That pretty well accounts for the difference between the book value of the old company and the new replacement value of the appraisal company?—A. It probably would the last four years.

By Mr. Kennedy (Winnipeg):

Q. Have preferred shareholders the right to vote irrespective of whether or not the dividend on preferred stock is in default?

Mr. LASH: I think they still have no right to vote except that they nominate the holder of the management preferred shares who represents them in the appointment of directors, so that in this case they vote for directors by nominating a man who has the right to vote. It is nearly as bad as the presidential election in the United States.

Mr. KENNEDY (*Winnipeg*): If the dividends on preferred stock are in default they have the right to vote?

Mr. LASH: I do not know. I do not know whether they have or not, or whether that has been modified in this reorganization.

Mr. KENNEDY (*Winnipeg*): Have you any reason to believe it has been modified?

Mr. LASH: I just don't know.

Mr. SOMMERVILLE: These six annual reports from 1928 to 1933 will be filed.

(Annual reports, 1928-33 filed, marked Exhibit 209.)

(Prospectus $6,900,000, Burns Co., Ltd., filed, marked Exhibit 210.)

Mr. SOMMERVILLE: Will you be good enough to let us have a prospectus for the issue of the bonds.

(Prospectus for bond issue filed, marked Exhibit 211.)

Is there anything else you want to say in connection with this reorganization?

The WITNESS: Nothing.

Witness retired.

The committee adjourned to meet at 3.30 p.m.

AFTERNOON SITTING

The committee resumed at 3.30 P.M.

The CHAIRMAN: Gentlemen, we have a pretty hard day before us. As far as I know, there is nothing more regarding the Burns' matter we wish to take up, and if there is nothing more the committee wants to ask, we shall continue with the presentation of a brief by Mr. Sparks on behalf of the Canadian Pharmaceutical Association. May I make this observation; a very carefully prepared brief will be presented, and I think if the committee is agreeable, we should allow the brief to be put on the record as complete as possible, and reserve our questions as far as reasonable until later. I am not objecting at all to questions, but the committee have been so courteous in the past, and it is in order to facilitate the business of the committee I make that suggestion.

Mr. PARRY: Mr. Chairman, there are five representatives of the Pharmaceutical Association appearing here, as follows: H. D. Campbell, Montreal, President, Canadian Pharmaceutical Association; A. J. Wilkinson, Windsor, Ont., Chairman of the Council, Canadian Pharmaceutical Association; A. F. LaRose, Montreal, Immediate Past President, Canadian Pharmaceutical Association; C. G. Whebby, Toronto, Pharmacist, former President, Proprietory Articles Trade Association; Dr. R. B. J. Stanbury, Secretary, Canadian Pharmaceutical Association. It has been requested that Mr. Wilkinson be allowed to make a very brief statement, before Mr. Sparks, who is counsel for the group and their representative here, makes his representations to the committee.

Mr. ARTHUR J. WILKINSON, called and sworn.

By Mr. Parry:

Q. You are the chairman of the council of the Canadian Pharmaceutical Association?—A. I am.

Q. I understand that you want to address a few remarks to the committee before Mr. Sparks proceeds with his presentation?—A. Thank you.

Mr. Chairman and gentlemen of the committee, I thank you very much for giving me this opportunity to say a few words on behalf of the druggists of Canada. What I have to say will be very very brief, as it is simply an introduction to the arguments that Mr. Sparks has prepared.

On behalf of the Canadian Pharmaceutical Association, Inc., which includes every registered druggist in Canada, we wish to present certain facts concerning the problems of distribution of proprietary articles and patent medicines. In this regard, there is probably no class of business in which predatory price cutting is more prevalent.

In 1927 the situation had become so acute that retail and wholesale druggists together with manufacturers of proprietary articles and patent medicines organized an association known as the Proprietary Articles Trade Association, and instituted a system of price maintenance. Subsequently this Association was the subject of investigation by a Commissioner appointed under the Combines Investigation Act, as a result of which the Proprietary Articles Trade Association was dissolved.

We wish at this time to lay before you conditions in regard to the retail drug business, and suggest to you that some method should be adopted of legalizing a general system of price maintenance. Mr. R. P. Sparks has made a very intensive study of the whole problem of fixed resale price, and we have asked him to present a brief on our behalf.

Before doing so, however, I would like to take this occasion on behalf of the retail drug trade to call your attention to the disastrous condition which exists amongst retail druggists, which we believe is largely due to unfair, unethical, and at times dishonest methods employed by the large distributors of proprietary or patent articles. The question has been raised at some of the earlier hearings before this Committee as to whether the present price-cutting conditions was due to the depression or whether it was a method of merchandising which had been developed earlier. Evidence will be submitted showing that these conditions have existed in the drug trade for many years.

Might I take this occasion to point out that the drug store occupies a unique position in the retail field. The independent druggist is more than a merchant. He has had to take a long university training. His place of business is usually open from early in the morning to late at night. He gives a more personal service than most classes of distributors. When an investigation into drug merchandising was held in 1927 by Mr. L. V. O'Connor acting as Commissioner, under the Combines Investigation Act, Commissionner O'Connor made this reference to the retail druggist:

> Apart from the professional side of his business, the retail druggist performs very important service in the community. His place of business is open for possibly a longer period of time daily than that of any other line. He is looked upon as a general information bureau, and he attempts to devise divers ways and means to accommodate and meet the whims of the consumer. Before he is entitled to practise as a pharmacist he must take up a very intensive and costly course of study. There are also many obligations imposed upon and hazards assumed by the retail druggist in the practice of his profession. Not only must he keep in mind the provisions of the Pharmacy Act, but he must be ever alive to the provisions of

such legislation as the Opium and Narcotic Drug Act and the Proprietary or Patent Medicine Act. The duty is also imposed on the retail druggist to check up prescriptions handed to him by the physician so as to make certain that no injury will result to the consumer. Truly, it may be said that the retail druggist is a health station in every locality.

Evidence will be laid before the Committee which will demonstrate that the independent retail druggist is a very efficient distributor, who is rendering a service of great importance to the community, and we trust your Committee will find ways and means of enabling him to continue to perform that service.

As evidence of the deplorable financial condition of independent retail druggists throughout Canada, we submit herewith figures received by the Canadian Pharmaceutical Association, from The National Drug and Chemical Company Limited, and other sources.

The following figures are from reports received from the National Drug and Chemical Company in regard to a number of druggists whose credit standings are so unsatisfactory that they must purchase on a C.O.D. basis:—

Province	Total number of Drug Stores	Drug Stores on C. O. D. basis
Quebec	564	72
Ontario	464	143
New Brunswick	121	22
Manitoba	238	69
Saskatchewan	410	197
Alberta	277	48
British Columbia	271	48

The Might Directories Limited, who prepare a mailing list for commercial use, list only 927 "responsible" druggists in Ontario. There are 1,500 druggists in Ontario.

The President of Casgrain & Charbonneau, Wholesale Druggists, Montreal, reports that thirty-one per cent of the retail druggists in the Province of Quebec are on a C.O.D basis.

The Secretary of the Nova Scotia Pharmaceutical Association reports that twenty per cent of the retail druggists in Nova Scotia are on a C.O.D. basis.

It is reasonable to assume that a retail merchant who is on a C.O.D. basis with his suppliers is making a very poor living, and probably has lost a part or all of his capital. It is, of course, true that the financial condition of some of these druggists may be due to other causes than cutthroat competition. We submit, however, that the general cause is predatory price-cutting by the large corporate distributor against whose tactics the independent druggist, regardless of his ability or efficiency, is unable to compete."

With these few preliminary remarks, I will ask Mr. Sparks to present the general case on behalf of the Canadian Pharmaceutical Association.

By Mr. Kennedy (Winnipeg):

Q. Just before you retire, there is one point I should like to clear up. I understand that every registered druggist in Canada is a member of the Canadian Pharmaceutical association?—A. Just so.

Q. Is it compulsory?—A. The Canadian Pharmaceutical association is really a federation of the provincial pharmaceutical association, and as each druggist must of necessity be licensed by his provincial government, then he automatically becomes a member of the Canadian Pharmaceutical Association because there is a per capita tax collected from the province.

Q. By statute?—A. No, voluntary. The license fee from the druggist to his provincial body is statutory; the per capita tax is optional with the provincial bodies.

Q. Would there be anything to prevent a duly licensed druggist in any province—it is absolutely necessary that he be a member of the provincial phar-

maceutical association?—A. Yes, he cannot become—he cannot procure a license to practise pharmacy, without having paid his fee to the province.

Mr. PARRY: He is licensed by what body?

The WITNESS: By the provincial body.

By Mr. Kennedy (Winnipeg):

Q. By being licensed by the provincial body he becomes a member of the pharmaceutical association?—A. Yes.

Mr. R. P. SPARKS: Called and sworn.

By Mr. Parry:

Q. I do not think you need any introduction to an Ottawa audience. You have prepared a very comprehensive brief on your representations. Will you just proceed?

" A. Our purpose in appearing before your Committee is to submit evidence in support of the principle of price maintenance, or the fixing of a resale price by manufacturers of proprietary articles or patent medicines sold under an advertised brand, and to suggest an amendment to the Combines Investigation Act which will make legal agreements between manufacturers, wholesalers, and retailers for this purpose. This proposal goes to the very root of the problem of price spreads which is now before the Committee.

We might point out at the outset that price maintenance as we suggest it is not an American experiment, but is a British experience. We will show that:

1. Consumers as a whole are not benefited by price cutting.
2. That the independent druggist is a more efficient distributor than the chain store or departmental store, and is being unfairly discriminated against under the present methods of distribution
3. That price maintenance or a fixed resale price is beneficial to manufacturers, wholesalers, retailers and consumers.
4. That the Combines Investigation Act was used in the case of the drug trade to encourage monopoly in distribution, not to prevent it.

It appears desirable that at the outset we should establish that price-cutting is prevalent in this business. It will be unnecessary to go at great length into this phase of the problem, as the Committee is now doubtless fully convinced that the sale of loss leaders constitutes one of the principal methods by which chain stores and departmental stores promote the sale of goods. In order that our case be complete, however, we have prepared a number of exhibits representing advertisements appearing in each of the provinces of Canada. These exhibits include a copy of the advertisement to which is attached a memorandum showing the number of lines taken from each advertisement with the advertised price and the cost price as sold by wholesalers at their regular list.

Out of a total of 142 articles advertised, 104 or 73 per cent of the total were advertised below the wholesaler's regular list price, while 38 or 27 per cent of the total were advertised at slightly above regular wholesaler's list price. The 104 articles advertised below cost average 12 per cent less than the wholesaler's list price, the 38 articles advertised at above cost average 6 per cent above wholesaler's list price."

These are the exhibits, and on each one is a notation of the articles advertised.

The CHAIRMAN: Exhibit 212.

List of articles advertised with notations, filed and marked exhibit 212.

The WITNESS: They represent eight out of nine provinces.

Mr. Parry: There are various firms. I notice the T. Eaton company in the "Leader Post" of Regina and other firms handling products throughout Canada.

"We wish to put before you particularly the influence on distribution of the chain drug store. While predatory price cutting is a feature of departmental store and mail order distribution, these agencies more or less willingly accepted the principle of price maintenance on proprietary articles when it was put into effect some years ago. Price maintenance, however, was bitterly opposed by the largest chain store organizations in Canada, and for these reasons we will deal particularly with the competition between the chain store and the independent retail druggist."

By Mr. Ilsley:

Q. You made a statement that price maintenance was bitterly opposed by, did you say, two of the main chain store organizations in Canada?—A. One of the largest, the largest, I think.

Q. What form did their opposition take; who were they?—A. It was Tamblyn's, Limited, of Toronto. It took the form of public advertising, denouncing the organization of the Proprietary Trade Association. Finally it went to the extent of asking for an investigation under the Combines Investigation Act. Tamblyn's Limited stated publicly that they were the applicants for the investigation.

Q. That was the opposition to which you referred?—A. Yes.

Q. Were there any others?—A. No; so far as I know, the others accepted, as I have said, more or less willingly.

Q. They have a chain of drug stores?—A. Yes; they are operating 56 drug stores.

Q. In Ontario?—A. At the present time.

Q. In Ontario alone?—A. Practically all in Ontario.

By Mr. Parry:

Q. Did not Tamblyn's also bring a civil action, Mr. Sparks?—A. Yes.

Q. What happened to it?—A. Nothing happened to the civil action; they went ahead with the investigation of the P.A.T.A.

Q. The action was dropped—A. Yes.

"The development of chain stores during the past thirty years has been most rapid in two particular fields of distribution; that is, groceries and drugs. The full effect of chain store operations in a general way can perhaps be better studied by observing its effect upon the drug trade than in any other branch of business. There is no business in which predatory price cutting is more prevalent and more destructive than the sale of proprietary articles and patent medicines. Price cutting when carried to the extent of selling goods at cost or less is done for one purpose only, and that is to attract buyers to the pricecutter's store in the hope or expectation that they will buy something upon which there is an exorbitant profit. Obviously the pricecutter does not cut prices in the interest of the buyer. His motive must be self-interest. If price cutting is to be profitable to him he must sell his customers goods on which there is a normal profit, but he must do more than that. He must make an abnormal profit on some goods in order to compensate for the goods which he has sold at a loss. That such is the case was well established when an inquiry was held into the drug store business in 1927.

The application for an inquiry under the Combines Investigation Act, with which we will deal later, was made by Mr. G. Tamblyn, at that time in control of a chain of drug stores known as G. Tamblyn Limited. Tamblyn's sold a full line of standard proprietary articles, and also sold goods under three different private brands, known as: 'Santax,' 'Revery,' and 'Tamblyn's.' During the inquiry Mr. Gordon Tamblyn, President of the Company, gave evidence."

Now, I have prepared copies of some statistical matter which I am going to refer to. I have one for each member of the committee, which I think will facilitate getting it clearly. The first three tables are submitted for the purpose of showing that the price cutter does what we have just said, gets an exorbitant profit on some things to make up for the things on which he takes a loss.

This first statement shows the mark-ups on private brands of G. Tamblyn, Limited, and it is all taken from sworn evidence. You will note in the first column there is the line of goods, the next is the page—that means the page in the sworn evidence at the investigation. Then there is the unit cost price, the regular selling price.

By Mr. Parry:

Q. You referred to the investigation, Mr. Sparks. You mean the investigation by the commissioner under the Combines Investigation Act,—which is very comprehensive,—held in 1927, which established or revealed these cost prices, irregular selling prices and figures that are produced here?—A. Yes.

Mr. KENNEDY (*Peace River*): This report has been made public, has it?

Mr. PARRY: Yes.

The WITNESS: The report has been made public. The evidence has not been made public.

By Mr. Kennedy (Peace River):

Q. This is taken from the evidence?—A. Yes.

Q. Should we not have the evidence here, if we are going to deal with it?

The CHAIRMAN: You can get it if you want to, I imagine.

The WITNESS: I have given the page in the evidence, as evidence of good faith.

Mr. KENNEDY (*Peace River*): I am not saying anything about that.

Mr. PARRY: The report itself will be tabled, with the proceedings.

Mr. KENNEDY (*Peace River*): There are always two sides to it.

The WITNESS: These statistical tables are, I think, correct, so there would not be two sides.

Mr. KENNEDY (*Peace River*): I can understand that.

The WITNESS: You will notice that we made an average at the bottom, and that on the first, on these Santax goods, at the regular price they made a profit of 123 per cent on cost; and when they sold them at low prices, cut prices, they made an average of 56 per cent on cost.

By Mr. Parry:

Q. Were these standard products frequently sold at these low selling prices to which you have referred?—A. The standard products were very frequently sold at low prices; but the private brands were very rarely sold at low prices, only a day once in a while. So that, if these were weighted, you would find it would be very much higher than the averages we have given. Now, the second one is another private brand called "Revery."

By the Chairman:

Q. Wait a minute. You have now referred to Table No. 1?—A. Yes.

The CHAIRMAN: We will have these tables inserted in the evidence at this point.

TABLE No. 1

STATEMENT SHOWING MARK-UPS ON PRIVATE BRANDS, OF G. TAMBLYN LIMITED, CHAIN DRUG STORE, TORONTO, IN 1927. (SEE P.A.T.A. EVIDENCE)

Line of Goods	(Page)	Cost Price per Unit	Reg. Selling Price	Per cent Mark-up on Cost	Lowest Sale Price	Per cent Mark-up on Cost
		cts.	$ cts.	%	cts.	%
Santax Health Salts..........	(1436)	15	.50	233	33	120
Santax Bath Soap............	(1438)	7	.15	112	3 for 25	18
Santax Cocoanut Oil..........	(1438)	14	.50	257	29	107
Santax Shave Cream.........	(1442)	21	.35	66⅔	23	9·5
Santax Shave Stick..........	(1444)	16	.35	118	19	18
Santax Tooth Paste..........	(1446)	13	.25	91	18	38
Santax Tooth Powder.........	(1447)	9½	.25	160	9	−6
Santax Emulsion of Cod Liver Oil........................	(1506)	43	1.00	124	77	72
Santax Massage Cream.......	(1441)	13	.25	91	No Cut Price Given	
" "	....	26¼	.50	90	"	"
Santax Emulsion of God Liver Oil........................	(1506)	23⅓	.50	124	"	"

	On Regular Price	On Lowest Sale Price
Average Mark-up on Santax Line...........	123% on Cost	56% on Cost

It will be observed that the lowest mark-up of any of the eleven lines quoted was 66⅔ per cent advance on cost, and the highest mark-up was 257 per cent advance on cost, or an average mark-up on the whole Santax line when sold at regular prices of 123 per cent on cost. Even when these were offered for special sales at cut prices the average mark-up was 56 per cent on cost.

TABLE No. 2

STATEMENT SHOWING MARK-UPS ON PRIVATE BRANDS OF G. TAMBLYN LIMITED, CHAIN DRUG STORE, TORONTO, IN 1927. (SEE P.A.T.A. EVIDENCE)

Line of Goods	Page	Cost Price per Unit	Reg. Selling Price	Per cent Mark-up on Cost	Lowest Sale Price	Per cent Mark-up on Cost
		cts.	$ cts.	%	cts.	%
Revery Tooth Paste..........	(1465)	13	.25	92	18c. 2 for 25c	27
Revery Hair Tonic...........	(1468)	32	.50	57	39	22
" "	"	63	1.00	43	79	25
Revery Cold Cream..........	(1470)	22	.50	129	25	14
Revery Brilliantine (Liquid).	(1773)	15¾	.35	122	23	46
Revery Brilliantine (Solid)..	(1474)	26¼	.50	90	32	22
Revery Face Powder.........	(1474)	31½	1.00	217	63	100
Revery Perfume..............	(1475)	15⅔	.25	60	15	−5
Revery Peroxide Cream......	(1476)	26¼	.50	90	37	41
Revery Talcum..............	(1476)	31½	.50	60	33	5

	On Regular Price	On Lowest Sale Price
Average Mark-up on Revery Line..........	86%	27%

In regard to the "Revery" line, the lowest mark-up on cost when sold at regular price was 43 per cent, and the highest 217 per cent, or an average mark-up of 86 per cent on cost. When these lines were offered at cut prices the average mark-up was 27 per cent on cost.

TABLE No. 3

STATEMENT SHOWING MARK-UPS ON PRIVATE BRANDS, OF G. TAMBLYN LIMITED, CHAIN DRUG STORE, TORONTO, IN 1927. (SEE P.A.T.A. EVIDENCE)

Average Mark-up on Regular Selling Price 21% on cost   Average Mark-up on Lowest Selling Price −3·3% Loss on Cost

By the Chairman:

Q. You are now referring to Table No. 2?—A. Yes.

Q. One which contains material of the same character, showing another private brand of this company?—A. Yes, of this company. When selling this brand at the regular price, they made an average of 86 per cent profit. It

ran from 217 per cent down to 43 per cent; and even when sold at the lowest price, they made an average of 27 per cent on cost. Table No. 3 is another private branded line.

Q. Of the same company?—A. Yes.

By Mr. Kennedy (Peace River):

Q. Is this Tamblyn's own evidence?—A. Yes, this is his own evidence.

Mr. Parry: I think you had better make a particularly clear distinction between proprietary brands and standard products.

By the Chairman:

Q. These are Tamblyn's own proprietary brands, is that it?—A. Yes. The first is Santax Health Salts. Nobody but Tamblyn sells Santax Health Salts. Anybody sells Eno's Fruit Salts and a number of other salts. In fact, the independent retailer must deal in some of these other commodities. But Tamblyn's had a private brand of health salts.

By Mr. Parry:

Q. This would not be a nationally advertised product?—A. No.

Q. And would not be subject to wholesale distribution at all?—A. No. It was made for Tamblyn and sold by nobody else.

Q. Not comparable with any other product of another name, particularly? —A. No, it had no advertising value at all. There was no use cutting prices on this because there was no advertising value. It is his own brand.

By Mr. Kennedy (Winnipeg):

Q. Was the name protected?—A. Yes, I assume it would be protected. I presume it would be.

By the Chairman:

Q. You are at Table No. 3 now?—A. At Table No. 3. This is another private brand; and you will notice these three private brands cover a large range of proprietary articles. They have something to offer to replace many of the leading standard products. On Table No. 3 on the regular selling price, which was the price usually, they made 145 per cent; then at the lowest selling price they made 76 per cent.

By Mr. Kennedy (Peace River):

Q. How would the lowest price be taken; is there a sale put on?—A. A sale put on.

Q. Once in a while?—A. Advertised for one day.

Q. And the other was the standard price over a period?—A. Yes.

By Mr. Parry:

Q. The price at which it was consistently sold?—A. The regular selling price he usually sold it at. But occasionally he marked it down. Now, the importance of these figures I have just given is revealed when we look at Table No. 4. This is a rather short list, but these were all the goods that happened to be mentioned in the evidence given by Mr. Tamblyn. These are standard products, Eno's Fruit Salts, Scott's Emulsion, Baby's Own Soap, and Bovril. Now, you will notice the average mark-up at the regular selling price was 21 per cent on cost, and at the lowest selling price was 3·3 per cent less than cost. I think it would be safe to say that most of the time these goods

were sold at the special price, certainly to a very much larger extent than his own private brands. So it is a general picture of chain store methods. That is our submission, that this is their scheme of doing business.

Q. The distinction being that they protect their products?—A. Yes.

Q. And use it for a profit?—A. Yes.

Q. But when it comes to a nationally advertised article, it is used to attract the trade that purchases these things?—A. Yes. They might and they could advertise Eno's Fruit Salts for a particular day at 29 per cent less than it cost them; and they could on that day, 56 stores, have a very elaborate counter display of Santax Health Salts showing a profit of 233 per cent. Human nature being what it is, they might attract a customer's attention, who came in for a bottle of Eno's Fruit Salts, to very excellent salts which they put up themselves; and conceivably the customer might buy the 233 per cent whereas he came for something sold at 29 per cent loss.

By Mr. Kennedy (Winnipeg):

Q. Would the price of their own be more or less than that of Eno's?—A. Well, it would be a different quantity, a different package, a different type of thing altogether.

By Mr. Parry:

Q. Would that make much difference? If they were boosting the sale, it would not affect the idea, would it?—A. No, not at all. As a matter of fact, previous to this investigation, they paid salesmen a commission on sales of these private brands. That is, there was every evidence that they did want their salesmen to push the private brands as opposed to the standard brands. But they did use standard brand goods to get the customers into the store. That is the sum and substance of chain store methods. That is the way it is done.

By Mr. Kennedy (Peace River):

Q. I would like to ask one question, Mr. Sparks. I see the first article in Table No. 1 is Santax Health Salts, and on Table No. 4, Eno's Fruit Salts. I notice that the cost price per unit of Santax Health Salts is 15 cents while Eno's Fruit Salts in $70\frac{1}{6}$ cents, is it?—A. Well, that would be a different sized package, to begin with, Mr. Kennedy. Presumably Eno's would be a better product: I don't know. I don't know who would say so.

By Mr. Parry:

Q. It would, at least, be a different product; put it that way?—A. Yes, a different product, but one could be used in the place of another. Just dealing with these private brands, I think this is interesting, because it fits into the whole picture:

In connection with the sale of goods under the brand of "Revery", on the packages containing these preparations there was a signature of "Revery", in script. The evidence given as to the use of this name was rather interesting. It was as follows:—

> *By Sir William Glyn-Jones* (P.A.T.A. Evidence, Page 1461):
>
> Q. You put up a line of Revery Preparations?—A. Yes.
>
> Q. Who is Mr. Revery?—A. The same—I think he is a brother of Mr. Santax.
>
> Q. Is that his signature, Mr. Tamblyn?—A. That is just a name, sir.
>
> Q. Just look at it.—A. I don't know—I don't think there is any such party.

Q. No.

Mr. McMaster: He is a fictitious person?

By Sir William Glyn-Jones:

Q. He is a fictitious person, Mr. McMaster suggests.—A. Yes.

By Mr. Ilsley:

Q. Who was Mr. McMaster acting for?—A. For the government. Then there was a statement by Sir William Glyn-Jones as follows:—

Sir William Glyn-Jones: I would like the Commissioner to see that. Here is "Revery Dental Cream for the Teeth and Gums—Revery, Perfumer and Chemist", and Mr. Revery appears to have signed it. There is his script.

(A sample of Revery Dental Cream was filed, marked Exhibit B-43.)

Sir William Glyn-Jones: I simply read that Mr. Revery purports to be a chemist and a perfumer and he purports apparently to have signed it. But there is his script. He is not only alive, but he writes a nice hand, sir—a nice signature.

By Sir William Glyn-Jones (Page 1465-66):

Q. Mr. Tamblyn, do you thing it is quite fair to the public to sell them a tooth paste which bears the name of a fictitious person, which describes the fictitious person as a perfumer and chemist, when no such person exists?—A. Oh, I think that is quite—quite common in the trade, yes.

Q. Good merchandising—A. Whether or not it is good merchandising it is for you to judge. I don't pretend to be a good merchandiser. But I say it is quite common in the trade.

Q. Is it quite common? Are these signatures you see on the outside of bottles quite common?—A. You see them only in chain stores or department store. You don't see them in the retail trade druggist's store, because he can't do that sort of thing. He is not big enough.

Q. I have seen quite a lot of them?—A. However, I don't know whether it is quite common. The head of this chain store said it was quite common in their trade. In fact, I have another example here, rather an interesting one too. Tamblyn's also sold a toothpaste under the name of "Dentomint". Here are just a few sentences from the evidence, beginning with a question by Sir William Glyn-Jones:—

By Sir William Glyn-Jones (Pages 1511-1512):

Q. But I see printed on this (package): "A scientific preparation. Besides being a splendid cleanser for the teeth, acts as an antiseptic to the whole mouth and is germicidal and purifying to the gums and tends to prevent pyorrhea. The Dentomint Company, New York, Toronto London." What is the address of the Dentomint Company of New York, Mr. Tamblyn?—A. That is an error. That will have to be changed too; both that and the London.

Q. There is no such company as the Dentomint Company, is there? —A. No.

Q. And I suppose you supplied the material for the wording of the carton.—A. I don't remember that we supplied that. I provided the name and I think the Corson Company provided the language on it.

Mr. Parry: They didn't say who supplied the address?

The Witness: That is to say, a small manufacturer in Toronto made up the toothpaste and labelled it "The Dentomint Company, New York, Toronto and London."

Q. Who is Corson?—A. He is a manufacturer, or was at that time; but since is out of business.

Q. What is he doing now?—A. Well, I think he is with the packers, the Canada Packers.

By Mr. Edwards:

Q. In other words, he has graduated?—A. Yes, he has graduated.

By the Chairman:

Q. What is he doing there, putting up fertilizer Are they still in existence? —A. Who is that, Tamblyns? Oh, yes.

Q. These mysterious, ghostly scripts or signatures?—A. Oh, I imagine they have taken in "Revery" after that.

By Mr. Kennedy (Peace River):

Q. And Dentomint?—A. I should think they would take the address off Dentomint, yes, but I have no doubt they have replaced them with something else.

By the Chairman:

Q. The private brands are carried in the same way?—A. Yes.

Mr. WILKINSON: The "Revery" line is advertised in the same way.

The CHAIRMAN: The same script?

Mr. WILKINSON: I don't know about the script, but the practices are the same.

The CHAIRMAN: We can get that.

Mr. PARRY: Do you suggest that the sale of these products might have increased since the P.A.T.A. was put out of business?

Mr. WILKINSON: I don't know.

The CHAIRMAN: All right, Mr. Sparks, will you continue?

The WITNESS: "During this inquiry the managers of the T. Eaton's Company's drug departments at both Toronto and Winnipeg appeared before the Committee. Mr. Unsworth, the manager of Eaton's drug department in Toronto testified (see page 4033) that the private brands sold under their own name carried an average mark-up of approximately 50 per cent, whereas he admitted selling standard brands as loss leaders at cost or less. A similar admission was made by C. A. Hunter, manager of Eaton's drug department in Winnipeg (see page 3730)."

By the Chairman:

Q. That is, in this former inquiry?—A. The former inquiry, the same inquiry. I don't want to put Mr. Tamblyn in the position of being the only ones that do it, because all the chain stores do it, and all of these large companies. They make private brands, or have private brands made for themselves, and they make huge profits on them, and they entice customers in by the sale of loss leaders. That is what we object to.

"The condition indicated by these tables shows that the chain stores who have goods made under private brands make a regular practice of making up losses which they sustain by cutting prices on standard goods by getting exorbitant profits on goods under their own private brands. The general public have no means of determining the proper value of these private brand goods. That this is a general practice is well established by the inquiry made in the United States into chain store operations by the Federal Trade Commission.

Some of the largest chains in Canada are controlled from the United States, and there is every reason to believe that conditions in this regard are the same.

We beg to submit Table No. 5 showing the distribution of percentages of gross profits made on private and competing standard brand items in drug chains in the United States. This table appears in Senate Document No. 40. The first column shows the percentage of gross profit. The Federal Trade Commission had found that the operating expenses of drug chains in the United States was 33·3 per cent. It will be noted in the last column that 54·3 per cent of the standard brand goods sold were sold at less mark-up than total cost including operating expenses. In contrast this table shows that slightly more than one-half of 1 per cent of private brand items were sold at below cost, in other words a net profit was made on more than 99 per cent of the private brand goods."

TABLE No. 5

DISTRIBUTION OF PERCENTAGES OF GROSS PROFITS MADE ON PRIVATE AND COMPETING STANDARD BRAND ITEMS IN DRUG CHAINS ON MARCH 30, 1929, IN U.S.A.

Federal Trade Commission Inquiry—Senate Document No. 40

Percent of Gross Profit	Private Brand Items			Competing Standard Brands Items		
	Number	Per cent of total	Per cent cumulated	Number	Per cent of total	Per cent cumulated
Less than 25%	1	0·6	0·6	80	32·4	32·4
25% to 30%	0	....	0·6	23	9·3	41·7
30% to 33·3%	0	....	0·6	31	12·6	54·3
33·3% to 35%	0	....	0·6	32	13·0	67·3
35% to 40%	0	....	0·6	24	9·7	77·0
40% to 45%	10	6·0	6·6	36	14·6	91·6

Total	167	100·0	....	247	100·0	....

The cost of doing business in 1929 in the 118 drug chains which reported their operating expenses to the commission in detail was 33·3 per cent of their total net sales (preliminary figures).

By Mr. Heaps:

Q. When you mentioned operating expenses of drug stores, have you confined it purely to drugs?—A. No.

Q. You don't find many drugs in drug stores, do you?—A. Well, I have the percentages in the drug stores as they are operated in the United States.

Q. That is on everything you find in a drug store; that costs 33·3 per cent?—A. Yes.

Putting it in another way, 54 per cent of all the standard brands were sold at less than cost, and 99 per cent of all the private brands were sold at over cost.

Q. What is the reason for that?—A. The reason I have just given you, Mr. Heaps, that they use standard brands to attract customers to the store and then sell the private brands.

Q. Is it possible that it costs them less to buy the private brands than the standard brands?—A. Well, I don't know just what you mean, Mr. Heaps.

Q. Well, supposing the T. Eaton Company make a bottle of medicine of their own make, it would not cost them as much to produce that bottle as to

buy a similar article of goods from a wholesaler.—A. I do not think I could answer any questions about the cost of these articles. As retailers we are concerned with the selling price.

Q. It costs them as much to buy the bottle but you would expect them to sell it for less.

The CHAIRMAN: Of course, the point I understand Mr. Sparks is making at the moment is not the relative merits of two given articles, but rather that the practice is in certain lines to sell widely advertised proprietary brands to the public, the merits of which are known and not in question, at a low price, not infrequently below cost, whereas goods put up for themselves no matter what their cost may be are sold at a very wide margin of profit.

By Mr. Heaps:

Q. Is that not due to the fact that on a proprietary article, nationally advertised by the wholesaler may be charged possibly too much to the retailer?—A. I do not think that is the reason, Mr. Heaps. After all you get about what you pay for. If you buy a cheap article the chances are that it did not cost as much as a high priced article

Q. You know, Mr. Sparks, that the value of drugs, of the T. Eaton Company, is very small compared with the price paid?—A. I would not say, Mr. Heaps.

By Mr. Edwards:

Q. You would not admit that, Mr. Sparks?—A. No.

Q. You are only dealing with the system of distribution?—A. Yes.

By Mr. Kennedy (Winnipeg):

Q. Are you a druggist, Mr. Sparks?—A. No I am not a druggist, Mr. Kennedy.

Q. You understand that where proprietary articles are sold at less than the wholesale cost you assume that the retailer will make up his loss by the larger profit on certain other articles?—A. Yes.

Q. And might it not be that he would recoup himself for the loss on these high priced articles by increasing his volume of trade on other articles on the basis of exorbitant prices?—A. Well, but he does not sell his standard brands at a loss; he could not recoup himself by getting volume on them because the more he sold the more he would lose.

Q. No no. Supposing he advertised Eno's Fruit Salts at a price that is below the wholesale price, it attracts the public attention; they say: Well, here is a man selling drug supplies at a low price we will go in and buy. Well, if he loses on that article he might make it up on the volume of other articles which he sells which are not well known brands?—A. I think we have established that that is not the case. I think we have established that by sworn evidence, and as I pointed out they have found on enquiry in the United States that the standard brands of goods are universally sold at a low price, below cost, and 99 per cent of the private brands are sold at a profit, I think at a very high percentage of profit, at 65 per cent or over; 42 per cent of all the private brand goods sold in the United States are sold at over 65 per cent profit, and I think that establishes what we say.

By Mr. Heaps:

Q. Gross profit?—A. That is gross profit, mark up, yes. That means 100 per cent profit because they establish that the operating cost is $33\frac{1}{2}$ per cent and then they show that 42 per cent of all their high priced goods are sold at 100 per cent profit, and I think that establishes that they make it up in the way that we suggest.

By Mr. Kennedy (Winnipeg):

Q. Is 100 per cent profit an uncommon profit in the sale of drugs?—A. It certainly is in the retail drug sales. As a matter of fact, I am going to show later that the retail druggist is scarcely making a mechanics wages.

By Mr. Edwards:

Q. Mr. Sparks, does not your argument sum up to this, that on the regular standard advertised lines, lines that are nationally advertised, they are used as bait to bring a customer into the store, and then by means of bonuses and so forth the druggist's own private lines are sold to the customer if at all possible? —A. I think that is correct.

Q. Is not that the story, Mr. Sparks?—A. I think that is the story, Mr. Edwards.

By Mr. Heaps:

Q. Well, take a bottle of fruit salts. The T. Eaton Company put up their own fruit salts. Can you say from your own knowledge that the fruit salts of the T. Eaton Company are inferior to Eno's Fruit Salts?—A. I cannot express an opinion on that, but we know that the public have decided that Eno's Fruit Salts have merit by buying them in tremendous quantities. The public decide these things, and the public decide whether or not they want a certain line of proprietary articles, and if they do then we know that they must have merit.

Q. Suppose for arguments sake that they are both of equal quality, and suppose one sells for 75 cents and the other for 45 cents, what would you attribute that to?—A. Well, I cannot take your assumption that they are both of equal quality.

Q. You cannot say that they are not?—A. No I cannot say that they are not.

By Mr. Ilsley:

Q. They are paying the advertising out of the 75 cent article?—A. Yes.

Q. And it might possibly be that these standard articles are costing more than they ought to cost, because a druggist does spend a lot of money in advertising?—A. Yes, there is a lot of money spent in advertising.

Q. And it might also be true that the purchaser who is buying a private brand at 100 per cent profit is getting just as good value as the purchaser who is buying a standard brand at no profit?—A. It is rather unlikely but it is conceivable.

Mr. Ilsley: I think that is Mr. Heaps' point.

By Mr. Kennedy (Peace River):

Q. Mr. Sparks, with regard to the average mark-up on regular selling price, Table No. 4, 21 per cent on cost, is that regarded by the drug trade generally as being a fair mark-up?——A. No it is not, Mr. Kennedy. The next thing I say—

Q. I mean in connection with this?—A. No, Mr. Kennedy. No druggist can operate on a 21 per cent mark-up, no chain store, or anybody else.

Q. This is the average mark-up in Tamblyn's store?—A. These were the average mark-ups in Tamblyn's store. I am just coming to the question of mark-ups, Mr. Kennedy.

The Chairman: All right, Mr. Sparks.

The Witness: Now, Table No. 7—

Mr. Parry: Are you putting in Table No. 6, Mr. Sparks?

The Witness: Yes.

TABLE No. 6

NUMBER OF DRUG STORE CHAINS REPORTING HIGHER, LOWER, OR SAME MARK-UPS ON PRIVATE BRANDS THAN ON STANDARD BRANDS IN U.S.A.

Federal Trade Commission Inquiry—(U.S. Senate Document No. 142)

—	Chains		Stores	
	Number reporting	Per cent of all reporting on mark-ups	Number operated by chains reporting	Per cent of Total operated by all chains reporting
"Higher" Mark-up	45	63·4	1,109	89·8
"Same" Mark-up	23	32·4	106	8·6
"Lower" Mark-up	3	4·2	20	1·6
Total	71	100·0	1,235	100·0

The WITNESS: Table No. 6 gives the number of drug store chains reporting higher, lower, or same mark-ups on private brands than on standard brands in the United States. The most interesting point about this table is that the chains operating 89.8 per cent of the stores reported that they sold private brands at higher mark-ups than standard brands. 8.6 were sold at the same mark-up, and 1.6 were sold at a lower mark-up, that is, 89.8 per cent at a higher mark-up of private brands than standard brands.

By Mr. Kennedy (Winnipeg):

Q. What table is that, Mr. Sparks?—A. Table No. 6.

The CHAIRMAN: Now we come to Table No. 7.

The WITNESS: The next is Table No. 7.

TABLE No. 7

GENERAL STATISTICS OF RETAIL DRUG STORES IN CANADA, 1930

(Dominion Bureau of Statistics)

—	All Drug Stores	Independent Stores	Chain Stores
Number of stores reporting expenses	2,879	2,587	292
	$	$	$
Salaries and wages of employees	6,701,200	4,820,300	1,880,900
Total wage costs, including value of proprietors' services	10,452,800	8,871,900	1,880,900
Other operating expenses, including rent	7,428,500	5,539,600	1,888,900
Total operating expenses	17,881,300	14,111,500	13,769,800
Net Sales	66,460,700	52,489,600	13,971,100

SUMMARY OF OPERATING EXPENSES OF DRUG STORES IN CANADA

(Dominion Bureau of Statistics)

—	Number of Stores	Net Sales	Average Sales per Store	Total Operating Expenses	Expenses per $100 Sales
		$	$	$	$ cts.
All Drug Stores in Canada	2,879	66,460,700	23,085	17,881,300	26 90
Independent Stores for Canada	2,587	52,489,600	24,305	14,111,500	26 88
Chain Stores for Canada	292	13,971,100	47,846	3,769,800	26 98
Chain Stores for Canada, including Total Administrative Expense	....	....	....	....	27 73
Estimated Operating Ratio, including 6% Warehouse Expense	....	....	....	....	33 73

The WITNESS: You will note that all drug stores in Canada show an average cost of $26.90 expenses per $100 of sales, and the independent stores show $26.88 expenses per $100 sales. We found that that figure did not include all of the administration expenses of the chains.

By the Chairman:

Q. At head office?—A. Yes, at head office. It should also be noted that the operating expenses as shown does not include the operating cost of the central warehouses operated by the chain stores, and enquiry at the Dominion Bureau of Statistics revealed that the whole of the executive and administrative expenses were not included, as in some cases no returns were made to the Bureau of Statistics giving these figures. We are advised that approximately three-quarters of one per cent might be added to the percentage of operating expenses of the chain stores due to the fact that the whole of the administrative and executive expenses were not added.

By Mr. Ilsley:

Q. Yes, but does not he wholesale as well with his warehouse?—A. He does not. He supplies his own chains only. If we also added the cost of operating central warehouses, probably another 6 per cent might be added. The Dominion Bureau of Statistics explained that their reason for not adding expenses of the chain store central warehouses was that these warehouses were treated as wholesale houses. It is our submission that the cost of operating central warehouses might properly have been allocated against the retail outlets as a large chain store organization must of necessity have a central warehouse, whereas in the case of the independent retailer, while he may buy from wholesalers, he may and does also buy from manufacturers. The Dominion Bureau of Statistics treated these central warehouses as ordinary wholesale houses, and their operating costs do not appear at all in the chain store statistics. However, even disregarding this item, the figures clearly show that the independent drug store is able to distribute goods at a lower cost per hundred dollars of sales than the chain store organization. The Canadian figures are substantiated by the figures prepared by the United States Census of Distribution. We are prepared to put a great deal of stress upon that. I think it is basic.

It will be noted that included in the operating cost as shown in Table No. 7 is the estimated value of proprietor's services. The question asked by the Dominion Bureau of Statistics was for the proprietor to give the total salary and commission received for the year. "Independent owners of stores may have regarded this as requiring them to furnish figures as to their total income, which would have included interest on their investment. If such were the case this would not be giving a true picture of their operating expenses, as the independent merchant owning his own business is entitled to a return on his capital in addition to a living wage. The Dominion Bureau of Statistics in making their estimates took this into consideration, and for this reason figured the value of the services of proprietors who did not report a fixed salary at the average salary of a full time employee in the same kind of business in the same province. The final average, therefore, used as an estimate of the value of a proprietor's service, was $1,428 a year.

It will be noted that the average sales in independent stores was $24,305. The Dominion Bureau of Statistics reports do not give any estimate as to the capital employed. We know, however, that the average stock is turned over about three times a year, which would indicate an investment of at least seven to eight thousand dollars; interest alone at 6 per cent on this amount would be about four to five hundred dollars a year.

It will therefore be observed that the druggist, taking into consideration that he is a professional man who has had an expensive university training, is carrying on at a very low compensation for the service he is rendering to the community. It should be noted that the retail census was taken in the year 1930, before the full effect of the depression had become apparent, so that the very small return to the independent retail druggist as revealed by these figures was not due to the depression, but was a normal condition, brought about, we submit, very largely by the price cutting competition of the chain stores, departmental stores and mail order houses.

There is another fact which should be taken into consideration when comparing the cost of operation between the chain store and the independent, that is, that a substantial portion of the chain store business is done at a loss. This increases the turnover and reduces the ratio of expenses to sales. These loss leaders are sold for advertising purposes. If the loss incurred was charged to advertising expenses it would greatly increase the ratio of operating expense. It is true that some individuals have been benefited through the chains selling goods at a loss, but it distorts the true figure of operating ratio against sales, making the price cutter appear to be more efficient than he really is."

From the standpoint of their operating cost the chain stores are exceedingly inefficient, no doubt about that at all.

By Mr. Heaps:

Q. Do you want to make them more efficient now, Mr. Sparks?—A. Yes, we are going to make them efficient; if we get price maintenance they will have to compete on an even basis. If we get anything like fair competitive conditions we are not a bit afraid of the chain stores because we are more efficient.

By Mr. Kennedy (Winnipeg):

Q. If their costs are higher than the independents how are they able to compete with you?—A. They are buying at less than we do, Mr. Kennedy, that is one of the reasons, the principal reason, because their operating costs are so much higher than ours that they must, of necessity, get their goods at lower prices.

By Mr. Parry:

Q. That is what you mean by being put on an equal footing?—A. Yes. The thing than would suit the public best would be to give the man that operates most efficiently has goods at the cheapest price and then the public would get goods cheap.

Q. And that is what price maintenance will help to do, to give the efficient distributor an even chance to compete?—A. Yes, and that is one of the reasons why we are convinced that price maintenance is in the public interest.

By Mr. Heaps:

Q. Is there not a difference between the ordinary drug store and the average chain store in the character of the goods and the business they perform?—A. Not much in the character of the goods.

Q. The variety of goods you can get in a chain store is greater, is it not, such as candies, jewelry, all kinds of things?—A. Well, I am sorry to say that a lot of the independents have had to resort to that sort of thing too. I do not think there is much difference in that regard.

Q. They are all doing the same thing now?—A. Some of the retailers do not appear to be very much better in that regard.

By Mr. Kennedy (Winnipeg):

Q. On this matter of price maintenance, do you not think there would be considerable apprehension,—whether rightly or wrongly—in the minds of the

public in general, that with fixing of prices they may get goods costing them more?—A. In the minds of the public, yes, there is no doubt about that; the same reason that the public are going to the chain stores to buy these loss leaders because they think they are getting goods cheap. That is a fact, and it is discrediting the independent. The public think the chain stores are cheap, we don't.

By Mr. Heaps:

Q. Is it possible in these loss leaders that the wholesaler absorbs some of the loss?—A. No, I do not think the wholesaler takes much loss.

Q. You think he maintains his price all the way through?—A. No I would not say he maintains his price. I do not think he makes much on some of these loss leaders. I think the wholesaler probably takes them at a lower price too.

Q. You mean he sells them at a lower price?—A. Yes, I think he does.

The CHAIRMAN: All right, Mr. Sparks.

The WITNESS: In that table the question of proprietors' salaries come into it, that is, in the table of operating costs.

By Mr. Parry:

Q. You are referring to Table No. 7?—A. Yes, to Table No. 7, the question of wages. The average return to proprietors of independent drug stores was $1,428. We know that the average drug store does about $25,000 a year; we know that the turnover is about three times a year, and all that the average independent retailer gets out of it is $1,428 a year.

By Mr. Heaps:

Q. Is that net?—A. That is net.

Q. After paying salaries?—A. No, that is the proprietor's drawings from the business.

Q. Total drawings?—A. Yes total drawings. I presume that is it. I have the questionnaire sent out, and I think that is what the proprietor regarded as his return. Now normally 6 per cent on his investment would be between $400 and $500 a year, so according to the Bureau the average proprietor is only getting about $1,000 a year.

By the Chairman:

Q. Salary?—A. Yes, salary.

By Mr. Parry:

Q. Were those figures arrived at before or after the depression started?—A. Those were before the depression; these are 1930, before the depression started. Here we have professional men of a very high type getting apparently an income on an average of about $1,000 a year, and we attribute it almost solely to this chain store competition discrediting the independent by these methods of loss leaders and that sort of thing.

Now, there are several tables here, Table No. 8, and Table No. 9.

TABLE No. 8

COMPARATIVE OPERATING EXPENSES OF INDEPENDENT AND CHAIN DRUG STORES IN U.S.A.

(U.S. Census of Distribution, 1930)

—	All Stores	Independents	Chains
	$ cts.	$ cts.	$ cts.
Operating expenses per $100 sales	27 12	26 98	27 64
	$	$	$
Sales	1,690,398,682	1,378,096,961	312,301,721
Expenses	458,139,670	371,803,157	86,336,513

(The Chain Store figures include central buying and administrative expenses, but not central warehouse expenses.)

Table No. 8 shows similar figures for the United States, and shows that the independent stores are more efficient from the standpoint of operating expenses than the chain stores.

The WITNESS: I just want to establish firmly that the independent is the most efficient distributor. Table No. 8 was taken by the U.S. Census of Distribution, 1930, and you will note that it showed that the operating costs per one hundred dollars of sales, all stores, were 27.12; independents 26.98; and chains 27.64.

By Mr. Parry:

Q. This supports your Canadian figures?—A. Yes, Now the next Table is more interesting still.

This, Table No. 9, was taken from the trade commission enquiry and includes central warehouse cost. The interesting figure is shown in the fourth column, "Percentages of operating expenses to sales". Now, this brings in another aspect, this takes in the small chain of six to ten stores, and carries the table right through to chains of from 501 to 1,000. This demonstrates further the inefficiency; that the larger the chain the higher the net operating cost. You can see this, it goes from 27 to 32, and in chains having from 501 to 1,000 stores, it goes to 34.74.

By the Chairman:

Q. Those figures are taken from the report of the Federal Trade Commission of the United States?—A. Yes. It is a very exhaustive enquiry, and it shows that the larger the chain the more inefficient it becomes. Of course, that is well known to economists. It not only applies to chains, it applies to departmental stores as well; the larger the unit the more inefficient it becomes and the more they have to charge the public.

Q. And you are submitting this statement, Table No. 9, in support of that statement?—A. Yes, and I give documentary evidence—I give the Senate document No. 40, and it is available, we can supply the original document if you desire.

TABLE NO. 9

OPERATING RESULTS ACCORDING TO SIZE, BY NUMBER OF STORES, FOR DRUG CHAINS IN U.S.A.

Federal Trade Commission Inquiry—(Senate Document No. 40)

No. of Stores per Chain	Average Sales per Store	Percentage of Gross Margin to Sales	Percentages of Operating Expenses to Sales	Percentages of Operating Profit to Sales	Rates of Inventory Turnover
	$				
6-10	91,534	31·85	27·82	4·03	3·76
11- 25	104,105	32·71	28·30	4·41	3·76
25- 50	112,282	36·08	31·95	4·13	3·67
51- 100	147,283	35·98	31·60	4·38	3·59
101- 500	136,221	38·52	33·60	4·92	3·85
501-1,000	121,851	37·23	34·74	2·49	3·28
Average	117,809	36·60	32·89	4·21	3·64
Trend	Upward	Upward	Upward	Indeterminate	Indeterminate

The very exhaustive investigation made in United States by the Federal Trade Commission revealed another interesting fact in regard to the ratio of operating expenses to sales. Table No. 9 shows that in a general way the chains with a smaller number of stores operate more economically than the larger chains. It will be noted that for the chains of 6 to 10 stores the operating percentage to sales was 27·82, whereas for chains of 501 to 1,000 stores the comparative figure was 34·74. While there was some slight variance in this table, the trend is very clearly revealed showing the larger the chain the higher the operating ratio. It should be noted that the figures given in Table No. 9 include the cost of operating central warehouses by chain store organizations. The same trend, however, is confirmed in the report of the United States Census of Retail distribution. There is another interesting feature revealed by this table, which is that the operating ratio does not fall with the increased sales by the operating units.

By Mr. Ilsley:

Q. This is just a general principle which you say applies to the drug store, or is it to the Chain store?—A. Yes. I hope, if I am permitted, before this enquiry ends to make a general statement before this committee on behalf of 150,000 retailers in all branches of business. This, I think, Mr. Chairman, is a most complete picture that we have of this drug store business, it has the largest percentage of total volume of any chain store organization in Canada; groceries is the next. Groceries and drugs are the two great chain store commodities. We have had this special enquiry into the drug chain operation, so I think we have more information on that. These are facts. The next table is No. 10.

The CHAIRMAN: It shows about the same results?—A. The same story.

TABLE NO. 10

OPERATING EXPENSES OF RETAIL DRUG STORE CHAINS IN U.S.A.

(Retail Chains—Census of Retail Distribution—1929)

Operating Expenses by Size of Chains

—	Net Sales	Operating Expenses	Per $100 Sales
	$	$	
Total	312,301,721	86,336,513	27·64
Less than 6 units	33,669,311	8,927,841	26·52
6 to 10 units	27,381,416	7,508,275	27·42
11 to 25 units	35,960,854	9,840,259	27·36
26 to 30 units	38,353,057	10,024,506	26·14
50 to 100 units	13,219,025	3,363,771	25·45
More than 100	163,718,058	46,672,861	28·51

(Central office buying administrative expense and executive salaries are included in the above figures, but they do not include central warehouse expense.)

It might be noted that the 4 chains, with more than 100 stores each, operating 1,343 stores, do over half of the drug chain business in United States, but they also have a higher operating expense than any other group.

They do approximately one-tenth of the drug business in the United States.

Table No. 10 indicates an operating ratio of 26·52 for the smallest chain, increasing to 28·51 for the largest. This table does not include the cost of operating central warehouses.

This Table No. 10 gives us the same story: starting with the small units at 26·52, running up to more than 100 at 28·51.

Now, here is the Dominion Bureau of Statistics.

TABLE NO. 11

DRUG STORE CHAINS IN CANADA—1930

Drug Store Chain Operating Expenses—(Dominion Bureau of Statistics).

Chains Classified by Type of Operation

—	Number of Chains	Number of Units	Net Sales (1930)	Total	Operating Expenses Per $100 Sales	Operating Expenses Payroll per $100 Sales	Other Expenses (including rent) Per $100 Sales
			$	$			
Total, All Chains	31	292	13,917,087	3,769,830	26·98	13·46	13·52
Local Chains	24	174	6,696,634	1,785,264	26·66	14·25	12·41
Provincial Chains	5	75					
Sectional Chains	1	6	7,274,453	1,984,566	27·28	12·74	14·54
National Chains	1	37					

Table No. 11 shows the average operating ratio for local and Provincial chains in Canada as 26·66, as against Sectional and National chains of 27·28. While the figures of the Dominion Bureau of Statistics are not as complete, they do show the same general trend.

This survey by the Dominion Bureau of Statistics was not as exhaustive. Table No. 11, you will note, groups them into local and provincial chains; and

you will note that the cost for the small chain is 26·66, while that for the national chains is shown at 27·84. The reports as to Canadian and American operations differ as to details, but they show that the independent is the more efficient operator of the two.

TABLE NO. 12

Proportion of Chain Store Business done in Drugs in Canada by Size of Locality

(Dominion Bureau of Statistics)

—	All Stores	All Sales	Chain Stores	Chain Store Sales	Percentages Chain Stores to Total	Percentages Chain Store Sales to Total
		$		$		
All Localities	3,559	76,848,900	289	14,273,600	8·12	18·57
Over 100,000	1,127	33,102,400	182	9,555,000	16·15	28·86
30,000—100,000	347	10,076,800	62	3,043,000	17·87	30·20
10,000—30,000	388	10,104,200	26	1,218,900	6·70	12·06
1,000—10,000	832	15,120,800	12	338,800	1·44	2·24
Less than 1,000	865	8,444,700	7	117,900	0·81	1·40

Table No. 12 shows the proportion of the total drug store business in Canada obtained by the chain stores. It will be observed that 18·57 per cent of the total sales were made by chains. This table indicates that the chain stores obtain as high as 30 per cent of the total business in cities between 30,000 and 100,000 population. This table, however, does not indicate the full extent to which the price cutting organizations are affecting the business of the independent dealers, as it does not show the effects of mail order sales which would be much larger in the localities of less than 1,000 population, where there are 865 independent stores, nor does it deal with the sales by departmental stores. In regard to the latter, in a report of the Dominion Bureau of Statistics covering the province of Ontario only and dealing with the operatings of departmental and chain stores and independents, it is shown that 9·83 of the total sales are made by departmental stores, 33·02 by the chain stores, and 57·15 by independent stores.

I do not know that this table is of any particular significance, except as showing the percentage of the drug business in Canada done by the Chain Stores.

By Mr. Ilsley:

Q. Is the percentage increasing, do you know, in chain store buying?—A. It is difficult to say, Mr. Ilsley, we have no recent survey in Canada to show that so we do not know what is happening; but we think perhaps that the 1930 figures give a very fair picture, not distorted by the depression.

By Mr. Parry:

Q. Would you say that in the smaller centres the place of the chain store had been taken by the mail order distributor?—A. Yes, I was just going to read that, this table does not indicate the full extent of it. I should say that the three types of mass merchandising have now half the drug business of Canada; and if the present trend keeps on they will take it all in another twenty years. The whole tendency is toward the merger of big chains, which is eating up the little chains; the whole trend is towards great large corporate interests distributing all consumer goods.

By Mr. Ilsley:

Q. Although that is the most inefficient method of doing it?—A. Precisely.

Q. What is it explained by; how do you account for it, that the most inefficient way is gradually getting the whole thing, that the most inefficient form of organization is driving out the most efficient; how do you explain that?

By Mr. Kennedy (Winnipeg):

Q. Is one of the reasons, Mr. Sparks, their power to beat down the primary producer?—A. That is the only reason, Mr. Kennedy.

By Mr. Ilsley:

Q. Low purchases?—A. Yes.

By Mr. Parry:

Q. That is the mass power we have been hearing about?—A. I would just like to read this.

By Mr. Kennedy (Winnipeg):

Q. Are you going to produce any facts as evidence of that power being exercised?—A. I am going to produce facts as to what these big buyers get that the independents do not get.

By Mr. Heaps:

Q. There is no beating down the producer on the price, is there?—A. No, I do not think we have any evidence to show that there is. We know they are pretty close traders, but we do not charge them with sweat shop conditions, or anything of that kind.

By Mr. Kennedy (Winnipeg):

Q. I have reference to the general principle of mass buying.

The Witness: "It may be asked why, if the independent store is more efficient and has a lower operating cost in relation to sales, it cannot meet the competition of the chains. The answer, of course, is that the buying power made possible by the greater financial resources of the chains, and their ability to purchase in large quantities rather than small quantities, give them an advantage over their independent competitors. This leads us to an examination of the underlying principles of quantity buying. The question may fairly be asked, how much cheaper is the big buyer entitled to buy than the small buyer. The quantity buyer is entitled to a lower price than the small scale buyer, but no quantity buyer is entitled to a discount greater than the actual saving in the cost of distribution which can be justified on economic grounds.

If the quantity buyer pays cash and the small buyer takes 30 to 60 days, the quantity buyer is undoubtedly entitled to consideration equal to the value of his money to the seller. This may amount to 1 to 2 per cent. Some allowance may properly be made owing to the consideration of lesser credit risk. As a rule the large organization is safer to sell and losses through bad debts would be less than if the same quantities had been sold to a large number of smaller independent dealers. We have obtained from one of the largest credit insurance companies in the world a table showing their normal losses in various classes of business, and could satisfy the Committee that an allowance of 1 per cent for the factor of safer credit would be a generous allowance.

There is also the consideration that the cost of selling in large quantities is slightly less than the cost of selling in small quantities. While some sellers in taking large orders may theoretically eliminate selling costs, there are few if any cases in which this is economically sound, but even allowing for a saving in sales

expense of, say 2½ per cent, the three factors here referred to, which we submit are the only factors which should be taken into consideration, will total less than 5 per cent. It is our submission that under most circumstances a manufacturer is justified in making a difference in price of not greater than 5 per cent as between any two classes of distributors. There is no doubt that very much greater concessions than this are made to the big buyers, concessions far in excess of the actual savings, and these concessions are made merely because of the size of the order, the necessity of the seller, or the coercive power of the buyer."

Now, I think these two last sentences sum up the whole story. The reason the big buyer gets the low price is on account of the necessity of the seller, or the coercive power of the buyer.

By Mr. Heaps:

Q. Have you got anything there, Mr. Sparks, as to the prices charged to one set of retailers as compared to another?—A. No. I have something here on what are called advertising allowance rebates.

Q. Have you any actual prices, such as we had in other evidence?—A. No, they are not accessible to us; there is no conceivable way in which we can get them.

Q. You do not know what discounts are being allowed to the large buyers? —A. We have some things, which I will read in a moment.

By Mr. Kennedy (Peace River):

Q. Mr. Sparks, are you aware that the British Cooperative Wholesales do not make any allowances at all for large quantity purchases, in prices?—A. No, I was not aware of that; it is a very interesting fact if it is true.

"The sale of goods at substantially lower prices to one class of retail distributor than to another cannot be justified on any economic grounds. What frequently happens is that the seller in his anxiety to get volume will sell the big buyer at just sufficient to cover his raw material and labour, plus all or part of his overhead costs, depending entirely for his profits on the distributors who buy in small quantities. If this plan of procedure continues, it means, of course, the ultimate elimination of the small dealer and the complete control of distribution by a limited number of large corporations whom we have shown are less efficient than their independent competitors in so far as their operating costs are concerned."

By Mr. Parry:

Q. Can you give us any illustrations of that statement?—A. Yes, I think it would be fair to say this: there are a lot of manufacturers in this country who sell say 50 per cent of their output to the large stores—Eatons, Simpsons and the chain stores. They will sell them, for the sake of illustration, at their labour and material cost plus overhead in order to get the volume, say at 80 and they will charge the independent 100. Our contention is that they should sell the consuming public at 90; our contention is that the theory is absolutely unsound, that these volume sales should only carry overhead and not profit. And we are satisfied that if this committee will go thoroughly into the matter they will find that this is a condition which exists in hundreds of plants throughout this country; that the big buyer buys at cost because the manufacturer wants the volume and he takes the heavy orders, and he makes all his profits out of his customers who buy in small quantities. I know that is a very broad statement. I say that on my own responsibility from the many years' experience I have had in both selling and manufacturing, and because of which I know something about the manufacturing business; that that is what happened; that is the reason that the independents are going out of business.

"The present situation in regard to price cutting has many characteristics similar to that which existed some years ago in regard to the question of freight rates. Anyone familiar with economic history will recall the chaos which existed, particularly in the United States, before the regulation of freight rates became absolutely necessary. The big shippers obtained special rates which led to the destruction of their smaller competitors. In the year 1880 Charles Francis Adams, Jr., presented an argument before a committee of congress in the course of which he said, in part:"

I quote this because of the language, and because it seems to me, while it is dealing with freight rates, it precisely describes the condition of distribution in this country and in the United States. This was the statement of Charles Francis Adams, Jr. at that time:—

"We know that certain large business firms can and do dictate their own terms between rival corporations, while the small concern must accept the best terms it can get. . . In regard to these things I consider the existing system nearly as bad as any system can be. . . Studying its operations as I have, long and patiently, I am ready to repeat now what I have repeatedly said before, that the most surprising thing about it to me is, that the business community sustains itself under such conditions. . . Special contracts covering long periods of time are made every day with heavy shippers, under which the common carrier, whose first duty is to serve all equally, gives to favoured parties a certain control of the market. There is neither equality nor system, law nor equity, in the matter of railroad charges."

I would just like to repeat that last sentence, for purposes of emphasis: "There is neither equality nor system, law nor equity, in the matter of railroad charges. We feel that that should apply to merchandise, that there should be a bottom price to the consumer, as between different distributors.

" The situation called for drastic action, which was taken. Rates were fixed which put all shippers on an equal basis. Provision was made for two sets of rates, one on less than car load lots and a slightly lower rate on full car load lots. It is interesting to note that the car load was accepted as the unit below which rates should not go. To-day a shipper pays the same rate on a train load as a car load. In other words, rate makers have fixed a price below which a distribution service may not be sold.

We suggest that the principle is precisely the same in the sale of commodities, that no buyer is entitled to a lower price on account of quantity buying than is justified on sound economic grounds. It may be claimed that when a manufacturer takes a large order he can effect certain economies in production, and that the buyer is entitled to any savings thus effected. We believe this is thoroughly unsound reasoning. The manufacturer himself has some claim to the savings thus effected, as he must have a large plant and adequate equipment and financial resources in order to take such business, but the true beneficiary should be the general consuming public and any economies effected by large scale production should be spread over the production of the whole plant and should be shared with all the consumers of the product. It should be kept in mind, of course, that if the big buyer had not placed the large order some other buyer or a number of buyers would. The distributor certainly has no control over the volume of goods consumed. That is influenced solely by the purchasing power of the community. It is respectfully submitted that this is the whole crux of the problem of distribution, and that this problem can be most adequately dealt with by a system of price standardization.

Every manufacturer depends upon a wide distribution of his product. In order properly to serve the consuming public he must have his goods offered for sale by all classes and types of retail stores, including the neighbourhood and

small town druggists, who are a social and economic necessity. If wholesalers are to be employed as a means of reaching this type of retailer, then the wholesalers have a right to demand that the retailers they serve shall not be placed at too great a disadvantage in competition with other retailers who can buy in large quantities and to whom the manufacturer finds it convenient to sell direct."

By Mr. Parry:

Q. Will you develop that, it is a subject in which the committee is very much interested; where you said, the small town druggist is a social and economic necessity?—A. That is another matter which is pretty big to start at at this moment. We have made a study to a large extent, a field study, of this social aspect of the elimination of the retailer in the towns.

By the Chairman:

Q. Could you present that to us later?—A. I would like an opportunity, when the chain store and departmental store cases are in to present it, I was trying to boil it down to seven or eight typewritten pages—on the social aspect of this mass distribution; but I think possibly it would be better if you would allow me to leave it for a moment.

Q. That is applicable to all retailers?—A. All retailers; I think we should be confining it too much to deal with it on this drug case.

By Mr. Heaps:

Q. Have you any thoughts on the question as to how you would fix prices?—A. We are advocating a system of price fixing at this time, Mr. Heaps. It does not apply to all commodities, there are some with which it would not be workable. We are only interested in proprietary articles at the moment.

By Mr. Kennedy (Winnipeg):

Q. Your thought is if the manufacturer should fix the resale cost, based on the cost of the article?—A. Yes, I am going to deal with price maintenance in a moment.

The CHAIRMAN: All right, get along.

The WITNESS: We offer no objection to manufacturers selling chain stores or other large distributors, eliminating wholesalers completely. Every manufacturer has a perfect right to choose the medium of distribution which best suits his business, but we do submit that the independent retailer who is performing a valuable social and economic function has some right to protection against his chain store competitors, who utilizes his tremendous purchasing power to purchase at low prices. We do not deny the economic justice of what is generally known as quantity discounts, but we do suggest that some manufacturers by means of special discounts, advertising allowances, etc., are treating their small distributors most unfairly.

Referring to the matter of advertising allowances, an investigation was held in United States in the drug field by the Federal Trade Commission in regard to the distribution of three and a half million dollars in advertising allowances. The results are given in the magazine "Business Week" for December 24th last, which reads:—

> Delvings into the drug field graphically illustrate the story. The Commission has looked into the relations of 682 manufacturers in 1929 with 49 chain store systems, 58 drug wholesalers and 6 independent department stores. It has found that the 1,577 separate charge accounts maintained on the books of these manufacturers by the chains, accounting for only 39 per cent of their sales volume, collected 70 per cent of the allowances distributed. Some allowances were also traced in 2,529 wholesalers' charge

accounts and 79 accounts set up for the department stores; there were no melons for 29,375 accounts that represented over 87 per cent of the total number on the books.

"Specific allotments of these $3½ millions of allowances for mass buying power and other things are interesting. Liggett's 527 stores collected $815,804 in 1929 or 10·28 per cent on its purchases—which became 13·69 per cent on 1930 purchases. Walgreen operators got a 9·73 per cent rake-off in 1929, 10·06 per cent in 1930; People's Drug Stores, 9·16 per cent in 1929, 9·17 per cent in 1930; Owl Drug, 8·06 per cent in 1929, 10·57 per cent in 1930. But you don't have to be a drug chain operator. Sears, Roebuck came in for extras amounting to 10·02 per cent in 1929, 9·48 per cent in 1930. R. H. Macy & Co., salvaged over half its "6 per cent less" by taking 3·5 per cent in allowances.

" How much of the efficiency of the chain system lies in the allowance may be calculated in some cases. For instance, Walgreen's $10·06 per cent allowance on purchases of $6·1 millions in 1930 is a good 40 per cent of its $1,549,496 reported net income for that year."

Q. That does not take into consideration the special prices they may have obtained for volume buying?—A. No, advertising allowance.

Q. Straight bonuses for advertising?—A. Yes, 40 per cent of net income and straight advertising allowance; but, of course, we know that in addition to that they do get special prices.

Mr. Ilsley: They spend a lot of that for advertising.

The Chairman: No, no; this is space allowance.

The Witness: They spend some of the advertising allowance. The retailer gets the advertising allowance. He spends some of it.

Mr. Ilsley: He usually does not spend it all, but he spends some of it. That is what I understand.

The Chairman: Now, get that clear. When you are referring to advertising allowance to a chain store, what do you mean?

The Witness: A manufacturer selling an advertised product will go to a large organization, and if that large organization will purchase a large quantity of their product and will advertise that product they give them a special allowance to do so, running, as you see, up to 13 per cent.

By Mr. Parry:

Q. Putting the goods on the shelves?—A. Putting the goods on the shelves, advertising them in newspapers. There are many different kinds of advertising allowance contracts.

Q. And you will go further—as far as to say it is used as a form of special rebate for which no service is rendered in many cases?—A. I think it is. The retail druggist will probably advertise anyway.

By the Chairman:

Q. Of course, there is no particular criticism that can be offered of one person paying another person to do his advertising; but what the committee understands by "advertising allowances" of this character is that for the display of the goods in their stores, on their shelves, in particular places—in their windows or in poster displays—that they charge the manufacturer a fee or get an allowance for that. That is what is understood, as I infer, by special advertising allowances?—A. Of course, Mr. Stevens, included in all of this is the necessity of purchasing a large quantity of goods.

Q. Quite so?—A. Which is quite beyond the power of the independent druggist.

Q. The point I am making, because I want to clear it up—it will destroy a substantial part of your case for these allowances if what you now say is true—if the manufacturer simply makes an allowance to the retailer to carry on his newspaper or other advertising for him there is not much complaint which can be made of that, because he would spend the money in this type of advertising. I think you must discriminate between two classes of advertising allowances—poster, window, table, shelf display and quantity and so on—two vastly different things. I would like you to make that clear for your own case?—A. You have the tobacco in mind.

Q. Yes. What I had in mind particularly is the evidence that I think we all have heard regarding chain stores in connection with retail goods.

Mr. WILKINSON: May I say a word? A large distributor will take half a page, we will say, in a daily paper, and that is, presumably, the page of that retailer, whereas it contains advertisements for, we will say, Eno's, Jones and Brown's, and other places; and it is presumable—Tamblyn's for example—I am not accusing them—but presumably it is Tamblyn's ad. made up of fifty items. They are all paid for by the manufacturer. I cannot get that advertising allowance no matter what I do. If I want an ad. I have to pay for every inch I use; his entire ad. is paid for.

Q. Well, that makes it a little clearer. All right, Mr. Sparks, go ahead?—A. "There appears to be a widely held opinion that the evolution in the chain store is a result of broad economic forces. It has been said that our system of mass production required a system of mass distribution. There could be no greater fallacy. Mass production was a result of the mechanization of industry. The development of automatic machinery in practically all lines of production made mass production inevitable. Mass production resulted in improvement in the means of production. There is nothing at all comparable in the field of distribution.. Retail distribution is carried on precisely as it was fifty or one hundred years ago. Whether a drug store be conducted by an independent merchant, or whether it be conducted as a chain store with a brilliantly painted orange front with a glaring sign designating it as a cut rate store, the mechanics of distribution are identical in both of them. It must carry a similar stock of goods. The clerks in the store must handle the goods in precisely the same way. The human effort in selling goods through a chain store or an independent store is identical in every respect, so that no comparison can be made between mass production and mass distribution. As a matter of fact there is no such thing as mass distribution. The chain stores made up of a large number of small units handle goods in the identical same way as the independent store, the only difference being that the independent store is more efficiently operated and usually gives a more complete and personal service than its chain store competitor."

The point I want to make is that mass production was a better way of producing; this so-called mass distribution is a poorer way of distributing. There is no justification for any use of that term at all.

"The cut rate chain store or the downtown departmental store selling patent medicines, proprietary or toilet articles cannot be described as a system of distribution. The most economic method of distribution must be a method that gets wide general distribution in the first place. Chain stores will only establish units where traffic is heavy. They decide on their locations by counting the number of persons who pass a given point, depending entirely upon volume of sales to make profits. They sell a limited number of articles to a limited number of people at a price less than some other articles are sold to some other people, but it is a method of distribution which prevents orderly distribution."

Now, that is rather involved, and it is theoretical, but I think it is correct. The chain stores do not attempt to distribute goods all over the country, they

only pick out a few high spots where they can get volume, and they are not, and never will be, a system of distribution—they will just take the cream and leave the skim milk to the ordinary mediums of distribution.

By Mr. Parry:

Q. Do you think they stop where somebody else has blazed the trail?—A. Yes, they are purely predatory. If a man graduates in pharmacy and wants to go into business, usually he should or he does look around for some place where there is an available opportunity for opening a drugstore, and he will establish there because that particular community requires drugstore service. Now, the chain store does precisely the opposite they will try to find the best and most efficient drugstore anywhere and they will get as close to him as they can, beside him or across the street, with the express purpose of putting it out of business or taking that business away from that man, regardless of his efficiency. They go where there is somebody else, and the better business that other independent has the better it suits them. I mention that to point out that their whole method is predatory. It is not a system of distribution at all, it is an effort to make money out of volume at a given point. They are not concerned about a system of production—and I do not say that the independent store is concerned about a system of distribution—but the economic law is such that distribution will be orderly if it is left to independents whereas it will be predatory if it is left to these large drugstores.

Q. When it does do that does it give the same service as the local druggist gives; does it replace him in the spirit of the service they are calculated to give? —A. I have no doubt every member of the committee knows cut-rate drug stores, and I have no doubt every one of them knows independent drug stores. I do not think there is any question that can be raised by anybody that the service—the whole atmosphere and service of an independent drug store is superior to that of the chain with its—I will not say shop manners—I will say with its lack of personal touch which seems to me to be well adapted to the selling of medicine and that sort of thing. I do not think I need argue as to the relative services which these two types of distribution give, because every member of the committee knows the price cutting drug store and they know the independent drug store and so they can draw their own conclusions.

I am going to touch on the question of price maintenance.

" Price maintenance means the fixing by a manufacturer of a minimum resale price less than which no distributor is permitted to sell his goods. At the present time a great variety of articles are being sold under price maintenance plans. To illustrate how generally price maintenance has been accepted, the following are a few of many articles sold at fixed resale prices—newspapers, automobiles, chocolate bars, radios, freight rates, soft drinks, magazines, women's hosiery, cigarettes, etc."

I have picked out ten articles out of one hundred because they are typical of goods sold at price maintenance.

Mr. Edwards: Are there not quite a number of proprietary articles sold that way?

The Witness: Yes, there are.

" It is perfectly legal for a manufacturer to sell his goods under a resale price agreement, but according to the judgment of Mr. L. D. O'Connor in the P.A.T.A. case, if a number of persons agree to co-operate with each other in order to maintain resale prices, this constitutes a breach of the Combines Investigation Act. We respectfully submit that if the principle of price maintenance is just and fair then any reasonable and proper means for the enforcement of price maintenance agreement is likewise just and fair.

In so far as it affects the drug business, we are only concerned with the proprietary articles sold under the name or brand of the manufacturer and easily identified by the consumer. A clear distinction should be made between what is regarded as price fixing and the plan of price maintenance which we propose. Price fixing usually refers to the fixing of a price at which a producer may or shall sell his product. In the price maintenance plan which we submit for your consideration, the manufacturer or producer is absolutely free to fix any price he wishes at which his product shall be sold to the distributor. Price maintenance means that the manufacturer shall agree to a uniform resale price which shall allow a reasonable gross profit or remuneration to the distributor.

This plan has been in operation for many years in European countries. In the drug trade in Great Britain an organized price maintenance agreement between manufacturers, wholesalers and retailers, known as the Proprietary Articles Trade Association, has been in effect for thirty-six years. This Association has been the subject of two inquiries, one in 1919 when an inquiry was held under the Profiteering Act by a committee of which Mr. Douglas Wenham was the Chairman. It was again the subject of investigation in 1930 by a committee appointed by the Lord Chancellor Sankey. We wish to take the liberty of quoting rather extensively from these two reports, describing them as the Wenham Report and the Sankey Report.

In 1927 Sir William Glyn-Jones, who had been chief executive of the British P.A.T.A. was invited to come to Canada to organize a similar Association in Canada. Subsequently this organization was the subject of an inquiry under the Combines Investigation Act. An interim report was made by Mr. F. A. McGregor, Registrar, and subsequently an inquiry was held by Mr. L. V. O'Connor, acting as Commissioner. These reports we will refer to as the McGregor Report and the O'Connor Report. At the opening of this inquiry, Sir William Glyn-Jones made a general statement in regard to the Association's activities, from which we quote as follows:—"

Now, this is an outline of what price maintenance means as it was in effect:—

"Volume One of Evidence, Page 129:

> The Association was primarily organized by retail and wholesale distributors to secure for themselves a living profit on proprietary articles. . . . . . .
>
> About 150 manufacturers, controlling between them about 600 separate articles, joined the Association because they desired an economical and efficient method of distribution of their articles to the public by the co-operation of the wholesaler and retailer, and it was obvious that this co-operation could not be assured unless those distributors received reasonable remuneration. So convinced were some of the manufacturers of this that they prior to the organization of the P.A.T.A., more or less successfully instituted the system of fixing minimum reselling prices for their articles. This they had done by means of individual agreements. A further large section would have done so but for the difficulty and expense entailed.
>
> Each manufacturer has, of course, a property represented by the goodwill in his trade-mark or brand and the combined value of these properties representing the goodwill of the manufacturers who are members of the Association is exceedingly large. Enormous sums have been invested in creating that goodwill and the owners of their properties are naturally anxious to prevent practices which they are satisfied are rapidly damaging and decreasing the value of their businesses.

No attempt has either been made or contemplated to restrict the facilities for trading in P.A.T.A. articles to members of the Association or to give the members any terms of facilities not open to non-members. Neither has any attempt been made or contemplated to confine the trading to druggists or any particular trade. No effort has been made or contemplated to get manufacturers of rival articles to agree to any uniform system of marketing or of price fixing. The Association has not concerned itself with the price the manufacturers have for themselves in each case fixed as the normal selling price of their articles to the public. In practically every case such prices had long prior to the organization of the Association been fixed by each individual manufacturer, and no manufacturer has been asked by the Association to change that price. There is not and never has been any uniformity in size, package or price. An examination of the tooth pastes on the P.A.T.A. list will provide a striking example of the truth of this statement. . . .

It is true no article is added to the Association's list without consent of the council, but each application is examined by the council, not for the purpose of suggesting any fixing or adjustment of the manufacturer's price to the public, the council's sole concern being to see that taking the price which the manufacturer alone has fixed as the selling price to the public, the manufacturer's price to the trade for that article will leave the distributors a living profit. In other words, the Association is not concerned whether a manufacturer asks the public to pay 25 cents, 50 cents, $1, or any other price—what they are concerned with is that of the 25 cents, 50 cents, $1, as the case may be, which the manufacturer through the trade obtained for his article, he shall allow the trade a suitable percentage as its remuneration.

The CHAIRMAN: That is the end of the quotation from the evidence, is it?

The WITNESS: Yes. That was the statement of Sir William Glyn-Jones, who was the chief executive.

"The effect of the judgment of Commissioner O'Connor which brought about the dissolution of the P.A.T.A. has, we submit, had precisely the opposite effect from what the framers of the Combines Investigation Act intended. It has helped to build up a monopoly or semi-monopoly in the distribution of proprietary articles. The P.A.T.A. was organized to fight a growing monopoly in distribution, not to create one. Its object was to create fair competition and to prevent cutthroat competition, which was the chief weapon of the semi-monopolistic corporations who were endeavouring to control the distribution of proprietary articles.

The whole question of price maintenance in Great Britain is dealt with so clearly in the Wenham report under the Profiteering Act in 1929 that we shall take the liberty of quoting at considerable length from this report. After setting out the terms of the reference, the report continues as follows":—

Our discussions have led us to the view that there are two distinct headings under the subject of the fixing of retail prices which should properly be considered, and it is proposed to treat these more or less separately in this Report, as we believe it to be important for the proper understanding of the question that they should be somewhat clearly distinguished.

These headings may be set out as follows:—

A. Proprietary Articles—sold under trade-marks or trade names, or made under patents, these, in the case of medicines (a very numerous class) being subject to the Inland Revenue Stamp Duty.

> B. Goods of Common or General Use—controlled by associations or combinations, which fix prices at which retailers must sell or below which they must not sell to the public.

After some preliminary statements, the Report proceeds:—

> At the time when open competition in proprietary articles was in vogue, it was found that there was very keen cutting of prices between retailers themselves, proprietary articles being sold at a margin of profit which left less than a living wage to the retailer. "I might mention this is 26 years ago in England. It is not recent." Many of the smaller men were driven out of business, and this reacted on the manufacturer, who found the number of retailers who were prepared to push the sale, or even to stock his product, diminishing. In addition to this, it was found that the large stores were in the habit of selling proprietary articles at a price less, in some cases, than the actual cost to the small retailer. This was done in order to attract purchasers for other goods and not by way of legitimate competition, it sometimes being found that the proprietors of a large store after accomplishing their object ceased to stock the article any further, with the result that the manufacturer of it was "let down" and the small retailer had lost that part of his business without any corresponding advantage to the public. . . .
>
> The evidence has satisfied us that the price fixed by the manufacturer has, in almost every instance, been adhered to by retailers. We further find that the margin of profit allowed to the retailer is in most cases not so large as to enable him to cut the price even if he wished to do so, except at a loss, but that it is such as the experience of the particular trade has shown to be adequate to enable him to earn a fair remuneration for his services as a distributor. We may add that the evidence of the retailers whose evidence we have taken was generally to the effect that the margin of profit on goods for which retail prices are fixed is not so large as that which they would, on the average, obtain for uncontrolled goods, and that while they recognized that in most cases a not unreasonable profit accrued to them from the sale of these goods, they would have been glad to be allowed a more liberal scale of profit.

I may say it is identical in Canada; the margin was very very reasonable.

By Mr. Heaps:

Q. Who makes the margin?—A. The manufacturer fixes the retail price, and it was arrived at at a conference between the wholesaler and manufacturer.

Q. Can you have price maintenance without price fixing?—A. I think there is a distinction, Mr. Heaps. Price maintenance does not fix the price; all it fixes is the price which the distributor will get. It is very similar to a minimum wage.

Q. Can you have price maintenance without fixing prices?—A. Without fixing the manufacturers' price, yes.

Mr. Parry: It allows the manufacturer to be free to set his own.

The Witness: Yes; he is practically free to set whatever price he likes.

By Mr. Heaps:

Q. But suppose the manufacturer decides upon an exorbitant price, who would you have to step in to protect the public?—A. There is no danger of that. The manufacturer won't allow exorbitant prices. The manufacturer's whole desire is to have the wholesale price low. He would not agree to any high price.

Q. Suppose a manufacturer is charging too much to a retailer?—A. Well, price maintenance as we suggest, is not concerned with that at all, Mr. Heaps.

Mr. EDWARDS: It is a different matter altogether.

Mr. HEAPS: It is so closely interlocked you cannot separate them.

The WITNESS: I think you can separate them completely.

Mr. KENNEDY (*Peace River*): Do you suggest there will be competition between the manufacturers?

The WITNESS: Yes.

Mr. PARRY: You are allowing that?

The WITNESS: No change at all.

Mr. KENNEDY (*Peace River*): If one manufacturer is charging too much, the theory would be another manufacturer would come in and get the business.

The WITNESS: Exactly.

Mr. PARRY: You say you do not care whether he charges 25 cents, 50 cents or a dollar for a tube of toothpaste, as long as the distributor is allowed a proper return on his investment?

The WITNESS: Yes; it does not interfere with competition between the manufacturers a particle.

By Mr. Parry:

Q. You are referring now to a list of articles at various prices?—A. Yes. It simply provides—I think a minimum wage is the right way to term it—it provides the distributor with a minimum wage. It does not fix prices; it fixes the price spread which the distributor will get.

Mr. KENNEDY (*Peace River*): It would fix the price at which a commodity would be sold by various people.

The WITNESS: Yes.

By Mr. Heaps:

Q. Who would enforce the maintenance?—A. Well, I will come to that. The association, of course, would enforce price maintenance, because any retailer who sells below this fixed price won't get any more goods.

Q. That is the very thing we had so many complaints about just a few weeks ago, the refusal of wholesalers to supply retailers.—A. I thought you had support of price maintenance for wholesaler and retailer.

Q. I am in favour of something.—A. There is this thing that came out in the tobacco inquiry: Price maintenance does not mean a big profit for the retailer. In the tobacco price maintenance scheme, the retailer got very very little. In fact, their own stores were operating at a loss. I merely mention price maintenance does not necessarily mean the retailer is going to get a big profit at all. He hopes to get a reasonable living wage out of it, but there is not much danger of there being high prices under price maintenance.

By Mr. Edwards:

Q. Did I understand you to say when you spoke of price maintenance, you meant a minimum price at which the article might be sold?—A. Yes.

Q. Suppose the article is something that is worth a dollar?—A. Yes.

Q. The price is a dollar, and it is just possible the minimum price of that would be 85 cents. That is the minimum price at which it could be sold. Is that the case; I am not quite clear?—A. I do not know that I am perfectly clear either.

Mr. WILKINSON: Yes, I quite understand. That is the thing we are asking for.

The WITNESS: That is a P.A.T.A. principle.

By Mr. Edwards:

Q. That is a method of controlling a price that is fixed by the manufacturer, a method of maintaining the manufacturer's fixed price?—A. Not necessarily the maximum price.

Mr. Wilkinson: No, the minimum price below which nobody can sell or must sell.

The Witness: It says maximum as well as minimum.

Mr. Edwards: Merchandise of any sort is worth a fair price. That is your contention?

Mr. Wilkinson: Yes.

Mr. Edwards: If you are not getting a fair price for merchandise, the manufacturer of merchandise cannot pay a fair wage to his people?

The Witness: I do not think we go that far; all we say is, as distributors, we are entitled to a minimum price. We do not even question whether a fair price or not. Our retailer has to get a fair return for the services that he is performing to the public.

By Mr. Edwards:

Q. In other words, it costs you 25 per cent, 26 per cent, or 27 per cent to do business?—A. Yes.

Q. You must have a return of that much to break even?—A. Yes.

Q. And you must ask a fair price on top of that to do business?—A. Yes; the objection of the P.A.T.A. was $33\frac{1}{3}$ per cent.

The Chairman: Gross.

The Witness: Gross.

Mr. Edwards: Over 5 or 6 per cent of what it costs.

The Witness: Yes. Take $25,000 as the average amount invested in a drug store—we had an average of about $25,000—6 per cent on that would give us $1,500 a year, and as they say in England, and I think it will be the same here, "We further find that the margin of profit allowed to the retailer is in most cases not so large as to enable him to cut the price even if he wished to do so, except at a loss, but that it is such as the experience of the particular trade has shown to be adequate to enable him to earn a fair remuneration for his services as a distributor."

Now, that is the point. Then, they say "We may add that the evidence we have taken was generally to the effect that the margin of profit on goods for which retail prices are fixed, is not so large as that which they would on the average, obtain for uncontrolled goods."
I think the play of economic forces will compel that always to be the same.

Mr. Edwards: It is quite clear to me that a manufacturer would not set a price, his fair price as he would call it, would not be high, because a manufacturer would rather sell twelve articles at 75 cents, amounting to $9, than nine articles at $1.

The Witness: That is precisely it.

Mr. Edwards: That is the principle.

The Witness: The manufacturer would want to keep prices down.

Mr. Edwards: The manufacturer is necessarily interested in this. It is to his advantage?

The Witness: Yes.

Mr. Parry: He is in competition with other manufacturers himself?

The Witness: The pressure of the manufacturer is always to keep the retail price down, because he does not want—

Mr. HEAPS: Is there much competition to-day amongst wholesale drug companies in this country?

The WITNESS: Manufacturers?

Mr. HEAPS: Yes.

The WITNESS: There certainly is competition, very bitter competition.

Mr. EDWARDS: The wholesalers are pretty nearly all out of business?

The WITNESS: Yes, they would put the drug wholesalers out of business.

Mr. EDWARDS: I think Mr. Wilkinson will agree that the National Drug Company, who used to have branches all over, now have only one or two?

Mr. WILKINSON: They have not paid a dividend for years.

The CHAIRMAN: Will you proceed, Mr. Sparks?

The WITNESS:—

> It is, we submit, clear that a manufacturer of a proprietary article, in fixing a margin of profit to the retailer, must determine a rate which (1) will afford the retailer a sufficient inducement to stock and push the sale of his product on a sound basis of trading, and (2) will not be so high as to deter the public from purchasing, or to induce them to look out for a substitute which will equally serve the purpose at a lower price. We are satisfied that these considerations will effectively check any tendency to profiteering on the part of the retailers in the case of such proprietary goods.

The Committee had this to say in regard to the effect of price maintenance on the consumer:—

> Looking at the matter from the position of the consumer, i.e., the purchasing public, it would appear that the fixing of selling prices and margins of profit as between subsequent sellers and finally to the consumer cannot, in practice, be detrimental to the latter. The fixing of a fair margin of profit to the retailer is obviously beneficial to the latter, who it must be remembered represents a large and not unimportant element of the community. It also prevents unfair and ruinous competition, which it is submitted is not in the long run in the general interest. It must be remembered that the manufacturer is extremely unlikely to allow to the wholesaler or retailer such a large margin of profit as will (1) tend to check the sale of his products, or (2) deprive him of a proportion of the eventual profit which he might have retained for himself. . . . . . .
>
> Our view, then, in regard to the general question, is that the system of fixing retail prices as between the four classes referred to above, viz. (1) the manufacturer, (2) the wholesaler, (3) the retailer, and (4) the public, is (subject to the general proviso stated hereafter) to the advantage of the latter, in that, (1) in times of scarcity it does in fact check the undue inflation of prices, (2) in times of plenty it tends to ensure to all classes, including labour employed in manufacture and distribution, a fair rate of remuneration for the services respectively performed by them.

The later report made by a Committee appointed by Lord Chancellor Sankey to inquire into matters concerning restraint of trade covers much the same ground, pointing out the injury to manufacturer, wholesaler and retailer of extreme price-cutting. In regard to the effect on the consumer the report states:—

Sankey Report, Page 18, Section 38:—

> The position of the consumer in relation to price maintained goods is similar to that of the retailer in so far as he can refuse to buy any

> particular brand of goods. If a man buys a particular brand at a particular price he thereby shows that in all the circumstances he prefers that article at that price to other branded or unbranded goods. The question whether his preference is well founded, and whether the goods are reasonable in price having regard to costs of production and distribution, is of course open. What appeals to him is the quality of the goods which he associates with the brand. We were informed that a point which has also told in favour of the brand system in recent years is the careful and hygienic way in which many branded articles are now packed.
>
> Another point which was put to us by several witnesses relates to the psychology of the consumer in relation to price cutting. We were told that where the prices fixed for branded goods are not enforced consumers lose confidence in the quality of the goods, in the reasonableness of the price ordinarily charged or in the good faith of the manufacturer. Conversely, it was stated that consumers are very ready to buy price maintained goods provided they regard the price as reasonable, and that they appreciate the knowledge that they can buy similar goods at the same price wherever they happen to be. The price maintenance system, we were told, tends to promote an atmosphere of harmony between the retailer and his customer and to make selling easy and expeditious.

The whole report is an exceedingly interesting document, going at considerable length into all details of the price maintenance system. It closes with the following general conclusions:—

> (*a*) We hold that the ordinary right of freedom to contract ought not to be withdrawn without some compelling reason.
>
> (*b*) We do not regard the price maintenance system as free from disadvantages from the public point of view, but we are not satisfied that if a change in the law were made there is any reason to think that the interests of the public would be better served.

The position of the wholesaler under present day merchandising conditions has become increasingly difficult. The wholesaler is frequently described as a middleman whose elimination would be desirable in the interest of low prices. It is undoubtedly true that in some branches of trade the wholesaler has almost disappeared.

It should be kept in mind, however, that the functions which the wholesaler performed in earlier days when goods followed the channel of manufacturer to wholesaler to retailer to consumer must still be performed by someone. The wholesaler as a separate unit may be eliminated, but the functions which he performed cannot be eliminated. Many manufacturers are now selling direct to large unit retailers, which means that the manufacturer is doing his own wholesaling. Many retailers are buying direct from manufacturers in larger quantities than they would have bought from wholesalers. In this way the retailer is doing his own wholesaling.

TABLE NO. 13

NATIONAL DRUG AND CHEMICAL COMPANY OF CANADA

SHOWING AVERAGE NUMBER OF ITEMS ON EACH INVOICE AND AVERAGE VALUE OF EACH ITEM

(P. A. T. A. Evidence, Pages 37–38)

Branch	Average Number of Items	Total Value	Average Value per Item
		$	$
Halifax	5·0	10 77	2 15
St. John	5·39	13 17	1 45
Montreal	4·0	14 36	3 59
Ottawa	4·66	7 01	1 52
Toronto	7·3	15 99	2 19
Hamilton	7·1	12 88	1 80
London	7·5	12 28	1 64
Winnipeg	5·19	14 58	2 80
Regina	6·0	16 22	2 70
Saskatoon	6·5	13 36	2 55
Calgary	7·25	12 80	1 76
Edmonton	7·9	17 11	2 37
Vancouver	5·27	11 12	2 11
Victoria	3·25	5 86	1 80

The above was recently shown to one of the branch managers of The National Drug & Chemical Company, who states that this would fairly represent present day conditions.

In a general way in the drug trade the wholesaler continues to perform a very important function. It is impossible to say precisely the percentage of the total distribution which is handled by the wholesale trade, but it is undoubtedly a very large percentage of the total volume. The reason for this is the large variety of articles which the retail druggist must carry in stock. The McGregor Report states that even the smallest drug stores must carry more than 3,500 different articles in stock, while the larger stores carry from 8,000 to 13,000 articles. In the evidence given before Commissioner O'Connor, The T. Eaton Company stated they were carrying in their drug department more than 22,000 different articles. In order to keep a well assorted stock, the average retail druggist must buy in small quantities. The McGregor Report quoted the following as an experience in the United States, and doubtless the same would hold good in Canada:—

> The Committee on proprietary goods of the National Wholesale Druggists' Association of New York investigated this problem in 1925, and found as follows:—

City—$1.00	articles	80	per cent	bought in	quarter doz. or less.
.75	"	80	"	"	"
.50	"	60	"	"	"
.25	"	50	"	"	"
.10	"	12	"	"	"
Country—$1.00	articles	60	per cent	bought in	quarter doz. or less.
.75	"	55	"	"	"
.50	"	40	"	"	"
.25	"	25	"	"	"
.10	"	5	"	"	"

Sir William Glyn-Jones in his evidence given before Commissioner O'Connor put in the following figures as representing average quantities and values of sales by the National Drug and Chemical Company.

Probably the most complete study of price maintenance which has ever been made has been published under the title of "Price Cutting and Price Maintenance," a study in economics by Professor Edwin R. A. Seligman, LL.D., of Columbia University, and Professor Robert A. Love, Ph.D., College of City of New York. This book of nearly 600 pages reviews in an unbiased way every argument both for and against the principle of price maintenance, and concludes its general study with a summary from which we extract the following, page 267:—

> So-called cutthroat competition is not true competition; it is brute competition. In the first place, the avowed object of cutthroat competition is to cut the throat of the competitor. . . . Cutthroat competition is designed to remove the rival entirely from the arena in order that the successful competitor may remain in control. Cutthroat competition results in monopoly. The temporary benefit to the consumer from the reduction in price will in the end be more than outweighed by the evils of monopoly. Cutthroat competition, therefore, is pseudo-competition, not real competition.
>
> The producer of a commodity may cut prices or indulge in practices which, while perhaps actuated by the determination to achieve a monopoly, are nevertheless motivated by the desire to outwit his rival and to capture a larger share of the market. In this endeavour, however, he does not proceed, as under the regime of true competition by reducing his costs and giving the consumer a part at least of the benefit; rather does he seek to deceive or to decoy the consumer into the belief that the latter is getting something which is not actually the case. . . . In every such case—and they might be multiplied—the essential elements underlying the theory of true competition are absent. . . . He benefits himself, but he does not benefit anyone else.
>
> In other words, true competition is beneficial competition. It profits the producers as a whole and it benefits the consumers as a whole. Pseudo-competition does not benefit the consumers at all and, while it may for the time being advantage some of the producers, it injures the producers as a whole. True competition is mutual and reciprocal in its benefits; pseudo-competition not only fails to benefit the consumer, but it hits the producer below the belt. True competition makes for progress, pseudo-competition makes for retrogression and decay. True competition is constructive, pseudo-competition is destructive.
>
> What we have termed pseudo-competition is in common parlance often called unfair competition. The word "unfair" connotes something immoral, something unethical. In the long run nothing can be morally right unless it is economically sound; for the roots of both ethics and economics are to be found in social considerations.
>
> We are accordingly led to the conclusion that the evil with which price maintenance seeks to cope, namely, the evil of certain forms of cut prices, has no justification in either economics or ethics. Price maintenance as a general social policy is to be judged not by the seeming antagonism between consumers as a class and producers as a class, nor, on the other hand, by the ostensible conflict between the two sections of the producing class, the manufacturers and the retailers. For, in the first place, there is no such antagonism between producers and consumers. Consumers themselves will in the long run be benefited by the adoption of price maintenance in the sense that, as we have seen, the welfare of the consumer depends ultimately on the prosperity of the producer. And in the second place, there is no such antagonism between manufacturers as a class and retailers as a class. The real conflict is found in the atti-

tude of the few retailers who think that their interests would be jeopardized by the adoption of price maintenance, and whose success at present is being achieved at the cost of other more fair-minded competitors. When we consider that against this comparatively limited class stand the bulk of the retailers, the mass of the manufacturers and the permanent interests of the consumers, we are forced to the conclusion that in principle at least price maintenance is a logical inference from the doctrine of true competition, and that the denial of price maintenance denotes a perpetuation of the pseudo-competition from which modern American life is suffering. Those forms of price cutting which involve the "leader" policy, the sale below cost, and the necessity of devious methods of securing supplies from others than the producers themselves, however, profitable to the individual, are open to criticism as constituting destructive and not constructive competition, as being economically unsound and therefore ethically unjust. Price cutting of this kind, in short, is a form of unfair competition; price maintenance is a step toward fair competition.

Mr. Justice Oliver Wendell Holmes, of the United States Supreme Court, December 9, 1929:—

> I cannot believe that in the long run, the public will profit by this course, permitting knaves to cut reasonable prices for mere ulterior purposes of their own and thus to impair, if not to destroy, the production and sale of articles which it is assumed to be desirable the people should be able to get.

Lord Parker, quoted in "Chain Stores and the Drift Toward Monopoly in the Retail Field." Page 11:—

> In considering the interests of consumers it is impossible to disregard the interests of those who are engaged in such production and distribution. It can never be in the interests of consumers that any article of consumption should cease to be produced and distributed, as it certainly would be unless those engaged in its production and distribution obtain a fair remuneration for the capital employed and the labour expended.

Mr. Justice Brandeis, quoted in "Chain Stores and the Drift Toward Monopoly in the Retail Field." Page 10:—

> When a trade-marked article is advertised to be sold at less than the standard price, it is generally done to attract business to the particular store by the offer of an obviously extraordinary bargain. It is a bait—called by the dealers a "leader"; but the cut-price article would more appropriately be termed a "mis-leader," because ordinarily the very purpose of the cut-price is to create a false impression . . . . . The evil results of price-cutting are far reaching. It is sometimes urged that price-cutting of a trade-marked article injures no one; that the producer is not injured, since he received his full price in the original sale to jobber or retailer; that the retailer cannot be harmed, since he has cut the price voluntarily to advance his own interests; that the consumer is surely benefited because he gets the article cheaper. But this reasoning is most superficial and misleading . . . . . . The process of exterminating the small independent retailer already hard pressed by capitalistic combinations would be greatly accelerated by such a movement. Already the displacement of the small independent business man by the huge corporation with its myriad of employees, its absentee ownership, and its financial control, presents a grave danger to our democracy. The social loss is great; and there is no economic gain. "But the process of capitalizing

> free Americans is not an inevitable one. It is not even in accord with the natural law of business. Shall we, under the guise of protecting competition, further foster monopoly by creating immunity for the price-cutters? Americans should be under no illusions as to the value or effect of price-cutting. It has been the most potent weapon of monopoly—a means of killing the small rival to which the great trusts have resorted most frequently. It is so simple, so effective. Far-seeing organized capital secures by this means the co-operation of the short-sighted unorganized consumer to his own undoing. Thoughtless or weak, he yields to the temptation of trifling immediate gain; and, selling his birthright for a mess of potage, becomes himself an instrument of monoply.

From "The Chemist and Druggist," November 19, 1927:

> *Re* Palmolive Cases—British Court of Appeal.
>
> The Master of the Rolls, in giving judgment, said that after entering into the price-fixing agreement the appellant found he was able to obtain, and did obtain, soap from other sources than the plaintiff company. But it was clear than an agreement of price maintenance was not necessarily bad, and slight evidence only was needed to justify it from the public point of view. (His Lordship referred to previous decisions bearing on the case.) Of what was reasonable between themselves the Court regarded the parties as the best judges. The agreement did not enforce a general restraint. It applied only to the proprietary articles sold by the plaintiff company, and there was no evidence to show that the appellant would suffer any material inconvenience if he never sold another cake of Palmolive soap. At least the appellant had a choice. If he did determine to sell, why should not the matter of price be decided according to the agreement? If the respondents fixed a price so high as to preclude a sale of their goods, that would be their loss. There was no restriction upon the appellant's selling other people's soap. Different considerations might well apply if the appellant was bound by contract to buy definite amounts of the respondents' goods, and precluded from buying the goods of others. It was impossible to hold that the contract was unreasonable, and the appeal must be dismissed.

We would respectfully suggest that the machinery set up to administer the Combines Investigation Act is entirely inadequate. The history of the operation of this Act and its relationship to the P.A.T.A. affords a convincing argument in favour of a more adequate and satisfactory machinery both for investigation and decision in matters in regard to restraint of trade.

We would suggest the setting up of a board along the general lines of the Board of Railway Commissioners, composed of men with business experience or having a knowledge of economics, whose judgment would command the respect of a business community, and that adequate machinery for investigation should be organized by such a board. We would further suggest such amendment to the Combines Investigation Act as would make legal agreements between manufacturers and traders for the maintenance of fixed resale prices when such agreements have been approved by the board above suggested."

I have a note here that might be very interesting, the average number of persons per drug store. I have not dealt with the reports made by Commissioner O'Connor and Mr. McGregor; I do not think there is any use threshing old straw, but they did intimate that there were too many drug stores in Canada. The average number of persons to each drug store in Canada is 2,871, and the average number in the United States is 2,107.

By the Chairman:

Q. Will you repeat that, Mr. Sparks, please?—A. The average number of persons to each drug store in Canada is 2,871, and the average number of persons to each drug store in the United States is 2,107.

By Mr. Parry:

Q. What year were those figures for?—A. That is 1930.

The CHAIRMAN: That is the census?

The WITNESS: I will just file those figures.

The CHAIRMAN: They will be incorporated in the record.

GENERAL DRUG STORE STATISTICS

Population of Canada (estimated) 1930..		10,215,571
Number of Drug Stores in Canada, 1930..		3,559
Average number of persons to each drug store		2,871
	1925	1930
Population..	9,364,000	10,215,571
Number of Retail Stores	129,684	125,002
Average number of persons to each store..	72	81
Average number of families to each store.. ..	16	17.5
(Based on average family of 4.62 persons, according to Q.B.S. figures for 1921 census.)		
U. S. A.		
Population of U. S. A. (1930)..		122,775,046
Number of Drug Stores (1930)..		58,258
Average number of persons to each drug store..		2,107

The CHAIRMAN: Now gentlemen, are there any further questions to ask Mr. Sparks?

By Mr. Edwards:

Q. I have one question. It may not be relevant to what he has already given us, but it is with reference to advertising. I was looking through those files that he presented but I did not see it there. However, some time ago there was a large chain store that used to advertise themselves as "The Enemy of the Drug Trust." That was the slogan that they had. Was there ever such a thing as the "Drug Trust"?—A. I think you are referring to Mr. Tamblyn's advertising previously to the P.A.T.A.

Q. It was a large chain store at any rate?—A. Yes.

Q. To your knowledge, was there any such thing as a "Drug Trust," Mr. Wilkinson?—A. I am quite sure there has not been. I do not know what you mean by "trust." There has never been any such thing in my lifetime.

Mr. EDWARDS: The inference was that there was such a thing as a trust and they were the individuals who were out to fight this combine. That is what I would take out of it. Was there any such a thing as a drug combine?

Mr. WILKINSON: Foolishness.

The WITNESS: Mr. Chairman, the druggists of this country would welcome a most complete investigation of their business, a complete investigation of their operations under the P.A.T.A.; they would welcome the widest kind of enquiry because they are satisfied that their case is sound. There is no idea of burying anything, or doing anything secretly or privately to injure the public. The widest possible investigation would be most desirable to the druggists of Canada.

By Mr. Kennedy (Winnipeg):

Q. Mr. Sparks, what effect does this price cutting have on the wages of those employed in the retail drug trade?—A. Well, I have no examples to submit of cutting of wages but that sort of thing is bound to work out, in drugs or in anything else. If a producer is driven down below an economic price then

he will follow the line of least resistance and cut wages. We do not make any allegations or charges against the manufacturers having done that, but on general principles that is the effect of price cutting.

Mr. EDWARDS: I think Mr. Kennedy referred to the retailers if they could not make money.—A. They will cut wages, of course they will.

By Mr. Kennedy (Winnipeg):

Q. Has there been any cutting of wages, so far as you know—A. Registered druggists are working for $15 and $20 a week, professional men.

Q. They had to take a University course?—A. Oh yes.

Q. Of how many years?—A. Three years. Yes, the trade is in a desperate condition.

Mr. WILKINSON: And these men are not working 40 hours a week; they are working more nearly 70, 10 hours a day 7 days a week.

The WITNESS: The fact that we have referred to two English reports which show identical conditions would, I think, lead to the conclusion that our statement is correct, that it is this thing that has affected the drug trade. The depression has not affected the price perhaps as much as some others. In fact, some people went from the doctor to the drug store. They possibly could not afford to have a doctor and they went to the drug store and bought proprietary medicines, so that the bigger part of the desperate condition of the retail druggist is due, we are convinced, to unfair price cutting; and we are convinced we have an honest, straight-forward method of carrying out business, and that is what we ask this committee in its deliberation to recommend to parliament, some action which will make possible the elimination of these things we complain of and what we believe to be a public evil.

The CHAIRMAN: Well now, that is all to-day We will adjourn until 11 o'clock to-morrow morning to take up the report of the auditors on department stores.

The committee adjourned at 5.40 p.m. to resume on Tuesday, June 5th, at 11 a.m.

HOUSE OF COMMONS, ROOM 368, June 5, 1934.

The special committee appointed to inquire into price spreads and mass buying met at 11 a.m., Hon. H. H. Stevens, presiding.

Mr. Norman Sommerville, K.C., and Mr. W. W. Parry, K.C., of Toronto, appeared as counsel for the committee.

The CHAIRMAN: Order, gentlemen. The minutes of yesterday's meetings indicate the witnesses heard and certain exhibits filed. We will declare them approved.

Now, Mr. Sommerville, who is your first witness?

Mr. SOMMERVILLE: I propose to proceed with the consideration of the report of the auditors appointed to investigate department stores. To-day we will commence with Woodward Stores Limited, in Vancouver, Spencers Limited, in Vancouver, followed by the Army & Navy Stores of Regina. By process of an examination of these organizations which are smaller than several of the big ones, we will get a plan of operation, and in this way know better what to look for in sizing up the situation of the bigger accounts when we reach them.

The CHAIRMAN: Each member of the committee is supplied, I believe, with a series of printed forms that will be followed in the evidence by the witness, Mr. Nash and his assistants, as we proceed.

Mr. SOMMERVILLE: There are certain key statements that will be referred to and the same system will be followed throughout.

ALBERT E. NASH, called and sworn.

J. GRANT GLASSCO, called and sworn.

By Mr. Sommerville:

Q. Mr. Nash, you are a member of the firm of Clarkson, Gordon, Dilworth, Guilfoyle & Nash?—A. Yes.

Q. Your firm is a firm of chartered accountants and auditors?—A. Yes.

Q. And at the request of the committee you have inquired into certain operations of the department stores in Canada?—A. Yes.

Q. You have now before you the report on the Woodward Stores Limited, in Vancouver?—A. Yes.

Q. Will you just present to the committee the result of your inquiry there, upon the scope outlined to you by the committee?—A. In the first place, I would like to say this, that in making our investigation of Woodwards and other department stores we had in mind particularly certain major phases. Firstly we had in mind the price spreads between the cost of goods purchased, and the price at which those were sold to be public; that is, the percentage of spread to the cost and the percentage to the selling; secondly, the expenses incidental to the selling and distribution of those goods; thirdly, the wages and salaries paid by these companies in carrying on their business; and fourthly, the capital set up, the ownership and the resulting profits or losses to the ownership of these companies. The statements are so arranged that I think we can follow those four phases without very much difficulty.

Q. Your statements will also indicate the growth and development of this method of merchandising?—A. They will indicate the growth and development of the merchandising, and the growth and development of the company itself—the growth of its capital, the growth of its own worth, the growth of its business.

Q. That growth is given over a period of what?—A. Ten years, generally.

Q. Generally speaking, a ten-year period?—A. Yes.

Q. With a reference to the earlier history, in order that one might get a picture of the whole situation?—A. Yes; we thought it proper and fair to take ten years, because five years would only have brought us back to the commencement of what is commonly called the depression period. We therefore went back another five years until we got into what is known as the period of expansion.

NOTE:—While the above figures relate to the regular employees there were employed during the week ending 2nd April, 252 extra selling clerks at wages ranging from $1.50 per day to $4.00 per day.

It has been and still is the practice of the Company to call in extra selling clerks for special Sales Days. These extra employees are not required to stand by waiting for employment but are called by telephone from a specially prepared list when they are required. Woodward Stores Limited frequently put on what they call their "95 Cent Day" and on such days from 500 to 700 extra clerks may be employed.

The first statement I show you is a copy of the balance sheets of Woodward Stores Limited, for eleven years ending January 31, 1934. I should explain here that in all the statements we shall submit, the close of the year does not coincide with the calendar year. The department stores usually close their accounts sometime in January. In the case of Woodwards, they close them on January 31. The statement shows that at January 31, 1924, the total assets of Woodwards were $1,641,000, and their capital was $1,000,000 with a surplus of $194,000, or a shareholders' equity of $1,194,000. In the 11-year period, the assets of Woodwards grew to $6,699,000 and the equity of the shareholders to $5,529,000, consisting of $5,000,000 of share capital and $529,000 of surplus.

Q. The surplus has grown from $194,320.54, in 1924, to $529,382.31, in 1934?—A. Yes. I should say, in explanation, that the surplus actually grew from $194,000 in 1924 to $2,700,000 in 1930.

Q. That is, in the six-year period the increase was that?—A. $2,500,000.

Q. $2,500,000 approximately?—A. Yes, approximately. At that date the company went through a reorganization of its capital. The fixed assets of the company were appraised; the appraisal value was put upon the books, and together with the surplus made an amount for which new capital was issued in the amount of $5,000,000. The capital was issued to the previous holders, substantially. There was no change in the ownership and no invitation to the public to subscribe for shares.

Q. By what amount were the assets written up in 1930?—A. Something over $1,000,000. There was a surplus, at the time of the reorganization, of $3,100,000. There was a capital of $1,250,000 at the time. The difference between that and $5,300,000 represents the amount for which the assets were written up—approximately $1,000,000.

Q. Approximately $1,000,000?—A. Yes.

Q. Then the surplus was absorbed?—A. Yes, the surplus was absorbed.

Q. And the capital write-up of approximately $1,000,000, together with the existing capital, constituted the consideration for the issue of the new capital of $5,000,000?—A. That is right.

Q. At the present time the shares issued and outstanding amount to $5,000,000?—A. $5,000,000.

Q. Then on January 31, 1932, you had the appearance of a new surplus?—A. A new surplus.

Q. What was the amount of that?—A. $300,000.

Q. $300,517.57?—A. Yes.

Q. Which, in 1933, grew to $378,907.97?—A. Right.

Q. And at January 31, 1934, had grown to $529,382.31—A. Yes.

Q. A surplus from operations?—A. A surplus from operations.

Q. Surplus profit from operations?—A. Yes, surplus profit from operations.

By Mr. Young:

Q. That means there was no new money put into it from the beginning, does it?—A. There was no new money. The profits of the business were what is called "ploughed back" into the business.

By Mr. Sommerville:

Q. Then, what was $1,641,000 in 1924 is now $6,699,000, in 1934?—A. That is right. Those are the assets.

Q. And held by practically the same shareholders?—A. By substantially the same shareholders.

Q. This is a private company?—A. A privately owned company, no outside shareholders of any kind. I think the Woodward family and their immediate relatives hold well over 90 per cent of the shares.

Q. You are going to indicate to us the dividends that have been paid in the meantime?—A. Yes, I will do that. It comes in the ordinary course. I was wondering if I might go on with the next statement and just bring out that point.

Q. Very well?—A. The second statement is the statement of operating accounts for the ten years ending January 31, 1934. You will see on the top of the page the sales each year, and a little lower down you will see the gross profit; then, as against that, the expenses are detailed in fairly good detail, and the operating profit is shown at the bottom. The operating profit from the actual operations of the store itself is what I am dealing with on this particular statement.

If you turn to the next sheet, you will find the operating profit carried forward, and certain other sundry incomes and expenditures added and the net profit for the period, which is down at the middle of the sheet. Following that still further, under the heading of surplus account, is shown the dividends paid each year.

By Mr. Young:

Q. Is that in addition to what is "ploughed back"?—A. Yes. The dividend has been paid.

By Mr. Sommerville:

Q. In the operating account, will you just indicate the increase in the volume that has taken place in the sales in that period of time?—A. In the year 1924,—that is, the year ending January 31, 1925,—sales of $5,480,000; that grew to a peak in the year ending January 31, 1932, of $10,050,000.

Q. You are giving us the figures approximately, or the odd figures?—A. I am giving you the odd figures, to the nearest thousand. Is that convenient? It will save a lot of dollars and cents.

Mr. Young: It suits me all right.

Mr. Sommerville: Yes.

The Witness: That dropped to $7,836,000 in the year ending January 31, 1934.

By Mr. Sommerville:

Q. But in the ten-year period the sales totalled what?—A. $82,000,000.

Q. And the gross profits in that period were what?—A. The gross profit fluctuated from the low in 1925—that is January 31, 1925. I will try and make that clear as I go along—of $936,000 to a peak in 1932 of $2,287,000.

Q. That was their biggest year in gross profit?—A. That was their biggest year in gross profit.

By Mr. Heaps:

Q. What was it in the last year?—A. In the last year it was $1,939,000.

Mr. Kennedy (*Peace River*): The biggest gross profit was in what year?

Mr. Sommerville: The biggest gross profit was in the year ending January 31, 1932, the twelve months period.

The Chairman: Thirteen months.

The Witness: Yes, thirteen months period.

Mr. Sommerville: I beg your pardon, for the thirteen months period, to the end of the year.

By Mr. Sommerville:

Q. The gross profit for the year ending January 31, 1934, was $1,939,000?—A. Yes.

Q. In the matter of expenses, I observe that during that period they had expended on advertising $1,092,000?—A. Yes.

Q. Rising from the low of $80,000 in the year ending January 31, 1925, to a peak of $132,000 for the year 1931?—A. Yes.

Q. And for last year, advertising of $107,000?—A. Yes.

By Mr. Kennedy (Winnipeg):

Q. Before you leave that item of advertising, is that the cost of money paid out for advertising or does it include allowances?—A. That is the cost of the money paid out for advertising in this case.

By Mr. Sommerville:

Q. Then I observe that wages, salaries and bonuses,—at the bottom of the page—had increased from $498,000 in 1924 to a peak of $1,212,000 at the end of January, 1932, and last year were $952,326.69?—A. Yes.

By Mr. Heaps:

Q. What about the number of employees in the same period?—A. I am coming to that, Mr. Heaps.

Mr. Heaps: Unless we have the number of employees we can't tell very much.

Mr. Sommerville: We will get that picture very fully.

By Mr. Sommerville:

Q. Then, this operating account will give you a record of the development of the business?—A. Yes.

Q. From an operating standpoint?—A. Yes.

Q. And the growth of the buying power of the company in that time?—A. Yes.

Q. Then I observe that you carry forward onto the next page, folio 3, that the net profits for the period—item 29—is an amount of $5,045,000?—A. That is right.

Q. That rises from a low of $213,000 in 1924 to a peak of $736,000 at January 31, 1930?—A. Yes.

Q. That is their most profitable year, in net profits. That drops to an amount of $484,000 at January 31, 1934?—A. It might be a matter of wonder to some of the members of the committee, and I can perhaps explain it, that the profits in 1930 were greater; that is, in the 1929 calendar year were greater than those of the year 1931, although the peak of the business was in 1931. My explanation is that in 1931 bonuses were paid on the accumulated profits amounting to $200,000 more than the salary expenses of the year 1929; just about the same difference.

By Mr. Heaps:

Q. Who were the bonuses paid to?—A. The employees.

Q. Which employees?—A. Everybody from the management down; that is, I won't say everybody. I would not like to say everybody got it, but generally, there was a system of bonuses paid in the year 1931.

By Mr. Sommerville:

Q. And that added substantially to it?—A. That added to the operating costs $200,000. There were no very large bonuses—I know what your question involves—no very large bonuses paid to the management.

Q. Was it in pursuance of a general system or was it an exceptional amount at that time?—A. I think, Mr. Sommerville, it was a distribution by the manage-

ment. In view of the substantial profits that the company had made, they felt generous towards their employees in that year, and gave them a little extra money.

Q. Now, in addition to the growth in the surplus that has been referred to previously from $1,600,000 to $6,600,000, what amount of dividends had been paid in the meantime to the shareholders of this company?—A. About $980,000.

Q. About $980,000 of dividends paid out?—A. Yes.

Q. Out of the surplus that was accumulated there was transferred to share capital at the date of reorganization, in December, 1930, I observe, a sum of $3,195,000?—A. That is right, yes.

Mr. HEAPS: Mr. Sommerville, would it not be as well if you put in the record the turn-over of the firm in that same period?

Mr. SOMMERVILLE: The sales have already been put on the record.

The CHAIRMAN: Have you got a copy of this?

Mr. HEAPS: I didn't get one.

The CHAIRMAN: You will find it at the top of the second sheet.

By the Chairman:

Q. What do you say those dividends were over the period?—A. $980,000, roughly.

By Mr. Kennedy (Winnipeg):

Q. What folio are you reading from that shows that?—A. The third page. I don't know whether it is number three with you, but it is the second half of the profit and loss account.

Q. There was not a total here?—A. I totalled them. It was not totalled.

By Mr. Sommerville:

Q. After the payment of those dividends, the transfer of this surplus to capital account and the payment of income tax, there now remains in surplus account a balance of what?—A. $529,000.

Q. $529,382.31?—A. Yes.

Q. I observe the dividends have been very largely increased since the years 1928-1929. Up to 1928 they were $70,000 a year?—A. Yes, that is right.

Q. 1929, $87,500; 1930, $113,000; 1932, $116,666; and 1933, $155,920, and 1934, $155,920?—A. Yes. They have been increased. They are not, as a matter of fact, though, any higher in relation to the profits.

Q. They are not any higher in relation to the profits. They are larger?—A. They are larger in amount, but actually a smaller percentage of profit has been distributed in later years.

Q. What is the entry for the 31st of January, 1933, shareholders special advances written off?—A. I am informed by agents in Vancouver in this case—I didn't make a personal examination—that those were advances that were made to certain of the Woodward family, perhaps you might call them in anticipation of dividends, and were written off at that time.

Q. So that in addition to the $980,000 in dividends they received an additional $201,000?—A. That is right.

Q. Or a total of about $1,180,000?—A. Yes.

By Mr. Kennedy (Peace River):

Q. Were they getting salaries on top of dividends?—A. Oh, yes.

By Mr. Sommerville:

Q. In addition to dividends, the executives were getting salaries?—A. Yes.

Q. The salaries in this company are very reasonable?—A. Very moderate in this company.

Q. Very moderate in this company?—A. Apart from dividends, the salaries are moderate.

Q. Now, the next statement is departmental operating statement?—A. For the last year of operations, the year 1933, ending on January 31, 1934, and this will show the department, the sales of that department, the cost of those sales, the gross profit and the mark-up percentage.

Mr. SOMMERVILLE: Just a minute. These statements had better be printed into the record, had they not?

The CHAIRMAN: Yes, I think so.

Mr. SOMMERVILLE: These statements that have already been filed will be printed as part of the record. They will come first. And so with the departmental mark-ups.—A. Shall I go on?

Q. Yes.—A. That shows that on sales of $7.836.838 in the last year of operations, there was a gross profit of $2,045,029.63, or an average mark-up of all departments of 35·31 per cent.

Q. Is that the actual mark-up on the cost?—A. That is the mark-up on the cost.

Q. The laid down cost?—A. The laid down cost. Now, if we eliminate from that the grocery and food departments we would get an average mark-up of 42 per cent on all departments on cost.

Mr. HEAPS: What was the grocery mark-up?

By Mr. Sommerville:

Q. If we eliminate the grocery and food mark-ups.—A. I have not worked it out, but I could very easily.

Q. Eliminating the grocery and food mark-ups leaves a gross mark-up of 42 per cent on all the other items?—A. The grocery was 22·4 per cent.

Q. The grocery is 22·4 per cent. Generally speaking, throughout the department stores you have examined, grocery and food departments show a low mark-up?—A. Yes.

Q. And then because it is a low mark-up in the one department, it tends to bring down the average of the whole?—A. That is quite so.

Q. And it does show the more in proportion to the volume in that grocery or food department?—A. Quite right, and the reason was that the sales in the grocery department are $1.878.967.91 out of a total of $7,836.838, or 25 per cent of the whole.

Q. 25 per cent of the whole business was in the grocery and food departments?—A. Yes.

Q. Because of the grocery department representing 25 per cent of the entire sales, it has a very important effect upon the whole average of mark-up, when you include the grocery mark-up in the statement?—A. Quite so.

Q. By eliminating it, then you get a 42 per cent mark-up on the cost of the remainder of the goods that are covered by the departmental figures that you have submitted?—A. Yes.

Q. Now, let us take some of those samples. In your candy department, you have a mark-up of 64·05 per cent?—A. Yes.

Q. In your dry goods, draperies, you have a mark-up of 51·13 per cent; in your dry goods, notions, you have a mark-up of 49·29 per cent?

Mr. KENNEDY *(Winnipeg):* The hairdressing has a mark-up of 719·05 per cent.

By Mr. Sommerville:

Q. We will come to that. On drugs you have a mark-up of 54·34 per cent; fruit and vegetables a mark-up of 32·51 per cent; fish has a mark-up of 33·90 per cent; fresh meats have a mark-up of 40·57 per cent?—A. Yes.

Q. Gents furnishings have a mark-up of 46·12 per cent?—A. Right.

Q. Hardware has a mark-up of 52·32 per cent. Hairdressing shows a large mark-up, but that is because it is only the cost of materials that are taken into consideration?—A. Yes.

Q. Labour has to come out of that?—A. Yes, and if you take the work-room, what was called the work-room expenses, wages, out of that, you will reduce that mark-up very substantially, as you will see in the next column. It does not really mean anything. The hairdressing department, strictly speaking, should be eliminated from that merchandising, to arrive at a fair mark-up. It does not amount to anything.

By Mr. Kennedy (Peace River):

Q. How much does it affect the general average?—A. It affects it so little that it has not been eliminated.

By Mr. Sommerville:

Q. Kitchenware was marked-up 49·05 per cent. Then, the lunch counter figures in the same way, does it not? You have all your wages to come out of that mark-up?—A.Yes.

The CHAIRMAN: No, excuse me.

The WITNESS: No, not in the lunch counter. Wages would be in.

The CHAIRMAN: That is 98 per cent.

By Mr. Sommerville:

Q. 98 per cent?—A. You will find very violent fluctuations as you go through the department stores between the mark-up of lunch counters.

Q. Then you have mantles marked up 38·32 per cent; men's shoes 39·94 per cent; men's clothing 47·16 per cent; picture frames 70·60 per cent; toys 50·01 per cent; toilet goods 45·96 per cent?—A. The committee will understand this point: These mark-ups are maintained mark-ups, the final figures.

Q. The finally maintained mark-up?—A. Yes, after any mark-downs for the sales of any slow-moving goods at lower prices, stock shortages, losses on merchandise or anything of that kind; these are the maintained mark-ups.

Mr. KENNEDY (*Winnipeg*): These are the mark-ups on the original invoices?

The WITNESS: No; we will come to that a little later on.

By Mr. Young:

Q. In arriving at the average of 35 per cent, you took into consideration the quantity of turnover in each department, did you?—A. Oh, yes.

By Mr. Sommerville:

Q. The turnover in every department is taken into consideration in getting your average. In other words, it is a weighted average?—A. It is a weighted average.

Q. For instance, in a department you may have a mark-up of 60 per cent; but suppose you had a sale of clearances, where they had reduced everything to 10 per cent that was included in the sale, that would bring down the average on the whole department?—A. Yes, quite so.

Q. Although it might not reflect itself in any reduction on any of the items except perhaps the articles that may have been included in the sale?—A. Quite so.

By Mr. Heaps:

Q. Was this firm entirely a cash trade firm?—A. No, there was some credit given. The credit is not very large. They had on the 31st January,

1934, $102,000 on general accounts, and $56,000 of a balance on goods sold under lien.

Q. It is practically a cash trade?—A. Practically a cash business, very small credit. We have not that printed, Mr. Sommerville, the one you have now. I think perhaps now we might give you some samples of the price spreads.

Q. Coming to the purchases in the departments themselves, you have, for instance, butter?—A. Yes.

Q. What did you find with respect to the butter department in this firm?—A. This firm made a loss on all butter sold in the year 1933.

Q. All the butter which they sold in 1933 was sold at a loss?—A. Sold at a loss.

Q. These departments are recognized as loss leader departments?—A. I think it is fair to say that the butter and eggs department—the eggs show a profit, but the butter shows a loss right throughout.

Q. It is part of the policy of this company throughout to sell its butter at cost or less than cost?—A. Yes, I think that is so.

Q. And that makes that item one of those that has been generally referred to here as a loss leader?—A. Yes.

Mr. YOUNG: This 17·07 per cent mark-up must be attributable to the eggs?

The WITNESS: It is attributable to the eggs.

The CHAIRMAN: Biddy carries the load.

By Mr. Sommerville:

Q. In addition to the butter, what other items were made regular loss leader departments by this firm?—A. Well, the outstanding item in this firm is bread.

Q. Bread?—A. Yes; the firm sells a one-pound loaf of bread, or two one-pound loaves of bread for 7 cents, or 3 for ten. The bread costs, as nearly as can be arrived at, and it was confirmed, when we had arrived at it, by the officials of the company, 4½ cents.

Q. The bread that costs them 4½ cents they sell at 3 for ten?—A. Three for ten.

Q. And that is a consistent, steady policy of the firm?—A. A consistent, steady policy of the company to sell their bread as a leader at less than cost.

Mr. HEAPS: Do they buy this bread or manufacture it themselves.

The WITNESS: They bake it, make it themselves.

Mr. SOMMERVILLE: On the premises?

The WITNESS: On the premises.

Mr. YOUNG: And yet they have a mark-up of 80 to 90 per cent on their bakery?

The WITNESS: That would be before taking in the labour and the cost of their bakery.

By Mr. Sommerville:

Q. What else did you find, by the way?—A. Including the labour, the calculation we made was that the ingredients cost per loaf 2·46 cents—2·246; the labour cost was ·721, 7/10ths of a cent, depreciation, electricity and sundry supplies cost ·453 cent, less than half a cent.

Mr. YOUNG: For a one pound loaf?

The WITNESS: For a one pound loaf.

Mr. HEAPS: How does that compare with the other numbers you have there?

Mr. SOMMERVILLE: I cannot tell you offhand, but we will compare it.

The WITNESS: The proportion of overhead that is charged to the bakery, consisting of a monthly charge for rent, management, wages etc., was .149 cents. The total cost of manufacturing the bread was 3.569 cents, selling cost .925 cents, making a total cost of 4.494 cents, practically 4½ cents, as against a selling cost of 3½ cents a loaf.

By Mr. Sommerville:

Q. And they deliver this bread in their delivery system?—A. They would deliver it on orders for other goods; they do not make a special delivery like a baker.

Q. I do not mean that they send delivery wagons to deliver bread from door to door?—A. No.

Q. But the price that is quoted for this bread is the delivery price?—A. Yes.

Q. When ordered by their customers?—A. Yes.

The CHAIRMAN: And it is used as a leader.

The WITNESS: It is used as a leader.

Mr. KENNEDY (*Winnipeg*): Let me get that point clear. Under the heading of bakery, you show the mark-up percentage as 80.93 per cent; after taking into consideration the wages, you show the net mark-up to be 48.28 per cent.

The CHAIRMAN: There are other things in there.

The WITNESS: Quite right. That 48.28 per cent is the mark-up in the bread before you apply the general departmental expenses. Now, in giving the cost of a loaf of bread, I have taken everything into consideration. Let us take any other article. If you take a man's overcoat, you might find a man's overcoat marked up 40 per cent, but if you apply the cost of the department, the selling price, and the overhead of the department—

Mr. KENNEDY (*Winnipeg*): I realize that.

The WITNESS: It shows the cost; the same thing applies on bread.

Mr. KENNEDY (*Winnipeg*): 48 per cent seems quite a mark-up, yet in spite of that it is operated at a loss.

The WITNESS: At a loss.

Mr. KENNEDY (*Winnipeg*): Is that carried through on the sheet to show a loss?

The WITNESS: No, I have shown on the separate statement the figures I have given just now.

By Mr. Sommerville:

Q. But you show the net departmental profit or loss on the whole bakery department to be a profit of $496.—A. Quite so.

Q. On all the bakery products?—A. On all the bakery products.

Q. And then this 48 per cent also includes other bakery products such as cakes?—A. Yes.

Q. And the supplies that are sold by the bakery?—A. Yes. They have quite a large sale of cakes and biscuits, home made cakes and things like that.

Q. That 48 per cent is the average? On the basis that you have indicated, the balance of the product must have a substantial market?—A. It would.

Q. In excess of 48 per cent?—A. Yes, it would, of course. Take cakes; they are a very profitable item.

Q. Now, you show bread and butter as leaders. What other leaders in that store do you recall as consistent leaders sold at a loss?—A. I think we can say

there were not consistent—that no items were consistently sold, but there is undoubtedly the policy of selling from time to time, articles as loss leaders. For instance, I can give you an instance now. On the 28th February, 1934, this company purchased from the B. C. Sugar Refinery, 240 bags of fine granulated sugar, 24,000 pounds, at $4.60 less 6 per cent trade discount, plus 2 cents per pound excise tax, or a net price to Woodwards' of 6.324 cents a pound. Sugar at that time, that month, cost, I would say, the independent retailer 6.6 cents per pound.

Q. 6.6 cents?—A. A little more.

Q. To the independent retailer?—R. Yes.

Q. From the refinery?—A. From the refinery, because of all the elements I have given, excise tax and so on. Woodwards obtained it through a special trade discount at a little less. Woodwards sold that sugar for 5.9 cents.

Q. 5.9 cents?—A. Yes. I won't say that was the common practice, but there was that particular case on that day.

Q. During that month?—A. During that month. On the 7th January, 1934, they purchased from the Royal Crown soap company, 54 cases of Crown Olive soap, in which they got 24 cases free. It is a policy, I think, of some of the soap companies, to give soap free—

Q. 24 cases of that soap was given free?—A. With 54 cases of 72's,—A. I do not know what the size of the 54 cases would be.

Q. They had 54 cases and they got 24 cases free?—A. Yes, and the purchase price was equal to 38·4 cents a dozen, which was sold by Woodwards at 2½ cents a cake.

Q. The 38·4 cents included their cost?—A. Yes.

Q. And the whole were sold at—A. Thirty cents a dozen.

The CHAIRMAN: It cost what?

The WITNESS: 38 cents a dozen.

Mr. HEAPS: What would be the loss on the total transaction?

The WITNESS: It was only a purchase of $180. You can get a lot of soap for $180. It would probably be around $40 on that one transaction.

By Mr. Sommerville:

Q. Yes?—A. And there are some other indications of it. I have not taken a list of them all; I thought one or two instances would be—

Q. Indicative?—A. Indicative of the fact that they do sell from time to time what is known as loss leaders.

Mr. KENNEDY (*Winnipeg*): The only two consistent commodities were butter and eggs?

The WITNESS: That is the only two we could find in the time—

Mr. YOUNG: Have you any means, Mr. Nash of knowing whether their bakery is efficiently managed or not?

The WITNESS: I think it is.

Mr. YOUNG: You think it is?

The WITNESS: Yes.

The CHAIRMAN: I do not think it would be there if it were not.

The WITNESS: I think it has to be consistently managed from what I know of the bakery situation in Vancouver.

By Mr. Sommerville:

Q. The bakery situation is a bad one?—A. The worst thing in the whole country, I think, in Vancouver.

Q. I understand the baking trade in Vancouver is in a worse condition there than any other part of the country?—A. I believe so; I know it, from a study of it.

Q. I think you are peculiarly familiar with the baking industry?—A. Yes, I know it.

Q. You had charge of the Maple Leaf Milling Company?—A. Yes.

Q. For some years?—A. Yes.

Q. Still?—A. No; I resigned actually from the board three years ago—from the management—I resigned from the board one year ago.

Q. What do you say as to the complaints that have been made to us so freely by the baking industry in Vancouver, that a large portion of their problem is created by the fact that bread is sold as a loss leader and the rest of the bakers have to try to meet it without the reserves behind them that Woodward's has, or the other stores have that are using bread as a distinct loss leader?—A. That is what I found.

Q. You found that that was the practice?—A. The larger bakers, those that have the milling companies behind them, are finding it difficult, but the small baker who has not the reserves cannot make bread and sell it at 3½ cents. It cannot be done.

By Mr. Kennedy (Winnipeg):

Q. Mr. Nash, did the officials of Woodward's intimate to you that they sell bread and butter as consistent loss leaders?—A. Not particularly.

Q. Did you make any inquiries as to that?—A. I did not make this investigation myself entirely. I went out there and instructed our agents in Vancouver to do it and told them the brief picture we wanted to gather, and I did not discuss or have an opportunity to discuss the reasons with the Woodward officials.

Mr. EDWARDS: Would the reason not likely be this, that the articles are common to every home?

The WITNESS: I think that is probably the case.

Mr. KENNEDY (*Winnipeg*): I wondered if they said that.

The WITNESS: No, they did not indicate that to me, but I gathered that was the case. I think there is no doubt about it.

Mr. KENNEDY (*Peace River*): That would also be true of sugar and soap.

The WITNESS: They are common household goods.

Mr. KENNEDY (*Winnipeg*): Cheap butter and bread would draw the people.

The WITNESS: It certainly draws the people. We find it often in Toronto; bread was also found at prices the bakers could not compete with.

By Mr. Young:

Q. Why does it draw the people, Mr. Nash?—A. Because I think it is a common household good; everybody has to have it.

Q. Why will they go into one store and get it, to save a cent?—A. I think most of us would do that.

Q. Is it because they need the cent?—A. I think it is.

By Mr. Sommerville:

Q. At any rate, the bread is sold at this loss, and so it creates the impression of cheap sales?—A. Yes.

Q. And it is a fact?—A. It is a fact.

Q. Now, with reference to your department of eggs. You have already intimated that there is a mark-up there?—A. The mark-up averaged from 23 per cent down to a very little; but the average mark-up is 17 per cent.

Q. What is the next department you dealt with?—A. Boots and shoes. We find the mark-up averages all the way from 100 per cent down to 10 per cent.

Q. We do not want to publish the names?

The CHAIRMAN: No.

By Mr. Sommerville:

Q. I just want to indicate some of those mark-ups in the individual departments?—A. Yes.

Q. That are made in shoes? Here are black suede three-eyelet tie shoes, total cost— —A. They cost $3.89, sold at a mark-up of $8.50. I do not want to tire the committee on explanations, but I want to say this was the initial mark-up. They were marked up to $8.50 or 118 per cent.

Q. Misses' black calf oxford shoes?—A. Cost 89 cents. Marked up to $1.79, or 110 per cent.

Q. Profit of 90 cents? Brown kid oxford tongue shoes?—A. Cost $3.15 and they marked up to $5.85 or 85 per cent.

Q. The next item is G. M. oxfords?—A. Cost $1.47 marked up to $2.69, 82 per cent.

Q. Gent's black calf Blucher shoes, cost $1.64 marked up to $2.95.

Q. Marked up— —A. 80 per cent, practically.

Q. Women's black calf tie shoes?—A. Cost $1.65, marked up to $2.95, 78 per cent.

Q. Women's black's dong. four-eye tie shoes?—A. Cost $2.16, marked up $3.85, 78 per cent.

Q. You have a number of these items with similar mark-ups. Let us come down to a more modest mark-up?—Take your Dominion Rubber women's plain over Vine—

Q. That is a large item?—A. The shoe cost 52 cents, the labour, marked up to 79 cents, a mark-up of practically 52 per cent.

Q. That is a large item. Take the item just before that, girls, cream and brown oxfords? A. Cost $1.94, marked up to $3.95.

Q. A profit of $1.01?—A. 52 per cent.

Q. Then you come down to the last mark-up here?—A. Indian Slipper called the Indian Lorette, Women's Indian slippers, black cape, cost 85 cents, marked-up to 95 cents, a mark-up of 11·76 per cent.

Q. That was a large selling item?—A. That was a large selling item.

Q. That large selling item with the low mark-up reduces the average on the whole?—A. Oh, yes. So after the markdowns and adjustments, sales of all the off stock, the average mark-up of each department was 49·73 per cent.

Q. The average mark-up maintained in all departments after all mark-downs was 49·73 per cent?—A. Yes.

Mr. HEAPS: How is that average arrived at, Mr. Nash?

The WITNESS: We took all the sales, and all the profits, and divided one into the other.

Mr. HEAPS: In the items where there was a large mark-up, were there many sales?

The WITNESS: Oh, yes.

Mr. HEAPS: On the shoes that cost $3.70 and sold for $8.50?

The WITNESS: Yes, some of them had pretty substantial sales.

Mr. KENNEDY (*Peace River*): The average is a weighted average.

The WITNESS: Yes, a weighted average.

By Mr. Sommerville:

Q. That very item you refer to, 240 pairs——A. In the one purchase.

Q. Most of the items vary from 30 and 40 up, while the item that has an 82 per cent mark-up had 120 pairs.

Mr. HEAPS: Take the case of the low items, where the percentage is rather small.

Mr. SOMMERVILLE: 700 pairs of the women's Indian slippers would be the largest item in the entire lot.

Mr. YOUNG: Does this appear to be the general rule with the cheaper lines? Take the lowest mark-up.

The WITNESS: No, I do not think I can say that.

By Mr. Sommerville:

Q. Here is a line, with a cost of 89 cents. The mark-up is $1.79, which is a mark-up of 101 per cent. Here is a line that cost 71 cents marked up to $1.25, 76 per cent?—A. I think it would be fair to answer your question in this way, that the highest price goods and the more fancy goods, such as—we come to some of them in the ladies' dress department, the highest priced dresses; they carry a larger mark-up than the cheaper dresses. I do not think you can apply that right throughout. I have not completed my study that I am making as to the lower prices. I cannot answer that question, and naturally I would not like to say—

Q. Does the amount of labour involved in fitting a customer affect the mark-up? I mean, those lines that require a lot of fitting, are they marked up on a higher margin than those that are easily fitted?—A. Of course the fitting cost would certainly be added to the cost of manufacture.

By Mr. Young:

Q. Does the amount of labour involved in fitting a customer effect the mark-up? I mean, in those lines that require a lot of fitting, are they marked at a higher mark-up than those that are easily fitted?—A. Of course, fitting costs would certainly be added to the cost of manufacturing.

Mr. SOMMERVILLE: In selling.

Mr. YOUNG: For instance, a man might go into a store to buy a pair of boots, and might be out in five minutes. Another would go in—and this would be a lady—and she would be there a long time.

The CHAIRMAN: Order.

By Mr. Heaps:

Q. Would not fashion have something to do with it?—A. Fashion?

Q. Fashionable goods would have a higher margin, would they not?—A. Yes, I think that is a fair statement.

By Mr. Young:

Q. The amount of labour involved in finishing a boot to suit individual tastes and fitting of the customer does not affect the mark-up?—A. No, I don't think so.

By Mr. Sommerville:

Q. Take for instance the item that you have got here of patent buckle strap shoes. I observe here the cost was $1.05. It is written up to $1.75, a 66 per cent mark-up on that item?—A. Yes.

Mr. SOMMERVILLE: That is a comparatively cheap shoe, and easily fitted, one would think—a slipper.

The CHAIRMAN: Mr. Young would know.

Mr. SOMMERVILLE: He ought to know.

By Mr. Sommerville:

Q. Take the next department, samples of mark-ups in boys' clothing?—A. The boys' clothing go from 96 per cent to 25 per cent of cost. The average mark-up percentage for 1933 was 35·62 per cent.

Q. The average actually maintained was 35·62 per cent?—A. Yes.

Q. For instance, the first item I observe on your sheet is boys' black cape gauntlet gloves, 600 pairs?—A. Cost 50 cents, marked up to 98 cents, 96 per cent mark-up.

Q. Aviation goggles; that is not a very large item, but it is 600 pairs?—A. Marked up from 51 cents to 98 cents, a mark-up of 92·16 per cent.

Q. The next is gloves?—A. Yes, cheap gloves. The cost was 54 cents, marked up to 98 cents, an 81·48 per cent mark-up.

Q. I see a large item here of knitted sweaters. What about them?—A. They cost 83 cents, were marked up to $1.49, or 79·52 per cent.

Q. I observe here boys' 4-piece suits, 225 of them?—A. They cost $9.48, and are marked up to $15.95, a mark-up of 68·25 per cent.

Q. I observe that these are supplied by a firm about which we have already had evidence, where they were prosecuted for not paying the minimum wage?—A. We shall be reporting on that firm later.

Q. Take the next item which is boys' combinations?—A. Yes. Cost, 42 cents; marked up to 69 cents, or a 64·20 per cent mark-up.

Q. The next is boys' long trousers?—A. 96 cents cost, marked up to $1.49, a 55·21 per cent mark-up.

Q. Here is a very large item of gloves?—A. Boys' gloves.

Q. 1,200 pairs of gloves?—A. Cost 46 cents, marked up to 69 cents, a 50 per cent mark-up.

Q. There is a small mark-up here on boys' shorts?—A. Cost 55 cents, marked up to 69 cents, a 25·45 per cent mark-up.

Mr. HEAPS: Were these shorts that were made for about 2 cents apiece?

Mr. SOMMERVILLE: I am sure they were.

The WITNESS: I didn't see the goods.

By Mr. Sommerville:

Q. But these are fair samples that you are choosing throughout the mark-ups?—A. Yes.

Q. And in choosing them, you have chosen items in which there was a substantial sale?—A. Yes. My instructions throughout to everybody was not to pick any high or low or medium, but all of them, some of all, as purely indicative of the method.

Q. And to choose items that were representative of large commodity sales?—A. Yes, as far as possible.

Q. Take for instance some items in the dry goods department, ladies' underwear?—A. There is one very large item there which you perhaps might take, rayon underwear.

Q. Rayon underwear?—A. Yes, 6060.

Q. Sets or pieces?—A. I don't know whether that is sets or pieces. They cost 34 cents, are marked up to 59 cents, a 73·53 per cent mark-up.

Q. What about pure silk dresses, the second item?—A. They cost $1.07, are marked up to $1.97, an 82·24 per cent mark-up.

Q. What about sleepers?—A. Sleepers cost 35 cents, marked up to 59 cents, a 68·57 per cent mark-up.

Q. Pyjamas?—A. Cost $1.27, marked up to $1.95, a 53·54 per cent mark-up.

Q. What about creepers?—A. Creepers cost 65 cents, marked up to 98 cents, or a 50·77 per cent mark-up.

Q. Here are some bathing suits, a large item?—A. Cost $1.25, marked up to $1.95, a 49·03 per cent mark-up.

Q. Here is an item that I thought had passed out of existence, corsets. There is not a great quantity?—A. They cost $2.71, marked up to $3.95, a 45·76 per cent mark-up. The average maintained mark-up of that department is 41·86 per cent.

Q. The average maintained mark-up in the entire department?—A. Yes.

Q. Next we have the drug department. First we have mineral oil, 90 gallons. That is a large quantity?—A. Cost $1.20, marked up to $3, a 150 per cent mark-up.

Q. The next is rubbing alcohol. What is that for?

Mr. Heaps: Rubbing.

The Witness: Cost 27 cents, marked up to 65 cents, a 140·74 per cent mark-up.

Mr. Sommerville: That is what they find under the park benches.

By Mr. Sommerville:

Q. What about Balmoral decorated 3-piece sets? Apparently it is something like celluloid?—A. Cost $4.49, marked up to $8.95, a 99·33 per cent mark-up.

Q. What about LaSalle cotton?—A. Cost 32 cents, marked up to 59 cents, an 84·38 per cent mark-up.

Q. Empty kit cases?—A. Cost 43 cents, marked up to 79 cents, an 83·72 per cent mark-up.

Q. Beef, iron & wine?—A. Cost 56 cents, marked up to $1, a 78·57 per cent mark-up.

Q. Tabloid thyroid, 5 grain, 100's?—A. Cost 95 cents, marked up to $1.50, a 57·90 per cent mark-up.

Q. Rolls razors?—A. Cost $4.10, marked up to $6.50, a 58·54 per cent mark-up.

By Mr. Heaps:

Q. Is that a standard article?—A. Rolls?

Q. Is that a price that is regulated by the manufacturer?

By the Chairman:

Q. Is it not a standard brand article?—A. I was going to say that my own personal knowledge is you can buy them at different prices.

By Mr. Sommerville:

Q. It is not a maintained price?—A. I don't think the price is maintained.

Q. Take aspirin, for instance, Bayer's aspirin?—A. Cost 66 cents a bottle of 100, I think, marked up to 95 cents, a 43·64 per cent mark-up.

Q. Wincarnis?—A. Wincarnis cost 91 cents, marked up to $1.29, a 41·76 per cent mark-up.

Q. Dr. Chase's nerve food?—A. Cost 37 cents, marked up to 52 cents, a 40·54 per cent mark-up.

Q. Let us go down to some of these maintained items. Is Fruit-a-tives in the maintained items?—A. I think probably it is, Mr. Sommerville. It cost 31 cents, marked up to 39 cents, a mark-up of 25·80 per cent.

Q. Burdock Blood Bitters?—A. Cost 78 cents, marked up to $1.
Q. That is a 28 per cent mark-up?—A. Yes, a 28·20 per cent mark-up.
Q. Then you have Castoria?—A. Cost 28 cents, marked up to 34 cents.
Q. A 30 per cent mark-up?—A. Yes, a 30·77 per cent mark-up.

Mr. HEAPS: Have you got Eno's fruit salts there?

Mr. SOMMERVILLE: We have got something just as good.

The CHAIRMAN: You seem to want Eno's.

The WITNESS: We have some Kruschen salts.

Mr. SOMMERVILLE: They won't do.

By Mr. Sommerville:

Q. What about Kruschen salts?—A. Cost 48 cents, marked up to 63 cents, a 31·25 per cent mark-up.

Q. You notice that all these lower mark-ups are on articles that are nationally advertised?—A. Largely so, yes.

Q. And many of them are maintained price articles?—A. Yes.

Q. As against some of these items that are not so advertised or maintained? —A. Yes.

Mr. HEAPS: What was the average mark-up in the drugs?

By Mr. Sommerville:

Q. Yes, the average maintained?—A. 54·34 per cent.

Mr. HEAPS: It is not so bad for a price maintained.

Mr. SOMMERVILLE: See how they have made it up, though.

Mr. HEAPS: Yes.

Mr. SOMMERVILLE: Notice the 150 per cent, 140 per cent, 99 cent per cent.

By Mr. Heaps:

Q. In the drug section you would have all the other standard articles, would you not?—A. Yes.

Q. Such as toothpaste and all that?—A. Yes.

Q. On which the profits are extremely low?—A. Yes, in many cases.

Mr. HEAPS: That would counteract it.

By Mr. Sommerville:

Q. Now, take furniture?—A. The mark-ups average there—they run from 91 per cent to 12 per cent the initial mark-up. The maintained mark-up for the department is only 27·91 per cent.

Q. That is the maintained mark-up?—A. Yes. The furniture in Vancouver is not a good example of the furniture trade across Canada.

Q. That is, in these stores the furniture is not handled in the same proportion of volume in Vancouver as in other cities?—A. No.

Q. I observe here some dressers marked up, the third item?—A. Cost $39.43, marked up to $66, a mark-up of 67·38 per cent.

Q. Take the first item, a walnut table?—A. Cost $23.45, written up to $45, a 91·89 per cent mark-up.

Q. They are made in Vancouver itself?—A. No, I think they are not. I think they are made in Ontario. There is a good deal of their furniture made in Vancouver.

Q. The next is a combination bookcase?—A. Cost $44.30, marked up to $79.50, a mark-up of 79·46 per cent.

Q. Take hardwood unfinished chairs, which forms a large item?—A. They cost 93½ cents, marked up to $1.50, a mark-up of 60·43 per cent.

Q. I observe here 20 bedroom suites. What about them?—A. They cost \$55.18, marked up to \$79.50, a mark-up of 44·07 per cent.

Q. Then you have a 3-piece tapestry suite, the fourth item from the end?—A. Cost \$53, marked up to \$69.50, a 30·62 per cent mark-up.

Q. That was made in Vancouver?—A. Yes, made in Vancouver.

Q. And that is where you have a 31 per cent mark-up only on that?—A. Yes.

Q. Here is an item of bed, spring and mattress of a well known, nationally advertised make?—A. Cost \$23.85, marked up to \$29.50, a mark-up of 23·69 per cent. There was a maintained mark-up in this department of 27·91 per cent.

Q. Now, let us take the fruit and vegetable department.—A. These mark-up range from 48·15 per cent to 19·64 per cent, the initial mark-up. The maintained mark-up for the department is 32·51 per cent.

Q. 32·51 per cent is the maintained mark-up on fruit and vegetables?—A. Yes.

Q. The first item is cauliflower?—A. Cauliflower bought for ·054 cents and sold for ·08 cents, a mark-up of 48·15 per cent.

Q. Potatoes, 5 tons?—A. Cost \$1.02½ per sack, sold for \$1.35 per sack, a mark-up of 31·71 per cent.

By Mr. Young:

Q. Is that selling by sacks or what they retail for?—A. That was sale by sack.

By Mr. Sommerville:

Q. Now, by pounds?—A. By pounds, the mark-up was from 10¼ cents for 10 pounds.

Q. For a peck?—A. A peck.

Q. No, that would not be it.—A. From 10¼ cents for 10 pounds to 15 cents, a mark-up of 46·34 per cent. The higher mark-up was in smaller quantities.

Q. Potatoes again, 15 tons, sacks?—A. Sacks marked from \$1.05 cost to \$1.39, a 32·38 per cent mark-up; and in small quantities, a 42·86 per cent mark-up.

Q. Apples, Mackintosh?—A. Cost \$1.25, marked up to \$1.65, a 32 per cent mark-up.

Q. Taking some of the last mark-ups, give us the mark-up for Japanese oranges.—A. Japanese oranges from \$1.25 to \$1.50, a 20 per cent mark-up.

Q. I see your list includes all varieties of fruit and vegetables?—A. Yes.

By Mr. Young:

Q. Do oranges only cost \$1.25 in Vancouver?—A. \$1.25.

Q. Is that a box or bale?—A. A case.

The Chairman: A \$1.25 bundle, they call them.

By Mr. Sommerville:

Q. Now, let us take fresh meats?—A. In fresh meats the mark-up is all the way from 144·44 per cent to 14·28 per cent.

Q. The first item is hams?—A. Hams purchased for 9 cents a pound, marked up to 22 cents a pound, a 144·44 per cent mark-up.

Q. Lambs?—A. Lambs purchased for ·0462 cents a pound sold at ·1075 cents, a 132·68 per cent mark-up.

Q. It does not look as if the consumer demand was fixing the price to the farmer there. The next is beef, F-quarters?—A. On beef there was a mark-up of 50 per cent.

Q. Carcasses of bulls?—A. Mark-up of 40 per cent.

Mr. KENNEDY (*Peace River*): What is that?

Mr. SOMMERVILLE: Ccs. bulls, bought at 5 cents, sold at 7 cents.

Mr. YOUNG: Not C.C.F.?

Mr. SOMMERVILLE: I didn't think anything of that existed in the C.C.F.

Mr. YOUNG: My mistake.

By Mr. Sommerville:

Q. The next item is lambs again.—A. Carcasses of lambs, 36·58 per cent mark-up.

Q. Sides of veal?—A. 30·77 per cent mark-up.

Q. And again, 30 carcasses of lamb?—A. 30·23 per cent mark-up.

Q. Beef again?—A. 28·57 per cent.

Q. Then, carcasses of beef, 10 carcasses?—A. 28·57 per cent mark-up.

Q. Premium chickens?—A. A mark-up of 27·27 per cent, purchased at 22 cents, sold at 28 cents a pound.

Q. Fresh pork loins?—A. A mark-up of 26·66 per cent.

Q. Pork shoulders?—A. 26·31 per cent.

Q. I see 10 cases of broilers, up above there, bought for 18 cents?—A. Yes, bought for 18 cents pound, sold for 25 cents, a mark-up of 38·88 per cent.

Q. I see a large quantity of turkeys here, 3,286 pounds of turkeys?—A. Purchased at 15½ cents a pound, marked up to 19 cents, a 22·58 per cent mark-up.

Q. And again, turkeys, farther down?—A. Yes, a mark-up of 17 cents to 20 cents a pound.

Q. A 17 per cent mark-up?—A. Yes, 17·65 per cent.

Q. And again at the bottom of the sheet, pork shoulers?—A. Yes, marked up from ·07 cents to ·08 cents, or a 14·28 per cent mark-up.

By Mr. Young:

Q. Is there any rule which they follow in fixing these mark-ups? I suppose they would not give you reasons why they charge that?—A. Oh, they were not averse to giving us reasons. They say that they leave this matter pretty well in the hands of the department manager, that they make him responsible for his department making a good showing. They are quite frank about it.

Q. They didn't explain why they wanted a 15 per cent mark-up in one case and wanted over 100 per cent in another?—A. No.

By Mr. Heaps:

Q. Would not outside competition possibly be the reason for that?—A. I think so. Vancouver business is somewhat different to Toronto, or the eastern business, where you have very large business in farm produce, butter, eggs and meats in these stores in comparison with their total business, larger than you will find in the eastern department stores.

By Mr. Sommerville:

Q. On your meat department, you show an average maintained mark-up for the year of 40·57 per cent?—A. Yes.

Q. And in the food department, that is a large mark-up?—A. Yes.

By Mr. Kennedy (Peace River):

Q. Why was the mark-up on hams so high?—A. I think that is a particular type of hams; they are a high quality ham.

Mr. SOMMERVILLE: They bought them very cheap.

The CHAIRMAN: What are they?

Mr. SOMMERVILLE: 100 hams at 9 cents, sold for 22 cents.

The CHAIRMAN: There is an illustration of special buying, from 9 cents marked up to 22 cents. It is an exceeding low price.

By Mr. Young:

Q. Did I understand you to say a minute ago that in some of these lines they could get supplies from the farmers?—A. No, I don't know that I said that. Fresh meat, I think.

Q. They get fresh meat from the farmers?—A. Sometimes, I think.

Q. But can't get hams from them?—A. No, these hams are not from the farmers.

Q. Might that explain the difference in the mark-up?

Mr. SOMMERVILLE: No, here are the mark-ups. These are from the big firms, Burns, Gainers, Swifts, Union Packing Company, Gainers, Scotts, the Pacific Meat Company, Swifts, Gainers, Burns, Scotts, Swifts, Northern Alberta Dairy Pool, Scotts and Swifts again.

By Mr. Young:

Q. There is no record of the mark-up on what they bought from the farmers?—A. No.

By Mr. Sommerville:

Q. Now, let us take the grocery department?—A. The grocery department showed an average maintained mark-up of 22·40 per cent, and the initial mark-up ranged from 45 per cent to 4·36 per cent.

Q. 4 per cent was what?—A. 4 per cent is the mark-up on fine granulated sugar.

Q. On fine granulated sugar, the year's mark-up was 4 per cent?—A. 4 per cent.

Q. I observe at the head of the list, there is tea?—A. Tea purchased at 20 cents, marked up to 29 cents, or a 45 per cent mark-up.

Q. Kellogg's corn flakes?—A. Bought for ·0631 cents and sold for 8½ cents, a mark-up of 34·71 per cent.

Q. White naphtha?—A. White naphtha, a mark-up of 28·20 per cent.

Q. Prunes?—A. Prunes are marked up 27·27 per cent.

Q. Crown olive soap?—A. 25 per cent.

Q. Peas, No. 5's, 2 size tins?—A. 23·88 per cent.

Q. Quaker corn flakes?—A. 17·24 per cent.

Q. Now go down to Clover Leaf salmon, ½'s, flat?—A. Bought for 14 cents, marked up to 16 cents, a 14·29 per cent mark-up.

Q. The next item is Ontario honey?—A. A mark-up from ·2628 to 30 cents, a mark-up of 14·15 per cent.

Q. Then coming down to Fels Naphtha soap, there is a little mark-up?—A. A mark-up of 11·46 per cent.

Q. Now come to the mantles department, that is ladies' mantles?—A. The maintained mark-up was 38·32 per cent. The initial mark-ups went all the way from 193·10 per cent to 36·84 per cent. There is a loss in this department. You will notice that the initial mark-up appears to be somewhat out of line with the maintained cost. There is a loss in connection with mantles, a sharp mark-down in sale of small specialty goods.

Q. At the end of the selling season?—A. Yes. It is necessary to get a higher initial mark-up in the case of goods of this quality.

Q. For instance, I see assorted coats, 150 of them?—A. They were bought for \$2.03 and written up to \$5.95, or a 193·10 per cent mark-up.

Q. That is not a high grade coat?—A. That particular one is not. That probably was a popular coat.

Q. A 193 per cent mark-up?—A. Yes.

Q. Then here is another quantity of assorted coats?—A. Yes, assorted coats purchased for \$8.29, marked up to \$14.95, an 80·35 per cent mark-up.

Mr. HEAPS: Have you got the quantity there?

Mr. SOMMERVILLE: Yes, in the first case it was 150 coats and in the next case it was 68 coats.

The WITNESS: In one case of 1,200 linen and print dresses, they were purchased at 60 cents and marked up to 98 cents, a 63.33 per cent mark-up.

By Mr. Sommerville:

Q. When it is sold at 60 cents to the retailer, that is laid down, they cost 54 cents?—A. They cost, from the factory, 54 cents.

By Mr. Heaps:

Q. Do you know where they were made?—A. Purchased in Montreal.

Q. Does the same apply to the mantles at \$2?—A. Yes, both in Montreal.

Mr. SOMMERVILLE: Yes. We have had the name of this firm mentioned to us before.

The WITNESS: We shall also be reporting on that.

Mr. SOMMERVILLE: You will be reporting on that. There will be a report on that firm, also.

By Mr. Sommerville:

Q. Then, I observe here an item of some skirts?—A. Yes, 60 skirts purchased at \$1.23, marked up to \$1.95, a 58.53 per cent mark-up.

Q. Leatherette coats?—A. Leatherette coats purchased for \$3.15, marked up to \$4.95, a 57.14 per cent mark-up.

Q. Lace dresses?—A. Lace dresses purchased for \$9.54, marked up to \$14.95, a 56.71 per cent marked-up.

Q. I observe you have not any of the high priced coats in this list at all?—A. No, it is indicative of the business.

Q. This is indicative of the popular dress business?—A. Yes.

Q. Here are suits or coats next?—A. \$42.25, marked up to \$65, a 50.84 per cent mark-up.

Q. That is not the one I mean?—A. You want taffeta?

Q. Yes, taffeta dresses, 300?—A. Also purchased in Montreal, purchased at 81 cents, marked up to \$1.25, a 54·32 per cent mark-up.

Q. They were sold in Montreal at 75 cents?—A. Sold in Montreal at 75 cents.

Q. With freight and sales tax, the laid down was 81 cents, and your mark-up is 54 per cent on that?—A. Yes.

Q. I think we also have a report on that firm in Montreal?—A. Yes.

Q. Then coming down to the item of coats, No. 237, made in Winnipeg, about the sixth from the bottom?—A. Yes; the laid down cost was \$8.89, marked up to \$12.95, a 45.67 per cent mark-up. That is purchased in Winnipeg.

Q. And your lowest mark-up there is what?—A. Coats purchased in Toronto for \$16.75, laid down in Vancouver at \$18.25, marked up to \$25.

Q. That is a mark-up of 36 per cent?—A. Yes.

Q. Take these smocks made in Montreal?—A. Laid down cost in Vancouver, \$1.38; purchased from factory in Montreal at \$1.25, marked up to \$1.95, a 41.30 per cent mark-up.

Q. That is fairly representative of the mantle department in that business?—A. I believe so. That is my instructions.

Q. I observe that practically all, or the bulk of these coats are made in Montreal, some in Toronto, and one lot in Winnipeg?—A. Yes, they are made in Montreal.

Q. Then, take men's clothing?—A. Men's clothing, also mostly Montreal, some Toronto. The maintained mark-up against the clothing department is 47.16 per cent, and the mark-ups range from 80 to 90 per cent, down to 35 per cent.

Q. Take the first item from Montreal, men's suits?—A. Quantity purchased at $7.50, laid down at $8.05, sold at three prices, $12, $15, $18.

Q. 236 suits were bought from this Montreal firm at $7.50 a suit?—A. Yes.

Q. They were sold at $12, $15, and $18?—A. Yes.

Mr. Heaps: Was that $7.50 at Vancouver?

The Witness: $7.50 at Montreal.

By Mr. Sommerville:

Q. It cost 59 cents to lay them down at Vancouver, or $8.09, and the mark-up ranged from $12, to $18?—A. 48 per cent.

Q. From 48 per cent to 85 per cent?—A. 48 per cent to 85 per cent on two lots.

Q. Those that sold at $18 were marked up—A. 122 per cent.

Q. The next item, grey worsted trousers, from a Montreal firm?—A. Purchased for $1.90, laid down in Vancouver at $2.09, marked up to $3.95 or a mark-up of 89 per cent.

Q. Here are some men's trench coats?—A. Cost laid down $3.94, marked up to $6.95, or a mark-up of 76 per cent.

Q. Here we have this Toronto firm that was penalized for a breach of the minimum wage law, and we find men's four piece suits?—A. Purchased laid down in Vancouver at $8.15, purchased from the factory at $7.50.

Q. That would be two-trouser suits?—A. Yes.

Q. $7.50?—A. Yes.

Q. $7.50?—A. Marked up to $13.65, or a mark-up percentage of 67.

Q. Boys' long trousers is the next item?—A. Laid down in Vancouver $2.43, marked up to $3.95, or a percentage of 62.

Mr. Kennedy (*Peace River*): What is the explanation of the suit laid down at $8.09 having three prices?

The Witness: I cannot give that to you.

By Mr. Kennedy (Peace River):

Q. And being sold at $18, $12, and $15.—A. I cannot give you all these purchases, but I can give you another case where parts of a suit were divided as to selection of colour and suitability, perhaps to the trade generally, and that is indicated in the three prices. We came across that case.

Q. They would be marked that way when the lot came in?—A. I believe that was the case, yes.

Mr. Sommerville: You will find other cases.

The Witness: Well, of the $7.50 suits, perhaps browns were not as favourable to the trade as blue, and so on.

Mr. Kennedy (*Peace River*): What were the colours; was it a question of colours?

Mr. Sommerville: You would have to choose the less popular colours, if you want to get in on the low mark-ups. Then, we have Raglan top coats.

The WITNESS: Purchased from Montreal at $12.75, laid down in Vancouver at $13.60, marked up to $21, 54 per cent.

Mr. SOMMERVILLE: Zipper combinations from an overall company in Montreal.

Mr. HEAPS: Before you go on with this, can you tell me why it costs so much to lay down one article as compared with another?

The CHAIRMAN: Sales tax and freight.

The WITNESS: Sales tax, freight and duty.

Mr. HEAPS: In the suits you gave, there was an extra expense of 50 odd cents for a suit laid down in Vancouver, and then you gave others where the expense of laying down in Vancouver was much higher, as high as $2.50.

The WITNESS: No, I compared that suit that was purchased in Montreal for $7.50, and sales tax and freight to Vancouver amounted to 59 cents, which would be $8.09, with the price that the article was selling for in Vancouver. The article that we are dealing with now, the $12.75 article, has sales tax and freight of 85 cents.

Mr. SOMMERVILLE: They have all a relatively small cost.

Mr. HEAPS: Pardon me.

The WITNESS: Zipper combinations cost, laid down in Vancouver, $2.25, marked up to $3.50, 55 per cent.

Mr. SOMMERVILLE: Moleskin pants.

The WITNESS: Laid down at $1.25, marked up to $1.95, 56 per cent.

Mr. HEAPS: Where were these made?

Mr. SOMMERVILLE: In Toronto. That firm is also one of the firms on which there will be a report.

By Mr. Sommerville:

Q. Here you have another one: 130 pairs of trousers made in Vancouver?—A. Cost, $3, marked up to $4.50, 50 per cent.

Q. The next item there is men's leather coats?—A. Laid down at $7.72, marked up to $10.95, 42 per cent.

Q. Take the toilet goods department?—A. The toilet goods department maintained a mark-up of 42·96 per cent. The initial mark-up ran from 96 per cent to 26 per cent.

Q. Give me just a few of those?—A. Take three items there, castile soaps, a dozen cakes of castile soap marked up 85 per cent.

The CHAIRMAN: Bought at ·027 cents, and sold at 5 cents.

The WITNESS: Bought at ·027 and sold at 5 cents.

By Mr. Sommerville:

Q. Moire pouch bags?—A. Moire pouch bags, gross, purchased for 17$\frac{2}{3}$, marked up $1.25, 70 per cent mark-up. Various shades of rouge, purchased 32$\frac{3}{4}$ cents, sold for 55 cents, 66 per cent mark-up.

Q. Here is Squibbs dental cream?—A. Squibbs dental cream, purchased for 16 cents, marked up 25 cents, 56 cents.

Q. Devon violets?—A. Purchased for 83$\frac{1}{2}$, marked up to $1.25, 50 per cent.

Q. Even William Special tonition preparation?—A. Marked up to 50 per cent.

Q. Pompeian?—A. Marked up 48 per cent, cost 42$\frac{1}{2}$ cents.

Q. Ponds Vanishing cream?—A. Ponds Vanishing cream, purchased for 28 cents, marked up to 39 cents, 39 per cent mark-up.

Q. We come down to Ponds Cold cream?—A. Marked up to 34 per cent, on a cost of 66 cents?

Q. Pepsodent tooth paste?—A. Cost 34 cents, sold for 43, marked up 26 per cent.

Q. That covers— —A. That covers all the departments examined. We could not examine every department; we took 12 as being the average, indicative of the whole.

Q. And these are fairly representative of the modest priced merchandise sold in those various departments?—A. Yes.

Q. I have not observed any very high price articles as set out showing the mark-up— —A. No, it would be no use taking one outstanding article; it would not be fair; it would not be indicative. There is one thing, Mr. Sommerville, that I have which will not take me a moment to explain. You asked me about loss leaders, and I should have told you about it, but I did not tell you of the one I had. While perhaps it is not exactly in the class of loss leaders, it comes in the important class which you asked us to look into; that is, special trade discounts. We have certain cases here of Absorbine Junior liniment purchased at $11.25 per dozen. That is the regular price to the trade. Woodwards received a trade discount of 15 per cent on this price. Phillips' milk of magnesia sells to the trade at $4.77; Woodward's received a trade discount of 15 per cent, on that.

Q. Is that one of the cases where they used it as a loss leader?—A. I cannot tell you because our agents in Vancouver did not select that. Mr. Matthews gave evidence on page 494 of the evidence, of these being loss leaders, and for that reason I got the price and the discount to Woodward's, so as to tie up the evidence of Mr. Matthews.

Q. What does it show?—A. It shows this only; they got the 15 per cent discount off the regular selling price. Dodds kidney pills is another case, selling at $4.30 a dozen, whereas Woodward's purchased them in February at $3.88 per dozen. I put this in because the evidence was given and I thought the explanation might bring that out. The last statement I have with regard to Woodward's themselves, is the wage statement, but I have not a printed copy of them.

Q. Wage statement?—A. There is nothing that is very outstanding in this. I might save the committee's time by saying we were assured by Woodward's first, and secondly by the Minimum Wage Board in British Columbia, that in no case have Woodward's, Spencer's or the Hudsons Bay Company evaded the Minimum wage act.

Mr. Kennedy (*Winnipeg*): What is the minimum wage for females in British Columbia?

The Witness: $12.

Mr. Heaps: It goes up to $12?

The Witness: $12.

Mr. Heaps: What is the minimum?

The Witness: I have a table for all across Canada, which I will file later.

Mr. Sommerville: There is a comparative statement to be filed?

Mr. Heaps: How does the wages at Woodward's compare with the wages paid in the other stores?

The Witness: I think they are fairly comparable.

Mr. Heaps: Have you any idea as to the rates of pay in departmental stores as compared with the independent retail stores?

The Witness: No, we did not go into the independent retail stores.

Mr. Kennedy (*Winnipeg*): Did you go into the chain stores?

The WITNESS: No.

Mr. HEAPS: What hours is the Woodward store open for business?

The WITNESS: I will look it up for you.

Mr. EDWARDS: You will find that on folio number 567.

The WITNESS: I have not got that immediately available.

By Mr. Heaps:

Q. You will get that later on?—A. Yes.

Q. You spoke there about bonuses that were given to the employees for one year?—A. Yes.

Q. Was it just for one year only?—A. Well, that particular bonus I was speaking of was for one year.

Q. There has been no other bonus paid in other years?—A. I would not like to say that. There have been a few bonuses paid from time to time, you know.

Q. Is there any other concession that the employees obtained from this firm?—A. They can purchase goods at the store for something less than the general public.

Q. Do they get paid for time off when they are sick?—A. I cannot answer that question.

Q. Do they get any holidays with pay?—A. Yes, they get holidays with pay.

Q. How long do they get?—A. I think it is a week in this case.

By Mr. Sommerville:

Q. In the case of this store, I understand the employees are on full time?—A. Full time, yes.

Q. The employees are not asked to come in at 11 and serve until 4.30 or 5; they are engaged a full week and work a full week?—A. That is correct.

Q. Except on certain days when they have what they call a 95 cent day?—A. Except on certain days when they have a 95 cent day, when they bring in extra employees.

Q. When they bring in from 500 to 700 extra clerks?—A. Yes.

By Mr. Heaps:

Q. Are there any part-time employees there?—A. Not apart from this 95 cent day.

The CHAIRMAN: None of that evasion of the minimum wage law by having a clerk come in late and leave early?

The WITNESS: We did not find any indication in Vancouver. The wages are not high, neither are they what we would call low, as we have seen them in other places.

The CHAIRMAN: These are the minimum?

The WITNESS: Yes.

By Mr. Sommerville:

Q. You have given us here the high, low and average?—A. Yes.

Q. In each of the departments through the store?—A. Yes, through the store.

Q. And the number of employees?—A. Yes.

Q. Now, have you in this case, a comparative statement showing the reduction, if any, that has taken place in the wages of employees these past

two or three years?—A. No, but I can give you the information. I have not got a statement, because there was only one reduction made. They made one reduction in wages about two years ago when a cut of ten per cent was made in all salaries on wages less than $30 a week, and 15 per cent on all salaries above that figure. That scale is still in force at the present time.

By Mr. Heaps:

Q. It would not bring any of the employees below the minimum wage rates of the Province?—A. No, it would not.

By Mr. Sommerville:

Q. Was there a reduction in British Columbia of the minimum wage, the same as there was in Manitoba and Saskatchewan?—A. That is my belief, I think that is so.

Q. There was in Manitoba a ten per cent reduction?—A. I think there was, I have that but I have not the rate of the reduction in the minimum wage.

Q. You say that reduction took place in— —A. 1932.

Q. In the year 1932?—A. Early in 1932.

Q. Early in 1932, and that was at a time when they had shown a profit of $585,352, in that year ending the 31st January, 1932?—A. Yes.

Q. Which was a very substantial profit, a larger profit than they had made in the previous year, 1929?—A. No, it was the falling off in operating profit from 1930 to December of 1931.

Q. Oh yes, there was a falling off in the profit that was made in 1929, 1930 and 1931?—A. Quite so.

Q. But the profit of that year was larger than the profits of any year prior to 1929?—A. Quite so.

By Mr. Kennedy (Winnipeg):

Q. Returning to the matter of minimum wages: I see in the annual report of the Department of Labour as affecting British Columbia for the year ending December 31, 1932, a heading which refers to industry, I suppose that is the industry such as is referred to where workers get $12.75 a week; then under the classification of inexperienced workers they start at a minimum of $7.50 for the first three months; it goes up to $11 per week, under 18 years of age. With respect to 18 years of age or over, it starts with a minimum of $9 per week, but after three months it goes up to $12 a week?—A. I am not sure.

By Mr. Heaps:

Q. Are these employees of these departmental stores on a weekly rate?—A. On a weekly rate, yes.

Q. It is not an hourly rate?—A. No, it is weekly; they are sales clerks, you see, they have no rate per hour.

Q. Would that weekly rate apply to all employees of the firm?—A. All employees, yes.

By Mr. Kennedy (Winnipeg):

Q. Mr. Nash, I notice in the sample week you gave that you gave the weekly wages for the week ending April 2 of this year; how does it differ as to last year or other dates?—A. Not to any great extent. This statement merely supplies what we were asked to get.

Q. You are satisfied that the sample week you give reflects similar conditions of a year ago?—A. Quite satisfied, yes.

By Mr. Sommerville:

Q. And the total number of their employees on April 2 last was 857?—A. 857.

By Mr. Young:

Q. Now, Mr. Nash, this committee wants to find out whether these big stores are justifiable or not. We are told now that these firms in particular used bread and butter consistently as loss leaders, they sell them at a loss; and we are told that they make up that loss by charging too much for other kinds of goods. Now, you have given us their mark-up on a good many lines of goods, in order that they might be of value to us in determining whether these stores are justified or not. To do that we would have to have similar mark-ups in independent stores?—A. Yes, sir.

Q. Are we getting that, Mr. Chairman?

The CHAIRMAN: I expect so, yes.

Now gentlemen, it is almost one o'clock and we will not open another matter, because we will start again at 3.30.

The Committee adjourned at 12.50 p.m. to meet again this day at 3.30 p.m.

AFTERNOON SESSION

The committee resumed at 3.30 p.m.

The CHAIRMAN: Order, gentlemen.

A. E. Nash, examination resumed.

By Mr. Sommerville:

Q. Now, Mr. Nash, just before we leave this statement of Woodward Stores Limited, may we just gather up the net results of the operations; for the past four years the net profits appear to be $2,064,083?—A. That is right.

Q. And the reserves for several purposes,—depreciation, etc.—have increased $516,671?—A. That is right.

Q. Making a total of profit before reserve of $2,580,754 in these four years? —A. Yes.

Q. And these are the four years since the reorganization when the capital was increased to $5,000,000?—A. Yes.

Q. And when they accumulated surplus up to that time and the additional write-up was transferred to the shareholders by way of a capital increase?—A. Yes.

Q. And they were given the increased shares which that capital represented?—A. Right.

Q. Now during that time, in the past four years the amount of dividends paid out was the sum of $542,372?—A. Yes. That is exclusive of special advances.

Q. That is exclusive of special advances?—A. Yes.

Q. $542,000, then there were special advances of $201,108 to the shareholders?—A. That is right.

Q. Making a total of $743,480?—A. Yes.

Q. By way of dividends and advances?—A. Yes.

Q. Then during this period there was a surplus built up from nothing to $529,382?—A. That is right.

Q. Making a total of dividends and surplus for this period of $1,272,862?—A. Yes.

Q. Then during that same period the goodwill was written off?—A. Yes.

Q. Of $137,793?—A. That is right.

Q. And, in addition to that, there was a special income tax assessment on previous years of $178,309?—A. I do not know whether that is an assessment. It was a payment by the company of taxes applicable to prior years.

Q. And in addition to that you had an increase in the reserve of $516,000? —A. Right.

Q. And that made a real appreciation in these years from profits after providing reserves of $2,105,024?—A. That is right.

Q. And, in addition to that, the profit for the year 1930 amounted to $588,922.59?—A. Yes.

Q. And that was capitalized and added or was included in the $3,195,000 by which the capital stock was increased?—A. Yes, that is quite right, but I do not think you can add it there and also add it into your profits.

Q. I quite appreciate that, but I wanted to show where that $588,000 appears?—A. It disappeared into capital.

Q. Now, did the profits of this company decline in proportion to the drop in volume of sales?—A. No, they maintained a better profit in relation to sales in the last two or three years.

Q. Yes, notwithstanding the depression period they made a higher rate of profit?—A. Yes.

Q. How did they do that, Mr. Nash?—A. Well, I think we can take it perhaps in two or three ways. They had a little higher mark-up on their business.

Q. That is, they increased the margin of profit?—A. Yes, the gross margin.

Q. They increased the gross margin of profit to the public?—A. Yes.

Q. By increasing their mark-up on the sale of goods to the public?—A. That is right.

Q. That is one way. And secondly?—A. They had a reduction in wages.

Q. There was a 10 per cent reduction in wages?—A. Yes.

By Mr. Heaps:

Q. What did that 10 per cent reduction amount to?—A. About $100,000 a year, Mr. Heaps.

By Mr. Sommerville:

Q. About $100,000 a year, and those were two sources of improvement in that profit situation?—A. Yes.

Q. Did they at any time call upon any of their reserves to maintain wages? —A. No, I cannot say that.

Q. Or did they at any time call upon their reserves to maintain their mark-up to the public as it had been prior to the period of depression?—A. No, I cannot find any trace of that.

Q. Then will you give me some examples of the increased mark-ups to the public?—A. Take boots and shoes. The mark-up in 1931 was 43·5 per cent, and in 1934 it was 49.7 per cent.

Q. Yes?—A. Boys' clothing went up from 32·8 per cent to 35·6 per cent; dry goods went up from 38·48 to 49·36 per cent; furniture came down.

By Mr. Heaps:

Q. In regard to the increased mark-up, did the price of their goods come down from the wholesaler to the retailer, or was it the retailer marking up his price to the consumer?—A. All we can speak of is the increased mark-up. I cannot tell you whether the goods came down from the factory because there is no way of comparing the goods that were purchased in 1931 with 1933.

Mr. Sommerville: The sale price was increased by the spread.

Mr. Heaps: The price from the firm to the consumer increased.

Mr. SOMMERVILLE: The spread increased.

Mr. HEAPS: We have not got the cause of the spread.

Mr. SOMMERVILLE: You know now that the spread increased in the retail store.

Mr. HEAPS: Yes. If there was a reduction in the price from the wholesaler to the retailer it was not passed on to the consumer.

Mr. SOMMERVILLE: It was not passed on to the consumer. The wholesaler took it or the manufacturer took it, that is the indication here.

The WITNESS: Perhaps I can explain it Mr. Heaps, in this way: Take the grocery department, it went up from 19·72 to 22·40, that is, percentage of gross profit, and in 1931 they sold $1,757,000 of groceries and in 1933 they sold $1,530,000 of groceries, or $225,000 less, but their gross profit was only $2,000 less.

By Mr. Heaps:

Q. Was not there a reduction in the cost of commodities in that period?—A. Which would apply to both volume and commodity price.

By Mr. Young:

Q. You have no way of comparing the volume in those two years?—A. Not volume in pounds but in dollars.

By Mr. Sommerville:

Q. You have the volume in dollars?—A. That is all.

Q. But the point was that the spread was increased. What others?—A. In the case of the mantle department they increased the spread from 31·46 to 38·32. There again, in 1931 they sold $400,000 worth of mantles, and in 1933 they sold $300,000.

By Mr. Heaps:

Q. On that point, Mr. Nash, could you say how many mantles were sold?—A. No, there is no record kept to show how many mantles were sold, but they sold $100,000 less although they made as much or almost as much gross profit on the $300,000 as they previously had made on the $400,000. Mens' clothing, there was a reduction.

By Mr. Sommerville:

Q. Men's clothing, in 1932, 46·11 and in 1934 47·16 per cent?—A. A shade of an increase. And in toilet goods it went up very considerably.

By the Chairman:

Q. What was it?—A. Toilet goods, in 1931 24·44 per cent and in 1934 it was 45·96.

By Mr. Sommerville:

Q. In other words, they sold $92,000 worth of toilet goods in 1931 with a spread of 24·44 per cent, and in 1933 they sold $75,000 of toilet goods with a spread of 41 per cent?—A. Yes.

Q. And in 1934 they sold $67,000 worth of toilet goods with a spread of 45·96 per cent?—A. Yes.

By Mr. Kennedy:

Q. Do I understand there is a mark-up in men's clothing?—A. Yes, a slight mark-up in men's clothing.

Q. There has been a very considerable fall in the price of clothing generally?—A. We want to get our minds perfectly clear on that point. I am not speaking of the price of a man's suit, whether the price is $10 or $20.

Mr. HEAPS: It is the spread between what it cost this store and the cost to the consumer.

The CHAIRMAN: What I think Mr. Heaps is concerned about—and I confess it interests me too—is this: If there are figures that will show that the price from the manufacturer to the mercantile establishment—Woodward's—was less in 1934 it would be reasonable to assume that a wider margin of mark-up, that the diminution in cost was backed up and the cost to the factory—

The WITNESS: Mr. Chairman, we are going to have these figures.

The CHAIRMAN: In another category.

The WITNESS: Yes.

The CHAIRMAN: We will just keep that question in mind then.

Mr. SOMMERVILLE: Just for the benefit of the committee, we are dealing with the stores, and after we get through with the stores then we are coming back to the factories that supply those stores, and we will have a volume of information from them which will indicate the spread that has taken place and give a relative view of the way in which the manufacturer has been affected during these years which we are considering in the departmental stores.

The CHAIRMAN: That will answer your question, Mr. Heaps, and we will get it later on.

Mr. HEAPS: Yes, Mr. Chairman.

Mr. SOMMERVILLE: Thank you. I think that will cover the present examination.

Mr. HEAPS: I would like to ask one question arising out of the evidence of this morning, that is, with reference to the holidays that the departmental stores give to their employees. You told me that they gave holidays to their employees each year with pay.—A. I am not sure. I have wired my agents in Vancouver for that information.

Q. The reason I ask the question is because during the recess a gentleman who knows the firm in question fairly well was not quite sure on that point.—A. I intended to correct that and put it correctly whether it was or not.

By Mr. Sommerville:

Q. Now then, the record that is being filed with the committee as an exhibit is the record from which you have been taking these various figures?—A. Yes.

Q. And this is the correct reflection of the conditions found in the books of Woodward's?—A. It is actually taken from Woodward's books.

Mr. SOMMERVILLE: Now, we pass to a consideration at the present time of the David Spencer Limited store.

The CHAIRMAN: We will run through this in the same order that we did in the other.

DAVID SPENCER LIMITED

Consolidated Balance Sheets—For Eleven Years ending 31st January, 1934

	—	As at 31st January, 1934	As at 31st January, 1933	As at 31st January, 1932	As at 31st January, 1931

		420			

The WITNESS: The first statement I have given you is the consolidated balance sheet of the David Spencer Company for ten years. Perhaps I should tell you at the outset that this is also a private company, a company that has been in existence in Vancouver a great number of years. It has its main store in Vancouver, a substantial store in Victoria, a store in Nanaimo, and a store in Westminster. The shares of this company are owned entirely by the widow of the founder—Mr. David Spencer—and her son.

As in the case of Woodward's, this company was reorganized; its capital was reorganized in 1931.

By Mr. Sommerville:

Q. That is so as to take advantage of Section 19 of the Dominion Income War tax?—A. Yes.

Q. And its surplus was then capitalized?—A. Its surplus was then turned into capital.

Q. And the capital distributed to the same shareholders?—A. To the same shareholders as they had before, and at the same time the assets were appraised and the appraisal value was put upon the books,—exactly the same transaction, except as to amount, as the Woodward Company.

By Mr. Kennedy (Winnipeg):

Q. That distribution was provided under the law without payment of income tax?—A. Without payment of income tax, yes.

Q. That was the occasion for this reorganization at that time?—A. Yes.

By Mr. Sommerville:

Q. That was the case where parliament decided that surplus profits that were being kept in company accounts ought to be distributed and without being used, and that permitted the distribution of surplus profits without the payment of income tax.—A. The Income War Tax was amended to permit of that.

To follow the same procedure as this morning, you will note that at January 31, 1924, the total assets of David Spencer, Limited, were $5,826,000, and at January 31, 1934, were $13,707,000.

Q. They had grown from $5,800,000 to $13,700,000?—A. Yes.

Q. Perhaps you can identify just what happened at the reorganization?—A. At the end of 1931, the company had $200,000 of capital and $5,600,000 which had been built up, as you see, for many years prior to even 1924.

Q. In 1924 the surplus had amounted to $4,100,000?—A. Yes.

Q. And by the end of 1931 it had risen to $5,600,000?—A. That is right.

Q. It had increased by $1,500,000 in the meantime?—A. That is right.

Q. That is the only capital that was outstanding up to 1931, $200,000?—A. $200,000. And so the $5,600,000 was turned into capital, shares issued for it, and at the same time the land and buildings account of the company was written up some $3,250,000.

Q. Those two amounts, the surplus of $5,600,000, plus the capital already outstanding of $200,000?—A. And something over $3,000,000.

Q. And upwards of $3,000,000 of increased appraised value?—A. $4,000,000, over $4,000,000.

Q. Over $4,000,000 of appraised value, increased appraised value on the premises of David Spencer Limited, were added together and a new charter issued and new capital authorized or issued, amounting to what?—A. $11,000,005.

Q. The $200,000 of capital stock then became $11,000,000 of capital stock, including the surplus?—A. Right.

Mr. Heaps: Was that on the basis of the new appraisal?

Mr. Sommerville: That was on the basis of the new appraisal.

Mr. Heaps: Have we got that definite?

Mr. Sommerville: Oh, yes.

Mr. Heaps: Have we got anything to show that the appraisal was $11,000,000?

Mr. Sommerville: No.

The Witness: The appraisal was not $11,000,000.

The Chairman: Including surplus.

Mr. Sommerville: The actual surplus on hand at that time was $5,600,000. In addition to that there was $200,000 of capital stock. Those two amounts made $5,800,000. To bring it up to $11,000,000 required an additional amount. That additional amount was supplied by the increased value put upon the premises of David Spencer, Limited, of $4,000,000 odd.

The WITNESS: Yes.

Mr. HEAPS: Was there anything to show what the increased value was?

Mr. SOMMERVILLE: The actual premises.

The WITNESS: The appraisal.

By Mr. Heaps:

Q. Had it increased at all to that extent?—A. Well, of course we can't tell you that. The appraisal company says so.

Q. We had an appraisal yesterday?—A. Yes, I have seen that.

The CHAIRMAN: Pretty fishy.

Mr. SOMMERVILLE: Of course, this is a private company, Mr. Heaps.

Mr. HEAPS: Yes, but still paying profits, I presume, on the whole of the capitalization.

Mr. SOMMERVILLE: The dividends will be declared on the whole capitalization, that is true.

By Mr. Heaps:

Q. I was just wondering if there was anything to show for the new valuation that was put on the premises?—A. There was a report by the appraisal company.

Q. You have not got the report?—A. No, I have not got the report with me, but my agents in Vancouver have seen the report. The amount, Mr. Heaps, does not surprise me particularly, the fact that it was written up $4,000,000; the land and buildings account was appraised at some $8,600,000.

Q. Prior to the appraisal, what were the lands and buildings carried at in the books of the company?—A. $4,700,000.

The CHAIRMAN: No. $5,300,000.

Mr. SOMMERVILLE: Yes, $5,300,000.

The CHAIRMAN: Oh, yes, less reserves, $4,700,000.

The WITNESS: $4,700,000.

The CHAIRMAN: There is a reserve of $674,000 which they presumably carried into this new capital.

The WITNESS: Yes, exactly.

Mr. SOMMERVILLE: In 1934 land and buildings had a valuation of $2,800,000?

The WITNESS: Mr. Chairman, if you or the members of the committee will look at the plant and equipment account, the first item is furniture and fixtures which was carried at $659,000. There was a reserve against that at that time of $460,000. That would mean that the net value of the furniture and fixtures, according to the company, was $200,000. The appraisal company says, "That is not worth $200,000, it is worth $660,000," as you will see on the column on the right.

By Mr. Sommerville:

Q. Where is that?—A. Subheading "Plant and Equipment." If you follow down here to January 31, 1931, you will see that the book value is $659,000, less reserve of $460,000. The heavy black are the reserve items. The appraisal company comes along and says that is worth $664,000 and it is put upon the books the next year at that figure. The plant and machinery which is followed by the book value of $1,022,000, with a reserve of $554,000 against it, would make something like $470,000 net. The appraisal company says it is worth $1,023,000; and the same with the automobiles and trucks.

Q. Automobiles and trucks have a value of $222,000 with $200,000 of reserve against that?—A. Yes.

By the Chairman:

Q. They included those three reserves?—A. And the reserve below the land and buildings is $674,000. All of these reserves were written out when the appraisal was made, and the assets were taken on the books at the appraisal figure, at the new appraisal figure, without those reserves.

By Mr. Sommerville:

Q. Land and buildings were increased from $5,376,000, against which there was a reserve of $674,000?—A. Yes.

Q. To $8,607,000?—A. Right.

By Mr. Heaps:

Q. There was an increase of approximately $4,000,000?—A. Approximately $4,000,000, yes.

By Mr. Senn:

Q. Was there any enlargement or building going on in that time?—A. Not in that time, no.

Mr. HEAPS: Buildings had come down in value, instead of going up, between 1931.

The WITNESS: This is in 1931.

Mr. SOMMERVILLE: Yes.

By Mr. Senn:

Q. Was there any installation of new machinery or new fixtures?—A. No. I am speaking in substantial amounts now.

By Mr. Sommerville:

Q. This apparently was a reorganization taking advantage of the situation as it existed at the time, and adding to it the new appraisal?—A. Yes.

Q. And as it was a private enterprise, they considered, I presume, that it didn't make any difference what value was put on the buildings?—A. It is a private company.

By Mr. Young:

Q. The valuations put on in 1924 were those prevailing at that time; when were they put on?—A. In 1924.

Q. Those might have been greater values in 1928?—A. Might possibly have been.

The CHAIRMAN: There were large increases in the plant since then, in the years immediately following that.

By the Chairman:

Q. Is that all on that page?—A. The other item I want to call attention to is the surplus which ten years ago was $4,000,000 odd, and then amounted to $5,600,000 and was taken into the capital. In 1931—January 31, 1932—there was a small profit of $103,000, a substantial loss in 1932, and in 1933. In explaining that loss, I might say that company had been for some years very heavily indebted to its bankers, and it was considered advisable to have some new control which was supplied. The new manager or controller set about cleaning house, and that is largely responsible for the losses in the last two years.

Q. That would be on inventory, I suppose?—A. Yes; a regular house-cleaning.

By Mr. Kennedy (Winnipeg):

Q. In what year was that amendment to the Income War Tax Act which permitted that distribution of surplus capital?—A. 1929, I think.

Mr. SOMMERVILLE: Yes, I think it was 1929.

The CHAIRMAN: I thought it was 1930.

Mr. SOMMERVILLE: Hon. Mr. Robb was Minister of Finance, if I remember correctly.

The WITNESS: 1929.

Mr. KENNEDY: It is under that provision that Mr. Stewart of Macdonald's gave evidence of drawing $5,000 a week without payment of the tax?

Mr. SOMMERVILLE: It was under that same provision. In other words, he drew out his capital, loaned it back to the company and the company pays it back to him at the rate of $5,000 a week.

Mr. EDWARDS: That was in the Dunning budget of 1929.

By Mr. Heaps:

Q. Was it not being done by the other people?—A. No, it was not.

By Mr. Sommerville:

Q. With reference to the question of the reduction, I observe that the bank loan was reduced from $2,000,000 in 1931 to $1,800,000 in 1932, to $1,100,000 in 1933 and down to $443,000 in 1934?—A. That is right.

Q. It is only about 25 per cent of what it was two years ago?—A. Yes.

By Mr. Kennedy (Peace River):

Q. Had that something to do with the loans?—A. Yes, it had.

Q. There is an interesting story about that?—A. It has something to do with it, and that is why I explained it, because you cannot take the loans in the last two years as being truly indicative of the operating condition of the company. When you have a cleaning of house and trying to bring inventory down, you are bound to take certain losses.

By Mr. Heaps:

Q. Did this bank loan compel the company to liquidate its stock?—A. I believe that is not the case. I think the bank was concerned with the fact that the loan had been running so high for so many years, but my information is that it was not compelled by the bank. The Spencer family themselves desired to get their debts paid, and wanted to get this company on a clean basis.

Q. The reason I say that is that if you look at the inventories on that same page, from 1931 to 1934, it shows a great diminution, does it not?—A. Yes, it does.

By Mr. Sommerville:

Q. Before you leave that consolidated balance sheet, is there any significance attached to the very large increase in the bank loans from 1926 to 1927?—A. No, there is not.

Q. That may have been at the time when they were— —A. You will notice that the company's assets at the same time went up nearly $6,500,000. That is at the time that they have added very largely to the size of their store.

Q. I observe also in the next year the mortgage was increased?—A. Yes.

Q. And the bank loan was proportionately decreased?—A. The bank loan decreased. They borrowed money from another source.

Q. All right. Will you continue?—A. The next statement is the consolidated trading accounts for ten years, and it shows the sales figure about half way down in the first group, Mr. Sommerville.

Q. Yes, the sales were what?—A. They went from $10,400,000 in 1925 up to a peak of $16,400,000 in 1929, and down to the low of $9,500,000 in 1933, at January 31, 1934.

Q. Their year ends the same as Woodward's?—A. Yes, the same as Woodward's, January 31.

Q. The total sales during that ten-year period amounted to what?—A. $128,000,000.

Q. $128,875,000?—A. Yes.

Q. The gross profit in that period went from $2,823,000 in 1925 to a peak of $4,750,000 in 1930?—A. Yes.

Q. And down to $2,639,000 at the end of January 31, 1934?—A. Yes.

Q. The total gross profit was $35,347,983.82?—A. Yes.

Q. With total sales of $128,875,000?—A. That is right. Then as shown below, there are two groups. First of all there are departmental expense, and secondly administration expense. You will notice that in this case the advertising, which we were interested in in connection with Woodwards this morning, which ran to $100,000, is very much larger in this company.

Q. In this company the advertising is very much more?—A. A peak of well over $300,000.

Q. It runs from $215,799 on January 31, 1925, to a peak of $389.000 on January 31, 1931, to some $244,000 at January 31, 1934?—A. Yes.

Q. The total there for the period is what?—A. $3,000,000.

Q. $3,070,810.68?—A. Yes.

Q. With regard to this salary item in the departmental expense, what salaries are covered by that item?—A. Everything is covered by that.

Q. That is wages?—A. Yes, everything.

Q. Wages?—A. They call it all salaries.

By Mr. Heaps:

Q. How do they compare with other firms?—A. I will be filing those in a minute or two.

The CHAIRMAN: You get that in the last sheet.

By Mr. Sommerville:

Q. Was there anything further on that?—A. No, I think that is all. Then you come to administration.

Q. Yes, you have administration, directors' salaries at January 31, 1925. were $94,000, which reached a peak of $145,000, and then are down to $30.000 this last year?—A. Yes.

By Mr. Kennedy (Peace River):

Q. How many directors are there?—A. That covers a group of seven.

By Mr. Kennedy (Winnipeg):

Q. Without mentioning either the amount or the names, how do the executives' salaries of David Spencer, Limited, compare with the one we had this morning, Woodwards?—A. They are higher, generally.

Q. Are they still moderate?—A. Yes, they are still moderate. There is a group of seven in this.

By Mr. Heaps:

Q. These were extremely low?—A. These were extremely low. One thing I wanted to say this morning was that the Woodward Company is very

economically run from an expense standpoint. That is one of the reasons for the profits.

Q. From the overhead standpoint?—A. Yes.

By Mr. Kennedy (Winnipeg):

Q. Where it is what you call a closed group, whether they get it in salaries or dividends is immaterial?—A. Quite so. You have got to take into consideration the dividends paid. You find when they give dividends in cash they are lower than the dividends in Woodwards, whereas the salaries are higher.

By Mr. Kennedy (Peace River):

Q. While you are dealing with the directors, might I ask if most of the directors are in the family?—A. They are all in the family.

Q. So that the returns to the groups are salaries and dividends?—A. Yes.

By Mr. Heaps:

Q. You have an item for bad debts on the same sheet. What about that? —A. I was just going to comment on that. I wanted to draw attention to the fact that in the Spencer Company there are, running over a period of ten years, bad debts amounting to $666,000. This company has given considerably more credit than the Woodward company. You will notice in the balance sheet, the first page we referred to, on January 31, 1934, there were $979,000 outstanding accounts as against $102,000 outstanding accounts in Woodwards. While the turnover is larger, it is not a like proportion.

By Mr. Kennedy (Winnipeg):

Q. Before we leave the matter of dividends, can you tell us in round figures, what the actual average dividend of Woodwards Limited was, and also Spencers Limited, in percentage?—A. Percentage on the capital?

Mr. SOMMERVILLE: On the new capital of $5,000,000.

Mr. KENNEDY (*Winnipeg*): Well, the percentage return on the invested capital.

Mr. SOMMERVILLE: Was it not six per cent?

The WITNESS: In Woodwards?

Mr. SOMMERVILLE: Yes, in Woodwards.

The WITNESS: The dividends paid in Spencer's are extremely small; no dividend at all paid in 1933; there was a loss in that year, $16,000 was paid in 1932; $31,000 in 1931.

By Mr. Sommerville:

Q. Can you give us them in percentages?—A. On $11,000,000 capital, $30,000 would be a little over one quarter of one per cent.

The CHAIRMAN: ·03?

The WITNESS: Yes.

By Mr. Kennedy (Winnipeg):

Q. You say Spencer's has been run on a percentage basis?—A. Yes.

Q. What about their earnings that were carried into surplus? Have their earnings been low on invested capital?—A. No; we can give you that too. There would be no earnings, of course, the last two years, owing to losses. In the year 1931 the earnings on invested capital were 10 per cent—nearer 9 per cent, and they paid one-third of one per cent in dividends. In the year 1930 there was a small loss.

Q. The earnings on capital of these companies are particularly large?—A. The two companies are very very different. The Woodward has maintained a substantial profit throughout ten or eleven years; the Spencer company in the last five years, its profit has been very low, and in some cases actually losses, so its dividends have been small. On the other hand, its salaries have been somewhat higher.

By Mr. Sommerville:

Q. Now, dealing with your consolidated trading account, we will finish the first page?—A. May I just amplify my statement as to Woodward's? Woodsward's earned during the last four years, 10 per cent and paid 4 per cent in dividends.

Mr. KENNEDY (*Winnipeg*): In dividends?

The WITNESS: On its invested capital, and paid 4 per cent dividends.

By Mr. Sommerville:

Q. When you are considering invested capital, you are considering $5,000,-000?—A. Yes.

Q. Ten per cent on the $5,000,000 would be.— —A. $500,000.

Q. And then you say the $5,000,000 is largely written by— —A. Quite so.

Q.—by the new appreciation?—A. I should not use the word "investment"; I should say capital.

By Mr. Kennedy (Winnipeg):

Q. A portion of the capital on which you reckon a return of 10 per cent is written up 50 per cent?—A. In the Woodward company, possibly so—

Q. That would mean really 20 per cent on invested capital?—A. Yes, if you eliminated the appraisal.

Q. Eliminated what is written up?—A. Yes.

Q. No, it is not quite that.

By Mr. Sommerville:

Q. In the case of Woodwards, there was written up something like $1,000,-000?—A. Yes.

Q. It would be 25 per cent write-up.—A. I should correct that. The capital would be about $4,000,000, and the profit would be $500,000 on $4,000,000.

By Mr. Kennedy (Winnipeg):

Q. Let us get that correct.—A. Yes, I would like to correct that.

Q. The return in percentage on invested capital— —A. Would be about 13 per cent in the last four years, and they paid 4 per cent.

By Mr. Sommerville:

Q. For each of the last four years?—A. Average of the four years.

Q. Now then, dealing with the second page of your consolidated profit and loss account, was there something you desired to bring to the attention of the committee there?—A. I do not think there is anything there that is not self-explanatory. We point out there the capital from the date of the organization and show the losses for the recent years.

Q. The store operations show a profit in itself?—A. Yes.

Q. The operation of the store itself shows a profit of $280,000?—A. In the last year, yes.

Q. There are losses in respect of sundry rents due to them but not received, $21,000?—A. Certain sundry recoveries, interest from investments—they have

a substantial investment portfolio, and rents from the Victoria building and the Times building against each territory; municipal taxes ran to $109,000 in the last year; interest on mortgages which they borrowed on their buildings, $126,-000, charge for life insurance on certain of the lives of the directors, $21,000, fire insurance and depreciation—

Q. Depreciation amount written off was $86,000?—A. Yes, there was no increase in the depreciation charge as the result of writing up the assets.

Q. They continued to add the same amount?—A. Yes.

Q. Annually for depreciation?—A. Yes, approximately so.

Q. But a large portion of the big loss is represented by the $86,000 of depreciation and $21,000 life insurance premiums?—A. Yes.

Q. That was charged against the operations, and as a result the statement shows a net loss of $39,000 in the operations.—A. $35,000.

Q. $35,916?—A. Yes.

Q. Which would be more than wiped out by the depreciation?—A. Oh, yes.

Q. Now, what were the total net figures in the ten year period in the operations, net profit and loss?—A. You are not speaking of the profit from the store operations?

Q. I am talking of the whole company.—A. $692,000 of profit in the 10 years.

Q. On what page is that?—A. The same page, the next block up, Mr. Sommerville, on the right hand side, the next block up, $692,000, the net column.

The CHAIRMAN: Balance to surplus?

By Mr. Sommerville:

Q. $692,020 for the ten year period after taking into consideration losses sustained through its sale of inventory?—A. Yes, then on the next sheet we show the departmental operating statements, the results of which we have referred to. You have noticed there are a great many more departments here than there were in the Woodward store, and we show the sales on the left hand column and the mark-up percentage on the third column from the right.

Q. Now in this Vancouver store, I observe Spencer's conduct also a five, ten, and twenty-five cent store?—A. Yes, a section of the store is five, ten, and twenty-five cents.

Q. In that particular store they have a mark-up of— —A. 45·7 per cent.

Q. In umbrellas the mark-up is 49·5 per cent?—A. Yes.

Q. Linens, 47·9 per cent?—A. Yes.

Q. Notions, 53 per cent?—A. Yes.

Q. Millinery, 69 per cent?—A. Yes.

Q. Drugs. What is your mark-up in drugs, 41 per cent?—A. 41 per cent is right.

Q. Corsets, 65 per cent.

Mr. HEAPS: Thrift Shop, 44 per cent.

By Mr. Sommerville:

Q. Thrift shop 44 per cent mark-up?—A. Yes.

Q. Carpets, 42 per cent?—A. Yes.

Q. Draperies, 48 per cent; China, 63 per cent; Wallpaper, 70 per cent; greeting cards, 62 per cent; pictures, 98 per cent?—A. That is seeds.

Q. Seeds, 98 per cent; pictures, 60 per cent?—A. Right.

Q. Builders' hardware, 47 per cent; boys' clothing, 47 per cent; neckware, 58 per cent; ribbons, 90 per cent?—A. Right.

Q. Watch repairing, 74 per cent; cutlery, 49 per cent; curios, 58 per cent.

The CHAIRMAN: There is a flapper shop.

Mr. YOUNG: They did all right on their flappers.

Mr. SOMMERVILLE: 49 per cent on the flapper shop.

The CHAIRMAN: Downstairs store; is that the groceries?

The WITNESS: That is a downstairs store, something like Eaton's basement, only not developed to that extent.

By Mr. Sommerville:

Q. Bargain department; youths' clothing, 42 per cent?—A. Yes.

Q. Not-Nu furniture; that is the trade-in furniture?—A. Yes, traded in.

Q. 64 per cent? Cosmetics, 62 per cent, optical 133 per cent, sewing machines, 76 per cent?—A. Yes.

Q. Lamps, 52 per cent; boys' shoes 39 per cent; Robson street store?—A. That is a small fancy store.

Q. A special store, 58 per cent. Candies, 49 per cent, stationery, down to 14 per cent?—A. It does very little of that.

Mr. KENNEDY (*Winnipeg*): The bakery here shows a profit, Mr. Sommerville.

Mr. HEAPS: Tobacco, 32·3 per cent.

Mr. SOMMERVILLE: Tobacco 32·3.

Mr. HEAPS: On the other page you have also a tobacco item, item No. 98.

Mr. SOMMERVILLE: A small one.

Mr. HEAPS: 23·6.

Mr. SOMMERVILLE: This is a small item.

The WITNESS: I think they had one little one; it is just an extra counter for convenience, perhaps, in the store; it would be separate.

By Mr. Sommerville:

Q. Then you have a candy factory, 98 per cent, spice factory, 51 per cent, tea and coffee, 18 per cent, bakery 45·6 per cent?—A. That is the same as we have in the Woodward store. That is the profit before the whole department expenses are applied to it.

Q. What did you find in this store with respect to the question of bread?—A. They are also selling bread for two for seven cents following,—I don't say following, but they are doing the same—

The CHAIRMAN: Doing the same as Woodward's.

The WITNESS: Doing the same as Woodward's. Selling the bread continuously below cost.

By Mr. Kennedy (Winnipeg):

Q. And butter?—A. I did not find the same thing in butter in this store, no.

Q. Did you find it in any other commodity besides bread?—A. We found examples of loss leaders, but in no steady department, or in no one commodity through the year.

Q. Bread was the only commodity consistently sold below cost?—A. Bread was the only commodity consistently sold below cost.

By Mr. Sommerville:

Q. The average mark-up was 40·4?—A. That is including the last two groups of foodstuffs and eliminating this, the mark-up was 43·1 per cent.

Q. Eliminating foodstuffs, the average mark-up was 43·1 per cent?

Mr. HEAPS: When were these mark-ups taken?

The WITNESS: When? They were taken right from the company's record for last year.

Mr. SOMMERVILLE: The whole of last year?

The WITNESS: The whole of last year.

By Mr. Heaps:

Q. Have you the average mark-up for the year?—A. Yes, this is the average mark-up. That is the only way we could get the maintained mark-up. We might have some samples later. We tried to get the maintained mark-up on one particular purchase, say coats, but you cannot find it; you cannot find the last one, two or three coats in the purchase.

Q. I have in mind a specific seasonal commodity. At the end of the season they will probably clear it out at a fairly low rate?—A. Yes.

Q. It is pretty common in all department stores?—A. Yes, quite common.

Mr. SOMMERVILLE: This is reflected in the maintained mark-up.

Mr. HEAPS: In those averages we have here?

Mr. SOMMERVILLE: Yes.

Mr. YOUNG: They lost money on about half of their departments?

The WITNESS: They did last year.

Mr. SOMMERVILLE: The losses are shown in the heavy black type.

By Mr. Young:

Q. Yes. Can you give any rule; was there any rule followed there in taking those losses? Why did they take a loss on the five, ten and twenty-five cent store and make money on the umbrellas and men's furnishings?—A. I do not think I could apply any rule to that. As I say, this company was going through a period of reconstruction and reorganization. They were cleaning their stock, and trying to put the company on its feet again at the time. I think they had undoubtedly an inventory loss. This would be reflected in those figures.

By Mr. Sommerville:

Q. That process would also reflect itself in the maintained market?—A. Right, yes.

Q. In the mark-ups that were received?

Mr. YOUNG: They made very heavy losses in the furniture, heavy losses in the china and drapery groups.

The WITNESS: You will remember furniture was not a good department in the Woodward store either. The furniture business in Vancouver in the department stores is not good.

Mr. YOUNG: What I want to get at is, whether these losses are due to the fact that they had big stocks of those commodities on hand when prices went down.

The WITNESS: That would be part of it, yes.

Mr. YOUNG: No other reason you can think of?

The WITNESS: No.

By Mr. Sommerville:

Q. That would mean that they would keep that in stock for years; but that is hardly the policy in departmental stores, is it?—A. I think if you will turn over—

Q. To page 5?—A. I thought perhaps that might be useful.

Q. Page 5 shows the mark-ups?—A. We show the mark-up on three dates; we really wanted to show whether there is any very serious fluctuation between the summer of 1933 and the winter of 1933, because when we struck that particular company, they were bringing about the change internally, and we wanted to find out whether our figures were indicative, so we gave the mark-up both in June and December.

Q. Yes. Now then— —A. The next statement which is also not printed, is a statement of certain departments for ten years showing the fluctuations of the mark-up during that period.

Q. Yes. I observe that this company has had an average mark-up?—A. Has a general increase in the last two years.

Q. In the last two years the mark-up has increased?—A. In fruits from 27 per cent to 30 per cent; vegetables 29·5 to 33·6; groceries from 8·81 to 14·9.

Q. That is almost a 70 per cent increase in that mark-up?—A. Ladies' underwear 44·76 to 55·5; boys' clothing from 39·67 to 47·5; furniture from 34·31 to 37·1; mantles are down.

Q. Men's clothing 29·66 in 1933 to 36 in 1934?—A. Mine is not printed, on this copy—what is yours?

Q. 29·66 in 1933 to 36 in 1934; mantles from 34 in 1933 to 38 in 1934?—A. Men's shoes went up in two years from 41·6 to 46·8; ladies' shoes from 31·22 to 40; drugs from 44·8 to 41·8—they went down.

Q. Generally speaking this indicates a rise in the spread in these items from the price at which they were purchased to the price at which they were sold; and there has been an increase in the last two years?—A. Yes.

Q. Then the next statement is for the purpose of showing the spread of the expenses, it is for filing?—A. The balance of these statements are examples of price spreads, the same as I gave in the case of Woodwards this morning.

Q. Now, let us take some of these; let us take for instance drugs?—A. The maintained mark-up of the drug department was 41·8 per cent in 1933; the spreads from initial mark-ups were from 113 per cent high to 12 per cent low.

Q. 113 per cent is high—vacuum bottles I see cost 23 cents and sold at 49 cents; a mark-up of 113 per cent. Facial oil cost 25 cents, marked up to 50 cents; 100 per cent. Absorbent cotton purchased at 21 cents and sold at 39 cents, a mark-up of 85 per cent?—A. Yes.

Q. Hospital absorbent cotton—what is that?—A. The same thing. It costs 21 cents, marked up to 39 cents, a spread of 85 per cent.

Q. Blue blades, apparently razor blades; what is that?—A. They cost 6.40, marked up to 10; a mark-up of 56 per cent.

Q. And here you have Epsoms Salts—you were interested in that Mr. Heaps?

Mr. Heaps: No, I was interested in Enos.

The Witness: Cost 4.5, marked up to 9, a mark-up of 50 per cent.

The Chairman: Can't you find some Enos?

Mr. Sommerville: We had so much of it yesterday it should not be hard to find.

The Chairman: I mean, give him the details.

By Mr. Sommerville:

Q. Toilet paper?—A. Cost 10, marked up to 15.

Q. Palm olive?—A. Cost 6 cents, marked up to 8 cents, a mark-up of 33 per cent.

Q. Kruschen salts?—A. Cost 48 cents, marked up to 63 cents, a mark-up of 30 per cent.

Q. Listerine?—A. Cost 79 cents, marked up to 98 cents, a mark-up of 24 per cent.

Q. Listerine is one of those standard brands. And the maintained mark-up of this department you say was 41·8. Now, in ladies underwear?—A. A maintained mark-up in 1933 of 55·5 per cent, with the mark-up varying from 122 per cent to 6 per cent.

Q. Now, can you give us some example of these; most of these are manufactured in Montreal?—A. Slips purchase cost 40 cents laid down, marked up to 89 cents; a mark-up of 122½ per cent. Vests purchased in Galt, cost laid down $1.40, marked up to $2.95; a mark-up of 110 per cent.

Mr. Kennedy (*Winnipeg*): How much did you say the mark-up was?

Mr. Sommerville: 110 per cent—that is pretty fair for Galt.

The Witness: 300 sets of pajamas purchased for $1.01, marked up to $1.75; a mark-up of 75 per cent. 300 gowns purchased in Montreal, 42 laid down, marked up to 69, a mark-up of 64 per cent. 120 knitted garments of some kind purchased at 66 laid down, marked up to a dollar; a mark-up of 51 per cent; 120 other slips cost $1.70 laid down, marked up to $1.98; a mark-up of 16 per cent.

Q. The next covers?—A. The mantle department, 38.3 per cent maintained mark-up, the individual mark-up being from 121 per cent to 3 per cent.

Q. Now, in the case of coats?—A. Purchased in Vancouver, made in Vancouver, coats bought for $8.80 marked up to $19.50, a mark-up of 121·57 per cent. 100 coats purchased in Montreal at $22.05 laid down sold for $29; some at $39.10—a mark-up from 31 per cent to 79 per cent.

Q. Coats and suits bought in Winnipeg?—A. Cost $25.85 laid down, sold at $45, a mark-up of 74 per cent.

By Mr. Young:

Q. Do the items shown on this sheet indicate whether there is a net profit or loss on each?—A. No, but they are being filed.

The Chairman: They are being filed as exhibits.

The Witness: We could not get them all printed in time.

By Mr. Sommerville:

Q. Give us some more of these; here are some squirrel coats from Montreal? —A. The cost laid down was $42.12, they were marked up to $69.50; a mark-up of 65 per cent.

Q. Suede coats?—A. They were purchased for 48.05, they sold for 79, a mark-up of 64 per cent.

Q. How about that item of wolf-trimmed coats?—A. Those were purchased for $20.93 laid down. They sold for $35; a mark-up of 67 per cent.

Q. Perhaps it would be better to refer to the one previous to that; somebody asked if the more expensive suits had a larger mark-up; just above is that item "suit-wolf"?—A. That was a special suit purchased for $17.07 and marked up to $29.50, a mark-up of 72 per cent.

Q. Would you refer to the one here which cost $59.50— —A. Oh, yes, that is called the wolf suit.

Q. The wolf suit?—A. That was purchased for $35.15 laid down, it sold for $59.50, a mark-up of 69 per cent.

Q. Which is practically the same carrying charge as on any of the larger suits. Here is one, shadow-fox?—A. That cost $101.47 laid down, it was marked up to $159.50; a mark-up of 57 per cent.

Q. Swagger suits?—A. Purchased at a cost of $15.78 laid down, sold all the way from $13.95 to $21, a mark-up of as high as 52 per cent.

By Mr. Kennedy (Peace River):

Q. Were some sold at a loss?—A. Not sold at a loss, but some were sold at a very small profit; none at a loss.

Q. Furniture?—A. A maintained mark-up of 37·1 per cent; and there are instances of that mark-up varying strongly—some furniture was actually sold at a loss.

Q. Were the chesterfields sold at a loss?—A. 18 were sold at a loss.

Q. I see that, I mean taking it all into consideration you have had a maintained mark-up of 37 per cent?—A. Yes.

The CHAIRMAN: 31·7 per cent.

The WITNESS: 37·1 per cent.

The CHAIRMAN: I beg your pardon.

By Mr. Sommerville:

Q. For instance, here you have desks?—A. Desks purchased at Elora at a cost of $5.45, sold at $10; a mark-up of 87 per cent. Tea wagons cost $21.90 laid down, sold at $39.50; a mark-up of 80 per cent. Chesterfield sets cost $198.75, sold at $335; a profit of $136 or 68 per cent. Bedroom sets, purchased at $94.50 laid down—a Stratford purchase—sold at $159; or a mark-up of 68 per cent.

The CHAIRMAN: Stratford—that is the place where we had all the trouble, wasn't it? What is that again?

The WITNESS: They were purchased from the factory at a cost of $76, they cost $18.50 for sales tax and freight, a combined total of $94.50; they sold for $159; a mark-up of 68·25 per cent.

By Mr. Heaps:

Q. Mr. Nash, are not a good deal of these goods about which you are speaking sold on a term basis?—A. You mean by Spencers?

Q. On the instalment plan?—A. Not all on credit.

Q. They carry on a large cash business though?—A. Spencers carry on a large cash business, they also have a substantial credit business.

By Mr. Sommerville:

Q. What Heaps is referring to is, he wants to know whether these mark-ups are on the cash business or the credit business?—A. I do not think it makes any difference.

Q. There is a regular provision for that, 6 per cent interest additional, or something of the kind.

Mr. HEAPS: The reason I draw attention to this is because of the large amount that was put down to bad debts.

Mr. SOMMERVILLE: I appreciate that.

The WITNESS: This, Mr. Heaps, was the cash selling price. These are the prices at which the goods are marked in the store. As soon as the goods are received at the store, they are marked with the cost price and the selling price. If goods are sent to your house on a 30 day credit basis, there is no extra charge, but if the account is not paid then, there is a charge of interest on deferred payments. They have no instalment sale plan. They have a modified form in Woodward's, but not in Spencers.

By Mr. Sommerville:

Q. Here you have tea waggons from Napanee?—A. Purchase price laid down was $19.40, sold at $32.50, a mark-up of 67·52 per cent.

Q. Then there is the item of Vanity Chairs purchased in Vancouver?—A. They were purchased at a cost of $10.33, marked up to $15.90; a mark-up of 63·60 per cent.

Q. Walnut tables from Stratford?—A. Cost $1.06, sold for $1.69; a mark-up of 59·34 per cent.

By Mr. Young:

Q. A walnut table, you say, for a dollar?—A. So-called.

Mr. SOMMERVILLE: Laid down in Vancouver?

The WITNESS: That may be what they call B. C. walnut.

By Mr. Sommerville:

Q. Cedar chests?—A. Purchased for $21.73 laid down, sold at $34.58; a mark-up of 58·76 per cent.

Q. Then you have Beach Umbrellas from Stratford?—A. They cost $2.98 laid down, they sold for $4.50; a mark-up of 51 per cent.

Q. Fern stands?—A. Purchased in Vancouver at $1.06, sold for $1.60; a mark-up of 51 per cent.

Q. Bedroom suites from Vancouver—further down?—A. Purchased at a cost of $52.50, that includes tax, sold at $69; a mark-up of 31 per cent. These 18 chesterfields at the last were purchased at a cost of $31.97, sold for $29.50—that is a definite loss leader.

Mr. HEAPS: Would they be a loss leader, or would it be a bad buy?

By Mr. Sommerville:

Q. It is a quantity, 18?—A. Might I point out, Mr. Heaps, that these mark-ups I am giving you are not the prices at which the goods are marked when they are sold, it is the price at which the goods are marked when they come into the store. When the goods come into the store the practice in all departmental stores, as we will explain later, is to put the selling price right on the goods at that time, their mark-up—the price which it is expected will be obtained in them subject to later fluctuation, if they do not sell for that price.

Q. Take these chesterfields, was that the original marked price?—A. When the invoices came in.

Q. Then the intention was to take a loss on them?—A. Oh yes.

The CHAIRMAN: Loss leaders.

By Mr. Sommerville:

Q. They came from Montreal?—A. Yes.

Q. Then you have some samples of ladies' shoes?—A. In that statement we find that the maintained mark-up is 40 per cent—that is the ladies' shoe department.

Q. The maintained mark-up in the ladies' shoe department is?—A. 40 per cent; and the initial mark-up run from $87\frac{1}{2}$ per cent to 11 per cent.

Q. You see here some black satin strap slippers?—A. They were purchased in Kitchener at $3.20, sold at $6; a mark-up of $87\frac{1}{2}$ per cent.

Q. Green slippers?—A. Purchased in Toronto at $1.31, marked up to $2.45; a mark-up of 87 per cent.

The CHAIRMAN: Will you speak a little louder, please.

Q. Brown glazed Hiawathas?—A. Purchased in Quebec at $1.10, marked up to $1.95; a mark-up of 77 per cent.

Q. Women's white slippers?—A. Purchased at 74 cents, marked up to $1.25; a mark-up of 68 per cent.

Q. Brown calf oxfords?—A. These were purchased in Galt at a cost of $3.03, they were marked up to $5, a mark-up of 65 per cent.

An Hon. MEMBER: What about Cinderella slippers?

Mr. SOMMERVILLE: They were just fresh out of Cinderella slippers apparently.

By Mr. Sommerville:

Priscilla oxford rubbers?—A. Purchased at $1.69, marked up to $2.75; a mark-up of 62 per cent.

Q. Grafton ties, blue suede?—A. These were purchased at a cost of $3.91, they were marked up to $6; a mark-up of 53 per cent.

Q. White Nurse's oxfords?—A. $3.59, mark-up $5.45, 51 per cent.

Q. Women's Splasho Rubbers?—A. $1.12, mark-up $1.31, 17 per cent.

Q. Men's clothes?—A. Maintained mark-up, 36·9 per cent. The mark-up runs from 97 per cent to 23 per cent.

Q. Men's Bathrobes?—A. Purchased from Montreal for $3, laid down $3.44, mark-up $6.50, 89 per cent.

Q. Men's Pants? Made in Edmonton?—A. $2.40, mark-up, $4.75, 98 per cent.

Q. Overcoats, Montreal?—A. $10.80, mark-up $19.75, 81 per cent.

Q. Men's gowns, Toronto?—A. $5.20, mark-up $9, 73 per cent.

Q. Tuxedos and silk vests, Montreal?—A. $16.80, mark-up, $27.50, 63 per cent.

Q. Men's suits from the same firm in Montreal?—A. $11.94, mark-up, $19.50, 63 per cent.

Q. That is a firm you have the report upon?—A. We will have a report on it later.

Q. Cravenette coats?—A. $8.45, mark-up, $13.50, 60 per cent.

Q. O.K. Fish Brand Medium Coat?—A. Purchased at $4.02, mark-up, $6.25, 55 per cent.

Q. Blue High Back Overalls?—A. Purchased at $1.61, mark-up, $2.25, 39 per cent.

Q. Men's suits, 2 pants?—A. $17.02, mark-up $23.50, 38 per cent.

Q. Men's Overall Pants?—A. $1.10, mark-up $1.50, 36 per cent.

Q. The maintained mark-up on the department was 36·9 per cent?—A. Yes.

Q. Butter and egg department. I see you observe that the maintained departmental mark-up for 1933 is 30·4?—A. That is including fresh meats. They are together.

Q. Now, let us get some of these fresh meats. Pork tenderloin?—A. Pork tenderloin, 10¼ pounds for 18 cents, sold at 30 cents, 66·67 per cent.

Q. Premium bacon, 25 pieces?—A. 25 cents sold at 35 cents, 37 per cent.

Q. Beef tongues?—A. 11 cents, sold at 18 cents, 63 per cent.

Q. Chickens?—A. Purchased at 22 cents sold for 30 cents, 36 per cent.

Q. Shoulder of pork?—A. There was a loss. They purchased for 11 cents and sold for 10 cents.

Q. That is a loss leader?—A. I do not know whether it is.

Q. 323 pounds?—A. The butts were sold at a slight profit.

Q. Boys' clothing?—A. Maintained mark-up in 1933, 47·5 per cent; initial mark-up, 120 per cent to 5 per cent.

Q. Youths' coats from the firm in Toronto we have referred to as not paying minimum wage?—A. Laid down $4.84, mark-up $8.95 and $10.95, mark-up range 84 per cent to 126 per cent.

The CHAIRMAN: Made in a sweatshop.

By Mr. Sommerville:

Q. There is no doubt about that. Boys' Shorts?—A. Purchased for $1, mark-up $2.20, 120 per cent.

Q. Boys' Trench Coats?—A. Purchased at $2.80, mark-up $5.95—112 per cent.

Q. Boys' Overcoats?—A. Laid down $3.97, mark up $7.95—100 per cent.

Q. Juniors' Overcoats?—A. $7.11 laid down, mark-up $13.95—96 per cent.

Q. Juvenile Coats?—A. $2.52, mark-up $4.50—78 per cent.

Q. That is all very moderately priced stuff?—A. Moderate priced stuff.

Q. That is a $2.52 coat is put up to $4.50 and that indicates it is moderate priced clothing that is raised in that way. Peel, 3-piece suits?—A. Purchased at $6.37, mark-up, $10.95—72 per cent.

Mr. Heaps: Men's suits?

Mr. Sommerville: Boys' suits.

By Mr. Sommerville:

Q. Corduroy Breeches?—A. $1.16, mark-up $1.95—68 per cent.

Q. And they come from Montreal. Here is another one from this Toronto firm, J. A. Coats, whatever they are?—A. Price $4.77 laid down, mark-up $7.95 —66 per cent.

Q. King 3-piece suits, Montreal?—A. Price $5.56, mark-up $8.95—60 per cent.

Q. Boys' Suits again, 112 suits?—A. $3.71, mark-up $5.95—60 per cent.

Q. Boys Longs?—A. Purchase price $1.90, mark-up, $2.95—55 per cent.

Q. Boys' Bloomers?—A. $1.29, mark-up $1.95—51 per cent.

Q. The significant thing about these mark-ups is the way they run—$3.95, $4.95, $1.95, $8.95, $13.95 and so on up the line.

Mr. Young: There are no 99's?

Mr. Sommerville: No, 95, just under the dollar.

By Mr. Sommerville:

Q. There is a large quantity of straights, whatever they are. Boys' Straights? —A. Purchased at $1.15, mark-up $1.75—52 per cent.

Q. Boys' Sheepskin Coats?—A. Purchased at $3.37, mark-up $4.95—46 per cent.

Q. Now, we have groceries. Maintained mark-up on groceries?—A. 14·9 per cent.

Q. Tomatoes $2\frac{1}{2}$'s?—A. Tomatoes, mark-up 56 per cent.

The Chairman: You had better give us the figures.

The Witness: Unit cost ·083, mark-up, ·13.

By Mr. Sommerville:

Q. Pea soup, 10 ounces?—A. Cost ·054, mark-up ·08—48 per cent.

Q. Oxo cubes?—A. ·076, sold for 11 cents—44 per cent.

Q. Puffed Wheat?—A. ·09, mark-up 13 cents—44 per cent.

Q. Coarse Oatmeal?—A. ·217, mark-up ·29—33 per cent.

Q. Apricots?—A. ·146, mark-up ·19—30 per cent.

Q. Orange Peko Tea?—A. ·225, mark-up ·29—28 per cent.

Q. Coffe?—A. 36 cents, mark-up 45 cents—25 per cent.

Q. Sunlight Soap?—A. ·163 cost, mark-up ·19—16 per cent.

Q. Purity Flour?—A. Purchased for 75 cents—that is 4-24 bag—mark-up 85 cents—13 per cent.

Q. Baking Powder?—A. ·65, mark-up ·71 cents—9 per cent.

Q. Sugar. Is that a loss leader?—A. Not quite. Purchased at $6.60, sold at $6.70.

Q. A hundred?—A. Yes.

Q. Fruit and vegetables?—A. Maintained mark-up for 1933, 33·6 per cent. The mark-ups go from 134 per cent down to 15 per cent.

Q. That is mostly fresh vegetables and fruits?—A. Mostly stuff of that sort.

Q. Here are men's shoes?—A. Maintained mark-up for 1933, 46·8 per cent marks-ups running from 74 per cent to 27 per cent.

Q. Brown Dong. Romeo?—A. Purchased Montreal for $2.26, mark-up $3.95—74 per cent.

Q. Green Slippers?—A. Purchased $1.41, mark-up $2.45—73 per cent.

Q. Men's Black Oil G's?—A. $2.33, mark-up $3.95—69 per cent.

Q. Black Kid Bals?—A. Purchase price $3.26 mark-up $5.50—68 per cent.

Q. Men's Patent Oxfords?—A. Purchased at $3.11 mark-up $5—60 per cent.

Q. P.R.A. Black Kid Bluchers?—A. $5.02, mark-up $8—59 per cent.

Q. Black Kid Bluchers again?—A. Purchase price $3.72, mark-up $5.85—57 per cent.

Q. Brown Calf and Pebbler Oxfords?—A. Purchase price $2.25, mark-up $3.49—55 per cent.

Q. Black Men's Soft Toe Shoes?—A. $2.67, mark-up $3.95—48 per cent.

Q. Men's Habitant Cleated?—A. Price $4, mark-up $5.75—43 per cent.

Q. That is rubber footwear?—A. Yes.

Q. These are some fair samples of the mark-ups throughout that store?—A. Yes.

Q. Now, you are filing also the report from the Victoria store made in the same way?—A. Made in the same way. The difference is not material.

Q. But the mark-ups are substantially the same?—A. The mark-ups are substantially the same.

Q. And the conditions that you already describe of the Vancouver store apply equally to the Victoria store?—A. Yes. Then on the printed statement is a report on the wage.

(David Spencer Co., Ltd., schedule, filed marked Exhibit 214.)

Q. Now, the wage schedule?—A. It is on the right-hand side on the top of the sheet and we show there the department, the number of employees employed and the high, low and average wages for the year 1933.

The CHAIRMAN: That is in Vancouver?

The WITNESS: That is in Vancouver.

By the Chairman:

Q. Might I ask you this. I notice in the "low" column quite a number enumerated as $7, $7.50, $7.50, $8, $5, $7, $7, $8, $6, $7, $8, and $8. Now, I notice that the minimum wage law clause, if I remember rightly, prescribes $9. Did you examine this in connection with the minimum wage law regulations?—A. I instructed our agent to do so.

Q. What is his report?—A. That they had not any knowledge nor could find out that they had broken the clauses of the minimum wage law.

Q. Are we to presume wages that are enumerated here as below the minimum wage rate—that is the minimum wage rate for adults—come under that classification? For instance, I notice that the regulation says: "Under eighteen years of age $7.50 for the first three months; $8 for the second and $8.50 for the third" and so on?—A. I think that is the case.

Q. That is the explanation.

By Mr. Heaps:

Q. Are some of these temporary employees?—A. I think if my instructions were carried out—and I believe they were—this is based on a full week.

Q. Let me show you one item here, Willow Ware china. I think you show a low wage here of $5. Would that be for a full week. I pointed out to you on a previous page Willow Ware china, bankrupt stock, item 126. That showed a spread there in the prices charged of 254 per cent.

Mr. SOMMERVILLE: Yes, that was a bankrupt stock of china and in a large portion of it there was a large mark-up of 250 per cent.

By Mr. Heaps:

Q. The point I am making now is that someone evidently received $5 for all purposes on a sum of something like 200 per cent?—A. I would like to be definite in answer to your question, and my understanding is that all of these are based upon a full week's pay. In regard to that particular case, I would like to find out definitely.

Q. If it would apply to that case it would apply to all?—A. Yes.

By the Chairman:

Q. Then on the next page, in the Vancouver store, we find one $8; another $7?—A. And you find the odd one of $6 and $6.50.

Q. $7.25; another $6.50; $7; $7.50; and one at $5.50.—A. That is what they call the auxiliary staff, the part time staff.

Q. The others are in departments?—A. Yes.

Q. Well, will you check on that to make certain?—A. I will have that checked on to-night, Mr. Chairman.

Q. That it is accounted for by coming within the regulations set out in the Minimum Wage Law?—A. Yes.

By Mr. Heaps:

Q. Are these people who are employed there on a weekly rate?—A. Yes, a weekly rate.

By the Chairman:

Q. Are they fairly steadily employed?—A. Yes, they are fairly steadily employed. There is very little part time employment in Spencer's.

By Mr. Sommerville:

Q. And in the Spencer Vancouver store there are 721 employees?—A. Yes.

Q. And in the Spencer Victoria store there are 420 employees?—A. Yes.

Q. And in the New Westminster Spencer Store there are 46 employees?—A. Yes.

By Mr. Heaps:

Q. Are these employees paid for all legal holidays?—A. I am afraid I cannot answer that definitely. I will make that a matter also of my inquiry to-night.

Q. Have you any information as to whether they receive any holidays during the year?—A. I have already wired for that information, Mr. Heaps. I would like to read you this section of the report that was made to me:

> In connection with auxiliaries and extra help, these would all be paid, in the case of females, at the minimum wage or more and would be employed for times such as special sales, Christmas, and other events that require more than our usual staff.

They might fall into that category, but I will inquire and clear that up to your satisfaction, and my own as well.

By Mr. Sommerville:

Q. In the case of Spencer's there is a much larger advertising appropriation?—A. Yes, three times as much.

Q. I observe in the report here that the total advertising in the two Vancouver papers for the Vancouver store amounted to 1,647,814 lines in the year 1933?—A. Yes. There was another point I would like to speak to, that is, as to consignment stocks. There are no consignment stocks as such in either the Woodward's or the Spencer store in Vancouver.

Q. And I suppose there is also a substantial number of loss leaders?—A. Loss leaders in both stores.

By Mr. Heaps:

Q. In going through the books of the company, did you find that most of the goods purchased were made in the Dominion of Canada?—A. Oh yes, almost all; a very small percentage made outside.

Mr. SOMMERVILLE: Now then, we will have the Army and Navy Department Stores, Regina.

The WITNESS: Mr. Sommerville, would you like me to file a little summary for the Spencer store the same as the Woodward stores?

Mr. SOMMERVILLE: Yes, if you will file the same kind of summary for Spencer's as in the case of Woodward's.

The WITNESS: I will do that to-morrow morning.

By Mr. Sommerville:

Q. Now, have you got the statements for the Army and Navy Department stores?—A. Yes.

Statement No. 1

ARMY AND NAVY DEPARTMENT STORES

Statement of Assets and Liabilities

As at 31st March, 1934 (approximate) (Vancouver as at 31st May, 1933)

Statement No. 10

ARMY AND NAVY STORE, REGINA, SASKATCHEWAN

EXAMPLES OF CLEARING LINES OFFERED BY MANUFACTURERS AND JOBBERS

April, 1934	Bought through E. H. Walsh and Company Limited, Hammond Building, Winnipeg 356½ doz. full-fashioned silk hose, manufactured by Butterfly Hosiery Company, Limited, Drummondville, Que., at $4.25 per dozen. This is a regular $6.50 line selling ordinarily at a retail price of 75c. per pair. This purchase will be catalogued (new catalogue) and sold at 50c. per pair.
April 18th, 1934	Offer received from Wellesley Wear Limited, Wellesley, Ont., of 100 dozen boys' windbreakers at a clearing price of $8.00. This is regular $11.50 line.
April 19th, 1934	Offer received from Acme Glove Works Limited, of mocassins. Job lots to clear. Quantities about 1,000 dozen at about one-third off present regular prices. Could buy this and catalogue at good price.
March 17th, 1931	Bought from Canadian Goodrich Company Limited approximately 5,000 pairs of Women's Zipper overshoes at 27½ c. and 25,000 pairs at 50c. Were discontinued line. Still in Fall 1933 catalogue. Clearing balance of broken sizes. Selling at 50c. See (Page 3). These overshoes sold (when a regular line) at $2.50 to $6.00 per pair. Sold previously at 59c. to $1.19.
October 5th, 1933	Bought 650 dozen full-fashioned silk hose at $4.00 per dozen plus tax and freight from Gotham Hosiery, St. Hyacinthe. Page 3 of Mid-winter Catalogue. Sell these at 50c. New line introduced by Gotham to sell at $1.35 retail and costing $10.35 per dozen proved failure, and Gotham discontinued the line and sold their stock to Army and Navy at $4.00. All sold by Army and Navy at 50c. per pair.
February 3rd, 1933	Eastern Hosiery Mills Limited offered 2,000 dozen of No. 46 cotton hose, a discontinued line, at $1.25, tax included, f.o.b. mill. Army and Navy purchased this lot and catalogued to sell at 15c. per pair (Fall and Winter, page 5.) This would previously have been sold by a jobber to the retail trade at $2.10 and sold to the public at 25c. or 20c. per pair.
February 1932	Bought from Alfred Lambert Limited, Montreal, several thousand pairs Women's shoes at flat price of $1.25 per pair, f.o.b. Montreal, represented as values of $1.75 to $3.00 at Lambert's regular jobbers' prices. These were fitted to catalogue where possible and remainder sold retail. Some went in Fall and Winter catalogue grouped, page 35, at $1.95 (better ones).
December 28th, 1932	Job lot of pyjamas, bought about 300 dozen from Grover Knitting Mills, Montreal, at $8.00 per dozen, plus tax and freight. These pyjamas did not come up to standard fitting garments and were forced to clear finally at 50c. Catalogued at 95c., Fall and Winter flyer.
October 17th, 1932	Bought from Grover Knitting Mills in October, 1932, 2,000 dozen bloomers at $2.00 and 850 men's shirt and sock sets at $6.30, plus tax and freight. Represented as being $2.40 to $3.00 line of bloomers and sets as $8.50 to $10.00 sets. Broke sets up and sold shirts and socks separately, filling in on catalogue items. Bloomers were sold at 25c. in Mid-winter catalogue, front page. Bought more bloomers from Grover in 1933 at same price.
October 1933	Job lot of shoes bought from Patricks Limited, wholesale shoe jobbers in Winnipeg, $8,500.00 worth. Paid $1.25, $1.50 and $1.75 per pair for women's shoes, men's oxfords at $2.00 and $2.25, work boots at $1.75 and $2.15. Comprised everything this jobber handled, including merchandise to $7.00 per pair. Fitted in to Catalogue Nos. and also sold in retail store.
February 1933	Bought clearing line of blankets from Canadian Factors Corporation, 1459 Alexander Street, Montreal, approximately 2,000 represented to Army and Navy as a $2.25 retail line. Sold to Army and Navy, assorted at 90c. plus freight which was about 12c. a blanket. Catalogued in Fall and Winter catalogue, page 49, at $1.69 each and remainder cleared in retail store at $1.00 per blanket. All sold.
June 19th 1933	Bought 64 dozen lumbermen's all-wool worsted socks at $6.25 per dozen from Massey Knitting Company, Montreal. Regular $8.00 to $10.00 lines. Sold on page 19 Fall and Winter catalogue at 98c.
June 24th 1933	Bought 1,326 ¾ dozen toques from Utica Company Limited, Montreal, Importers, at 75c. per dozen F.O.B. Montreal. Sold to Army and Navy as being $2.00 to $4.00 per dozen lines. Came in from Czecho-Slovakia. Catalogued Mid-Winter, page 10, at 10c. each.
September 4th 1931	Bought entire stock of Kaster Bros., Montreal, all kinds of pocket knives and other cutlery at about ¼ regular prices. Total purchase $5,400.00. Still selling these knives. See order form Fall Catalogue.
June 1933	Bought clearing line of muleskin leather work gloves from Quality Glove, Waterloo, Ontario. Bought approximately 3,000 dozen at $1.40 per dozen, plus freight and tax. Regular prices not less than $2.25. Selling in Mid-Winter catalogue, page 35, at 17c. per pair.
June 1933	Bought clearing lines of assorted merchandise manufactured by Belding Corticelli, Montreal. (Hosiery, cottons, silks, etc.) Bought at better than ⅓ off regular prices. Total purchases approximately $2,500.00. Used for "grab boxes" and, where fitted, regular merchandise. In this case, customers would get branded line better than regular goods supplied.

ARMY AND NAVY STORE, REGINA, SASKATCHEWAN

EXAMPLES OF CLEARING LINES OFFERED BY MANUFACTURERS AND JOBBERS—*Concluded.*

September 15th 1933	Bought clearing line from Canadian Converters Limited, pants and shirts at from 10% to 25% off regular prices. Also large quantities of samples at 25% off their regular selling prices.
	Used to fit in catalogue numbers where suitable and sold retail on bargain days.
December 1933......	Bought from Samuel Hart, 105 odd pants at $2.75. Regular product of factory from suits ends of good materials and buy these frequently at this price.
	Advertised Mid-Winter catalogue, page 17, at $3.98—"includes values up to $12.00".
	Very good materials in these and usual custom of factories to sell these products cheaply.
April 20th 1934......	Mercury Mills Limited without solicitation wrote as follows:—"We have 1,000 dozen No. 3920 in stock. We are thinking of discontinuing this number and making a better hose to take its place. We would be willing to sell you this stock at $4.00 net, tax extra. If 1,000 dozen is too many, we would be willing to sell part part of it to you at that price".
	Army and Navy had this line on order with Mercury at $4.75, 141 dozen to take out of 1,500 dozen order. Cancelled balance of this order and accepted above offer, 1,000 dozen at $4.00 to be delivered March 25th—August 25th.
	Will sell these this coming Summer at 50c. Now selling at 63c.
	Will use on 50c. day and $1.00 day.

The WITNESS: Mr. Sommerville, this statement contains not only the Army and Navy Department stores but certain other small department stores which will be taken up later, but perhaps it will be convenient to file it at this time.

The CHAIRMAN: Yes. That will be exhibit No. 215.

The WITNESS: This covers the Army and Navy Department Stores, Freimans of Ottawa, Ogilvies, and the Dupuis Freres, Montreal.

The CHAIRMAN: All right.

The WITNESS: I would like, if I may, in this case, to say something to the committee about the Army and Navy Department stores.

By Mr. Sommerville:

Q. If you will just tell us what the Army and Navy Departmental Stores are, and the origin or beginning of that organization.—A. The records are entirely different to those that we have taken up in Vancouver. There is no departmentalization at all of the Army and Navy stores. I cannot tell you what the men's department or the women's dress goods department are doing as such. Their sales are all thrown into the common pot.

By the Chairman:

Q. There are three stores?—A. Yes, there are three stores. The history is that the business was formed in Vancouver about 1919 to deal in army supplies disposed of at the close of the war by the British, Canadian and American governments.

Q. That was supposed to be the reason for its existence?—A. That is the reason we have been given, and the name "Army and Navy Stores" was adopted at that time as being descriptive of that sort of business. It is interesting to note that during this period other stores with a similar name were operating in other sections of Canada but there was no connection whatsoever with the Army and Navy Stores. There is one in Toronto. From its beginning the business developed into a regular retail department store and mail order business dealing in the usual classes of merchandise.

In 1922 a mail order business was founded in Vancouver, and in 1924 competition from other mail order houses in the prairies, and the desirability of having a central shipping point, necessitated a move to Regina, where the mail order business was established and a retail store opened. That was in 1924.

In 1928 and 1929 a modern two-story basement and brick building was erected for the retail store at the corner of Eleventh Avenue and Broad Street, Regina. A warehouse was also built on Scarth Street in the same year, the total capital investment in land and buildings at 28th February, 1929, amounted to $128,491.01, of which amount $70,000 was raised by mortgage.

In 1930 a warehouse was erected on Osler Street for the mail order which had previously been conducted at Scarth Street. The cost of the Osler Street site and building was approximately $36,000 of which $23,000 was obtained by mortgage.

The business is run by three brothers, Samuel J. Cohen of Regina; Harry Cohen of Edmonton, and Joseph Cohen, Moose Jaw, and it is run as a partnership and not as an incorporated company. The business generally is that of a low priced line of merchandise designed for sale to farming and working classes, and the advertising appeal through their catalogues and papers is made to these classes of people. The company are heavy purchasers of manufacturers' clearing lines at low prices, job lots, and to a limited and lesser extent, of bankrupt stocks.

Q. Let me understand that. They are operating a retail business?—A. Yes.

Q. In Regina?—A. In Regina.

Q. And one in Edmonton?—A. Yes, and one in Vancouver.

Q. Then, in addition to that, they are operating a mail order business?—A. Yes.

Q. In all of these places?—A. Yes.

Q. Then in addition to that, they operate what is called a wholesale house?—A. Yes.

Q. And the wholesale house is known as what?—A. I have it here somewhere.

Q. Your advertising will show it?—A. Saskatchewan Wholesale Corporation, Limited.

Q. Saskatchewan Wholesale Corporation—not limited, registered?—A. Registered, yes.

Q. It is not a limited company?—A. No, registered.

Q. It has no separate premises?—A. No, no separate stock.

Q. No separate stock. Any orders that come to the wholesale business are filled out of the mail order or retail stock?—A. That is right.

Q. Although they carry on under this very high-sounding name of Saskatchewan Wholesale Corporation, Registered. Will you proceed with the statement?—A. I show you first a statement of assets and liabilities.

Q. Before we come to that statement, they issue catalogues, do they?—A. Yes, they issue catalogues, what is called the fall and winter catalogue and the mid-winter catalogue.

Q. Do they lay in stocks that are assigned to these catalogues or have numbers representative of what is shown in the catalogues?—A. No.

Q. They don't do that?—A. No, they don't do that.

Q. When they have issued their catalogues, how do they proceed to get the stuff to fill the orders that may be made on that catalogue?—A. Well, their methods are these, in brief: The catalogue items do not represent a definite line of merchandise purchased for the catalogue. They issue the catalogue, and then they purchase lines the same as their catalogue, if possible; if not, as nearly like the catalogue line as possible. In shipping the goods to their customers, they fill the catalogue line from the goods that they have, as near to those lines as possible. There is a certain amount of substitution, a good deal of substitution; and the explanation of that is that they substitute at least as good or better lines, and that they have a guarantee of money back if goods not satisfactory.

Q. That means that, having issued their catalogue, they then go out and try to buy clearance lines of merchandise in various parts of the country?—A. Not entirely clearance lines; regular lines and clearance lines.

Q. But I understood from you that they bought mostly bankrupt stocks and clearance lines?—A. I would not like to say mostly. I think their clearance lines run about 30 per cent of their sales, and bankrupt stocks another 5 per cent. I could not tell you exactly.

By Mr. Heaps:

Q. Is there any separation of the mail order business from the general business?—A. No.

Q. You don't know what per cent is mail order or what per cent is general?—A. No. The whole stock is carried for the three different classes of business, and they fill orders from it, from their general stock. They do sell, I believe, their retail goods at the same price as they sell in the mail order catalogues.

Q. But you don't know what percentage of the business is mail order and what percentage is the other?—A. No.

By Mr. Sommerville:

Q. Will you now proceed with the statement?—A. The statements I have to show are devoid of any departmental spreads and profits; and the main

evidence that I wish to give on this is that connected with the advertising. But first of all I have given in printed form a statement of the assets and liabilities, to indicate the size and importance of the concern. That is shown in the first page of the printed statement.

Q. Yes, that shows the total assets of what?—A. That shows total assets of $787,000 approximately at March 31, 1934; and a capital of $402,000, including the surplus. That is the partnership capital.

Q. Based upon the inventory, largely, which they have in their business?—A. Yes, largely on the inventory.

Q. Their total inventory was $571,000?—A. The total inventory at that date was $571,000.

Q. In the three stores, and in all departments?—A. That is right.

Q. Including mail order and wholesale?—A. That is right, $571,000. The subsequent statements I have filed I thought perhaps would be more for reference. They do not throw any particular additional light upon the consolidated statement, except that they are drawn up for a period of seven years. I have shown separately for Regina, Vancouver and for Edmonton. Accompanying each is a statement of the trading and profit and loss account for the years.

Q. Take in Regina, for instance. I see during six years the average mark-up is 34·70 per cent on the cost of the goods sold?—A. That is right.

Q. That is their average?—A. That is their average from 1927 up to March, 1934.

Q. And the total sales for the eight years were $2,060,000?—A. No, I am sorry, I think I am in error there. That is the average for the years 1933 and 1934. The sales have been running around $2,000,000 a year.

By Mr. Heaps:

Q. All the stores?—A. No, this is Regina only.

By Mr. Sommerville:

Q. Yes?—A. The peak was in 1932, that is the year ending February 28, 1932, when it was $2,261,000 in Regina. Sales last year were $2,060,000.

Q. You will furnish us with a summary of the profits such as we had in the other case?—A. Yes.

Q. Not being departmentalized, you cannot give us the mark-ups on the various items?—A. I can't give you the mark-ups on the various departments, because they have no departments as such. But for your information I have compiled this for the last seven years the mark-up on the whole business has varied from 29·33 per cent in 1928 to 34·7 per cent in 1934.

Q. A maintained mark-up?—A. Yes, a maintained mark-up. There was a peak in 1930 of 36·64 per cent, but on the whole, the trend has been somewhat upwards. Then we tried to obtain—I will not take very long, but I think perhaps it might be useful—the departmental mark-ups, so as to compare with the other concerns we have already reported on, by taking a select number of transactions in each of them. We found this, that in men's boots and shoes the mark-ups were from 82 per cent to 25 per cent; in women's boots and shoes, we found the mark-ups were from 79 per cent to 28 per cent; in men's underwear, from 61 per cent to 20 per cent; in overshoes and rubbers from 76 per cent to 24 per cent; men's underwear from 84 per cent to 25 per cent; sweaters and sweater coats from 62 per cent to 23 per cent; women's hosiery, from 74 per cent to 40 per cent; men's work shirts from 44 to 23 per cent; men's overalls, from 51 per cent to 15 per cent; men's clothing general from 71 per cent to 44 per cent; ladies ready-to-wear, from 115 per cent to 66 per cent; ladies house dresses from 45 per cent to 21 per cent. That is about all the information I can give you as to the mark-ups of merchandise. Now, if I might I would

like to show you the advertising of this business, which is perhaps the most important.

Q. That is the one that has been brought to our attention from a number of quarters, and complained of?—A. In connection with the purchase and sale of bankrupt stocks, we were informed by the retail merchants' association representative of Saskatchewan that this company was in the habit of advertising bankrupt stocks, and including in those bankrupt stocks for sale certain of their own goods taken from their own stocks. We endeavour to follow that to find out whether that practice was a common one, and we found it to be so to some limited extent in certain sales, certain sales of bankrupt stock. One in which that applied was the Famous Cloak Company.

By Mr. Young:

Q. Do you mean that bankrupt stock has some virtue that stock that had not gone into bankruptcy did not have?—A. I did not get that.

Q. When they are advertising that bankrupt stocks are being sold as bankrupt stocks is there any particular virtue attached to that kind of stuff; would it sell better?—A. I would think not, but the complaint made by the Saskatchewan merchants was that they would advertise bankrupt stock, take the bankrupt stock onto their floor, and advertise it, and then they would be enabled through that sale to dispose of certain of their own merchandise.

By Mr. Sommerville:

Q. Representing it as having been bought at 50 cents on the dollar?—A. Purchased at some price below cost. Now, I am just reporting that because it was a matter of information before the committee.

Q. These are the kind of advertisement?—A. This is just an advertisement of the Famous Cloak Company, where we did find certain of their own stock.

Q. Liquidation sale of the Famous Cloak Company?—A. Where they advertised here, "Army and Navy store buys Famous Cloak stock, 50 cents on the dollar;" and it does include some of their own purchases. Then, another kind of advertising which we found was this: They advertised a liquidation sale of the Mac and Mac Limited stock, and on that page is included a substantial list of stock from their own store.

Q. That Mac and Mac stock was a particularly high grade of stock?—A. I point that out in this way: The advertisement says "Mac and Mac" stock. It is Mac and Mac stock in the centre, but the side advertisements are not Mac and Mac.

Q. Yes?—A. And the same thing is true of the Laura Lee chain stores, where the centre of the advertisement only—are the purchases of the Laura Lee Company.

Q. And the whole thing is shown in red type as a bankrupt sale, Army and Navy? Yes?—A. Now, I would like—

The CHAIRMAN: We shall file this as exhibit 216.

Copies of advertisements filed and marked exhibit 216.

By Mr. Young:

Q. You are not in a position to tell whether these stocks were as good as the advertisements say?—A. I cannot say; I am not at all criticizing that feature of it. I am just bringing out the method of merchandising through advertising.

Mr. HEAPS: The average you gave of the average profits—the bankrupt stock had been bought and passed on to the consumers—

The WITNESS: They did come under the general merchandising.

Mr. SOMMERVILLE: Yes.

The WITNESS: Now, Mr. Johnston, who is associated with me in this investigation, has some catalogues, and I have endeavoured to find out the method of advertising the goods through these catalogues, and I ask the patience of this committee while it is being read. These are a little technical to follow, but they are rather interesting as being indicative of the practice.

Mr. F. M. JOHNSTON called and sworn.

Q. You are filing a catalogue, what is it known as?—A. It is called the mid-winter catalogue, the large one is called the fall and winter catalogue.

The CHAIRMAN: What year?

The WITNESS: The year is 1933.

The CHAIRMAN: We will file this as exhibit No. 217.

Catalogues filed and marked exhibit 217.

The WITNESS: On page 6 of the mid-winter catalogue, item T 28—may I ask Mr. Johnston to read that?

Mr. SOMMERVILLE: Yes.

Mr. JOHNSTON: On page No. 6, there is a man's shoe described as solid pearl elk, Valentine-Martin quality, finest full grain pearl elk, outside counter, box toe, solid leather soles, 13 nail rubber heel—

Mr. SOMMERVILLE: Don't go quite so fast.

Mr. JOHNSTON: The advertisement reads: Buy shoes now—leather prices are away up, we've reduced our sale prices, $4.50 value, $3.20 delivered.

The WITNESS: Now, we followed that very line at cost, through the books of the company, and found they purchased those goods for $1.99.

By Mr. Sommerville:

Q. $1.99?—A. Marked them up to $3.20 or a 60 per cent mark-up.

Q. If they were a regular $4.50 mark-up in value, that would be about 200 per cent.

The CHAIRMAN: The point there being that they represented they were selling a shoe normally valued at $4.50 for $3.20 when, as a matter of fact, they bought the article for $1.98, is that it?

The WITNESS: $1.99.

By Mr. Heaps:

Q. Were they purchased in the regular way from the factory?—A. That we could not tell because some were not, some were, some would be odd lots, remnants, lines and others—

Mr. SOMMERVILLE: Bought from the factory?

The WITNESS: Yes.

Mr. SOMMERVILLE: Not bought in bankrupt stock?

The WITNESS: No; this was bought from the factory. The next one is on page 6, item T-36.

Mr. JOHNSTON: Genuine grain leather, described as follows: These heavy duty hi-cuts are made of oil and chrome tanned grain leather—with two solid leather soles—full outside counter and backstrap—solid leather heels moccasin sewn vamp; full bellows tongue—16 inches high. You can give them the hardest wear you ever gave your boots. Dark brown, $8.50 value, clearance price, delivered, $5.98.

The WITNESS: We followed this through the books and found they were purchased in the regular way at $3.91, a 53 per cent mark-up.

Mr. SOMMERVILLE: Advertised specially at $5.98, marked up—

The WITNESS: 53 per cent.

Mr. SOMMERVILLE: If they were regular $8 value, that would be a mark-up of several hundred per cent, would it not?

Mr. YOUNG: What do they mean by "heavy duty" there?

Mr. SOMMERVILLE: For fishermen.

The WITNESS: The next is on page 7, R-68.

Mr. JOHNSTON: The advertisement reads as follows: Soft Cushion Insole. There's real comfort in this boot—and real quality as well. Soft Black Kid or fine black calf leather—with real goodyear welt leather soles—soft cushioned insoles and riveted steel shank arch support. Rubber heels. Full fitting blucher last in two wide widths, EE and EEE, $6 value, clearance price delivered $3.95.

The WITNESS: That was purchased for $2.68, and marked up to $3.95.

The CHAIRMAN: Per cent?

The WITNESS: 47 per cent.

Mr. SOMMERVILLE: The regular value was given as what?

Mr. JOHNSTON: $6.

Mr. YOUNG: Any other misrepresentation?

Mr. JOHNSTON: No.

The WITNESS: I would not like to say, Mr. Young—I am not saying it is a misrepresentation, but I do say it is misleading in a sense, for while it may be valued at $6, it was never purchased at $6. This firm never intended to sell it or put it on the market at $6. Some of these goods may have been actually worth more. I cannot tell the quality of the goods.

Mr. YOUNG: The quality of the article was as described?

The WITNESS: I do not know they were not.

Mr. YOUNG: Mr. Johnston thinks it was.

Mr. SOMMERVILLE: You are not complaining of that. The merchants' complaint was they are representing them as being of a quality that was beyond the sale price.

The WITNESS: That is the reason why Mr. Sommerville asked me to do this. There were representations from the merchants of Saskatchewan to the effect that this was going on, and we were asked to discover it. Mid-winter catalogue, page 49—

By Mr. Kennedy (Peace River):

Q. The suggestion in the advertisement is clearly that the proper retail price would be $8.50.

The WITNESS: Item R-14.

Mr. JOHNSTON: This is a lady's shoe described as follows: there will be a big demand for this, it is a spring leader at a mid-winter clearance price! Fine black calf leather—round-toe last—snappy cut-out and silver underlay trim—fully leathertex-lined—covered cuban heel, $3.75 value for $2.29.

Mr. SOMMERVILLE: $2.29 for regular $3.75.

The WITNESS: That was purchased at $1.37, or a mark-up of 67 per cent. On page 26, Item F-86.

Mr. JOHNSTON: This is a lady's shoe described as follows: So smart they add style to your outfit—such value that it's economy to buy now at our sale price! One eyelet tie style in genuine black calf—look at the stitching and

cut-out trims! Black satin bow. High covered cuban heel. To-day's $4 value —for $2.30.

The WITNESS: That was purchased at $1.42; a mark-up of 62 per cent. I am only giving you a few of these, I have a great many instances.

Mr. SOMMERVILLE: If you will just give us a few more of these.

Mr. HEAPS: Is that from a special shoe catalogue?

The WITNESS: No. I will give you other lines of goods now.

Mr. SOMMERVILLE: There are a great many more shoe items similar to these?

The CHAIRMAN: We will file this.

The WITNESS: I will be glad to file them. Perhaps it would be better if I had them typed.

Mr. SOMMERVILLE: Yes.

The WITNESS: The next item is on page 32.

Mr. SOMMERVILLE: That is from the winter catalogue of 1933.

The WITNESS: Page 32, item 68-2—$2.98.

Mr. JOHNSTON: This is a rubber boot described as follows: You will get complete protection from this new "Kaufman" number! Wear these overboots, moccasins, bushman's socks, etc.! All black gum rubber, with corregated rolled-edge soles, and heels—2 buckle height, double bellows tongue, double reinforcements, warm fleece lining. These are worth $4 by comparison with others—$2.98.

The WITNESS: These were purchased for $2.01, a mark-up of 48 per cent. There is another one on the same page which sells for $2.98; the advertising is written much the same—they say it is worth $4—it was purchased for $1.82, and that represents a mark-up of 64 per cent.

By Mr. Sommerville:

Q. And you have many more rubber lines that are similar?—A. Yes, I have many more. Then, we have one of men's underwear—page 19 of the catalogue Item A-62.

Mr. JOHNSTON: This is described as follows, this is Men's Combinations: special! silk and wool—Turnbull quality—that means a lot. Army and Navy Clearance price—that means the greatest possible value! Fine pure wool—but no bulk—lustrous silk stripe—silk trimmed collar and facing. Winners for perfect fit and comfort. A $4 value. Clearance price delivered suit $2.50 or 2 suits for $4.75.

The WITNESS: That was purchased at $1.83 and represents a mark-up of 38 per cent.

Mr. YOUNG: Did you see any of these goods?

Mr. JOHNSTON: Yes, they were a regular $2.50 value, purchased in the regular way from the regular merchant.

Mr. SOMMERVILLE: But they are represented here as being a $4.00 value.

The WITNESS: Yes.

Mr. JOHNSTON: Incidentally, they are marked $4.50 at one place, and $4.00 in another in the same ad.

Mr. SOMMERVILLE: Just a slip of the pen?

The WITNESS: In the mid-winter catalogue on page 13, item D-42.

Mr. JOHNSTON: This is a lady's combination: "Plum-line" underwear, Made by Atlantic Mills, Will provide winter warmth! Here they are—in half sleeve ankle-length style—and look at our low-sale price! Elastic rib knit—fleecy brushed surfaces. Regular $1.59, for 95 cents; or 2 suits for $1.85.

By Mr. Young:

Q. Did you see these also?—A. Yes, sir.

Q. What would the regular price be for them?—A. They were purchased for 64 cents.

By Mr. Sommerville:

Q. They were purchased for 64 cents and sold at 95 cents?—A. Sold for 95 cents, which would be a mark-up of approximately 48 to 49 per cent.

Mr. Young: And the retail price would be about—?

Mr. Johnston: 95 cents, bought in the regular way from the manufacturers.

The Witness: There is an item Sweaters, on page 20—B-38.

Mr. Johnston: Pure wool—sport style! It's a knock-out men!—In quality —warmth—value! "Sport Club style." Super-heavy all-pure wool "no sag." Jumbo knit. Big shawl collar—2 pockets. It's the best made—and now is the time to buy! Black with cardinal and white trim. $7.50 value for $3.95 delivered.

The Witness: Purchased at $2.43, or $2.51.

Mr. Sommerville: Sold at $3.95 and represented as being worth $7.50.

The Witness: That represented mark-ups of 62 per cent and 57 per cent.

By Mr. Young:

Q. Were these really all wool?

Mr. Johnston: They were all wool, but not the finest grade.

Mr. Young: And the value would be—?

Mr. Johnston: About what they were sold at. They were good value at that. They were bought direct from the maker in the regular way.

Mr. Sommerville: Yes.

The Witness: Men's overalls, page 5, D-14. There are many of those.

Mr. Johnston: Best coveralls made—8 ounce denim—wear tested; they're everything a work garment should be. Cut generously full to prevent binding when reaching or bending. Made of extra heavy 8 ounce, red-back blue denim or 8 ounce khaki denim—they're as strong as a mule. Reinforced seams. Two hip pockets, two breast pockets, two front pockets. Extension neckband and sleeve tabs. Buy now at this sale price, $3 value, sale price delivered suit $2.49.

The Witness: They were purchased at $1.88.

By Mr. Sommerville:

Q. Sold at $2.49?—A. They only carried 34 per cent mark-up.

Q. That is the smallest mark-up you have given us so far. That was the regular value of them.

Mr. Johnston: Yes, very good value at that.

The Witness: There is one item of men's clothing in the fall catalogue, page 44, item 60-3.

Mr. Johnston: This is an overcoat: "Feature value, lowest 'quality price' in 25 years. Warm and serviceable all wool, chinchilla. Strongly stitched seams. Deep generous size pockets. Smart half belted back. Fully lined with 'velvetex.' Check this coat for value, Men. It's the grandest bargain you have ever seen. Large convertible collar, Perfect tailoring and the distinctive waterproof 'velvetex' lining, guarantees warmth. Wear one of these rich Navy Chinchillas and be well dressed. Retail values to $20—delivered, each $11.85.

The Witness: Purchased at $6.90.

By Mr. Sommerville:

Q. $6.90?—A. In Montreal; sold for $11.85, 72 per cent mark-up.

Q. For the richest chinchilla ever made?

Mr. HEAPS: That was from Saskatchewan.

Mr. SOMMERVILLE: They have to be good from Saskatchewan. Just give us the advertisement from the wholesale house. That is rather illuminating. These have all been given numbers?

The WITNESS: Would it be convenient if I filed that statement at a later date with the catalogue?

(Catalogue, mid-winter, ends April 15, 1934, filed, marked exhibit 217.)

Catalogue, fall and winter, filed, marked exhibit 217 (A).

By Mr. Sommerville:

Q. This is the advertisement of the Saskatchewan Wholesale Corporation registered. First of all, this is not a limited company, is it?—A. No.

Q. It is a registered partnership?—A. Yes.

Q. And it is offering to the retail merchants a wholesale service. Will you kindly read from that some of the excerpts?—A. I think Mr. Johnston is a little more qualified to do that, he being a merchandising man.

Mr. JOHNSTON: There is one statement here "B," on the front page of this circular: "We carry a million dollar stock (centrally located in Regina, Sask., for fast service to the east or west). Our large stock eliminates 'back ordering'." At that particular time their stock was $401,000.

Mr. SOMMERVILLE: That is the stock $400,000 covered their retail stock and their mail order stock. Was there any wholesale apart from that?

Mr. JOHNSTON: No, they had no wholesale stock.

Mr. SOMMERVILLE: What else, Mr. Johnston?

Mr. JOHNSTON: This is a circular sent out. It gives the impression that there is a very large wholesale whereas it is a name only,

Mr. HEAPS: May I ask what kind of advertisement it is; is it newspaper advertisement?

Mr. JOHNSTON: It is a circular, a flyer sent out to about eight thousand customers throughout Saskatchewan and Alberta.

Mr. HEAPS: Circularizing the retail trade throughout the prairie provinces?

Mr. JOHNSTON: This is one of their statements: "Our wholesale business is secured entirely from these lists at a fraction of a cent per dollar—a new 'low' in selling costs that is passed entirely to our 6,900 dealers." This in itself is misleading as the records show that they only did $25,000 worth of business with those 6,900 customers.

Mr. SOMMERVILLE: $25,000 worth of business in a wholesale corporation with its million dollars worth of assets; and did they do it on the fraction of a cent on the dollar as intimated or was that on the 34 per cent mark-up?

Mr. JOHNSTON: No, the prices were much closer than the mail order.

Mr. SOMMERVILLE: Was their business not included in the whole business that has been represented to us here to-day by Mr. Nash?

Mr. JOHNSTON: Yes, it is included in that.

Mr. SOMMERVILLE: And the returns would come in from this fraction of a cent on the dollar and may have reduced the average and accounted for the low average we have been hearing about?

Mr. JOHNSTON: Yes. There is still another one.

Mr. SOMMERVILLE: There is one that is illuminating. They say, "There are no inside special discounts."

The WITNESS: This one was sent out last fall and is described as a "Million Dollar Harvest Sale."

Mr. SOMMERVILLE: There must have been a good harvest.

Mr. JOHNSTON: That represents half of the volume of the business for one year.

Mr. SOMMERVILLE: Half of the volume of all the business in Vancouver, Edmonton and Regina, mail order retail and wholesale; is that right?

Mr. JOHNSTON: Yes, sir.

Mr. SOMMERVILLE: This is the special million dollar sale that is being held for a few weeks?

Mr. JOHNSTON: For 45 days.

Mr. HEAPS: What about the grasshopper season?

Mr. SOMMERVILLE: That was before they saw the grasshoppers.

Mr. JOHNSTON: There is a further item that is worth considering: "$50,000 worth of merchandise given away." When asked for records of how much they had given away they said that possibly they had given away $1,000, but they said "If the orders came in we would give away $50,000."

Mr. SOMMERVILLE: But on their $2,000,000 worth of business throughout the year they had given away $1,000 worth of goods.

Mr. JOHNSTON: Probably not.

Mr. SOMMERVILLE: Those were premiums. What is their principle of merchandising in that respect? Do they give anything away?

Mr. JOHNSTON: If you turn back this catalogue it will show the gifts.

(Circulars and fliers, Saskatchewan Wholesale Corporation and Army and Navy, filed, marked exhibit 218.)

Mr. JOHNSTON: It is done on a percentage basis. They say if a person buys $25 worth of goods they will get a gift of $2.50 worth of merchandise. On $75 purchase, it is $7.50, and so on.

Mr. SOMMERVILLE: And the gift is left in the hands of the giver to choose?

Mr. JOHNSTON: No, it is catalogued. If you could see the larger catalogue. The fly leaves show the goods given away. The system is that if you send in an order for $5 they will send you five coupons. They issue a coupon for each dollar's worth of merchandise ordered from them, and inserted in the centre it describes what you can get for so many coupons.

Mr. SOMMERVILLE: I suppose it is described in the same modest language we have been listening to?

Mr. JOHNSTON: Very much the same.

Mr. SOMMERVILLE: Is that not contrary to the Trading Stamp Act? I will have to look into that.

The WITNESS: I have here an announcement that was sent out to the trade.

Mr. SOMMERVILLE: This announcement was sent out to the trade on April 5, 1934:—

ANNOUNCEMENT

> No need to place for Fall and Winter if you're one of our customers. We've bought $3,000,000 worth of staple seasonable merchandise at right cash prices for you and thousands of others.
>
> No need for you to gamble on the ups and downs of the market—we're doing it for you.

When Fall and Winter rolls around our cash with order wholesale prices will place you out of reach of competition big or small. Depend on it for your Fall requirements at bottom prices regardless of the advancing market...And you are assured of huge stocks to draw from daily if you wish.

SASKATCHEWAN WHOLESALE CORP. REG'D.
Regina, Sask.

Mr. SOMMERVILLE: Had there been any purchase of $3,000,000 of merchandise, or did they ever purchase $1,000,000 of merchandise for such purpose.

Mr. JOHNSTON: Not for any such purpose as that. They purchased it over a year possibly.

Q. Over a year in their retail business, in their various stores, but for no such purpose for any wholesale business?

Mr. JOHNSTON: That is actually 50 per cent more than a year's turnover.

Mr. SOMMERVILLE: 50 per cent more than a year's turnover, more than they sold in their biggest year.

The CHAIRMAN: In their three retail stores.

Mr. JOHNSTON: Yes.

Mr. SOMMERVILLE: Do those instances that you have given us fairly indicate the kind of advertising that is being done by this firm on the basis of the business and the assets that you have already indicated in the financial statement filed?

Mr. JOHNSTON: Oh yes, that is indicative of their whole policy, high pressure, sensational type of advertising right through, which is, in most cases, misleading.

Mr. SOMMERVILLE: Just regular advertising ballyhoo.

Mr. JOHNSTON: Yes, right through.

The WITNESS: I do not want the committee to lose sight of one thing; I do not think we need to spend more than just a few moments on it, and I think it will be enough for me to explain what it is. Attached to the printed statements is a statement of certain examples of clearing lines offered by manufacturers and jobbers. That is called statement No. 10 on the printed sheet, and behind that is a statement of bankrupt stocks purchased in 1933-34; and following that is a wage schedule in very brief form of the Regina store of the Army and Navy Department Stores.

By Mr. Sommerville:

Q. What is the total number of employees in their whole organization?—A. On that date 203.

Q. 203 in the three places?—A. Yes.

Q. I see they have not got the wholesale department listed here?—A. No, it is not listed separately.

Mr. SOMMERVILLE: That may be looked after by the office boy.

The CHAIRMAN: Now, that is all for to-day.

Mr. SOMMERVILLE: Thank you, Mr. Nash.

The CHAIRMAN: The committee will adjourn until to-morrow at 11 o'clock when we will go on with—

Mr. SOMMERVILLE: The Robert Simpson Company.

The committee adjourned at 6.05 p.m., to resume on Wednesday, 6th June, at 11 a.m.

HOUSE OF COMMONS, ROOM 368,

June 6, 1934.

The special committee appointed to inquire into price spreads and mass buying met at 11 a.m., Hon. H. H. Stevens presiding.

Mr. Norman K. Sommerville, K.C., of Toronto and Mr. W. W. Parry of Toronto, appeared as counsel for the committee.

The CHAIRMAN: The minutes of yesterday's meeting record the hearing of witnesses and the filing of certain exhibits. I declare the minutes approved.

Mr. A. E. NASH recalled.

By Mr. Sommerville:

Q. Mr. Nash, you have some information in answer to Mr. Heap's inquiry of yesterday?—A. Yes. I shall deal with Woodward's first.

Q. Will you be good enough to put that information on the record?—A. In connection with Woodward's, I made a statement yesterday to Mr. Heaps that the staff was granted one week's holiday with full pay, and Mr. Heaps asked me to confirm that. The regular staff is granted one week's holiday with full pay. There is a sick benefit fund maintained by employees by monthly contributions. This fund is not contributed to by the company. All employees are allowed a discount of 10 per cent on general purchases, but no discount on food purchases. The employees' cafeteria is run by the company, sells meals at cost to the employees. In connection with the bonus plan, there is a departmental bonus group. Departmental group bonuses are distributed based on the average cost of selling over a period of years. Any improvement or saving in expense over the quotas established in a particular department, is distributed among the employees of that department. The working hours are 47 per week. Employees are paid a minimum wage of $12.75 for these 47 hours, although regulations of the minimum wage board provide for a 48 hour week. There have been reductions in wages, but no reduction in British Columbia minimum wage since January, 1928.

Q. You have similar information with respect to the David Spencer Company?—A. In connection with the David Spencer Company the regular staff is granted one week's holiday with full pay. A sick benefit fund is maintained by employees by monthly contributions. This fund is not contributed to by the company. All employees are allowed a discount of 12½ per cent on general merchandise, and 2½ per cent on food purchases. A cafeteria is run by the company, which sells meals at cost to the employees. All employees of the David Spencer Company are assessed 5 cents per week for recreation grounds which the company provides. The working hours are 44 hours per week, although the regulations of the minimum wage board provide for a 48 hour week. Employees are paid a minimum wage of $12.75 for these 44 hours.

By Mr. Kennedy (Winnipeg):

Q. Are these contributions to the sick benefit fund by employees compulsory or voluntary?—A. I imagine compulsory from the tone of the information I have. It does not state definitely on the information I got from my agents yesterday.

Q. You are under the impression that the employees are required to contribute to the fund; is that right?—A. I cannot state that definitely.

By Mr. Sommerville:

Q. You were asked also to give us a summary of the surplus accounts of David Spencer Limited, similar to that we had for Woodward's.—A. Would you care to have this filed with the statements of the respective companies?

Q. They are being incorporated in the record. You have taken the surplus account of David Spencer Limited for the last 10 years?—A. Yes.

Q. And the balance of surplus on the 31st January, 1934, was $4,135,788.02?—A. Yes.

Q. To which have been added profits from operations before appropriations for reserves, $2,823,403.21; proceeds of life insurance policy have been added to that, consisting of $135,650.40, and sundry gains (sales of property) $83,081.56, or a total addition during the period of $3,042,135.17, which makes a total surplus at the end of 1933 of $7,177,923.19?—A. That was not at the end of 1933.

Q. That is the amount?—A. The amount.

Q. The amount of additions during that period?—A. Yes.

Q. The total?—A. Yes, the total during that period.

Q. Then, that has been disposed of in the following manner?—A. Yes.

Q. Dividends and drawings paid, $306,512.58; surplus capitalized in 1932, $5,217,046.68; provincial taxes, $17,553.79; loss on investments, $448.65; life insurance premiums paid, $422,315.32, and depreciation reserves which were capitalized in 1932, $1,890,281?—A. Yes.

Q. Of which $1,426,824.09 were set up— —A. Set up for profits.

Q. That is the way— —A. That is the disposal of the surplus of the profits for the year. To make it convenient, we will file that in connection with every company, if you like to have it added to the statement.

Q. It is on the record as such?—A. Then I was asked to file as an exhibit extracts from the catalogues and advertising of the Army and Navy store, with reference to the prices at which the goods were purchased, and the mark-up in the Army and Navy stores, and I filed it as exhibit 217A.

Extracts from Catalogues and advertising of the Army and Navy store, filed and marked exhibit 217A.

Q. This exhibit gives the names of the firms supplying the goods in the catalogue?—A. Yes.

Q. A description of the goods?—A. Yes.

Q. The amount of the order, the date of the invoice, the unit cost of the invoice, the sales tax, added to unit cost laid down, the initial selling price, the amount of the mark-up and the percentage of same?—A. Yes.

Q. The catalogue reference number, the advertising remarks, and the management remarks?—A. Yes.

Q. That information is available for both the mail order and the retail store, and also for the wholesale business.

Q. Dealing with both the catalogues and the advertising material that has been filed as an exhibit?—A. Yes.

Witness retired.

George Adamson called and sworn.

By Mr. Sommerville:

Q. Mr. Adamson, you are a chartered accountant and auditor?—A. Yes.

Q. Member of the firm of Clarkson, Gordon, Dilworth and Company?—A. Yes.

Q. And as such you had to do with the examination and audit of the affairs of the Robert Simpson and Company, Limited?—A. Yes.

Q. And the group of companies associated with it?—A. Yes.

Q. And as such you have made a report upon that to the committee?—A. Yes.

Q. Is this the report?—A. A file of statements in connection with the investigation.

Q. These are the file of statements in connection with the Robert Simpson Company and its subsidiary companies?—A. And its subsidiary companies.

Q. That will be exhibit 219?—A. This is an extra copy for the Minister.

File of statements filed and marked exhibit 219.

Q. Have you any of the key statements?—A. They have not come from the printers' yet.

Q. We expected to have them at this time, and as soon as they come, they will be distributed. How many of those copies have you?—A. I have two more of these statements. They are just the statements; this is the memorandum.

Q. A memorandum of what?—A. In connection with the growth and organization of the business.

Q. Now will you be good enough to hand to the reporter a copy of this, so it will be incorporated into the record at this time, after which it will be read by you?—A. Yes.

SIMPSONS LIMITED AND CONSTITUENT COMPANIES

MEMORANDUM RE ORGANIZATION AND GROWTH OF BUSINESS

Organization

On Statement No. 1 is shown in chart form the Companies at present comprising the Simpson Organization; indicating their relationship and functions. The Robert Simpson Company Limited operates the Toronto Store and owns the entire capital of—

The Robert Simpson Eastern Limited
The Robert Simpson Western Limited
The Robert Simpson Montreal Limited
Keens Manufacturing Co. Limited
Thompson Manufacturing Co. Limited
Central Indoor Parking Garage Limited
The Robert Simpson Company (London) Limited (London, England)
The Robert Simpson Drug Co. Limited
Les Representants de Robert Simpson S.A. (Paris, France)

The capital of each of the last four of the above Companies is nominal and in the accounts of The Robert Simpson Company Limited their operations are treated as departments of that Company rather than as separate organizations.

Simpsons Limited (1925) was incorporated in 1925 to acquire the common stock of The Robert Simpson Company Limited which up until that time was the controlling Company of the Simpson organization. Simpsons Limited (1929) was incorporated in 1929 and acquired the assets of Simpsons Limited (1925) which was wound up at that time. Simpsons Limited (1929) now owns the common shares of The Robert Simpson Company Limited and certain of the lands and buildings. These changes in corporate and capital structure will be dealt with later.

On Statement No. 2 is shown the details of the incorporation of the various companies, their capital, bonded indebtedness and the names of the directors, etc.

Growth of Business

On Statement No. 3 is shown a chronological table indicating the extensions of the business from 1872 to the present time.

Toronto Store

The Robert Simpson Company Limited had its origin in a store founded by the late Mr. Robert Simpson in 1872. This store was located on Yonge Street, just south of Queen Street and during the next quarter century it expanded until it occupied a relatively large building at the corner of Queen and Yonge Streets.

The business of Robert Simpson was not incorporated until 1896 when The Robert Simpson Company Limited was incorporated with an authorized capital of $500,000. Two years later in 1898 the 1,375 issued shares of this Company were purchased by the late Mr. H. H. Fudger, Sir Joseph Flavelle and Mr. A. E. Ames.

On Statement No. 4 is submitted a plan of the area now occupied by the Toronto Store and from it the expansion of the past forty years can be judged and more particularly the extensions of 1900, 1908, 1912, 1923 and 1929 can be followed.

Mail Order

The mail order business was commenced as a store service. The first catalogue was issued in 1894 and by 1914 the business had grown large enough to require a separate building for it and it was therefore transferred to a warehouse on Front Street. In 1916 it was moved to the new Mutual Street Building which was built primarily for that purpose.

In 1915 The Robert Simpson Western Limited was incorporated to handle the mail order business in Western Canada and a warehouse was erected in Regina. In 1919 The Robert Simpson Eastern Limited was incorporated and a building erected in Halifax to take care of the mail order business in the Maritime Provinces. Retail departments are operated by the various mail order branches at Toronto, Regina and Halifax. In 1925 the Toronto Mail Order Division, formerly owned by the Toronto Store, was transferred to The Robert Simpson Eastern Limited.

Montreal Store

In 1904 The Robert Simpson Company Limited secured control of The John Murphy Company Limited which operated a department store in Montreal. In 1929 the name of this Company was changed to "The Robert Simpson Montreal Limited" and in 1930 a new building was erected.

Factories

The largest factory of the Simpson organization is that known as Keens Manufacturing Company Limited, which manufactures ladies' dresses for the Mail Order Division. This Company was purchased by The Robert Simpson Company Limited in 1913 and is situated in the Mutual Street Building. All the other factories and workrooms are comparatively small and most of them are operated as departments of the Toronto Store.

Points at which Business is Conducted

On Statement No. 5 is shown the centres at which business is conducted by the various companies of the organization. The locations of the various order offices and points from which agents transact business are shown on this statement. The business obtained by these order offices and agents represents only a small portion of the total volume.

Comparative Statement of Annual Sales 1915 to 1933 inclusive

The growth of the business in the last twenty years is indicated on the comparative statement of sales from 1914 to 1933 inclusive (Statement No. 6). This statement shows the sales by divisions and in total. In 1914, the total sales were approximately $14,000,000 but by 1929 they had increased to $48,000,000—the total volume in 1933 was $37,500,000. The mail order sales (which are included in the total volume referred to above) reached a peak of $14,300,000 in 1920 and in the subsequent eight years fluctuated between $11,500,000 and $13,700,000. Since 1929 the mail order sales volume has been decreasing more rapidly than that of the retail stores and in 1933 was $7,000,000. The retail departments of the Mail Order Companies, however, show substantial growth from year to year, having increased from $1,154,000 in 1929 to $2,042,000 in 1933. The Montreal business has also been steadily increasing and in the past year sales were approximately $5,000,000.

Comparison of Number of Employees

Records of the numbers of employees of the organization are not available prior to 1926. The following is a summary of the average number of persons employed by the whole organization in the month of October during each of the past eight years along with the comparable figures for the Toronto units:—

—	Total employees	Employees of Toronto units
1926	4,967	3,897
1927	5,228	4,071
1928	5,880	4,602
1929	6,700	5,464
1930	6,433	5,129
1931	6,365	4,947
1932	6,120	4,662
1933	6,228	4,650

Merchandise Transactions

A comparison of the merchandise transactions and the average value of these transactions for the whole selling organization (exclusive of Toronto restaurant transactions) for the past six years (the only period for which these records are available) is as follows:—

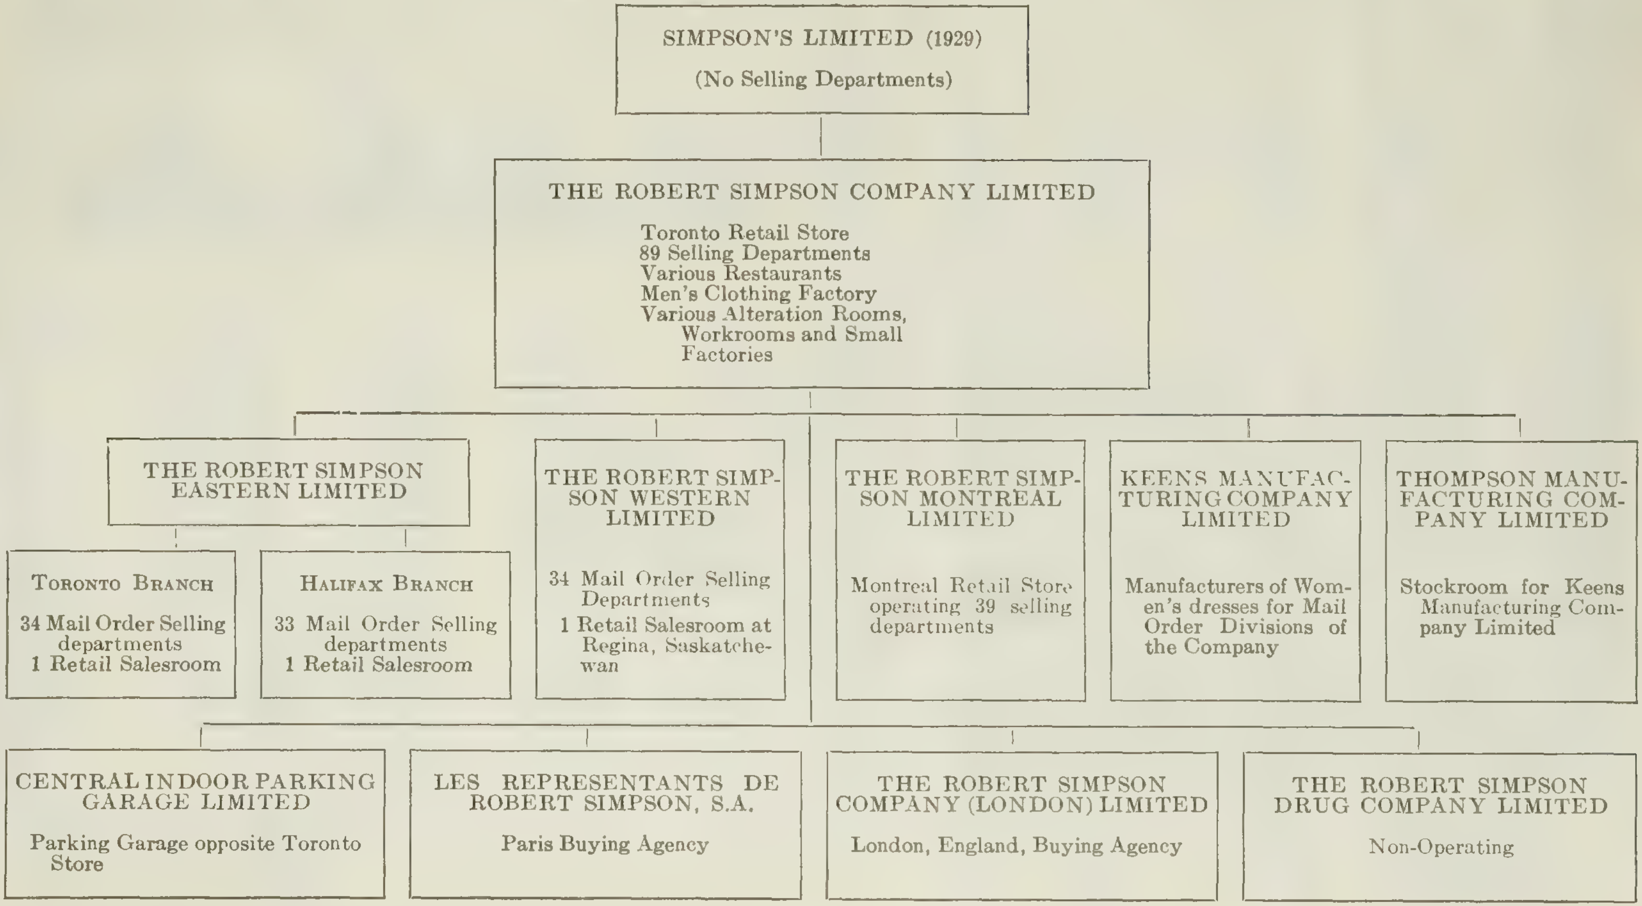
—	Merchandise trans-actions	Average transaction value
		$ cts.
1928 (52 weeks)	18,515,967	2 60
1929 "	20,661,965	2 54
1930 "	19,608,179	2 61
1931 (53 weeks)	20,855,906	2 34
1932 (48 weeks)	19,924,541	1 94
1933 (52 weeks)	22,922,931	1 80

While the sales volume in dollars is not as great as two or three years ago the number of merchandise transactions shows an increase. The average transaction value has been reduced from $2.60 in 1928 to $1.80 in 1933.

Statement No. 1

SIMPSON'S LIMITED AND CONSTITUENT COMPANIES

ORGANIZATION CHART



Statement No. 3

SIMPSONS LIMITED AND CONSTITUENT COMPANIES

Chronological Table Showing Growth of the Business

(Note.—Additions to Toronto Store shown on plan attached—Statement No. 4)

1872 The late Robert Simpson commenced business on Yonge Street, Toronto.
1893 Fire destroyed store buildings.
1894 First mail order catalogue issued.
1895 New six-story building on corner of Queen and Yonge Streets completed.
1896 The Robert Simpson Company Limited incorporated by the late Robert Simpson.
1898 Company acquired by the late Mr. H. H. Fudger, Sir Joseph Flavelle and Mr. A. E. Ames.
1900 Yonge and Richmond extension to Toronto Store completed.
1904 Department store operated by the John Murphy Company of Montreal purchased; company incorporated as The John Murphy Company Limited (name changed to The Robert Simpson Montreal Limited in 1929).
1908 "Knox" extension to Toronto store completed.
1912 "Wanless" extension to Toronto store completed.
1913 Capital Stock acquired of Keens Manufacturing Company Limited, a factory manufacturing whitewear, ladies' dresses, etc.

Q. Now, Mr. Adamson, will you just state to the committee the position you found with respect to the Robert Simpson Company, as requested?—A. The first statement submitted is statement No. 1, which is an organization chart. On this statement is shown in chart form the companies composing—

Q. Will you speak a little louder so the members of the committee can hear you?—A. On statement No. 1 is shown in chart form the companies at present comprising the Simpson organization; indicating their relationships and functions. The Robert Simpson Company Limited operates the Toronto store and owns the entire capital stock of:—

The Robert Simpson Eastern Limited.
The Robert Simpson Western Limited.
The Robert Simpson Montreal Limited.
Keens Manufacturing Co. Limited.
Central Indoor Parking Garage Limited.
The Robert Simpson Company (London) Limited (London, England).
The Robert Simpson Drug Co. Limited.
Les Representants de Robert Simpson S.A. (Paris, France).

Q. Then the holding company is——A. The holding company, the operating company—

Q. —the Robert Simpson Company Limited?—A. Right.

Q. And it owns all the capital of all those companies?—A. That is right, yes. The capital of the last four of the above companies is nominal and in the accounts of the Robert Simpson Company Limited, their operations are treated as departments of that company rather than as separate organizations.

Q. Everything from the Thompson Manufacturing Company, the Central Indoor Parking Garage Limited, the London office, the drug company, and the various combined companies——A. That is correct, sir. Simpson's Limited (1925) was incorporated in 1925 to acquire the common stock—

Q. Let us get that clear. There were two companies; first of all the operating company or the old parent company?—A. Yes, that is right.

Q. That operating company has operated for a great many years?—A. Since before 1900.

Q. And operates up to the present time?—A. Yes.

Q. In 1925 a company was incorporated called Simpson's Limited?—A. That is right.

Q. And that was incorporated for the purpose of acquiring all the outstanding common shares of the parent operating company?—A. That is right, yes.

Q. And the shareholders of that parent operating company turned over their shares to Simpson's, Limited (1925)?—A. That is right.

Q. For a certain consideration?—A. Yes.

Q. We will get the full financial set-up of those various set-ups subsequently to this——A. That is right.

Q. —and a commentary on the organization?

Mr. Ilsley: 1929 is the year?

The Witness: 1925, the first.

Mr. Sommerville: Then, four years later, a change was made?

The Witness: Simpson's Limited (1925) was incorporated in 1925 to acquire the common stock of the Robert Simpson Company Limited, which up to that time was the controlling company of the Simpson organization. Simpson's Limited (1929) was incorporated in 1929 and acquired the assets of Simpson's Limited (1925) which was wound up at that time.

By Mr. Sommerville:

Q. Simpson's Limited (1929) replaced Simpson's Limited (1925)?—A. Yes.

Q. Simpson's (1925) passed out of the picture?—A. Yes.

Q. Briefly at this point, perhaps one could indicate that, just as it will be developed by the financial set-up later, Simpson's (1925) distributed some $5,000,000 among its shareholders?—A. Yes.

Q. And still retained all the common shares of Simpson's?—A. Of the Robert Simpson Company.

Q. The operating company?—A. Yes.

Mr. Factor: What do you mean; did they distribute the profit, surplus?

Mr. Sommerville: No. Perhaps you had better describe it—I think we had better leave it until we come to the financial structure, but the situation was that the common shareholders—

The Witness: Simpson's Limited (1925) bought the shares of the common shareholders of the Robert Simpson Company.

By Mr. Sommerville:

Q. And paid them for those shares $5,000,000?—A. That is right, yes.

Q. And paid for, also, all the shares in Simpson's (1925)?—A. Yes.

Q. So that these shareholders of the 1925 company owned all the shares of the 1925 company?—A. Yes.

Q. And had as well $5,000,000 cash?—A. Yes.

Q. As the owners of all the shares of the 1925 company, they owned all the common stock of the parent operating company?—A. That is right.

Q. They paid out $5,000,000 in cash and still retained the entire ownership of all the common stock of the operating company?—A. Yes, that is right.

By Mr. Factor:

Q. Did they get share for share in addition to the cash?—A. Three shares for one in the new company, 33,500 shares of common stock of the Robert Simpson Company outstanding, and there were 100,000 shares of Simpson's Limited (1925) issued on the basis of three for one.

Mr. Heaps: How many shareholders were there?

By Mr. Sommerville:

Q. We will give you all the details as we go into the financial structure. The 1929 company was incorporated and it bought the shares of the 1925 company? —A. That is right.

Q. And these assets consisted of all the common stock of the parent company?—A. That is right.

Q. That is, all the assets that they had, plus some money that they had advanced?—A. To the operating company.

Q. And the consideration for the purchase which they paid to Simpson's Limited, 1925, was a sum of how much?—A. They gave them the bonds and shares of Simpson's Limited, 1929, which were sold to underwriters.

By the Chairman:

Q. For how much?—A. Twenty million dollars.

By Mr. Factor:

Q. Would you mind developing that last a bit, $20,000,000 they gave to whom, the shareholders?—A. In 1929 Simpson's Limited of 1925 sold all of his assets, with the exception of cash on deposit for sinking fund purposes which is described later, to a new company, Simpson's Limited, 1929, for: $10,000,000 of

6 per cent first mortgage bonds; \$10,000,000 of 6½ per cent preference shares; and 120,000 class B shares of no par value; there were also 120,000 class A shares. The first three items which I have given were sold by the underwriters for a total sum of \$20,000,000.

By Mr. Sommerville:

Q. And Simpson's Limited, 1929, got \$20,000,000?—A. That is right.

Q. And distributed that \$20,000,000 in a certain manner?—A. Yes.

Q. And of the \$20,000,000 which they then distributed some \$10,000,000 went to the shareholders?—A. That is right, to the majority shareholders.

Q. To the majority shareholders of Simpson's 1925 company?—A. That is right.

By the Chairman:

Q. Now, the result of that, Mr. Adamson, if I gather the picture is that in these various manipulations and this reconstruction process of the sale of the 1925 company to the 1929 company, there was actually taken out the sum of about fifteen million dollars?—A. That is right.

Q. That would be what might be termed in common parlance, winnings of the Mercantile Company which were distributed.

Mr. HEAPS: Were not these shares subscribed for by the public?

Mr. SOMMERVILLE: We will come to that. We want to catch the simple picture first, then we will develop it as it is developed in the statement.

Mr. FACTOR: I cannot understand the assumption that the Chairman makes, that it is taken out of winnings.

The CHAIRMAN: It is.

By Mr. Sommerville:

Q. I am sure that as the situation is developed from the statements we will get the complete picture as to what the situation was when Simpson Limited, 1929, acquired all the assets of the 1925 company?—A. That is right.

Q. And the 1925 company went out of existence?—A. Yes.

Q. And when it went out of existence the majority shareholders of the old company distributed among them approximately ten million dollars?—A. Yes.

Q. And the minority shareholders of that company received shares instead of cash?—A. Shares in the new company.

Q. So that the majority shareholders passed out of the picture and the minority shareholders came into control of the new company?—A. That is right, the Class A shares were distributed to the minority interest.

Q. Yes, it was a means of buying out the majority interest of the Robert Simpson Company.

By Mr. Factor:

Q. Were the assets of the 1925 company appreciated to the extent of that 20 million dollars; is that the story?—A. I think that could be more easily explained as we go along, there is a complete memorandum on it.

By the Chairman:

Q. Would it suffice for the moment to say that the funds necessary to pay these large sums were taken out of the bonds sold?—A. That is right, yes. Bonds and stocks.

Q. Based upon the stock value, which in turn was based upon the assets of the Robert Simpson Company.

Mr. SENN: Does that apply to the five million as well as to the ten?

The CHAIRMAN: It applies to both.

By Mr. Sommerville:

Q. In other words, the monies obtained by Simpsons Limited, 1925, were obtained from the public?—A. Yes, through the sale of bonds.

Q. The only security behind those bonds were the common shares?—A. In the Robert Simpson Company.

Q. The operating company?—A. That is right.

Q. In other words, it was not the ordinary course of bond mortgage issue on real estate and fixed assets?—A. No.

Q. It was a bond issue by a company which company owned nothing but common shares in another company?—A. That is right.

Q. And the common shares owned by that 1925 company were subject to outstanding senior obligations of the operating company?—A. Yes.

Q. Already subject to mortgage bonds and preference shares?—A. That is right.

Q. That were outstanding at that time in the operating company and are still outstanding?—A. Yes.

Q. So that the first financing of the 1925 company was done by the sale of these bonds to the public upon the basis of?—A. The security of these common shares.

Mr. ILSLEY: The only effect of that is that the first mortgage on the shares was in fact a second mortgage on the real asset; that is the effect of that, is it not?

Mr. SOMMERVILLE: Not even that, because you have a first mortgage on the assets in the way of bonds.

Mr. ILSLEY: Of the operating company.

Mr. SOMMERVILLE: Then you had the preference shares of the operating company, then you had your common shares which took third position, and now you have a mortgage upon that third position.

Mr. ILSLEY: In a sense a third mortgage on the real assets.

Mr. SOMMERVILLE: And subsequently the sale of these securities of 20 million, that have been referred to the public provided the money is necessary to finance the distribution and the elimination of the majority shareholders?

The WITNESS: Yes.

Mr. SOMMERVILLE: Now we will come to who they were and what they got.

Mr. FACTOR: What was this five million used for when the first company was formed in 1925?

The WITNESS: It was paid to the common shareholders of the Robert Simpson Company.

The CHAIRMAN: Will you pardon me if I interrupt, Mr. Factor: in your description of the financial set-up all this information will be given?

The WITNESS: That is all dealt with in detail.

By Mr. Sommerville:

Q. Now, will you just proceed with the statement showing the history and development of the company?—A. On statement No. 2 is shown the details of the incorporation of the various companies, their capital, bonded indebtedness and the names of the directors, etc.

Q. That would be dealt with late, would it not?

Mr. JOHNSON: I understand the statements are on their way here now and will be available presently.

The CHAIRMAN: We are just waiting for them to arrive so that the members of the committee will have copies of these statements before them.

Mr. SOMMERVILLE: Then we will refer to that again.

The WITNESS: Then, as to the growth of the business: on statement No. 3 is shown a chronological table indicating the extension of the business from 1872 to the present time.

"TORONTO STORE

The Robert Simpson Company, Limited, had it origin in a store founded by the late Mr. Robert Simpson in 1872. This store was located on Yonge street, just south of Queen street and during the next quarter century it expanded until it occupied a relatively large building at the corner of Queen and Yonge streets.

The business of Robert Simpson was not incorporated until 1896 when The Robert Simpson Company, Limited was incorporated with an authorized capital of $500,000. Two years later in 1898 the 1,375 issued shares of this Company were purchased by the late Mr. H. H. Fudger, Sir Joseph Flavelle and Mr. A. E. Ames.

On Statement No. 4 is submitted a plan of the area now occupied by the Toronto Store and from it the expansion of the past forty years can be judged and more particularly the extensions of 1900, 1908, 1912, 1923 and 1929 can be followed."

By Mr. Sommerville:

Q. 1375 shares?—A. That was the total issue of capital at that time.

Q. That is what the original three owners of the Robert Simpson Company Limited got?—A. Yes.

Q. And the subsequent history of the company will show in what manner the 1375 shares grew?—A. That is right, yes.

Q. And they amounted to 33,500 in 1925?—A. Yes.

Q. And just at this time could you tell us what was paid for the 1375 shares?—A. I could not tell you what was paid, because it was a transaction between the new owners and the old owner of the business, it is not a company transaction.

Q. Then you do not know the amount of the investment made by these three gentlemen in the business?—A. No. Dealing with the mail order section of the business;

"The mail order business was commenced as a store service. The first catalogue was issued in 1894 and by 1914 the business had grown large enough to require a separate building for it and it was therefore transferred to a warehouse on Front Street. In 1916 it was moved to the new Mutual Street Building which was built primarily for that purpose.

In 1915 The Robert Simpson Western Limited was incorporated to handle the mail order business in Western Canada and a warehouse was erected in Regina. In 1919 The Robert Simpson Eastern Limited was incorporated and a building erected in Halifax to take care of the mail order business in the Maritime Provinces. Retail departments are operated by the various mail order branches at Toronto, Regina and Halifax. In 1925 the Toronto Mail Order Division, formerly owned by the Toronto Store, was transferred to The Robert Simpson Eastern Limited.

MONTREAL STORE

In 1904 The Robert Simpson Company Limited secured control of The John Murphy Company Limited which operated a department store in Montreal. In 1929 the name of this Company was changed to "The Robert Simpson Montreal Limited" and in 1930 a new building was erected.

All of the capital of which was found by the Robert Simpson Company.

Q. The operating company?—A. Yes.

Dealing with factories:—

"The largest factory of the Simpson organization is that known as Keens Manufacturing Company Limited, which manufactures ladies' dresses for the Mail Order Division. This Company was purchased by The Robert Simpson Company Limited in 1913 and is situated in the Mutual Street Building. All the other factories and workrooms are comparatively small and most of them are operated as departments of the Toronto Store.

On Statement No. 5 is shown the centres at which business is conducted by the various companies of the organization. The locations of the various order offices and points from which agents transact business are shown on this statement. The business obtained by these order offices and agents represents only a small portion of the total volume."

Q. The places at which businesses are located in Ontario, retail stores, are—?—A. Toronto and Montreal, and at Regina and Halifax retail sections of the mail order business are operated.

Q. Yes, order offices are established where?—A. In Ontario at New Toronto, Oshawa and Brampton; these are suburban offices, the company refers to these as suburban offices. Other order offices are at Barry, Brockville, Hamilton, Kirkland Lake, Owen Sound, Peterborough, Rouyn, Timmins and Trenton.

Q. These order offices are places where orders may be given?—A. That is right, sir.

Q. And there are no large premises maintained, or no stocks on hand?—A. In some of them they have small stocks.

Q. At the order offices?—A. Yes.

By the Chairman:

Q. They are not retail stores?—A. No.

Q. Quite so?—A. Most of them have only samples on hand.

There are in addition to these order offices what are known as merchant agents, who are paid a commission for the business which they transact for the company.

Q. This is a development which is peculiar to the Simpson Company, is it not; the merchant agent?—A. Yes.

Q. In these cases you have merchant agents, and these merchant agents are paid a commission?—A. Yes.

Q. The stock of goods is provided for them?—A. It is a consignment stock.

Q. A consignment stock, and the merchant agent handles the stock and pays all the expenses and does all the collecting?—A. The company itself is responsible for collections, although in the case of credit sales the agent makes in the event of loss the company stands the loss.

Q. And the company allow the agent a commission?—A. Yes.

Q. Do you remember the amount of the commission?—A. It varies in various places and on various goods, but it averages about 15 per cent.

By Mr. Senn:

Q. Is this on all lines of goods?—A. On heavy goods.

By Mr. Sommerville:

Q. And the company therefore allow the agent 15 per cent of this commission on which to transact business, and that is the limit of the profit he makes on any transaction?—A. Yes.

Q. That is their measure of the cost of operating these businesses when they supply the stock?—A. Yes.

Q. And they assume the risk of loss in collection?—A. Yes.

Mr. FACTOR: A pretty good profit, isn't it, the merchant gets 15 per cent.

Mr. SOMMERVILLE: But the merchant has to pay all wages, rents, taxes and charges of all kinds.

The WITNESS: They are usually merchants who are in business for themselves.

By Mr. Sommerville:

Q. But they have the stock provided then?—A. By the Simpson Company.

Q. And these merchant agents are at— —A. In Ontario: Ansonville, Brockville, Belleville, Brampton, Brantford, Burlington, Chatham, Cochrane, Englehart, Haileybury, Ingersoll, Kapuskasing Kingston Kitchener, New Toronto, Oshawa, Port Hope, St. Catharines, St. Thomas, Smooth Rock Falls, Sudbury, Tweed, Whitby; in Saskatchewan: at Avonlea, Estevan, Millville, Moose Jaw, North Battleford, Prince Albert, Saskatoon, Swift Current, Weyburn, Wynward, Yorkton.

By Mr. Heaps:

Q. Do they keep much stock at these places?—A. It varies with different places.

Q. Have you any idea as to the quantity?—A. It runs from $4,000 to $15,000.

By Mr. Senn:

Q. In a place like the city of Brantford, which is a fairly large centre, would they only have one agent or a number?—A. I can give you that information in just a minute.

Mr. SOMMERVILLE: You gave us the province of Saskatchewan.

Mr. HEAPS: I notice that Weyburn is there.

Mr. SOMMERVILLE: Yes.

The WITNESS: I find that at Brantford there is only one agent.

Mr. SENN: I was just mentioning Brantford as an example, as a rule there is just one agent at one centre.

The WITNESS: Yes. There may be several agents working out of the order offices in the different places.

By Mr. Sommerville:

Q. And the mail order houses are at?—A. Toronto, Regina and Halifax.

By Mr. Factor:

Q. Have you anywhere the percentages of the volume of business done respectively by the mail order houses and the retail stores; also the order offices and the merchant agents?—A. There are statements showing that.

Q. Because you say in your statement here that order offices and agents represent only a small proportion of the total volume?—A. There is a statement on that.

By Mr. Sommerville:

Q. Yes?—A. Dealing now with the comparative statement of the annual sales from 1915 to 1933 inclusive.

"The growth of the business in the last twenty years is indicated on the comparative statement of sales from 1914 to 1933 inclusive (Statement No. 6). This statement shows the sales by divisions and in total. In 1914, the total sales were approximately $14,000.000 but by 1929 they had increased to $48,000,000—the total volume in 1933 was $37,500,000. The mail order sales

(which are included in the total volume referred to above) reached a peak of $14,300,000 in 1920 and in the subsequent eight years fluctuated between $11,500,000 and $13,700,000. Since 1929 the mail order sales volume has been decreasing more rapidly than that of the retail stores and in 1933 was $7,000,000. The retail departments of the Mail Order Companies, however, show substantial growth from year to year, having increased from $1,154,000 in 1929 to $2,042,000 in 1933. The Montreal business has also been steadily increasing and in the past year sales were approximately $5,000,000."

By Mr. Factor:

Q. What do you mean by the retail department of the mail order company?—A. In both Toronto, Regina and Halifax there is a retail salesroom in connection with the mail order business.

By Mr. Sommerville:

Q. And in the mail order building?—A. In the mail order building.

By Mr. Factor:

Q. Do you mean that I can go to the mail order building and buy retail there, the same as from the mail order catalogue?—A. Anybody can go in there.

Mr. YOUNG: Anybody can go right in and buy in the store.

Mr. SENN: Is not that for the convenience of out of town customers?

The WITNESS: Anybody can go in there.

By Mr. Heaps:

Q. Do they have a display of goods there?—A. Yes.

By Mr. Factor:

Q. What would be the advantage of a Toronto resident in going to the retail department of the mail order house and ordering from the catalogue; what would be the advantage?—A. I could not say; except that he may have lived in the country and be used to buying from the mail order catalogue.

By Mr. Kennedy (Peace River):

Q. Would it take less time to sell him in that manner, he would know exactly what he wanted?—A. I could not say as to that.

By Mr. Young:

Q. It is like an ordinary department store?—A. The retail volume through the mail order division in Toronto is very small.

Q. You do not need a catalogue to buy in those stores?—A. No.

Q. You can go in and buy over the counter the same as anywhere else?—A. Yes.

By Mr. Kennedy (Peace River):

Q. And the price is the same?—A. Yes.

By Mr. Sommerville:

Q. Yes?—A. Dealing now with a comparison of the number of employees:

"Records of the numbers of employees of the organization are not available prior to 1926. The following is a summary of the average number of persons

employed by the whole organization in the month of October during each of the past eight years along with the comparable figures for the Toronto units:—

	Total employees	Employees of Toronto units
1926	4,967	3,897
1927	5,228	4,071
1928	5,880	4,602
1929	6,700	5,464
1930	6,433	5,129
1931	6,365	4,947
1932	6,120	4,662
1933	6,228	4,650

By Mr. Factor:

Q. Apparently they have not reduced the number of employees to any appreciable extent since 1930?—A. Not very greatly.

By Mr. Sommerville:

Q. About ten per cent?—A. The business of some units of organization has been increasing, and for that reason they do not show a reduction in the number of employees.

Mr. Ilsley: It is not ten per cent.

Mr. Sommerville: I beg your pardon, I was not looking at the total I was looking at the Toronto units.

The Witness: The Toronto units have been reduced from 5,129 in 1930, to 4,650 in 1933.

"*Merchandise Transactions.*—A comparison of the merchandise transactions and the average value of these transactions for the whole selling organization (exclusive of Toronto resultant transactions) for the past six years (the only period for which these records are available) is as follows:—

	Merchandise transactions	Average transaction value
1928 (52 weeks)	18,515,967	$2 60
1929 (52 weeks)	20,661,965	2 54
1930 (52 weeks)	19,608,179	2 61
1931 (53 weeks)	20,855,906	2 34
1932 (48 weeks)	19,924,541	1 94
1933 (52 weeks)	22,922,931	1 80

While the sales volume in dollars is not as great as two or three years ago the number of merchandise transactions shows an increase. The average transaction value has been reduced from $2.60 in 1928 to $1.80 in 1933."

Q. Now then, just before leaving that memorandum of developments, the retail sales have increased from a total of $9,534,000 in 1915, to a total of $30,430,000 in 1933?—A. In 1933.

By Mr. Heaps:

Q. What was the retail in that year?—A. In the retail?

Q. Yes?—A. In 1929 it reached $35,500,000, in 1931 it reached the peak of $35,000,000.

By Mr. Sommerville:

Q. And then it dropped to twenty-eight million, and up again to thirty million. Now then, in the mail order division the sales increased from January of 1915?—A. From $4,500,000 to a peak of $13,668,000 in 1928, and down to $7,095,000 in 1933.

By Mr. Factor:

Q. So that the mail order business since 1928 has been gradually decreasing?—A. Yes.

By Mr. Ilsley:

Q. The most significant thing I should think is the drop between about 1920 and the present time; they are only doing about 50 per cent of the mail order business now that they were doing there; is that right?—A. That is right, yes.

By Mr. Sommerville:

Q. But the total sales, both retail and mail order, in 1915 were $14,081,000, and they have increased to a peak of $48,196,000 in 1929?—A. Yes.

Q. And for last year they were—?—A. $37,526,419.

Q. And the total sales for both mail order and retail stores for that 20 year period amounted to—?—A. $696,346,137.

By Mr. Factor:

Q. That is the part of the business reflected by the retail stores?—A. That is right, yes. There were only some of those statements printed.

Q. Have you any more of those, or have we got them all?—A. There are printed copies of it, sir.

The CHAIRMAN: Where are they?

The WITNESS: There is no No. 10.

By Mr. Sommerville:

Q. They are sorting the printed statement on the capital structure, and it will be up here in a few minutes. Now then, dealing with the memorandum regarding the capital structure and the bond issue, will you present that memorandum?

THE ROBERT SIMPSON COMPANY LIMITED AND SIMPSONS LIMITED

MEMORANDUM REGARDING CAPITAL AND BOND ISSUES

The initial authorized capital of The Robert Simpson Company Limited incorporated in 1896 consisted of 5,000 shares of a par value of $100 per share—$500,000. The entire capital issued to 1898 (1,375 shares) was acquired at that time by the late Mr. H. H. Fudger, Sir Joseph Flavelle and Mr. A. E. Ames. On Statement No. 7 is detailed the various additional issues up to 1917 when the outstanding capital consisted of:—

33,500 6 p.c. Preference Shares	$ 3,350,000
33,500 Common Shares	3,350,000

Of these shares 5,000 preferred shares and 26,033 common shares were issued as stock dividends. Since 1918 there has been no change in the capital structure of The Robert Simpson Company Limited. While most of the preference shares were issued to the public the common shares were held very closely and continued to be so held until 1925 when Simpsons Limited (1925) was incorporated to acquire these common shares.

In 1912 an issue of £462,500 ($2,250,833) 5 p.c. first mortgage bonds was sold to the public. This was the only issue of bonds of The Robert Simpson Company Limited and $1,375,222.66 of these bonds were still outstanding at 3rd January, 1934.

At 4th February, 1925 (at the time of the incorporation of Simpsons Limited (1925)), the outstanding bonds and shares of The Robert Simpson Company

Limited (exclusive of certain mortgages and bonds of subsidiary companies totalling $698,166) were as follows:—

5 p.c. First Mortgage Bonds	$ 1,852,059
6 p.c. Preference Shares	3,350,000
Common Shares	3,350,000

At that date, undistributed surpluses of the Company and its subsidiaries amounted to $4,752,743 equal to $142 per common share outstanding.

SIMPSONS LIMITED—(1925)

This Company was incorporated on 3rd March, 1925, and under an agreement dated 11th March, 1925, acquired all the outstanding common shares of The Robert Simpson Company Limited (33,500 shares with a par value of $100 each). It entered into no agreement with the latter Company—its dealings at this time were only with the holders of the common shares.

The consideration paid by Simpsons Limited to the former common shareholders of The Robert Simpson Company Limited was as follows:—

Cash—$150 per share	$ 5,025,000
100,000 no par value shares in Simpsons Limited (1925) on the basis of three for each one formerly held—*nominal* value	3,350,000
	$ 8,375,000

The cash was obtained by the sale of the Company's bonds, the details being:—

$5,600,000 $6\frac{1}{2}$ p.c. Sinking Fund Collateral Trust Gold Bonds, due 1st May, 1945. Secured by a specific first charge on the above mentioned common shares of The Robert Simpson Company Limited

These bonds were sold to underwriters at 90.

The balance sheet of Simpsons Limited (1925) as a corporation at the time of its organization is shown on Statement No. 8.

As indicated above the former shareholders of The Robert Simpson Company Limited as a body received, in addition to the cash consideration, 100,000 shares of Simpsons Limited for their 33,500 shares (approximately 3 shares for 1). The Company's officials state that some of these 100,000 shares were sold or donated by the former shareholders to department managers and other employees. The prospectus for the bond issue made at this time states:—

> "One of the primary purposes of this issue is to afford an opportunity for officers and department managers of the Company to secure a more important shareholding interest in the business. Simpsons Limited will comprise among its shareholders not only the present holders of common shares of The Robert Simpson Company Limited but also a number of the chief executives and managers of that Company."

The Secretary of the Company states that, as a result of these transfers by the former shareholders from 1925 on, no single individual had control of the Company. It will be noted that at this time the organization of the holding company did not directly affect The Robert Simpson Company Limited. There was an indirect effect, however, as the holding company could only pay its bond interest and sinking fund payments, amounting in the aggregate to $500,000 per annum, by dividends from the operating company, or at the rate of $15 per year on the 33,500 common shares of the latter company.

In 1928, funds were required for the Bay Street Extension to the Toronto Store. While this store was owned and operated by The Robert Simpson Company Limited, the financing was done by Simpsons Limited through an issue of $4,000,000 6 p.c. Cumulative Preference Shares, redeemable at 105. These shares were offered to the public at $100 per share. The total commissions and expenses in connection with this issue amounting to $170,934.20 were paid by The Robert Simpson Company Limited.

In February 1929 an additional issue of $3,000,000 of its 6 p.c. Cumulative Redeemable Preference shares was made by Simpsons Limited (1925) primarily for the construction of a new store in Montreal (the property of the John Murphy Company Limited, a company wholly owned by and conducting the Montreal business of The Robert Simpson Company Limited). This issue was also offered to the public at $100 per share and four months later it was redeemed at 105. Commission and expenses of this issue amounting to $121,255 were also paid by The Robert Simpson Company Limited.

In June, 1929, Simpsons Limited (1925) sold all its assets (with the exception of cash on deposit for sinking fund purposes) to a new company, Simpsons Limited (1929) for the following securities of that company:—

$10,000,000 6 p.c. 1st Mortgage Bonds
$10,000,000 6½ p.c. Preference Shares
120,000 Class "A" shares of no par value
120,000 Class "B" shares of no par value.

All the above, with the exception of the Class "A" shares, were then sold to underwriters for $20,000,000. Statement No. 9 shows that the proceeds from this sale, together with other funds available, were used in redeeming the bonds and preference shares outstanding of Simpsons Limited (1925), etc., and that the balance, $10,548,450, was distributed to the holders of 70,323 shares of the common stock of Simpsons Limited (1925) (on the basis of $150 per share). The holders of the remaining 29,677 shares received three shares of Simpsons Limited (1929) for each share of Simpsons Limited (1925) formerly held.

SIMPSONS LIMITED (1929)

This Company was incorporated on 22nd June, 1929, and as already stated, under an agreement dated 9th July, 1929, purchased from Simpsons Limited (1925) its holdings of the Common Shares of The Robert Simpson Company Limited and an advance made by it to the latter Company for construction purposes amounting to $4,600,829.13. The consideration for this was outlined above.

The securities so transferred to Simpsons Limited (1925) with the exception of the 120,000 Class "A" shares, were sold by it to underwriters for $20,000,000 (the par value of the bonds and preference shares) —the bonds were offered to the public at par. The preference shares were also offered at par but with a bonus of one share of the Class "B" stock with each five shares of Preferred and 20,000 of the Class "B" shares were required for this bonusing. The remaining 100,000 Class "B" shares represent the consideration received by the underwriters.

INVESTMENT IN THE SHARES OF THE ROBERT SIMPSON COMPANY LIMITED

As shown on Statement No. 10 the common shares of The Robert Simpson Company Limited were taken on the books of Simpsons Limited (1929) at the net book value of the shares			$20,460,485 09
Simpsons Limited (1925) had carried these same shares at a book value of (Statement No. 8)			8,375,000 00
Increase in book value of these shares			$12,085,485 09
Earnings of The Robert Simpson Company Limited and its subsidiaries between 4th February, 1925, and 26th June, 1929, in excess of dividends paid during that period accounted for			3,708,592 68
Difference			$ 8,376,892 41
Represented by—			
Appreciation in the values of the fixed assets as a result of two appraisals—			
(1) In 1925 when the fixed assets were written up in the books of the Constituent Companies by		$ 2,816,850 03	
(NOTE.—The appraisal in 1925 showed appreciation of $6,041,966.24 of which, however, only $2,816,850.03 was set up on the books of the Constituent Companies. This appreciations, however, was not reflected in the value assigned to the investment in the shares of The Robert Simpson Company Limited in the books of Simpsons Limited.)			
(2) In 1929 when the net book value of the assets was increased by appraisal appreciation of		5,903,850 09	
Total		$ 8,720,700 12	
LESS:			
(1) Balance of commissions and expenses in connection with issue of preference shares of Simpsons Limited (1925), etc., written off	$ 124,694 34		
(2) Difference between the value at which the shares of The Robert Simpson Company Limited was carried in the books of Simpsons Limited (1925) and the net tangible value of these assets (before appreciation of fixed assets) at 4th February, 1925	219,113 37		
		343,807 71	
			$ 8,376,892 41

LANDS, BUILDINGS and EQUIPMENT ACQUIRED FROM CONSTITUENT COMPANIES

Shortly after incorporation Simpsons Limited (1929) purchased certain of the lands, buildings and equipment of its constituent companies at their appraised value. As shown on Statement No. 10 the lands and buildings taken over at 26th June, 1929, had a book value of $10,778,859.32. Against this the debt of The Robert Simpson Company Limited to Simpsons Limited (1925) of $4,600,-829.13 referred to previously (which Simpsons Limited (1929) had taken over) was applied and the balance of $6,178,030.19 is shown on the Balance Sheet at that date as "Owing to Subsidiary Companies re properties transferred" (Statement No. 10). In the following year other properties having a book value of $1,808,311.70 were similarly transferred to Simpsons Limited (1929). This debt had to 3rd January, 1934, only been repaid to the extent of $2,475,498.45 and at that date the amount still owing in respect of these transfers was $5,510,843.44.

Simpsons Limited (1929) pays no interest on this debt to the constituent Companies, but the latter pay rentals to Simpsons Limited for the properties transferred. These rentals are at present $1,312,000 per year, or approximately 10 p.c. of the appraised values of the properties taken over. The operating companies also pay all taxes, ground rents, insurance and repairs on these leased properties. Depreciation provided on these properties by Simpsons Limited in 1933 amounted to $178,221, which is on the basis of 2 p.c. of the appraised values of the buildings and equipment. Deducting the depreciation

from the rental charge the net rental income to Simpsons Limited in 1933 is $1,133,779. If maximum depreciation rates allowed by the Federal Income Tax Department had been provided on these appraised values, the net income would have been reduced by approximately $200,000 or to $933,779.

This net rental is more than the interest charges on the funds actually contributed to the operating companies by Simpsons Limited (which as indicated later totalled approximately $7,700,000) and as a result the earnings of the operating companies are reduced and those of Simpsons Limited are correspondingly increased. Considering the organization as a whole, however, these property rentals do not affect the earnings, being eliminated in the consolidated statements.

Disposition of Funds Raised by Simpsons Limited

Simpsons Limited (1929) has contributed $7,695,637 directly to the operating companies; it has also paid approximately twice this amount to the former shareholders of The Robert Simpson Company Limited as shown in the following:—

Contributions to Operating Companies:—		
Cash—advances by its predecessor, Simpsons Limited (1925) to The Robert Simpson Company Limited and applied against properties transferred	$ 4,600,829	
Cash—payments on account of properties transferred	2,475,498	
Lands purchased and buildings constructed—(Mutual Street addition)	619,310	
		$ 7,695,637
Cash paid to former shareholders of The Robert Simpson Company Limited:—		
In 1925	$ 5,025,000	
In 1929 (through the winding-up of Simpsons Limited (1925))	10,548,450	
		15,573,450
		$ 23,269,087

The funds for these purposes were raised largely from the sale of its bonds and preference shares. As explained previously, its Class "A" shares were given to those former shareholders who still retained an interest in the business, and its Class "B" shares went to the underwriters of the other issues. Because of the various types of issues made, the income required from the operating companies for interest and dividends varies according to what dividends are declared.

At present no dividends are being paid on the preference shares of Simpsons Limited; in order to pay these dividends together with bond interest, income taxes, etc., it is necessary for the constituent companies to earn in addition to depreciation, interest charges on the bonds and dividends on the preference shares of The Robert Simpson Company Limited, still outstanding, approximately .... $ 1,500,000

Interest at 6½ p.c. (the dividend rate on the preferred shares) on the contributions made by Simpsons Limited to the operating Companies would amount to approximately	500,000
Balance, approximately	$ 1,000,000

which represents the approximate amount of interest charges on the securities issued in order to provide the funds paid to former Common shareholders of The Robert Simpson Company Limited and of Simpsons Limited (1925).

The basis of charging rent to merchandising and other departments (covering interest and depreciation) by the various operating Companies has not been affected by these capital reorganizations. The actual charges have increased only proportionately to the cost of additional buildings constructed and equipment used.

Comparative Consolidated Balance Sheets

On Statement No. 11 are shown the assets and liabilities in consolidated form of the Simpson organization for the nine years 4th February, 1925, to 3rd January, 1934.

The increase in the total assets during the nine years (Lands, Buildings and Equipment being included at their depreciated values) is:—

	At 4th February, 1925	At 3rd January, 1934	Increase
Totals per Balance Sheets	$ 19,802,873	$ 35,137,603	$ 15,334,730
Less: Appreciation of Fixed Assets included therein	2,816,850	8,720,700	5,903,850
Total Value of Assets, exclusive of appreciation	$ 16,986,023	$ 26,416,903	$ 9,430,880

and is due to an increase of $2,213,451 in the current assets and to the large investment which the companies have made in additional buildings, the chief of which were:—

1928-29 Bay Street extension to the Toronto Store
1930 Central Indoor Parking Garage
1929-31 New Montreal Store
1931 Addition to Mutual Street Building, Toronto.

The capital structure changed considerably during the period, and is summarized below:—

	At 4th February, 1925 Before the Reorganization	After the Formation of Simpsons Limited (1925)	At 3rd January, 1934
Bonds, Mortgages and Preference Shares of operating companies in the hands of the public	$ 5,900,224	$ 5,900,224	$ 4,725,223
Common Stock of The Robert Simpson Company Limited	3,350,000		
Bonds of Simpsons Limited		5,600,000	10,283,500
Capital Stock of Simpsons Limited—			
Preference Shares			11,250,000
Common Shares		5,372,737	
Common Shares, Class "A" and Class "B" Shares			5,061,314
Balance of Profit and Loss Account	4,805,887	....	725,819
	$ 14,056,111	$ 16,872,961	$ 32,045,856

Comparative Statements of Profit and Loss, Simpsons Limited and Constituent Companies

Statement No. 12 shows—

1. The annual earnings, both before and after depreciation, of the organization as a whole from the time of the incorporation of Simpsons Limited (1925) to 3rd January, 1934.
2. The charges against these earnings for interest and dividends on the bonds and shares of the constituent companies held by the public and for the bond interest of the holding company, etc., and—
3. The net profit or loss of the consolidation. The lower part of the statement shows how much of these profits have been paid out in dividends on the shares of Simpsons Limited.

Earnings Prior to 1925

From the time of the incorporation of The Robert Simpson Company Limited in 1896 to 1925, the operations of the Company and the subsidiaries which it acquired during that period, were very successful—the profits after depreciation, bond interest, income taxes, etc., amounting to..... $ 14,429,498
Dividends in that period were as follows—

Preference Shares—			
In Cash		$ 2,122,532	
Common Shares—			
In Cash	$ 4,450,923		
Stock Dividends—			
Preference Shares	500,000		
Common Shares	2,603,300		
		7,554,223	
			9,676,755
Balance of Surplus Account at 4th February, 1925, the date of the incorporation of Simpsons Limited (1925)			$ 4,752,743

EARNINGS 1925 TO 1933 INCLUSIVE

The annual profits of the consolidation, both before and after depreciation, (as shown on Statement No. 12), along with the percentages of these earnings to the net invested capital (*i.e.* bonds and shares outstanding less appreciation arising from fixed asset appraisals) are summarized below—

Year	No. of weeks	Amount of net invested Capital	Earnings — Before Depreciation: Amount	Before Depreciation: Per cent to net invested capital	After Depreciation as provided by the Company: Amount	After Depreciation: Per cent to net invested capital
		$	$	%	$	%
1924	53	14,056,112	2,541,652	18·1	2,019,812	14·4
1925	52	14,580,269	2,568,494	17·6	2,025,374	13·9
1926	52	15,251,932	3,168,993	20·8	2,592,313	17·0
1927	52	16,147,009	3,425,222	21·2	2,861,546	17·7
1928	52	20,905,851	3,621,975	17·3	3,048,385	14·6
1929	52	21,824,867	3,422,204	15·7	2,657,732	12·2
1930	52	24,507,271	3,277,687	13·4	2,501,012	10·2
1931	53	23,963,971	2,231,351	9·3	1,605,095	6·7
1932	48	23,467,133	679,278	2·9	114,660*	0·5
1933	52	23,325,156	1,826,607	7·8	1,223,458	5·2

*NOTE:—Depreciation was not provided by the Company for the year 1932. The profits shown $114,660 are after deducting $564,618 for depreciation which is the amount provided during 1932 but reversed at the year end.

The percentages of the earnings (after depreciation as provided by the Company) to the actual invested capital (*i.e.* without deduction for capital surpluses as was done above) are—

1924	1925	1926	1927	1928	1929	1930	1931	1932	1933
12·0%	11·6%	14·3%	15·1%	12·9%	8·7%	7·5%	4·9%	0·4%	3·8%

The operations of the various units of the organization will be referred to later. The Toronto Store has always provided the greater part of the earnings, although in the past four years its earnings have been considerably reduced. During this same period, the operations of the Mail Order Divisions have not been profitable, due to the very substantial reduction in Mail Order sales volume.

It will be noted that dividends on the preference shares of The Robert Simpson Company Limited have been maintained throughout the period. Dividends on all the common shares of that Company have been paid to Simpsons Limited since early in 1925 so that they do not appear in the consolidated statement. The net profits available for the shareholders of Simpsons Limited increased from $876,519 to a peak of $1,645,180 in 1928. In 1932 there was a net loss of $177,313, but the following year showed a net profit of $200,903.

The dividend record of Simpsons Limited is summarized as follows:—

SIMPSONS LIMITED (1925)

6 p.c. Preference Shares—paid in full from time of issue (1928 and 1929) to redemption in June 1929;

Common Shares paid \$2.50 per share in 1925; \$4 in 1926; \$5.00 in 1927 and 1928; \$1 in 1929.

SIMPSONS LIMITED (1929)

$6\frac{1}{2}$ p.c. Preference Shares—paid in full from time of issue to 1st February, 1932. No dividends paid since. The dividends on these shares are cumulative.

Class "A" shares—paid at the rate of \$2 per share in 1929 and 1930 and at \$1 per share in 1931. No dividends have been paid since 1931, and dividends on these shares are non-cumulative.

Class "B" shares—No dividends paid.

SIMPSONS LIMITED (1925) AS A CORPORATION

Statement No. 13 shows the Profit and Loss of Simpsons Limited (1925) as a Corporation, from the time of its incorporation in 1925 to the time of its winding up in 1929. The income of this Company was almost entirely derived from dividends received on the common shares of The Robert Simpson Company, Limited, which it owned. The chief expense was the interest on the \$5,600,000 bonds which it had issued.

The rate of dividend declared by The Robert Simpson Company Limited on its common shares and, hence, the income of Simpsons Limited, was, within wide limits, at the discretion of the directors of the latter Company. At no time did the balance of the Profit and Loss Account of this Company exceed \$250,000 in spite of the fact that the Profit and Loss Account of the consolidation had increased \$3,787,814 since the incorporation of Simpsons Limited. Thus nearly all of the earnings of the consolidation not required for bond interest and dividends was left with the operating companies.

SIMPSONS LIMITED (1929) AS A CORPORATION

Statement No. 14 shows the Profit and Loss of Simpsons Limited (1929) as a Corporation, from the time of its incorporation in 1929 to 3rd January, 1934. The income from this Company is derived from two sources:—

(1) Dividends on the common shares of The Robert Simpson Company Limited;

(2) Property rentals on lands and buildings receivable from four of the operating companies. Some of these properties have been constructed by Simpsons Limited (1929) but the greater part represents buildings formerly owned by the operating companies and transferred to Simpsons Limited (1929) at the time of its incorporation. The effect of these transfers on the operating companies has already been discussed.

Since 1931 no dividends have been declared on the shares of The Robert Simpson Company Limited.

The largest expense of Simpsons Limited (1929) is the interest on \$11,250,000 bonds issued by it which requires slightly more than \$600,000 per year. If

dividends are to be paid on the cumulative Preference shares, a further $731,250 is required, but, as mentioned above, these have not been paid since 1st February, 1932.

Statement No. 12 shows that the earnings of the consolidation, in excess of bond interest and dividends paid from the time of incorporation of Simpsons Limited (1929) to 3rd January, 1934, amount to $725,819. Simpsons Limited (1929) as a corporation, however, has a balance in its own profit and loss account of $974,731. Thus the holding company has been withdrawing slightly more than the combined earnings of its constituent companies.

A. Memorandum regarding capital and bond issues. The initial authorized capital of The Robert Simpson Company Limited incorporated in 1896 consisted of 5,000 shares of a par value of $100 per share—$500,000. The entire capital issued to 1898 (1,375 shares) was acquired at that time by the late Mr. H. H. Fudger, Sir Joseph Flavelle and Mr. A. E. Ames. On statement No. 7 is detailed the various additional issues up to 1917 when the outstanding capital consisted of:—

33,500 6 per cent preference shares..	$3,350,000
33,500 Common shares..	3,350,000

Q. Statement No. 7 is not printed?—A. Yes, it is sir.

Q. Statement No. 7 is attached to this?—A. Yes.

Mr. HEAPS: Of those two statements, have you any idea as to how much actual cash was put in the concern?

The WITNESS: It is shown on statement No. 7, which is being sorted now.

By Mr. Sommerville:

Q. But the original 1,375 shares of common stock— —A. Yes?

Q. —was bought by Mr. Fudger, Sir Joseph Flavelle and Mr. Ames?—A. Yes.

Q. At that date was there any preferred stock outstanding?—A. No.

Q. And subsequently preferred shares were issued?—A. In 1912 was the first issue.

Q. In 1912 preferred shares were issued to the public?—A. To the public and also to the common shareholders.

Q. And to the common shareholders?—A. As a bonus stock dividend.

Q. Just a moment. Preferred shares were issued to the public, and some preferred shares were issued to the common shareholders as a stock dividend?—A. Yes.

Q. The amount of the preferred shares issued to the public was how much?—A. 22,500.

Q. 22,500 shares?—A. Shares.

Mr. FACTOR: $100 each?

The WITNESS: Yes.

By Mr. Sommerville:

Q. We have statement No. 7 now. Now, with reference to the preferred shares, 2,000— —A. 2,250,000—

Q. Were issued to the public?—A. Yes.

Q. How much was given as bonus shares to the common shareholders?—A. It was a stock dividend of 5,000 shares.

Q. A stock dividend of 5,000 preferred shares?—A. Yes.

Q. What other disposition was made of the preferred shares?—A. In 1917, $600,000, 6,000 shares were sold to the public.

Q. So that the total number of preferred shares oustanding— —A. In 1917 was 33,500.

Q. Preferred?—A. Yes.

Q. Of that, 5,000 represented— —A. Stock dividends.

Q. To the common stockholders?—A. Yes.

Q. And the balance of preferred shares held by the public?—A. Yes.

Mr. FACTOR: What about that first mortgage in 1912?

The WITNESS: That was sold in 1912.

Mr. FACTOR: To the public?

The WITNESS: Yes.

By Mr. Sommerville:

Q. Then in addition to the preferred shares, there was sold to the public a first mortgage bond issue of $2,250,833?—A. Yes. This was the only issue of bonds of the Robert Simpson Company.

Q. Those bonds are still outstanding?—A. Yes, a portion. They are subject to a sinking fund provision, and some of them are redeemed each year.

Q. But there is a balance of them still outstanding?—A. 1,375,000.

Q. Are the preferred shares still outstanding?—A. Yes, they are.

Q. So that the present position is the 33,500 of preferred shares are outstanding in the parent operating company?—A. Yes.

Q. And bonds?—A. 1,375,000.

Q. Still outstanding in the parent company?—A. Yes.

Q. Now, the common shareholders having obtained 5,000 preferred shares, will you tell us what the common shareholders got by way of stock dividends during the next year—1925?—A. No change between 1917 and 1925, or until 1917 when the total number of outstanding common shares was 33,500, 26,033 of those had been issued as stock dividends.

Q. 26,033? Let us get this another way. The original 1,375 shares have grown to 33,500?—A. Yes.

Q. And that was not by the introduction of new capital?—A. Altogether.

Q. But 26,033 of those common shares had been issued as stock dividends? —A. That is right.

Mr. BELL: Doesn't it all go to the 1,375 here?

The WITNESS: No, there were new shareholders from time to time, and they were distributed to all the shareholders on record at the date of the distribution of the dividend.

Mr. SOMMERVILLE: They went to all the common shareholders who were on record at the time of each distribution?

The WITNESS: Yes.

By Mr. Factor:

Q. There were common shares sold to the public as well?—A. No.

Q. How were those additional shareholders of common stock created?—A. They were confined to a small group; they were not offered to the public.

Q. Actually there was cash invested in payment of those common shares by this small group?

By Mr. Sommerville:

Q. There may have been. As far as the company was concerned, the company issued no common shares for cash?—A. 7,467 shares paid for in cash.

Q. I beg your pardon?—A. 26,033 issued as stock dividends.

Q. Now, the shares that were issued as stock dividends went largely to the original holders of the 1,375 shares, did it not, or their successors in title?—A. Through their successors, yes. Shareholders have changed from time to time.

Q. That is to say, I understand about 1902, Mr. Ames sold his one-third interest and someone became the owner of them; who was that?—A. It was the Cox interests.

Q. So that the three principal owners were Mr. Fudger, Sir Joseph Flavelle and the Cox interest?—A. Yes.

Mr. Heaps: Before you go on with that part, I should like to know this: I am wondering what they paid for those 7,000 shares out of the 33,500 common shares?

By Mr. Sommerville:

Q. Mr. Heaps is asking what was paid for these 7,000 common shares bought from the company?—A. They had a par value of $100. and the amount of money which the company got was $746,700. I cannot tell what the three original members of the group paid to buy out the company, but the amount of money which the company got was $746,000.

Q. They got for 7,000 shares $746,000?—A. Yes.

Q. Which represented a little more than par?—A. No, exactly par.

Q. 7,000 shares?—A. 7,467 shares.

Mr. Bell: I wanted to find out, of that 1,375 shares, originally issued, what proportion of the 35,000 common shares went to those 1,375 shares, or in other words, did they get a bonus of stock in the same way as they did on the preference shares? How much common, in other words, did they get out of this $35,000.

The Witness: We can figure that out; I have not it worked out, but I can do it very quickly.

Mr. Young: They got about 20 to 1.

The Witness: It depends on the date of the stock dividend. Stock dividends were issued from time to time.

Mr. Sommerville: Stock dividends were issued every few years?

The Witness: There were five large stock dividends, 1903, 1905, 1907, 1910, 1912, 1917—six, really.

Mr. Factor: They received their proportion according to their holdings?

The Witness: Yes. The total proportionate to the shares outstanding.

Mr. Factor: The same as the others?

The Witness: Yes.

Mr. Sommerville: I think we can get that out in another way. You will find what the holdings are of those three interests at the time they sold out?

Mr. Bell: They got 5,000 shares of preference stock, didn't they?

The Witness: Yes.

Mr. Bell: At the same time. My question is did they get an equal amount of common shares as a bonus?

Mr. Sommerville: They got very large bonuses from time to time, or stock dividends from time to time?

Mr. Bell: Would they not get some consideration in regard to common shares at the same time as they did the preference?

The Chairman: The only way to answer that question would be, if the auditor would do it, to find out in 1925 the special interests of the common stock. They will work that out for us.

By Mr. Senn:

Q. May I ask one more question in that regard? In addition to the stock dividends issued, were there any cash dividends on the common stock?—A. Yes.

Q. Regularly paid?—A. Yes, every year.

Q. What per cent?—A. Ranging from 5 per cent up to 11½ per cent; that is, on the shares outstanding, not on the initial issued capital.

By Mr. Sommerville:

Q. On the amount outstanding at the time they received every year cash dividends from 5 to 11 per cent?—A. Yes.

Q. To 11 per cent?—A. On the total shares outstanding.

The CHAIRMAN: Common stock?

The WITNESS: Yes.

Mr. SOMMERVILLE: In addition to the stock dividends to which you have referred?

The CHAIRMAN: That is, the bonus stock that was issued one year, would bear next year a dividend of whatever the amount was?

The WITNESS: Yes.

The CHAIRMAN: Five per cent to 10 per cent?

The WITNESS: Yes.

The CHAIRMAN: It seems a reasonably profitable operation.

Mr. SOMMERVILLE: You are going to work out the amount of the original interest?

Mr. HEAPS: What was subsequently paid by the Cox interest for those common shares?

The WITNESS: That is a transaction between the shareholders, not a company transaction.

Mr. HEAPS: You do not know?

The WITNESS: No.

By Mr. Sommerville:

Q. It would be reflected in the books of the company?—A. No.

Q. Now then, you say that during that period the company had received $746,000 for its issued common stock?—A. Yes.

Q. And if the balance of the shares had been issued at par, it would have meant what?—A. You mean if the cash—

Q. Yes.—A. $2,603,300.60.

Q. So that another way of putting it is the shareholders received, in addition to cash dividends, stock dividends which at par had a value of $2,603,000?—A. Yes.

Q. Plus the dividends upon those stock dividends?—A. Yes.

Q. From year to year?—A. Yes.

Q. That brings us up to the year 1925?—A. Yes.

Q. What happened in 1925?—A. Of these shares, 5,000 preferred shares and 26.033 common shares were issued as stock dividends. Since 1918 there has been no change in the capital structure of the Robert Simpson Company, Limited. While most of the preference shares were issued to the public the common shares were held very closely and continued to be so held until 1925 when Simpson's Limited (1925) was incorporated to acquire these common shares.

In 1912 an issue of £462,500 ($2,250,833) five per cent first mortgage bonds was sold to the public. This was the only issue of bonds of The Robert Simpson

Company, Limited, and $1,375,222.66 of these bonds were still outstanding at 3rd January, 1934.

At 4th February, 1925 (at the time of the incorporation of Simpson's, Limited, (1925), the outstanding bonds and shares of the Robert Simpson Company, Limited, (exclusive of certain mortgages and bonds of subsidiary companies totalling $698,166) were as follows:

5 p. c. First mortgage bonds..	$1,852,059
6 p. c. Preference shares..	3,350,000
Common shares..	3,350,000

At that date, undistributed surpluses of the company and its subsidiaries amounted to $4,752,743 equal to $142 per common share outstanding.

Mr. Factor: How do you figure that out?

The Witness: There were 33,500 common shares outstanding.

Mr. Sommerville: This is surplus.

The Witness: Yes.

Mr. Sommerville: If that surplus were distributed to the outstanding common shares, it would represent a value of $142 per common share?

The Witness: Yes.

Mr. Factor: The common shareholders, however, are entitled to a division of the surplus, if distributed?

The Witness: Yes. Simpson's Limited (1925) was incorporated on the 3rd March, 1925—

Mr. Factor: Right here, may I just ask one question. The holders of the common shareholders were the original three?

The Witness: No.

Mr. Factor: And also the ones who invested the additional 7,460 odd shares?

The Witness: Interests had changed from time to time, transactions between shareholders themselves.

By Mr. Sommerville:

Q. At that time, 1925, can you tell us what were the holdings of the majority shareholders of the common shares—I think you had it this morning? —A. Approximately 50 per cent, slightly more than 50 per cent was owned by the Flavelle interests.

Q. A little over 50 per cent interest owned by the Flavelle interests?—A. And about 25 per cent by the Cox interests and the Fudger interests were very substantially reduced at that time; they were about 3,000 shares.

Q. And at that time theirs were 3,000 shares, less than 10 per cent?—A. Yes, and the others were small holdings.

Q. That is 85 per cent in those three?—A. Yes.

Q. Flavelle, 50 per cent?—A. A little more than 50 per cent.

Q. A little more than 50 per cent; the Cox interest was 25 per cent, and the Fudger about 10 per cent?—A. Yes.

Q. Or a total of 85 per cent held by the three interests?—A. Yes.

By Mr. Factor:

Q. How did Flavelle get over 50 per cent, by some internal transactions? —A. Transactions between the shareholders themselves.

Q. You have no record of that?—A. No.

Mr. SOMMERVILLE: And the remaining 15 per cent was small holdings of a number of different people?

The WITNESS: Yes.

By the Chairman:

Q. I should like to get clear on that point the standing of the shareholders as it was prior to the — —A. 1925?

Q. —1925 refinancing.—A. Yes.

Q. So that the 85 per cent interests represented by these three large groups of stockholders would be the ones who would control the refinancing?—A. Yes.

By Mr. Sommerville:

Q. Now then, what refinancing took place, or what took place in 1925, that affected the capital structure?—A. In 1925, Simpson's Limited (1925) was incorporated and acquired all the outstanding common shares of the Robert Simpson Company Limited, which was 33,500 shares. Then, Simpson's Limited entered into no agreement with The Robert Simpson Company Limited, its dealings at this time were only with the holders of the common shares. I shall read from the brief.

"This company was incorporated on 3rd March, 1925, and under an agreement dated 11th March, 1925, acquired all the outstanding common shares of The Robert Simpson Company Limited (33,500 shares with a par value of $100 each). It entered into no agreement with the latter company—its dealings at this time were only with the holders of the common shares."

Q. So that Simpson's Limited (1925), became the owners of the common stock instead of the original individual interests who held the stock?—A. That is right.

The CHAIRMAN: Became the holding company?

The WITNESS: Holding all the common shares of the Robert Simpson Company.

Mr. SOMMERVILLE: The operating company.

The WITNESS: The consideration paid by Simpson's Limited to the former common shareholders of The Robert Simpson Company Limited were as follows:—

Cash—$150 per share..	$5,025,000
100,000 no par value shares in Simpsons Limited (1925) on the basis of three for each one formerly held—nominal value..	3,350,000
	$8,375,000

Mr. SOMMERVILLE: The total consideration therefore paid was what?

The WITNESS: $8,375,000.

Mr. FACTOR: Where did you get the nominal value?

The WITNESS: That is the par value of the common shares of the Robert Simpson Company, 33,500 at $100.

By Mr. Heaps:

Q. Of those shares, 26,033 for which nothing was paid?—A. That is right; it represented stock dividends.

Q. No actual cash paid for that interest in the form of dividends?—A. Yes.

Q. For those shares?—A. It is cash dividend.
Q. They received $150 for par value shares at $100?—A. Yes.

By Mr. Sommerville:

Q. Then the net result of this operation was that the original shareholders of the original company got $5,025,000?—A. The shareholders in 1925 got that.
Q. The shareholders in 1925 had distributed among them $5,025,000 in cash?—A. Yes.
Q. And they still held all the shares?—A. Of the new company.
Q. Which owned all the shares of the old company?—A. That is right.
Q. In other words, their stock position was not changed in the slightest?—A. No.
Q. 85 per cent majority holdings still had an 85 per cent interest in the company thereafter?—A. Yes.
Q. And the 15 per cent minority holdings had 15 per cent thereafter?—A. There were transactions after the reorganization between the shareholders which changed that.
Q. The position as between the shareholders may have changed by some external arrangements, but the net position was that by this means $5,000,000 was withdrawn and distributed among the shareholders?—A. Yes.
Q. And of that $5,000,000, over 50 per cent went to Sir Joseph Flavelle and his interests?—A. His interests.
Q. His family interests, you mean by that?—A. Yes.
Q. 25 per cent to the Cox interests, and 10 per cent to the Fudger interest?—A. Yes.
Q. And the balance to the— —A. Minority holdings.
Mr. FACTOR: Why do you place a nominal value of $100,000 on the value of the original 33,500?

Mr. SOMMERVILLE: That is the par value.

The WITNESS: That is the value assigned to them on the company's books.

Mr. KENNEDY (*Peace River*): The net result is they have both the $5,000,000 in cash and the same control as before?

By Mr. Sommerville:

Q. As Mr. Kennedy asked, was not the net result this. They withdrew $5,000,000 in cash and had exactly the same control as they had before?—A. Yes.
Q. Then, Simpson's Limited (1925) not having any money, it being a new company, and not having any assets except the common shares, where did they get the $5,000,000?—A. It sold bonds, par value—
Q. To the public?—A. Yes, 5,600,000.
Q. $5,600,000 worth of bonds? Were these bonds secured by any real estate?—A. No.
Q. Were there any fixed assets?—A. None.
Q. Upon which the bonds were given?—A. None.
Q. They were bonds issued against common shares?—A. That is right.
Q. And these common shares were the common shares of the— —A. Robert Simpson Company.
Q. The operating company?—A. Yes.
Q. And its common shares in the operating company were already subject to a first mortgage bond issue and preferred shares outstanding?—A. Yes.
Mr. FACTOR: You are going a little too fast, Mr. Sommerville. I thought all the common shares were owned, or 85 per cent of them, were owned by these three interests?

Mr. SOMMERVILLE: Yes; and then they turned them over to the new company, the holding company, you see.

Mr. FACTOR: I see; they turned them over subject to the charge.

Mr. SOMMERVILLE: Yes.

The WITNESS: Sinking fund.

By Mr. Sommerville:

Q. The common shares they turned over would be subject to the liabilities of the company that issued the common shares. In other words, by this operation, Mr. Adamson, the parent companies financing was not affected in any way?

Q. Its stock structure was not changed?—A. No.

By Mr. Factor:

Q. In other words, the owners of common shares got $5,600,000 from the public on the security of their holdings in the common shares subject to the prior obligations?—A. $5,600,000 was not realized on the sale of these bonds, only $5,000,000 cash.

Q. That was on the common fixed assets?—A. Of the operating company.

Q. Or the real estate?—A. Of the operating company.

By Mr. Kennedy (Winnipeg):

Q. What was the amount of the bond issue?—A. $5,600,000.

By Mr. Heaps:

Q. Who issued it, was there not some nationally known firm that issued the bond?—A. Wood Gundy.

Mr. KENNEDY (*Winnipeg*): The amount received was $5,600,000.

By Mr. Sommerville:

Q. Just a minute now, one at a time, please. On the sale of $5,600,000 of bonds they received for the bonds $5,025,000?—A. Yes.

Q. In other words, this operation cost $525,000?—A. $575,000 was the difference.

Q. That is right, $575,000?—A. Between the face value of the bonds issued and the amount of cash actually received.

By Mr. Edwards:

Q. What was the interest allowed on that issue?—A. 6½ per cent.

Q. It was a 6½ per cent issue sold at 90?—A. Sold to the underwriters at 90.

Q. And the underwriters were Wood Gundy?—A. Yes.

By Mr. Senn:

Q. There was some sinking fund provision on those bonds?—A. Yes.

By Mr. Sommerville:

Q. Then the net result of that operation was that the operating company remained just as it was, without any change in its asset position?—A. Yes.

Q. The shareholders incorporated themselves under the new company?—A. Yes.

Q. They had exactly the same holdings in the new company, and withdrew five million?—A. Yes.

Q. And expended another $575,000 to accomplish that purpose?—A. Yes.

Mr. FACTOR: And gave the public a charge on the assets to that amount?

By Mr. Sommerville:

Q. A charge on the equity that remained in the assets?—A. Yes, secured by specific trust charge on the common shares of Robert Simpson Company Limited.

Q. What was the next financing operation of that company?—A. I think we might go on with this statement, and we will come to that.

As indicated above the former shareholders of The Robert Simpson Company Limited as a body received, in addition to the cash consideration, 100,000 shares of Simpson's Limited for their 33,500 shares (approximately 3 shares for 1). The Company's officials state that some of these 100,000 shares were sold or donated by the former shareholders to department managers and other employees. The prospectus for the bond issue made at this time states:—

> One of the primary purposes of this issue is to afford an opportunity for officers and department managers of the Company to secure a more important shareholding interest in the business. Simpson's Limited will comprise among its shareholders not only the present holders of common shares of The Robert Simpson Company Limited but also a number of the chief executives and managers of that Company.

The Secretary of the Company states that, as a result of these transfers by the former shareholders from 1925 on, no single individual had control of the Company.

By the Chairman:

Q. Of which company?—A. Simpsons Limited 1925.

Q. The holding company?—A. Yes.

It will be noted that at this time the organization of the holding company did not directly affect The Robert Simpson Company Limited. There was an indirect effect, however, as the holding company could only pay its bond interest and sinking fund payments, amounting in the aggregate to $500,000 per annum, by dividends from the operating company, or at the rate of $15 per year on the 33,500 common shares of the latter company.

By Mr. Sommerville:

Q. Now then, was not the result of this financing to impose upon Simpson's Limited, 1925, an annual obligation of $1,500,000?—A. Yes.

Q. They have no other sources from which to get this revenue, except by way of dividends on the common stock of the operating company?—A. That is right.

Mr. Factor: That was the security.

By Mr. Sommerville:

Q. Yes, that was the security. And that meant that in order to get enough revenue the operating company had to pay the holding company $15 per share per year, and that was on the common stock?—A. Yes.

Q. And that was an obligation on the part of the operating company then to pay 15 per cent dividends on the common shares?—A. Yes.

Mr. Factor: Let us get this right: do you mean there was an agreement entered into between the company and its common shareholders?

By Mr. Sommerville:

Q. No, no; I will clear that up in a minute now. There was no agreement between the operating company and the holding company that they would pay 15 per cent?—A. No, they owed the shares.

Q. But the holding company owns the shares of the operating company, and as the owners of the shares of the operating company, they controlled what the operating company would pay?—A. Yes.

Q. And the holding company could not discharge its obligations unless it got $15?—A. That is right.

Q. And the people who would pay the $15 were the same people as those who would receive it?—A. Yes.

Mr. FACTOR: Supposing the operating company could not earn $15 per share.

Mr. SOMMERVILLE: It was just too bad for the bondholders of the 1925 company; is not that the situation?—A. That is the situation.

Q. If the operating company did not pay 15 per cent per annum on these shares, then the holding company would not have the income and therefore would have to make a default upon its bonds, or else borrow the money from some place?—A. It was the only source of income.

Q. As a matter of fact, what did happen; did the operating company pay this $15 per share per year?—A. Yes.

Q. Or 15 per cent per year until 1929?—A. Yes.

By Mr. Factor:

Q. Did they actually earn that much?—A. More than that.

Mr. ILSLEY: $15 per what, did the shares have a par value of $100?

Mr. SOMMERVILLE: There was no change in the shares of the operating company, the shares did not change. They had to pay $15 a share on the shares they had outstanding.

The CHAIRMAN: Of the common stock.

By Mr. Sommerville:

Q. Then, having made this bond issue, perhaps you will tell us what was the next feature in the financing of the holding company?—A. Possibly I had better continue this statement:—

> In 1928, funds were required for the Bay Street Extension to the Toronto Store. While this store was owned and operated by The Robert Simpson Company Limited, the financing was done by Simpson's Limited through an issue of $4,000,000, 6 per cent Cumulative Preference Shares, redeemable at 105. These shares were offered to the public at $100 per share. The total commissions and expenses in connection with this issue amounting to $170,934.20 were paid by The Robert Simpson Company Limited.

Mr. SENN: Which company was this in addition to?

By Mr. Sommerville:

Q. This is Simpson's Limited, 1925, the holding company, which issued the preference shares?—A. Yes.

Q. And the only assets which it possessed at the time were these same common shares which were under bond?—A. Yes.

Q. And against these assets they issued four million 6 per cent accumulatvie preference shares?—A. Yes.

Q. And they provided that these will be redeemable at 105?—A. Yes.

Q. And they sold them to the public at 100?—A. They were sold to the public at $100 per share; they were sold through the underwriters.

By the Chairman:

Q. Who were they?—A. Wood Gundy & Company.

By Mr. Factor:

Q. Let us get that clear; was that the only security behind this 1925 issue of common shares of the operating company?—A. Yes.

Q. That was then a fourth charge, if I can put it that way; there was the first mortgage bonds, then the original 6 per cent preference shares, then the $6\frac{1}{2}$ per cent preference shares, and now the four million cumulative preference?—A. In this time, between these two periods, the operating company was making substantial profits, so that their assets were increasing all the time.

By Mr. Sommerville:

Q. And the value of the common shares had increased by reason of the increase in the value of the operating company?—A. Yes.

Q. Or rather, by reason of the increased earnings of the operating company?—A. Yes.

Q. And they capitalized on this—not in the actual sense—but they issued a further capital issue against these increased earnings?—A. Yes.

By Mr. Factor:

Q. But would not the sinking fund collateral gold bonds have a prior claim on the assets of the Robert Simpson Company?—A. Yes.

By the Chairman:

Q. Have you a copy of the prospectus?—A. Yes, I have; but I would like to have this one back as it is the only one which is available now.

By Mr. Heaps:

Q. Is that the 1928 prospectus?—A. That is 1925, I will give you 1928.

By Mr. Senn:

Q. I would like to know just what annual charges there were against these assets at the time this 1928 issue was made; you have already spoken about the issue of sinking fund collateral trust gold bonds?—A. There is a dividend on the preference shares of the Robert Simpson Company.

Q. These bonds constitute a liability of $15 per annum on these shares; can you tell us how much extra there was on these other two—the first mortgage bonds?—A. That is the first.

By Mr. Sommerville:

Q. I think what Mr. Senn wants to know is, there were 5 per cent first mortgage bonds outstanding in 1925 to an amount of— —A. $1,852,059.

Q. That is, there is an amount of $1,852,059 outstanding at this time of first mortgage 5 per cent bonds.

Mr. SENN: How much would that amount to by way of an annual cash payment?

Mr. SOMMERVILLE: That would amount to, let me see.

Mr. FACTOR: That is not a fair way of calculating it, because the first mortgage bonds and the preference shares were a prior charge on the assets of the operating company, were they not?

By Mr. Sommerville:

Q. No, no. In addition to that what was the amount outstanding of 6 per cent cumulative preference shares?—A. $3,350,000.

Q. Yes, and all of these amounts were outstanding at the time of the 1925 financing?

Mr. SENN: Yes, but the company had to earn dividends on that as well as the 15 per cent.

Mr. SOMMERVILLE: Yes; it had to earn first of all its bond interest, then it had to earn its cumulative preference dividend rate, had to set aside its depreciation, it had to take care of all other expenses, and whatever was left would be the net profit; and that net profit had to be sufficient to pay $15 a share to the 1925 company, otherwise the 1925 company would have been in default on its bonds.

Mr. HEAPS: It was really a gamble on the earning capacity of the company.

Mr. SOMMERVILLE: Was that all it was?

Mr. HEAPS: Perhaps it was not a very good one, from the investor's point of view.

By Mr. Sommerville:

Q. At any rate, that four million of preference shares was issued and it cost the operating company $170,934.20?—A. Yes.

Q. Although it was issued by Simpsons Limited, the holding company?—A. Yes.

Q. I presume the reason for the operating company paying the cost was because Simpsons Limited, the holding company, was advancing this money to the operating company for that purpose?—A. That is right.

Q. All right. That is the first expense we find against the operating company?—A. Referring to the statement again:—

> In February, 1929, an additional issue of $3,000,000 of its 6 per cent Cumulative Redeemable Preference shares was made by Simpsons Limited (1925) primarily for the construction of a new store in Montreal (the property of the John Murphy Company, Limited, a company wholly owned by and conducting the Montreal business of The Robert Simpson Company Limited). This issue was also offered to the public at $100 per share and four months later it was redeemed at 105. Commission and expenses of this issue amounting to $121,255 were also paid by The Robert Simpson Company Limited.

Q. To whom was that paid?—A. Largely to the underwriters.

Q. The underwriters were Wood Gundy & Company again?—A. Yes.

Q. This would cover the legal expenses?—A. All the expenses in connection with the issue.

Mr. ILSLEY: Is there anything wrong with that, the operating company paying these expenses?

By Mr. Sommerville:

Q. I would not think so; why would not it be a legitimate charge on the operating company since they were getting the money out of this issue?—A. It was part of the cost of the money.

Q. The situation may be a little changed when one sees how much they paid to redeem it the very next year. That is the expense then of the second preference issue, $121,255; that made up to that time on the part of the 1925 company a total issue of securities of five millions in bonds and seven millions in cumulative preference shares?—A. Yes.

Q. And its only assets against these were the common shares it held, plus the advance of money which it had made to the operating company?—A. Yes.

By Mr. Factor:

Q. Or, to put it another way, Mr. Adamson, is it fair to say that the total of the bonds, shares and securities outstanding was $17,802,059; against all

the assets of the Simpson Companies. I included in that the original first mortgage bonds of $1,852,000, the six per cent preference shares?—A. These would be reduced each year, they would not be the same as in 1925.

Q. Oh, sure; but as against all the assets of the Simpson Companies—fixed assets, real estate, operating company, etc.—there were altogether outstanding as liabilities in the form of bonds, shares, etc. an amount of $17,802,000, subject to these amounts being varied through the reduction in the amount of the mortgage?—A. That is approximately the figure.

By Mr. Sommerville:

Q. I observe that these bonds, the 1925 issue referred to, these 6½ per cent sinking fund collateral gold trust bonds—?

The CHAIRMAN: Now, might I interject a question here, this is not perhaps quite what you are on, but I have in my hand a prospectus of the issue of $3,000,000 of Simpsons Limited 6 per cent cumulative preference shares—I do not see the date.

Mr. SOMMERVILLE: Here it is, at the back, it is dated February 25, 1929.

The CHAIRMAN: On the back of this prospectus a financial statement at the head of which is, Simpsons Limited and constituent companies, consolidated balance sheet, as at January 30, 1929. Now, under the assets I notice for instance (I am just giving round numbers) merchandise amounting to eight million; accounts receivable three million; other assets of different kinds, the whole making up a total of 12 million; and the capital assets, land buildings and equipment as at February 1st, 1928 is shown at 13 million, giving 16 million odd; making a total in round figures, of $35,000,000.

Mr. FACTOR: Is that the total assets, $35,000,000?

By the Chairman:

Q. Yes. Now, the question I would like to ask is this: other than the ownership of the common shares of the Robert Simpson Company, Limited, is there any direct claim on the part of Simpsons Limited on the assets to which you have referred?—A. No, not up until 1929, the time of the second re-organization.

Mr. ILSLEY: They made that clear by using constituent companies making it a consolidated balance sheet.

The WITNESS: Yes, a consolidated balance sheet.

The CHAIRMAN: As a matter of fact, Simpson's, Limited, have no control over the assets?

Mr. SOMMERVILLE: Yes.

The CHAIRMAN: Or claim upon them other than ownership of the common shares of the Robert Simpson, Company, Limited?

The WITNESS: No, but that is the control.

The CHAIRMAN: That is the control?

The WITNESS: Yes.

Mr. FACTOR: I think the fair way to present this picture is to show at first the total assets, $35,000,000 owned by these companies and the total outstanding bond and share obligations of $17,800,000.

Mr. ILSLEY: I suppose they show that on the other side?

The CHAIRMAN: No, they do not.

Mr. FACTOR: Mr. Stevens describes it this way: it shows the assets of all the constituent companies, and apparently the holders of those obligations have no direct claim in those assets. I do not think it is quite fair to mention that.

Mr. Ilsley: They say "constituent companies."

The Witness: That is a consolidated balance sheet of all the companies, they say, which is Simpson's, Limited, and constituent companies.

Mr. Factor: The total assets are $35,000,000.

The Witness: And all liabilities and all capital outstanding eliminating inter company—

Mr. Factor: It would show the picture if the total assets were shown as $35,000,000 as against total capital obligations of $70,000,000.

Mr. Sommerville: No, they are more than that.

Mr. Factor: I am not talking about the direct liabilities; I am talking about the issue of bonds and shares.

The Witness: Later, there are other statements showing the comparative balance sheet from year to year over the ten years. We can get the information from that.

Mr. Heaps: You have not got the value of the assets?

By Mr. Sommerville:

Q. Yes, we will deal with that. Now, in order to reach the valuation necessary for the financing of the 1925 company, was there a new appraisal made?—A. An appraisal was made in both 1925 and in 1929?

Q. And the appraisal in 1925 gave an increased appraisal value of how much?—A. The assets were actually only written up by $2,800,000, although the appraisal indicated a value substantially greater than that.

Q. In other words, for the purpose of the 1925 financing, the assets were written up just $2,800,000?—A. Yes.

Q. The balance of the appraisal was subsequently written up in 1929?—A. 1929.

Q. We will come to that later?—A. Yes.

By Mr. Factor:

Q. What does this expression mean; what is written up?—A. An appraisal was made of the lands, buildings and equipment, and the value on which they were carried on the books of the company was increased by the difference between the then book value and the appraised value.

Mr. Sommerville: Mr. Factor was not here on Monday.

Mr. Factor: It is an arbitrary increase? Was there some fixed basis?

The Witness: The appraisals are made by appraisal companies.

Mr. Heaps: Who was the company which made this one?

The Witness: I have that here.

Mr. Nash: It was scientifically done, item by item.

Mr. Edwards: Replacement value?

The Witness: The name of the appraisal company will be in the prospectus.

Mr. Factor: I mean, Mr. Chairman, the statement goes out to the public that the assets are written up, and the ordinary public gets the impression that a certain gentleman, who is the appraiser, just changes a figure from one figure to a higher figure.

Mr. Sommerville: No; we had all that threshed out on Monday here.

The Chairman: We spent hours on it.

Mr. Sommerville: We had a long discussion on that Monday, when the question of appraisals came up. In that case the company underwriting the issue required the appraiser to give them an appraisal on replacement value new.

Mr. ILSLEY: Yes.

Mr. SOMMERVILLE: That was the basis he gave, and the question of appraisal is dependent entirely upon the basis.

Mr. FACTOR: That was Burns and Company?

Mr. SOMMERVILLE: Yes.

Mr. FACTOR: In this case it was not replacement value new, but the assets were written up only $2,000,000.

The WITNESS: It was depreciated appraised value.

Mr. FACTOR: In other words, on a certain scientific basis?

The WITNESS: Yes.

Mr. FACTOR: That appraisal companies have for writing them up?

The WITNESS: Yes.

By Mr. Sommerville:

Q. Then, in 1929, the issue that was sold to the public in February cost the public $121,255?—A. Yes.

Q. And it provided for the redemption of the preferred shares at $105?—A. They were cumulative, redeemable preference shares, the same as the previous shares.

Q. That was in February?—A. Yes.

Q. As a matter of fact, these shares were redeemed in June of 1929 by the new financing?—A. Yes.

Q. And the five per cent on the $3,000,000 redeemed in June, 1929, cost the company an additional $150,000 to redeem?—A. Yes.

Q. Plus cumulative interest in the meantime?—A. Yes.

Q. At the same time, in June, 1929, an issue of $4,000,000 of preference shares issued in 1928 were redeemed?—A. Yes.

Q. And they were five per cent redeemable?—A. Yes.

Q. And it cost them $200,000 to redeem them?—A. Yes.

Q. So that the cost of those two financing operations in 1928 were, expenses for the first $170,934.20, redemption within 15 months, $200,000, expenses of the second issue of $3,000,000, $121,255, and cost of redemption within three months $150,000?—A. Yes.

Q. Or a total of $642,189.20?—A. That is right.

Q. That was the entire cost of the money that was obtained in 1928 and 1929?—A. Yes.

Q. And that was paid back when a certain new financing operation took place in June, 1929?—A. Yes.

Mr. FACTOR: Cost of redemption, you mean $5 extra?

Mr. SOMMERVILLE: $5 extra together with the interest of six per cent paid on the cumulative preferred shares as well; they were oustanding?

The WITNESS: Yes.

Mr. SOMMERVILLE: Then we come to June, 1929; what took place?

The WITNESS: In June, 1929, Simpson's, Limited, (1925) sold all its assets (with the exception of cash on deposit for sinking fund purposes) to a new company, Simpson's, Limited, (1929) for the following securities of that company:—

$10,000,000 6 p. c. 1st mortgage bonds.
$10,000,000 $6\frac{1}{2}$ p. c. preference shares.
120,000 class "A" shares of no par value.
120,000 class "B" shares of no par vlaue.

All the above, with the exception of the Class "A" shares, were then sold to underwriters for $20,000,000.

By Mr. Factor:

Q. What do you mean by the term "assets," the charge they had against the common shares of the operating company—A. Their assets consisted of the common shares of the Robert Simpson, Company, and advances which had been made to the operating company to finance these extensions referred to a few minutes ago.

Mr. Ilsley: Bills receivable

The Witness: Yes.

Mr. Sommerville: Monies advanced

Th Witness: Yes, the securities. The securities which the 1925 company received for its assets were: \$10,000,000 of six per cent first mortgage bonds; \$10,000,000 of 6½ per cent preference shares; 120,000 class A shares, and 120,000 class B shares of no par value.

Q. That was what the 1929 company received the twenty million on?—A. Yes.

Q. From the underwriters?—A. Yes.

Q. And the underwriters were?—A. Wood Gundy.

Mr. Heaps: Do you know who the directors of the company were at this time, who was the President.

The Chairman: In the 1928 prospectus I see that the Directors are given as: Sir Joseph Flavelle, Bart., Chairman of Board; Charles L. Burton, Vice-President; William G. Morrow, David H. Gibson, J. Ellsworth Flavelle, Harris H. Fudger, President; Herbert C. Cox, James H. Gundy, John E. Goldring, Frank Y. McEachren.

Mr. Heaps: Have you got them for 1929?

Mr. Sommerville: For 1929 the Directors were, for Simpsons Limited 1929 —and they were also the directors of the operating company—C. L. Burton—

The Witness: Those are the present directors.

Mr. Sommerville: I have not got the directors for 1929.

The Chairman: The directors as indicated at the time of the reorganization in 1929 apparently were: Sir Joseph Flavelle, Bart., Chairman of Board of Directors; Harris H. Fudger, President; C. L. Burton, Vice-President; Herbert C. Cox, William G. Morrow, John E. Goldring, David H. Gibson, J. Ellsworth Flavelle, James H. Gundy, Frank Y. McEachren, and Frank Hay, Secretary.

Mr. Heaps: Practically the same as in 1925.

The Chairman: Practically the same.

Mr. Heaps: They were responsible for the reorganization proceedings.

By Mr. Sommerville:

Q. Yes. When you are talking of the directors after the re-financing of Simpsons Limited in 1929, the directors were—?—A. C. L. Burton, D. H. Gibson, J. H. Gundy, A. J. Mitchell, Sir Herbert Holt, S. Johnston, Mr. H. H. Bishop and Mr. H. G. Colbrook. Mr. Colbrook did not come in until after that. Those are the present directors. At that time Mr. A. T. Snell was a Director. H. H. Fudger was Chairman of the Board.

Q. Since deceased?—A. Yes.

Mr. Kennedy (*Peace River*): How much was made by selling these to the bond holders.

By Mr. Sommerville:

Q. Now then, we come to the question of the financing of this 1929 company. The operating company for this purpose turned over certain buildings and fixed assets to the holding company?—A. Yes.

Q. And the holding company is the owner of these lands, buildings and fixed assets; together with its common shares, and together with the money which it had advanced; then it issued to the old company, that is Simpsons Limited of 1925, certain securities?—A. Yes.

Q. And the securities which it issued were $10,000,000 of 6 per cent first mortgage bonds?—A. 6 per cent.

Q. And $10,000,000 of 6½ per cent preference shares?—A. Yes.

Q. And 120,000 Class A shares?—A. Yes.

Q. And 120,000 Class B shares?—A. Yes.

Q. And the Class A shares went to—?—A. The underwriters for $20,000,000.

Q. And what was the basis at which the underwriters took them, was it 90?

By Mr. Factor:

Q. Might I ask this question: did the new company, Simpsons 1929 own all of the assets of the operating company?—A. The 1925 company owned the common shares of the operating company, the Robert Simpson Company, and the 1925 company sold its assets to the 1929 company, so that in effect the 1929 company owned the common shares of the Robert Simpson Company.

By Mr. Factor:

Q. But did not Mr. Sommerville say they transferred real estate and fixed assets? –A. That was in addition to the common shares the 1925 company owned; part of the real estate, lands, buildings and equipment.

By Mr. Sommerville:

Q. That was a subsequent transaction?—A. The 1925 company did not actually own any real estate, it was part of the transaction at that time, the 1929 company would acquire from the operating company some of it lands and buildings.

By Mr. Factor:

Q. Not all of it?—A. No.

By Mr. Sommerville:

Q. So that the operating company still continued to operate and it does operate to-day?—A. Yes.

Q. It did part with certain of its land and buildings?—A. Yes.

Q. To the new 1929 company?—A. Yes.

Q. And the new 1929 company then received assets from two sources: one source was the operating company that gave them lands and buildings, the other was the 1925 company that gave it common shares?—A. Yes.

Q. Plus the amount owing by the operating company to—?—A. Simpson's 1925 company.

Q. And these two sources supplied the assets that entered into the new 1929 company?—A. Yes.

By the Chairman:

Q. And for that they paid the 1925 company how much, twenty million?—A. They paid them: $10,000,000 of 6 per cent first mortgage bonds; $10,000,000 of 6½ per cent preference shares; 120,000 shares Class A no par value, and 120,000 Class B shares no par value of Simpson's Limited, 1925. They sold these securities to the underwriters.

Q. Well, carry that through?—A. For $20,000,000. Statement No. 9 shows exactly what money was received, how it was disposed of.

Q. Just give it to us briefly now, and we will go into it in detail later?—A. Statement No. 9 shows the proceeds from the sale of these securities together with other funds available which were used in redeeming the bonds and preference shares outstanding of Simpson's Limited, 1925.

Q. How much is that?—A. The bonds were $5,024,800, on which the premium was $200,992, making a total of $5,225,792. The preference shares were par value $7,000,000 with a premium of $350,000; or a total of $7,350,000.

Q. Yes? And the balance?—A. And the balance, $10,000,000: In addition to the redemption of the bonds and the preferred shares there were other small disbursements to retire by The Robert Simpson Western Limited, bonds to the par value of $80,000, on which the premium was $2,400; making a total of $82,400. Then there was a dividend on the common shares to Simpson's Limited, 1925, of $150,000.

By Mr. Sommerville:

Q. Wait a minute: they paid out then to the shareholders?—A. The common shareholders.

Q. The common shareholders of Simpson's Limited, 1925, a dividend of $150,000?—A. Yes. Then there was the payment of incorporation and other expenses of Simpson Limited, 1929, which amounted to $149,089.

Q. Yes?—A. And balance of funds turned over to Simpson's Limited, 1929, $56,663. They deducted this payment from the $20,000,000 received from the sale of securities, plus the cash on deposit for the redemption of the collateral trust gold bonds, and the proceeds from 30,969 Class A shares sold to employees; and the interest on funds on deposit of $30,000, there remained $10,548,450, which was distributed to the holders of 70,323 shares on a basis of $150 per share.

Q. That is to say $10,548,000 was distributed among some of the shareholders of the 1925 company?—A. Yes.

Q. And the shareholders who received that cash of $10,000,000 were those who held 70 per cent of the common stock of the 1925 company?—A. Yes.

Q. And they were the majority interests that have been referred to; and at that time what were the holdings of the majority interests?

By the Chairman:

Q. That was the same group who got the $1,500,000 distribution out of the 1925 company?—A. The shareholdings had changed from time to time, it was not exactly the same.

Mr. SOMMERVILLE: It was the same grouping.

By Mr. Factor:

Q. Who were the principal shareholders?—A. About 38 per cent were held by the Flavelle family.

By the Chairman:

Q. And who were the others?—A. Approximately 7,400 shares by the Fudger family, and the others were more widely held.

Q. The Cox interest had been distributed?—A. They still had some holdings.

By Mr. Sommerville:

Q. Perhaps you can give us some of the larger holdings apart from the Flavelle interest; who had the control?—A. No one had the control, because there were 100,000 shares and the largest shareholder had only 38,000.

Q. Yes, that was in the 1925 company?—A. That was in the 1925 company.

Q. Well, the largest was Sir Joseph Flavelle, his interest was 38.000 shares?—A. Yes.

Q. And then 7,000 was the Fudger interest?—A. Yes.

Q. And then who else?—A. The Canadian Securities and Land Corporation, 2,000.

By the Chairman:

Q. Who were they?—A. I could not tell you who they were; I think the Secretary of the Company can probably tell you. We could get that.

Q. Have you the name of the firm in which the Cox holdings are now held? —A. I could not answer that in the meantime. The Canadian Securities and Land Corporation—

Q. Is that the Cox interest?—A. No, I will look that up for you.

Q. I was thinking it was—they just transferred the Cox interest in their name.

The CHAIRMAN: Now gentlemen, it is one o'clock, I think at this point we had better go and strengthen the inner man.

The Committee adjourned at 1.05 p.m. to meet again this day at 3.30 o'clock p.m.

AFTERNOON SESSION

The Committee resumed at 3.30 p.m.

The CHAIRMAN: Order gentlemen.

The examination of Mr. G. Adamson resumed.

By Mr. Sommerville:

Q. Now, Mr. Adamson, we have reached the point where you say that $10,548,450 was distributed to the holders of the 70,323 shares of common stock of Simpson Limited of 1925?—A. That is right.

Q. These same shareholders had already received $150 a share on their holdings in the Robert Simpson Company Limited?—A. Not exactly the same shareholders, but the shareholders.

Q. The group?—A. Yes, the group.

Q. In other words, the shareholders who sold to the 1925 company received $150 per share cash?—A. Yes.

Q. And also all the common shares?—A. Yes.

Q. Then, when they received all the common shares they got 3 shares of new stock in the 1925 company for each share that they formerly held?—A. That is right.

Q. And when they came to sell these shares in 1929 they got $150 a share for each of the shares which they held in the 1929 company?—A. 70,100 shares then outstanding.

Q. 70,000 of those shares received $150?—A. Yes.

Q. And the 70,000 represented the majority group?—A. Yes.

Q. In other words, the giving of three shares for one at that time really resulted a few years later in their getting $450 for what they had already drawn $150 on?—A. That is right, yes.

Q. And the net result was that in the four years' operation, if you take it on the basis of the 33,000 shares of common stock which were outstanding when the 1925 company was organized, they received $600 a share; those of them who owned the 70,000 shares?—A. Yes.

Mr. KENNEDY (*Peace River*): How does it happen that some were left out in the cold?

Mr. SOMMERVILLE: I will come to that.

The WITNESS: There were transactions in the meantime.

By Mr. Sommerville:

Q. Then the question arises, how does it happen that some of the shareholders received \$150 cash while others of them only got stock when the distribution was made in 1929; will you explain that to the committee?—A. The shareholders who got cash were the 70,323 shares who dropped out of the company at that time.

Q. Yes?—A. The remaining 29,667 shares received shares in the new Simpson 1929 company, on the basis of three for one; they represented the management of the company.

By Mr. Factor:

Q. What happened to the shareholders who dropped out?—A. They were paid off.

Mr. Heaps: Did they retire voluntarily?

Mr. Sommerville: They retired themselves apparently by this process—

Mr. Heaps: They milked the cow.

Mr. Sommerville: And left her dry—oh, no.

The Witness: They sold bonds and stocks to Simpsons 1929 in order to raise the money to retire the bonds, stocks and shares of Simpsons 1925, and to pay for these 70,000 shares.

By Mr. Factor:

Q. You are not overlooking the fact that they got paid for their 70,000 shares a bonus of 150 per cent?—A. \$150 per share amounted to around ten million dollars.

Q. In other words, the payment of \$150 per share to the 70,323 shares, amounted to—?—A. It amounted to \$10,548,000.

Q. Was in payment of their holdings of this number of shares?—A. Yes.

Q. So, on receipt of this \$10,548,000 odd they retired from the company?

By Mr. Heaps:

Q. Who were those who retired?—A. The Flavelle interests.

Q. The people who retire, that had the 70,000?—A. The Flavelle interests, the Fudger interests, the Cox interests, and Mr. Goldring's interests.

By Mr. Sommerville:

Q. Have you the proportions that each held?—A. Yes.

Q. This Flavelle interests had—?—A. 37,965 shares.

Mr. Heaps: What does that mean by way of dollars and cents?

Mr. Sommerville: You can take it at \$150 a share.

By Mr. Bell:

Q. How many thousand were there?—A. 37,965 shares.

By Mr. Sommerville:

Q. That amounts to \$5,700,000 to the Flavelle interests?—A. 7,396 shares of the Fudger interests.

Q. Approximately \$1,200,000?—A. Yes. The Cox interests 14,176 shares.

Q. Yes, approximately \$2,100,000?—A. And the qualifying 6,261 shares.

Q. Yes, approximately \$900,000?—A. Yes. At that time there were also about 2,400 shares held by trustees, representing shares set aside as a trust by the former shareholders in order to pay pensions of old employees; there were 2,400 shares registered in the name of that trust.

Q. And were these paid for in cash?—A. No.
Q. The trustee shares?—A. Oh, yes, they were.
Q. Paid for in cash?—A. Yes.

Mr. HEAPS: Perhaps it might be interesting now to put on record the amount the same interests received in the 1925 split-up.

Mr. SOMMERVILLE: Yes, now let me see, I want to get this.

Mr. ILSLEY: I would suggest before you do that that you might get some evidence as to who selected the persons who were to get cash, and the ones who were to get shares.

Mr. SOMMERVILLE: Perhaps that should be ascertained from the ones who actually got the shares.

Mr. ILSLEY: Yes.

Mr. SOMMERVILLE: Now, this 70 per cent interest got the 120,000 Class A shares.

Mr. FACTOR: I thought Mr. Adamson explained just a moment ago that this 70 per cent of the shareholders nearly received payments for their shares in the company at the rate of $150 a share.

Mr. SOMMERVILLE: Yes.

The WITNESS: The figures which I quoted are the shareholdings prior to the time that they were paid.

By Mr. Factor:

Q. You mean, in the 1925 company?—A. Yes.

By Mr. Sommerville:

Q. But these 70.323 shares, were these merely paid at the rate of $150 per share?—A. Yes.
Q. And leased all their interest in the company?—A. Yes.
Q. By the surrender of their shares to the company?—A. Yes.
Q. Will you follow that through. It was the new company, the 1929 company that issued these securities?—A. Yes.
Q. It was the old company then that had these securities?—A. Yes.
Q. The 1925 company?—A. Yes.
Q. Then the 1925 company having these securities in its possession liquidated?—A. Yes.
Q. Wound itself up?—A. Yes.
Q. In doing so they paid off certain—?—A. The bonds and shares of the 1925 company.
Q. The bonds of $5,600,000 of the 1925 company?—A. Yes.
Q. And the seven millions of preference shares of the 1925 company, and certain other small obligations?—A. Yes.
Q. And it left for liquidation the sum of $10,548.000; plus 120.000 shares of Class A stock?—A. That is right. It is all shown in statement No. 9.
Q. These assets, cash and shares, were then available for distribution among all the shareholders of the 1925 company?—A. Yes.
Q. And by some arrangement among them 70 per cent of the shareholders took cash?—A. That is right.
Q. And got all the cash, amounting to $10,000,000?—A. Yes.
Q. And the other 30 per cent took all the shares?—A. They took 89,031 of the shares, three for one.
Q. Three for one, that is the situation.

Mr. ILSLEY: The rest did not sell.

By Mr. Factor:

Q. Was that voluntary on the part of the 29,000 odd shareholders?—A. I do not know.

Mr. ILSLEY: It must have been.

By Mr. Sommerville:

Q. It must have been acceptable to them at any rate?—A. Yes.

Q. Now then, these 30 per cent represented the management, inside the operating company?—A. Yes.

Q. That is a fact?—A. Yes.

Q. And they represented the group who were in the management, the inside operating company, who were then taking over control of the operating company?—A. That is right.

Q. In other words, to get control they were willing to take shares rather than cash?—A. Yes.

Q. And those who had been in control, the Flavelle, Fudger and Cox interests, then passed out of the picture?—A. Yes.

Q. Now, that is the net result of that transaction?—A. Yes.

Q. And in passing out of the picture they realized upon their holdings in the Simpson companies up to that date?—A. Yes.

Q. And it left them— —A. That is, all their common share holdings; they may have holdings of preference shares.

Q. They still hold the 5 per cent preferred shares which had been given to them as a stock dividend back in 1912.

By Mr. Ilsley:

Q. If I may suggest one thing, that in the assets that were distributed in this way, were included \$1,548,450, being the proceeds from the sale of 30,969 Class A shares to employees at \$50 a share?—A. That is right; that is, 89,031 shares were issued to the management, and the others, the 30,969 make up a total of 120,000.

Q. Part of the \$10,548,450 that went to the Flavelle and other majority interests consisted of \$1,500,000 which came from the employees at \$50 a share?—A. Yes.

By Mr. Sommerville:

Q. The employees were among the others who obtained Class A shares in the 1929 company?—A. Yes.

Q. And they were solicited, doubtless, to take shares in that company, and paid \$50 a share?—A. Yes.

Mr. ILSLEY: There were two classes of people got these Class A shares; there were the employees, who got them at \$50 a share; and there were the minority shareholders who took them as part of their share on the distribution of the assets in the liquidation of the company.

By Mr. Sommerville:

Q. Yes. The minority interests that took shares, however, were in the 1925 company and got three for one?—A. Yes.

Q. They must have accepted them as being worth \$150 a share when the majority shareholders were getting \$150 a share in cash?—A. Yes.

By Mr. Factor:

Q. What happened to the first mortgage bonds and the original 6 per cent preference?—A. They were paid off out of the proceeds of the bonds and preference shares issued by the 1929 company.

Q. Is that shown in this statement?—A. That is shown in statement No. 9, the first part of the statement shows the cash that came in, the $20,000,000; and the second part of the statement shows how it was disbursed.

By the Chairman:

Q. It might be a good point to identify some of these holdings. Take the Class A stock?—A. Held by the management and employees.

Q. They bought this?—A. Yes.

Q. What did they pay for them?—A. The management got three shares for one, they had 29,677 shares of the 1925 company representing the minority interests; they exchanged these for 89,031, on the basis of three for one for the 1929 company.

Mr. SOMMERVILLE: And that meant that they took these shares out on the basis of $50 a share, that is, the Class A shares.

The CHAIRMAN: Have you got any record of the market value of these shares to-day?

By Mr. Sommerville:

Q. They are quoted regularly?—A. Yes.

Q. What is the quotation to-day on Class A shares?—A. I think it is $7.00 or $8.00 a share.

Q. Is that Class A or Class B?

The CHAIRMAN: From $7.00 to $8.00.

Mr. SENN: I think Class A shares are quoted at $12.00, Class B shares at from $7.00 to $8.00.

The WITNESS: I have not the figures here.

The CHAIRMAN: We can get that.

By Mr. Factor:

Q. Mr. Chairman, if you have finished your question, I just wanted to find out what had happened to the buyers of the bonds and shares that were liquidated—I can see what part of this $20,000,000 went for, but I was wondering about the $5,600,000 of sinking fund collateral gold bonds?—A. At that time there were only $5,024,800 outstanding.

Q. What has happened to the original first mortgage bonds and the 6 per cent preference shares?

Mr. SOMMERVILLE: They have never changed.

The WITNESS: They are still outstanding.

By Mr. Factor:

Q. So this new issue of twenty million is still subject to the first mortgage bonds and preference shares?—A. In the meantime some properties have been transferred to Simpsons Limited. In the period between 1925 and 1929 substantial extensions to buildings and equipment have been made, and in 1929 the Simpson Limited Company took over some of the properties of the Simpson Company Limited.

Q. What is the balance owing on these two issues now that is still outstanding, there is the first mortgage bond on the operating company?—A. The first mortgage bonds on the 3rd of January, 1934 amounted to $1,375,000.

Q. And the preference shares?—A. $3,750,000.

Q. That is still outstanding on the operating companies?—A. Yes.

By Mr. Kennedy (Peace River):

Q. What is the expense in connection with the floating of this twenty million?—A. The underwriters received $10,000,000 bonds and $10,000,000

preference shares, and 120,000 Class B shares for $20,000,000. It is whatever they sell this 120,000 shares for.

By Mr. Sommerville:

Q. The underwriters' profit on the transaction was the 120,000 shares of Class B?—A. Yes.

Q. And whatever price they sold the Class B at would represent their profit on it?—A. Yes.

Mr. ILSLEY: They gave away 20,000 of them as a bonus, that leaves 100,000 for them.

By Mr. Sommerville:

Q. They gave 20,000 to the purchasers of the preferred stock, and that left 100,000 for themselves?—A. Yes.

By Mr. Factor:

Q. Has that been disposed of to the public yet by the underwriting company?—A. I do not know.

By Mr. Sommerville:

Q. Were not some of them sold to the public?—A. Some have been sold.

Q. Do you know the price at which they were offered?—A. No, I do not.

Q. Has there been any substantial portion of them transferred, do you recall, from the books of the company?

Mr. NASH: We would not know, because the registers are not kept by the company.

Mr. SENN: What are the Class B shares standing at?

By Mr. Sommerville:

Q. First of all, let us get the standing of the 1929 company; you had $10,000,000 bonds?—A. Yes.

Q. Then 120,000 Class A shares?—A. Yes.

Q. And there was a distinction as between the Class A shares and the Class B shares—let us have that evidence developed—any dividends paid on Class B?—A. $3.00 per share on Class A, but they are non-cumulative.

Q. But there must be $3.00 a share paid on them before any dividend is paid on Class B?—A. Yes, that is the distinction; but they carry equal voting rights.

Q. And both Class A and Class B have equal voting rights?—A. Yes.

Q. Have the preferred shares any voting rights?—A. Only when the dividends are in arrears.

Q. That would give the holders of the Class B shares a large voting power in the company?—A. Yes.

Q. So that the Class B shares with their very large voting power might possibly control the company?—A. Not with the Class A.

Mr. FACTOR: Can you tell me from your record what the Flavelle's received from the company since they made their original investment.

Mr. HEAPS: Perhaps if you could let me have the information I wanted about the 1925 statement now it would give the information Mr. Factor is asking for.

By Mr. Sommerville:

Q. Yes, that would give us the information. Now, Mr. Adamson, can you tell me what the original investment of 1,375 shares produced when the distribution of the 1925 company was actually completed in 1929. If not, perhaps

you could give it to me on one share then?—A. For every one share, the original issue was 1,375 shares.

Q. The original outstanding issue, yes?—A. Up until 1902, in 1902 there were 5,000 shares, all of which had been paid for in cash.

Q. Had been paid for in cash at par?—A. Yes. Prior to that date no stock dividends had been paid, so that each 5,000 shares—

Q. Now, wait a minute till I get this; 5,000 shares were issued to the same people as held the 1,375 shares?—A. Yes, that is correct.

Q. So that at that time the total investment on the 5,000 shares was $500,000?—A. That is right.

Q. That was in 1902, for the whole group?—A. Yes.

Q. Now then, tell us what happened after that?—A. On each of these 5,000 shares slightly more than 4 common shares were issued as stock dividends to 1917.

Q. Up to 1917 there had been an issue of better than four for one?—A. Yes.

Q. In stock dividends?—A. Yes.

Q. In addition to their cash dividend?—A. Yes.

Q. Up to 1917; what happens after that?—A. They got $150 per share for each share held in 1925.

Q. In 1925 they got $150 for each share held, which meant—with four added to the original one—that they got $750 for each original share, or better?—A. Yes, approximately.

Q. In cash?—A. Yes.

Q. And at that time they received as well as large holdings in the company as they formerly held?—A. Yes.

Q. So that their withdrawals at that time amounted to $750 a share on the original shares?—A. Yes.

Q. And they retained their ownership in the same proportion?—A. Yes.

Q. Now, what did they receive in dividends in the meantime; can you tell me that?—A. I can give you the rate of dividends, and the total amount of dividends—but not on these particular shares.

Q. Then, if you will give us the rate of dividends for each year? Perhaps before going through the dividends we might follow through the actual shares, Up to the 1925 company they had five shares?—A. In place of their original one.

Q. Five shares in place of their original one?—A. Yes.

Q. And then when the 1925 company was formed they got 3 for 1?—A. Yes.

Q. That meant 15 shares?—A. Yes.

Q. For the original 1?—A. Yes.

Q. They had drawn out then $750 per share?—A. Yes.

Q. And they had 15 shares for each 1 of the original shares held of the 5,000?

Mr. Factor: Mr. Sommerville, could we get at the figures; in 1902 there were 5,000 shares issued on an investment of $500,000. I wonder if Mr. Adamson can tell us what that investment of $500,000 had brought to the investors at the end of 1929?

Mr. Sommerville: That is just what I am trying to get by shares. He is having difficulty in segregating it because other people bought shares in the meantime, and I am trying to limit it to single shares.

The Witness: It will take a few minutes to work it out and check it. I would like to make sure of the figures.

Mr. Sommerville: All right, Mr. Adamson, just work it out.

Mr. HEAPS: Mr. Sommerville, you have the amount they received in 1925 for that reorganization.

Mr. SOMMERVILLE: $150 per share.

Mr. HEAPS: There was a $5,000,000 item that was divided amongst the majority of shareholders.

Mr. SOMMERVILLE: Everybody got them.

Mr. HEAPS: I thought you might now obtain the exact figures that each of the shareholders obtained.

Mr. SOMMERVILLE: He can only give it to you in single shares because you see that was the distribution among themselves when the company was liquidated.

Mr. HEAPS: That is the 1925 company?

Mr. SOMMERVILLE: Yes, that was the 1925 company; they paid them for handing in their shares.

Mr. HEAPS: And that was $5,000,000.

Mr. SOMMERVILLE: $5,000,000 plus 3 for 1.

The WITNESS: I would like to check those figures before I give them to you. Some of the shares were disposed of in the meantime and I would like to eliminate those.

By Mr. Sommerville:

Q. Even if you eliminate those how can that change the situation?—A. Some of those shares, the interests of the shareholders in 1925 were changed by 1929 because some of the shares were sold to other persons.

By Mr. Ilsley:

Q. Mr. Adamson, assume the case of a man who got one share in 1902 for which he paid $100?—A. Yes.

Q. Assume that the gentleman followed that share through till 1925 when he got his cash, then he had 5 shares?—A. Yes.

Q. By 1925?—A. Yes.

Q. And for which he got $150 apiece, which made $750?—A. Yes.

Q. And he also got 5 other shares which he exchanged for 15 shares?—A. Yes.

Q. And those 15 shares he sold in 1929 for $150 apiece which is $2,250; the $2.250 plus the $750 makes $3.000 which he got in 1929 for an original investment of $100 with his cash dividends every year in the meantime?—A. Yes.

Q. That is the whole story is it not?—A. Yes.

By Mr. Factor:

Q. Then on that basis can you figure out what the Flavelle interests, say, received?

Mr. SOMMERVILLE: On that basis you can figure out what any shareholder received who had his holdings throughout.

Mr. ILSLEY: Yes.

By Mr. Sommerville:

Q. Then that is equivalent to 30 for 1?—A. Yes.

Q. Par value, plus dividends?—A. Yes.

Q. Now then, what were the dividends received?—A. The dividends received were:—

	Percentage
1903	6
1904	6
1905	5
1906	5
1907	6
1908	6
1909	8
1910	6
1911	6
1912	2
1913	8
1914	8
1915	6
1916	9
1917	10
1918	10
1919	11
1920	11½
1921	7½
1922	10
1923	10
1924	10

Q. Yes? These were on each share. If the holdings at 1917 were 5 for 1 and the dividend declared was 10 per cent it is equivalent to 50 per cent dividend on the original investment?—A. Yes. In addition to that there were the bonds and preferred shares.

Q. Yes, and these preferred shares were issued as bonus shares to the same group?—A. As stock dividends.

Q. I beg your pardon, as stock dividends?—A. Yes.

Q. To the original holders?—A. Yes.

Q. And by the way are they still held by the same interests?—A. I do not know who the preferred shareholders are at the present time.

Q. You do not know who the preferred shareholders are at the present time?—A. No.

Q. But they are the preferred shares of the operating company?—A. Yes.

Q. Now, in the setting up of the balance sheet for the financing of the 1929 company with its $20,000,000 issue, what write-up or appreciation was there in the assets of the company?—A. The 1925 company or the 1929?

Q. In connection with the financing of the 1929 company. We already had the fact that the appraisal value was increased $2,816,850 in 1925?—A. Yes.

Q. Although the appraisal showed a larger amount?—A. Yes.

Q. Now, what happened in 1929 with the same assets?—A. The same assets plus the extensions in the meantime were written up by $5,903,850.

Q. That was in addition to that which was added in 1925?—A. Yes.

Q. So that the total appraisal appreciation for both those operations of 1925 and 1929 amounted to $8,720,700?—A. That is right.

Q. Then added to that were the surpluses of the company amounting to $8,460,743?—A. The surplus from 1925 to 1929 was $3,708,000.

Q. The surplus for the four years?—A. Yes. The surplus for 1925 was around $4,700,000.

Q. In these four years the surplus accumulated amounted to $3,708,000?—A. That is right.

Q. And that made a total of $8,640,000, which together with $8,000,000 of appraisal write-up made a total of $17,181,000?—A. Yes, that is taking both appraisals and surplus together for both reorganizations.

Q. For both reorganizations, and they actually got cash from the public against these for about $15,573,000?—A. They first got cash from the sale of the 1925 company securities which were then redeemed, and then the bonds and shares of the 1929 company were sold.

By Mr. Heaps:

Q. Have not we got the book value of these physical assets of the company in the same period?—A. Yes.

The CHAIRMAN: It shows here on this statement, land, buildings, and equipment.

The WITNESS: Statement No. 11.

The CHAIRMAN: And it shows in 1929 as $16,850,000, that is after the $3,000,000 new building had been erected I think. Then the next year, 1930 it shows at $21,600,000. That is the occasion when the write-up occurred.

Mr. HEAPS: That is as the result of the appraisal?

The CHAIRMAN: Yes.

Mr. HEAPS: That shows the book value.

By the Chairman:

Q. That is the reflection of the new appraisal to which you have referred, Mr. Adamson?—A. Between 1929 and 1930. The dfference between the $16,-000,000 and $21,000,000 is largely new buildings. The effect of the appraisal write-up was to wipe out the reserves for depreciation rather than adding it to the cost of the assets.

By Mr. Heaps:

Q. Was there much difference between the book value of the company's assets and that of the appraisal?—A. It was $5,900,000; the difference between the assets prior to the 1929 write-up and the book value was $5,900,000.

Mr. SOMMERVILLE: You were asking for information respecting the appraisal. The prospectus shows the Canadian Appraisal Company made it and they made it on the basis of depreciated value.

By Mr. Factor:

Q. Mr. Adamson, as of the 3rd of January, 1934, the total assets, according to Statement No. 11, are $35,137,000 odd?—A. That is right, of which $8,-720,000 is represented by the amount by which the assets were increased as the result of the appraisal.

Q. Yes, and against those assets there is an issue of $20,000,000?—A. That is on the next page.

Q. Oh yes, and liabilities?—A. There were $3,000,000 of current liabilities, statement 11, page 2, $3,000,000, and $1,375,000 of Robert Simpson Company, bonds outstanding.

By Mr. Sommerville:

Q. Operating company?—A. Yes, $3,350,000 preference shares.

Q. Of the operating company?—A. Yes, and bonds of Simpson's, Limited, amounted to $9,127,600, and $1,556,000 of Series B bonds issued subsequent to the 6½ per cent bonds.

Q. By Simpson's, Limited?—A. Yes, by Simpson's, Limited.

Q. Yes?—A. And there were the preference shares of Simpson's, Limited, 1929, $11,250,000, and the 120,000 class A and 120,000 class B shares.

Q. Those class A and class B shares are given a value of $5,000,000?—A. Yes.

Q. That is represented by the amount of the appreciation of the appraisal, is it not, approximately?—A. It is partly represented by that.

Q. Now, if you will go on with your memorandum respecting Simpson's, Limited, 1929 I think we will get the complete story.—A. On page 5—

Q. You had quoted page 3, but we have discussed matters that are referred to on page 4 showing appraisal appreciation. Now then, page 5.

Mr. KENNEDY *(Winnipeg)*: What page, Mr. Sommerville?

Mr. SOMMERVILLE: On the memorandum.

The WITNESS: Shortly after incorporation Simpson's, Limited, (1929) purchased certain of the lands, buildings and equipment of its constituent companies at their appraised value. As shown on statement No. 10 the lands and buildings taken over at 26th June, 1929, had a book value of $10,778,859.32. Against this the debt of the Robert Simpson Company, Limited, to Simpson's, Limited, (1925) of $4,600,829.13 referred to previously (which Simpson's, Limited, (1929) had taken over) was applied and the balance of $6,178,030.19 is shown on the balance sheet at that date as "owing to subsidiary companies re properties transferred" (statement No. 10).

By Mr. Sommerville:

Q. Yes. In the balance sheet of the new 1929 company then there is shown an amount owing to subsidiary companies of $6,178,000?—A. Yes.

Q. And that is the consideration for the buildings taken over less the amount which they had already advanced on those buildings?—A. Yes. In the following year other properties having a book value of $1,808,311.70 were similarly transferred to Simpsons Limited (1929). This debt had to 3rd January, 1934, only been repaid to the extent of $2,475,498.45 and at that date the amount still owing in respect of these transfers was $5,510,843.44. That is, the Robert Simpson Company—

Q. It owed to the operating companies this amount of money?—A. Yes.

Q. For the balance on certain buildings which it had taken over?—A. Yes.

Q. And which it had not paid for in any way?—A. Yes, to the extent of $5,510,843.44.

By Mr. Factor:

Q. So that Simpsons Limited are now owners and have the title to part of the real estate of the company?—A. Yes.

Q. And who has the title to the remaining real estate?—A. The Robert Simpson Company.

Q. The operating company?—A. Yes.

Q. It is still in their name?—A. Yes.

By Mr. Sommerville:

Q. Now we will see perhaps the reason for this.

The WITNESS: Simpsons Limited (1929) pays no interest on this debt to the constituent company, but the latter pay rentals to Simpsons Limited for the properties transferred. These rentals are at present $1,312,000 per year, or approximately 10 per cent of the appraised values of the properties taken over. The operating companies also pay all taxes, ground rents, insurance and repairs on these leased properties.

By the Chairman:

Q. That will be a charge then— —A. Against the operating companies.

Q. —against their merchandising account?—A. Yes.

By Mr. Ilsley:

Q. It is a big rent, is it not?

By Mr. Sommerville:

Q. First of all, they get no interest from the holding company on the money owing to them?—A. That is right.

Q. Secondly, they pay all the carrying charges of the property?—A. Yes.

Q. Taxes?—A. Yes, and insurance.

Q. Insurance?—A. Yes, and repairs.

Q. Yes, and interest on the mortgages?—A. There are no mortgages; there are ground rents.

Q. Ground rents, and after paying all of these then they pay a rental additional of $1,312,000 per year to the— —A. Simpsons Limited.

Q. To Simpsons Limited, the holding company?—A. In respect of these properties.

Q. And, therefore, Simpsons Limited have this income with which to pay their obligations on their bonds and on preference shares to the extent of $20,000,000 that have been issued?—A. Yes.

Q. Now, apparently an increased rent is paid by the operating companies on the appraisal value?—A. Yes.

Q. And this appraisal value was appreciated by some $8,000,000?—A. That is all the properties; that is not the particular property referred to as Simpsons Limited.

Q. Roughly, what did the increase in the appraisal values represent in this case?

Mr. Edwards: Is not this more particularly the addition to Simpsons Limited?

Mr. Sommerville: No, no.

Mr. Edwards: The new part through to Bay Street?

Mr. Sommerville: This is the whole building.

By Mr. Sommerville:

Q. Well, the operating company then pay this increased rental, and that rental whatever it is goes into the cost of operation of the operating company?—A. It comes out of the operating companies, yes.

Q. And adds to their operating costs?—A. Yes.

Q. And must be carried as part of their fixed obligations of their business?—A. Yes.

Mr. Factor: That all depends if the stores are owned. You have not given us the details of the real estate that was transferred to Simpsons Limited.

By Mr. Sommerville:

Q. Now, the real estate that was transferred was in use by the operating company?—A. Yes.

Q. And the operating companies must make a profit big enough to cover the rentals on the buildings which were so transferred?—A. Yes.

Mr. Ilsley: Mr. Factor wants to know what stores these are. Is it substantially all their stores?

The Witness: It is all their stores, yes.

By Mr. Factor:

Q. All their stores were transferred to the holding company?—A. The balance of them except one part of the old Toronto store which is still owned by the Robert Simpson Company Limited.

By Mr. Sommerville:

Q. Perhaps you would be good enough to identify the buildings that were transferred, if you can.—A. There is quite a long list.

By Mr. Kennedy (Winnipeg):

Q. Is it the self contained part that is still owned by the old company?—A. Yes. It is one particular part of the Toronto store.

By Mr. Edwards:

Q. What is that, the Yonge Street property?—A. That is one of them.

By the Chairman:

Q. Could you turn, Mr. Adamson, to page 4 and see on that plan if we could identify the property?—A. I cannot identify it definitely, but it is the Yonge Street frontage of the Toronto store which is owned by the Robert Simpson Company.

Q. Would it be the part designated as 1872 and 1895?

By Mr. Heaps:

Q. What is meant by the front of the Yonge Street store, how far back does that go?—A. From Queen to Richmond Street, and it goes back, I would say, about half way between Bay and Yonge Street.

By Mr. Edwards:

Q. It is the old building?—A. Yes, it is the old building.

Mr. SOMMERVILLE: Well, we have the idea generally.

By Mr. Ilsley:

Q. What about the Halifax store?—A. The other buildings are owned by Simpsons Limited.

By Mr. Sommerville:

Q. The Halifax store?—A. Yes, and the Regina.

Q. Then at that rate the only building that is retained and owned by the operating company is the old building on the Yonge Street frontage?—A. Yes.

Q. The merchandising buildings, does that include the mail order house?—A. Yes.

Q. The remainder of the buildings then were transferred to Simpsons Limited?—A. Yes, or have since been constructed by them.

By. Mr. Ilsley:

Q. Just to make this concrete—and perhaps that is not necessary—take for instance the Halifax store, this is the story, is it not, that Simpsons Limited took a deed of the Halifax store and did not pay for it so that this operating company, whether it be the Robert Simpson Company Limited or the Robert Simpson Eastern Limited owes a substantial sum of money to Simpsons Limited, as a creditor to the extent of a substantial sum of money, a creditor of Simpsons Limited?—A. Yes.

Q. And Simpsons Limited does not pay any interest on that?—A. That is right.

Q. To the operating company?—A. That is right.

Q. But it charges the operating company rental at a very high rate?—A. Yes.

Q. For the Halifax store. I am taking the Halifax store as an example?—A. Yes.

Q. The result of that is, in the operating of the Halifax store it is burdened with a very high rental which it pays Simpsons Limited, but it does not get the benefit of the interest on the money which Simpsons Limited owes it?—A. Yes.

Q. That is the story, is it?—A. Yes.

By Mr. Sommerville:

Q. The result is, that it owns these buildings and it owns the common stock of the operating company?—A. Yes.

Q. And its sole source of income is either from the rentals from these buildings or the dividends on the common shares?—A. That is right.

Q. Of the Robert Simpson Company, Limited, the operating company?—A. That is right.

Q. And that means that the operating company must make profits necessary to pay the holding company the moneys required by the holding company to pay off their obligations?—A. If they pay them off.

Q. If they pay them off, that is, if they are to meet the interest upon the $10,000,000 of bonds and the $10,000,000 of preferred shares the only source from which it can come is from the operating company?—A. That is right.

Q. Either by way of rental or by way of profit?—A. That is right.

By Mr. Factor:

Q. Then if the rental is reduced, just for the sake of argument, the dividends or earnings on the common shares would be increased?—A. That is right.

Q. Which would also go to the limited company?—A. That is right. Taking all the companies as one, as a consolidation, the rentals have no effect at all, because they are income in the one company and expenses in the other company—

By Mr. Ilsley:

Q. I suppose it is more a question of the operating company making more money in its operation, is it?—A. No, I would not say that; the rent which is charged to the operating companies has not been increased on account of these rental charges.

By Mr. Sommerville:

Q. No, but it goes into the operating expenses.—A. It goes into the operating expenses of the company, but not the expenses of the departments of the company, the merchandising company.

Q. Quite, but it has to be spread as part of the overhead of the company?—A. Not of the departments but of the company itself.

Q. But in any event the departments are charged an arbitrary figure for overhead expense, overhead and management of the company?—A. Yes.

Q. And that figure will be in there somewhere?—A. Not the rentals, no. The amount which is charged to the departments does not include this rental charge in total.

Q. As rental?—A. The basis of charging rent to the departments has not been changed since the properties were transferred.

Q. I quite appreciate that rental as rental is charged to the departments?—A. Yes.

Q. And that rental as rental has not been increased by this development?—A. That is right.

Q. But that rental that is paid is charged into the overhead of the company?—A. Yes, of the company, but not of the departments.

Q. Then is there any apportionment?—A. It is an additional item in the profit and loss account for rentals, one item.

By Mr. Heaps:

Q. Has this been the same since 1929?—A. Yes.

Q. No change?—A. The rental has not been the same. It varies from year to year.

By Mr. Senn:

Q. In other words, it is a method of bookkeeping and does not affect the final results?—A. It does not affect the profits of the consolidation of all the companies together.

By Mr. Heaps:

Q. What change has there been during the past five years?—A. It is $1,312,000 in 1933; $1,212,000 in 1932, which was a forty-eight week period instead of fifty-two, accounting for the decrease; $1,275,000 in 1931. Extensions have been made from time to time, and those rentals changed for that reason.

Q. There was no extension since 1929, was there?—A. Yes, there was an extension built, the Mutual street building—that is the mail order building,—and the Montreal store.

Q. It has been more or less the same, anyhow?—A. Yes, there is not much change in the amount of rent.

Q. In the issuing of the prospectus, was there any mention made of these rentals?

Mr. SOMMERVILLE: I am afraid the reporter who was here when the excerpts were read from the prospectus has taken it with him. We have not that here at the present time.

Mr. HEAPS: I think it would have quite a bearing.

The WITNESS: The prospectus mentioned that the properties are being transferred to Simpson's Limited.

By Mr. Heaps:

Q. Was there any reference made to rentals?—A. The amount of the rentals?

Q. Yes?—A. No.

By Mr. Sommerville:

Q. Before we proceed, what has been the record with reference to the payment of interest and dividends upon the securities issued by the 1929 company?

By Mr. Factor:

Q. Before you come to that, might I interrupt for a moment. This figure to pay interest by Simpsons Limited to the operating company would not affect the final analysis?—A. It does not affect the profit and loss of the consolidation.

By Mr. Sommerville:

Q. All right, Mr. Adamson?—A. The interest on the bonds has been paid.

Q. The interest on $10,000,000 of bonds has been paid to date?—A. Yes.

Q. What about the dividends on the $10,000,000 of preferred shares?—A. Paid in full from the time of issue to February 1, 1932; no dividends paid since.

Q. The dividends on the preferred shares have not been paid since February 1, 1932?—A. That is right.

By Mr. Factor:

Q. Didn't they start paying on May 1st of this year?—A. No.

By Mr. Sommerville:

Q. Were any dividends paid on the Class "A" shares?—A. Class "A" shares were paid at the rate of $2 per share in 1929 and 1930, and at $1 per share in 1931. No dividends have been paid since 1931, and the dividends on those shares are non-cumulative.

Q. Those Class "A" shares are held by the employees and the management of the company?—A. Yes. No dividends have been paid on the class "B" shares.

Q. No dividends paid on Class "B" shares. Now, proceed with the narrative, please?—A. Operating companies—this is speaking of the properties transferred to Simpsons Limited. Depreciation provided on these properties by Simpsons Limited in 1933 amounted to $178,221, which is on the basis of 2 per cent of the appraised values of the buildings and equipment. Deducting the depreciation from the rental charge, the net rental income to Simpsons Limited in 1933 is $1,133,779. If maximum depreciation rates allowed by the Federal Income Tax Department had been provided on these appraised values, the net income would have been reduced by approximately $200,000, or to $933,779. This net rental is more than the interest charges on the funds actually contributed to the operating companies by Simpson Limited, (which as indicated later totalled approximately $7,700,000) and as a result the earnings of the operating companies are reduced and those of Simpsons Limited are correspondingly increased. Considering the organization as whole, however, these property rentals do not affect the earnings, being eliminated in the consolidated statements.

Q. Naturally the operating company must earn enough money to pay the necessary interest on its securities, if it is paid?—A. Yes, they must get their income either by way of rentals or by dividends on common shares of the operating company.

By Mr. Ilsley:

Q. Can you suggest any reason why the company does this, that is, charges rentals and does not pay interest?—A. No, I don't know.

Q. You don't know what the motive is?—A. No.

By Mr. Sommerville:

Q. Will you proceed, Mr. Adamson?—A. The next is disposition of funds raised by Simpsons Limited. This is a summary of the funds raised by way of sales of securities in Simpsons Limited. Simpsons Limited (1929) has contributed $7,695,637 directly to the operating companies; it has also paid approximately twice this amount to the former shareholders of the Robert Simpson Company Limited as shown in the following:—

Contributions to Operating Companies:—		
Cash—		
Advances by its predecessor, Simpsons Limited (1925) to the Robert Simpson Company Limited and applied against properties transferred	$ 4,600,829	
Payments on account of properties transferred	2,475,498	
Lands purchased and buildings constructed—(Mutual street addition)	619,310	
		$ 7,695,637
Cash paid to former shareholders of the Robert Simpson Company Limited:—		
In 1925	5,025,000	
In 1929 (through the winding-up of Simpson Limited (1925)	10,548,450	
		15,573,450
		$23,269,087

Q. In other words, $15,000,000 was paid out from the company to its shareholders?—A. Yes.

Q. The shareholders now still hold the same number of shares that they formerly held?—A. No.

Q. In the operating company?—A. Simpsons Limited (1929), holds the same shares.

Q. Simpsons (1929) holding company?—A. Yes.

Q. It holds the same number of common shares as the 1925 company held?—A. Yes, of the Robert Simpson Company.

Q. Of the Robert Simpson Company holdings?—A. Yes.

Q. So that the shares have not been reduced at all; the same number exists?—A. That is right.

Q. The same amount of shares, right up to the present time?—A. Yes.

Q. They are still outstanding; and instead of their being in the hands of a group that took $15,000,000 out for their interest, they are in the hands of— —A. Simpsons.

Q. —the management who took shares in the 1929 company?—A. The shares of the Robert Simpson Company are owned by Simpsons Limited (1929), whose own shares are held by the management of the company.

By Mr. Ilsley:

Q. Class "A" common shares?—A. Yes, Class "A."

Q. The management and employees?—A. Yes.

By Mr. Factor:

Q. The operating company still has the original first mortgage bonds and 6 per cent preferred shares?—A. Yes.

By Mr. Sommerville:

Q. It has never changed at all?—A. The bonds are reduced each year.

Q. Except to that extent. All right, will you proceed?—A. The funds for these purposes were raised largely from the sale of its bonds and preference shares. As explained previously, its Class "A" shares were given to those former shareholders who still retained an interest in the business, and its Class "B" shares went to the underwriters of the other issues. Because of the various types of issues made, the income required from the operating companies for interest and dividends varies according to what dividends are declared.

At present no dividends are being paid on the preference shares of Simpsons Limited; in order to pay these dividends together with bond interest, income taxes, etc., it is necessary for the constituent companies to earn in addition to depreciation, interest charges on the bonds and dividends on the preference shares of the Robert Simpson Company Limited, still outstanding, approximately $1,500,000

Interest at $6\frac{1}{2}$ per cent (the dividend rate on the preferred shares) on the contributions made by Simpsons Limited to the operating companies would amount to approximately.	500,000
Balance, approximately.	$1,000,000

which represents the approximate amount of interest charges on the securities issued in order to provide the funds paid to former common shareholders of the Robert Simpson Company Limited and of Simpsons Limited (1925).

Q. There is now $1,000,000 of interest charges that has to be raised in order to pay the interest upon the securities that were issued to pay off the former shareholders?—A. That is right.

Q. That is the situation?—A. That is, if the preferred dividends are being paid.

Q. That is if the preferred dividends are being paid?—A. Yes.

By the Chairman:

Q. Which they are not?—A. Not at the present time.

By Mr. Sommerville:

Q. Not since 1932?—A. No, 1931.

Q. February, 1932?—A. Yes, that is right. I beg your pardon.

Q. Then there is a comparative balance sheet, Statement No. 11?—A. On Statement No. 11 are shown the assets and liabilities in consolidated form of the Simpson organization for the nine years, February 4, 1925, to January 3, 1934.

The increase in the total assets during the nine years (lands, buildings and equipment being included at their depreciated values) at February 4, 1925, and January 3, 1934, are listed side by side, showing the increase.

By the Chairman:

Q. It gives us 1925 and 1934?—A. Yes.

	At 4th February, 1925	At 3rd January, 1934	Increase
Totals per balance sheets..	$19,802,873	$35,137,603	$15,334,730
Less: Appreciation of fixed assets included therein..	2,816,850	8,720,700	5,903,850
Total value of assets, exclusive of appreciation.	$16,986,023	$26,416,903	$ 9,430,880

and is due to an increase of $2,213,451 in the current assets and to the large investment which the companies have made in additional buildings, the chief of which were:—

1928-29 Bay street extension to the Toronto store;
1930 Central indoor parking garage;
1929-31 New Montreal store;
1931 Addition to Mutual street building, Toronto.

By Mr. Factor:

Q. Does that mean, Mr. Adamson, that this $9,000,000 of increase came out of the earnings between 1925 and 1934?—A. No, the extensions were financed by funds raised through the sale of securities.

By Mr. Sommerville:

Q. I observe on Statement No. 11 a small item running through various years, sinking fund cash in the hands of trustees, $31.25 in February, 1925, and $58.77 in 1932. It disappears then. What is that?—A. It is a small balance of the sinking fund in connection with the bonds.

Q. And they were all paid off?—A. Yes.

Q. All right, will you proceed?—A. The capital structure changed considerably during the period, and is summarized below. We have been over the details, but this is just a summary.

The Chairman: You need not go over that again. The next page, or page 2, may be entered in the record.

Mr. SOMMERVILLE: That is the capital structure?

The CHAIRMAN: Yes, because we have gone all over that now.

Mr. SOMMERVILLE: We will insert that at this point.

	At 4th February, 1925		
	Before the reorganization	After the formation of Simpsons Limited (1925)	At 3rd January, 1934
Bonds, mortgages and preference shares of operating companies in the hands of the public..	$ 5,900,224	$ 5,900,224	$ 4,725,223
Common stock of The Robert Simpson Company Limited..	3,350,000		
Bonds of Simpsons Limited ..	....	5,600,000	10,283,500
Capital stock of Simpsons Limited—			
Preference shares..	....	....	11,250,000
Common shares..	....	5,372,737	
Common shares, Class "A" and Class "B" shares..	....	....	5,061,314
Balance of profit and loss account..	4,805,887	....	725,819
	$14,056,111	$16,872,961	$32,045,856

By Mr. Sommerville:

Q. Will you proceed?—A. The next is a comparison of profit and loss of the consolidation, shown on Statement No. 12. Statement No. 12 shows the annual earnings, both before and after depreciation, of the organization as a whole from the time of the incorporation of Simpsons Limited (1925) to 3rd January, 1934; the charges against these earnings for interest and dividends on the bonds and shares of the constituent companies held by the public and for the bond interest of the holding company, etc., and the net profit or loss of the consolidation. The lower part of the statement shows how much of these profits have been paid out in dividends on the shares of Simpsons Limited.

The WITNESS: Dealing with the earnings prior to 1925, which are not shown in Statement No. 4—

By Mr. Sommerville:

Q. Just before you leave Statement No. 12, I want to ask— —A. I am coming back to that as soon as we finish with the earnings prior to that.

Q. All right, proceed?—A. From the time of the incorporation of the Robert Simpson Company Limited, in 1896 to 1925, the operations of the company and the subsidiaries which it acquired during that period, were very successful—the profits after depreciation, bond interest, income taxes, etc., amounting to $14,429,498. Dividends in that period were as follows:—

Preference shares—			
In cash..		$2,122,532	
Common shares—			
In cash..	$4,450,923		
Stock dividends—			
Preference shares..	500,000		
Common shares..	2,603,300		
		$7,554,223	
			$9,676,755

Balance of surplus account of 4th February, 1925, the date of the incorporation of Simpson's Limited (1925) $4,752,743

Earnings from 1925 to 1933, inclusive: The annual profits of the consolidation, both before and after depreciation (as shown on Statement No. 12), along with the percentages of these earnings to the net invested capital (i.e. bonds and shares outstanding less appreciation arising from fixed asset appraisals) are summarized below. Do you want me to read these?

Mr. SOMMERVILLE: If you will, please. This is important.

The CHAIRMAN: Put that statement in as it is. You can just state a few of them.

Year	No. of weeks	Amount of net invested Capital	Earnings			
			Before Depreciation		After Depreciation as provided by the Company	
			Amount	Per cent to net invested capital	Amount	Per cent to net invested capital
		$	$	%	$	%
1924	53	14,056,112	2,541,652	18·1	2,019,812	14·4
1925	52	14,580,269	2,568,494	17·6	2,025,374	13·9
1926	52	15,251,932	3,168,993	20·8	2,592,313	17·0
1927	52	16,147,009	3,425,222	21·2	2,861,546	17·7
1928	52	20,905,851	3,621,975	17·3	3,048,385	14·6
1929	52	21,824,867	3,422,204	15·7	2,657,732	12·2
1930	52	24,507,271	3,277,687	13·4	2,501,012	10·2
1931	53	23,963,971	2,231,351	9·3	1,605,095	6·7
1932	48	23,467,133	679,278	2·9	114,600*	0·5
1933	52	23,325,156	1,826,607	7·8	1,223,458	5·2

*NOTE:—Depreciation was not provided by the Company for the year 1932. The profits shown $114,660 are after deducting $564,618 for depreciation which is the amount provided during 1932 but reversed at the year end.

The WITNESS: In 1924, the percentage of earnings to the net invested capital was 18·1 per cent, before depreciation. After depreciation, as provided by the company, it was 14·4 per cent. In 1930, it was 13·4 per cent before depreciation and 10·2 per cent after depreciation. In 1933, it was 7·8 per cent before depreciation, and 5·2 per cent after depreciation.

By Mr. Sommerville:

Q. What do you mean by "the net invested capital"; what have you taken as being the net amount?—A. All the outstanding bonds and shares in the hands of the public; not the inter-company holdings and the surplus and the balance at the end of each year.

Q. All the bonds and shares in the hands of the public?—A. I have the details here.

Q. Of all the companies?—A. Yes; there are only the Robert Simpson bonds and preference shares and the Simpson's Limited bonds and shares.

Q. We have already indications that those shares have been increased from time to time, the share assets have been increased from time to time by the stock dividends?—A. That was before 1924.

Q. But then that formed the basis, did it not; are they not included in those?—A. No, because the common shares of the Robert Simpson Company are held by Simpson's Limited and are not in the hands of the public. The shares were washed out in the consolidation; the shares which are outstanding in the hands of the public are only the bonds of the Robert Simpson Company, 3,350,000 preference shares of Robert Simpson's and the Simpson's Limited bonds and preference shares.

Q. Now, let us see how they make up that $23,000,000?—A. 1933. Bonds, mortgages and preference shares of the subsidiary companies of Robert Simpson, $4,725,223; Simpson's Limited, bonds $10,283,500; preference shares $11,250,-000; common shares, $5,061,314; surplus balance of $725,819, a total of $32,-045,856, from which was deducted the amount of the appraisal.

Q. The appraisal appreciation?—A. Yes.

Mr. ILSLEY: Where did you get the valuation to put on the class A and the Class B shares?

The WITNESS: The valuation in the books of the company.

Mr. SOMMERVILLE: At what amount are they valued in the books of the company?

The WITNESS: $1,061,314.

Mr. ILSLEY: What is that value based on? What is the valuation of the no par shares based on?

Mr. SOMMERVILLE: It means about $20 a share.

The WITNESS: It is a balancing figure to bring the obligations up to the value of the assets in the Robert Simpson company.

Mr. ILSLEY: Based essentially on an appraisal?

The WITNESS: Yes.

By Mr. Sommerville:

Q. The balance, the appreciation and the appraisal?—A. Yes.

Q. It does not represent cash paid into the company for that amount?—A. No.

Q. To that extent this amount $23,000,000 does not represent cash?—A. The appraisal has been eliminated from that figure of $23,000,000.

By Mr. Factor:

Q. Why do you say you eliminate the common shares of the operating company?—A. Because they are held by the Simpson's Limited company, and in the consolidation are washed out, the inter-company holdings. The percentages of the earnings after depreciation to the actual invested capital, that is, before the deduction of the appreciation is shown for each of the ten years: 1924, 10 per cent; 1925, 11·6 per cent; 1926, 14·3 per cent; 1927, 15·1 per cent; 1928, 12·9 per cent; 1929, 8·7 per cent; 1930, 7·5 per cent; 1931, 4·9 per cent; 1932, 4 per cent; 1933, 3·8 per cent.

By Mr. Sommerville:

Q. That is, including those appreciation allowances?—A. Yes.

Q. Including the common stock?—A. Yes.

Q. Of Simpson's?—A. It includes all of the outstanding shares in bonds to the public.

Mr. ILSLEY: That $5,000,000 valuation is in that?

The WITNESS: Yes.

Mr. ILSLEY: It is in the $23,000,000?

Mr. SOMMERVILLE: It is in the sense that—

The WITNESS: The amount of the security issued after the appraisal appreciations have been eliminated to show the earnings if securities have not been issued for the amount of the appreciation.

Mr. ILSLEY: All right; I do not quite understand, but I can get an idea in a vague way.

The WITNESS: The last figure is the percentage to the actual invested capital.

Mr. SOMMERVILLE: Yes.

The CHAIRMAN: Continue.

The WITNESS: The operations of the various units of the organization will be referred to later. The Toronto store has always provided the greater part of the earnings, although in the past four years, its earnings have been considerably

reduced. During this same period, the operations of the mail order division have not been profitable, due to the very substantial reductions in mail order sales volume. It will be noted that dividends on the preference shares of the Robert Simpson Company Limited have been maintained throughout the period. Dividends on all the common shares of that company have been paid to Simpson's Limited, since early in 1925, so that they do not appear in the consolidated statement. The net profits available for the shareholders of Simpson's Limited increased from $867,519 to a peak of $1,645,180 in 1928. In 1932 there was a net loss of $177,313, but the following year showed a net profit of $200,903.

By Mr. Sommerville:

Q. That loss is more than offset by depreciation?—A. Yes. In 1932, there was no depreciation provided; that was the only year.

Q. They did not deduct any depreciation that year?—A. No.

Q. The store operations were successful but the combined operations produced this loss?—A. Yes.

Mr. Heaps: Does that take into consideration the rentals on the premises of $1,300,000?

The Witness: It is eliminated in the consolidation because it is just the expenses of one company against the income of another company.

Mr. Heaps: The rent is not shown.

The Witness: Paid out by one company and received by another, so that in the end it is washed out in the consolidation.

Mr. Sommerville: Represented largely by the amount paid out, interest on bonds, and preference shares.

Mr. Nash: Not preference; that would be dividends; by interest on the bonds, yes.

The Witness: The dividend record of Simpson's Limited is summarized as follows:—

Simpson's Limited (1925)—

6 p.c. preference shares—paid in full from time of issue (1928 and 1929) to redemption in June, 1929;

Common shares paid $2.50 per share in 1925; $4 in 1926; $5 in 1927 and 1928; $1 in 1929.

Simpson's Limited (1929)—

6½ p.c. preference shares—paid in full from time of issue to 1st February, 1932. No dividends paid since. The dividends on these shares are cumulative.

Class "A" shares—paid at the rate of $2 per share in 1929 and 1930 and at $1 per share in 1931. No dividends have been paid since 1931, and dividends on these shares are non-cumulative.

Class "B" shares—No dividends paid.

The next section deals with the income and expenses under the holding company itself. I think we have pretty well covered that.

The Chairman: Yes, we have covered that pretty well.

Mr. Sommerville: It is the same thing in regard to the 1929 company?

The Witness: Yes, the same thing.

Mr. Nash: It was all part of the printed statement.

The CHAIRMAN: All right.

Mr. SOMMERVILLE: A note ought to be made by the reporter, somewhere, indicating where, on the printed sheet very heavy black type is used, it represents red ink on the original statement, and indicates either a loss or a deficit, according to the record in the statement, or it sometimes may refer to a deduction instead of an addition.

Mr. NASH: I gave certain information yesterday as to price spreads in Woodward's and Spencer's, and if the chairman or the committee would like, it can be made part of the printed record. They are in the hands of the printer, and can be put in their proper place at the close of yesterday's proceedings, instead of being mixed up with the other companies.

The CHAIRMAN: It will be so printed.

Mr. NASH: The printers would have them printed, and they could be put in their proper place.

The CHAIRMAN: Ask them to add them to the record or as an appendix to yesterday's record.

By Mr. Young:

Q. Why was the year 1932 a 48-week year?—A. The company changed its year end from the end of January to the end of December, or approximately those days.

The CHAIRMAN: Your next is operations.

The WITNESS: The operations of the various units.

The CHAIRMAN: We are going to distribute some forms amongst the members of the committee.

By Mr. Ilsley:

Q. I want to ask a general question or two to get this clear before we go on. All of the profits of this company were at the peak of its prosperity in 1928?—A. Yes.

Q. 1928?—A. 1928 and 1929 was the period.

Q. That is when the persons who were interested in it from the beginning stepped out of the company?—A. Yes.

Q. Getting $3,000 for an investment of $100 about 1900?—A. On their original investments. There were other shares paid for subsequently on which the return would not be the same.

Q. But for those who had been in it from the beginning, it is true that they got $3,000 on $100 invested by stepping out at the peak of the company's prosperity?—A. Yes, as a group. The shares had changed hands in the meantime, so you cannot say one individual got that.

Q. No.

By Mr. Sommerville:

Q. If, as was shown, the Flavelle, the Fudger and the Cox interests remained from the beginning to the end, they, at least, received that amount from the shares held representing the original investment?—A. Yes, on those shares which they held at the time that they got out, they realized that.

By Mr. Ilsley:

Q. They had received cash dividends every year during the time they were in?—A. Yes.

Q. And some years these cash dividends amounted to 50 per cent on their original——A. Original invested capital, yes.

Q. That is to say, suppose I was a shareholder who came in in 1929, I paid $3,000 for what cost the original investor $100, didn't I?—A. That is the amount the shareholders had got out of it during that period, $3,000.

Q. If the company is put in a position now to earn fair dividends on the $3,000 it is earning a lot on what went into it?—A. Yes.

By Mr. Sommerville:

Q. Before you leave this narrative, I just want to have you make a reference to the last statement, statement 12. What is the earnings of the consolidation? Read that figure? "The largest expenses of Simpson's," read that.—A. The largest expenses of Simpson's Limited (1929) is the interest on $11,250,000 bonds issued by it, which requires slightly more than $600,000 per year. If dividends are to be paid on the cumulative preference shares, a further $731,250 is required, but, as mentioned above, these have not been paid since 1st February, 1932.

Q. Continue with the next paragraph.—A. Statement No. 12 shows that the earnings of the consolidation, in excess of bond interest and dividends paid from the time of incorporation of Simpson's Limited (1929) to 3rd January, 1934, amount to $725,819. Simpson's Limited (1929) as a corporation, however, has a balance in its own profit and loss account of $974,731. Thus the holding company has been withdrawing slightly more than the combined earnings of its constituent companies.

By the Chairman:

Q. Of the obligations outstanding, shown in the consolidate balance sheet, roughly $23,000,000, approximately $15,000,000 of that would represent securities issued in order to secure the funds to purchase the various stocks which are represented by the $15,000,000 paid out, $5,000,000 in 1925, and $10,000,000 in 1929?—A. That is right. The total bonds and stocks and shares outstanding the 3rd January, 1934, is approximately $32,000,000, not $23,000,000.

Q. There is the appreciation?—A. Yes.

By Mr. Sommerville:

Q. Will you give us the total cost of the company's refinancing in 1925 and 1929? We have already had the expenses of the two items, $170,934.20 for the financing of the 1925 $5,000,000 bond issue.

Mr. FACTOR: He gave us that.

The WITNESS: There are 120,000 class B shares.

Mr. SOMMERVILLE: There is the financing of a bond issue, $121,255—

The CHAIRMAN: Perhaps the best way would be to ask Mr. Adamson to prepare a concise statement which can be put in later, showing all of the costs of this refinancing.

The WITNESS: Yes.

Mr. FACTOR: There are only three items.

The CHAIRMAN: There will be those that were retired, too.

Mr. SOMMERVILLE: The total redemption amounts.

The CHAIRMAN: There were securities retired in that year.

Mr. SOMMERVILLE: Yes.

By Mr. Ilsley:

Q. I do not suppose you know the cost of the 1929 financing?—A. I do not know what was realized for those shares; the shares were given to the underwriters, 120,000.

Q. How did class B shares sell shortly after that?—A. I don't know.

Q. Wood, Gundy & Company did all the financing?—A. Yes.

The CHAIRMAN: Let us get on with the next statement.

Mr. SOMMERVILLE: You are proceeding with the store?

The WITNESS: The Toronto store operations. Statement No. TT-1 is the first.

Mr. FACTOR: Are you going through all those items?

Mr. SOMMERVILLE: No; Mr. Adamson is going to give us a summary on the operations of the Toronto store.

The WITNESS: Statement No. TT-1 shows the comparative profit and loss figures on the Toronto store operations for the ten years 1924 to 1933 inclusive. This statement has been drawn up in such a way as to show:—

(1) The departmental results before charging interest and depreciation.
(2) The departmental results after charging interest and depreciation.
(3) The operating profits, before provision for income taxes, bonuses, bond interest, etc.
(4) The profits after income taxes, bond interest, etc.
(5) The net addition to surplus after dividends, etc.

Statement TT-1 and following statements appear at the end of to-day's printed record.

As will be seen from this statement, the sales increased from approximately $22,000,000 in 1924 to approximately $31,000,000 in 1929, with a decrease to approximately $23,500,000 in 1933. Operating profits after depreciation (but before rentals to Simpson's Limited in the latter years) and before provisions for income taxes, bond interest, etc., may be compared as follows:—

Year:	Operating profit	Percentage to sales
1924	$1,393,698	6.28
1925	1,624,595	6.92
1926	1,722,800	7.17
1927	1,982,942	7.88
1928	2,134,915	7.88
1929	2,312,170	7.78
1930	2,322,534	8.23
1931	1,957,928	7.39
1932	814,489	4.56
1933	1,383,671	6.35

Mr. ILSLEY: What is that you are giving?

The WITNESS: Operating profits after depreciation but before rentals, Simpson's Limited. In order to compare the profits prior to 1929 and after 1929 you have to eliminate the rentals so as to have a comparative figure.

By Mr. Sommerville:

Q. On profits last year of $1,383.000 and rentals eliminated of $1,300,000—was that the amount of rental?—A. No. $800,000 on the Toronto store. $1,300,-000 is the total.

The figures shown above for 1932 are before writing back depreciation which was provided and later reversed. The depreciation provided in 1933 was only approximately two-thirds of the usual provision, and consideration should be given to this in comparing these results.

Departmental Results

It is the practice of the company to charge against each of the departments in each of the stores amounts representing interest on the capital employed in the departments and charges for depreciation of the fixed assets employed in the business.

Q. And the interest charged is on the basis of?—A. Six per cent.

Q. Added to laid-down cost?—A. No, it is charged as a rent charge to the departments.

Q. In addition to rent?—A. The rent which is charged includes the building maintenance and the interest and depreciation. This is not the rent to Simpson's Limited; it is the rent charged by the operating company to the department.

As stated above, capital statement TT-1 has been prepared in such a way as to show in total these departmental results after charging the overhead. Following these departmental results are shown the miscellaneous revenues and other adjustments required to arrive at the net profits or losses of the company.

The departmental results in total as shown on statement TT-1 may be summarized as follows.

Q. They run from 40 per cent to 44 per cent?

	Sales	Gross profit	Gross profit percentage to cost of sales	Total departmental profit or loss after charging overhead
1924	$22,184,397	$6,428,262	40.8	$ 717,695
1925	23,471,204	6,861,945	41.3	891,251
1926	24,021,577	7,155,168	42.4	1,101,106
1927	25,152,589	7,520,241	42.7	1,343,278
1928	27,084,993	8,352,258	44.6	1,504,429
1929	31,290,698	9,745,158	45.2	1,232,922
1930	30,917,406	9,550,243	44.7	983,549
1931	29,430,371	8,719,338	42.0	320,964
1932 (48 weeks)	22,458,679	6,616,300	41.8	420,108
1933	23,479,227	7,175,391	44.0	24,813

To that departmental profit is added in the profit and loss account the interest which is included in the rent charge to the department.

Q. That forms a head office entry?—A. Yes.

Q. In other words, the departments could all show no profit and no loss and yet the company would have a profit on its operation of 6 per cent on the total amount of money invested?—A. It is a figure arrived at on approximately 6 per cent.

Q. On the money invested in various departments from time to time?—A. Yes.

By Mr. Senn:

Q. Do you mean the operating capital?—A. No, it is the cost of the assets, of the company's assets estimated to be used in the different departments.

By Mr. Heaps:

Q. Is that 6 per cent on sales?—A. No, on the cost of the assets.

By Mr. Sommerville:

Q. And inventory also?—A. Yes.

Q. In other words, to every department's costs there is added 6 per cent which is 6 per cent on the inventory and on the proportion of fixed assets used in the department. Is there anything else?—A. No, that is all. They are fixed assets. In addition to the buildings and permanent equipment there is other equipment which is written off over a short period of time. Interest is charged on that on the depreciated value.

Q. So that the company is in this position, as I have heard a manager say, "In my department I could lose $10,000 a year and make money for the company." That is by reason of the interest charge that is made to the departments on inventory and fixed assets, is it not?—A. Yes.

Q. Whatever amount of goods are bought for that department and used in that department, 6 per cent is added?—A. No. On the inventory from time to time, not on the total purchases—it is on the inventory.

Q. I see. All right.

By Mr. Factor:

Q. That is, the capital employed in the department consists of the inventory in proportion to the fixed assets and 6 per cent is charged on that?—A. Yes.

By Mr. Senn:

Q. Will it also account for rentals as well as 6 per cent?—A. The rental which is charged includes the maintenance of buildings, the interest and depreciation, and the depreciation which is included in the rental which Simpsons Limited gets is included in that rent.

By Mr. Sommerville:

Q. Very well, go on?—A. Gross Profits, etc.

From the above table it will be seen that the percentage of gross profit to cost of sales of the Toronto store has not varied in the ten-year period more than 4·4 per cent. A steady annual increase from 40·8 per cent in 1924 to 45·2 per cent in 1929 is shown and in the following three years the percentage dropped to 44·7 per cent, 42 per cent and 41·8 per cent respectively. A considerable improvement was shown in 1933 when the percentage to cost of sales was 44 per cent.

Q. That is a very even course which has been running for ten years?—A. Yes, ten years.

These gross profits results are after charging into cost of sales, a percentage on cost for buying expenses (usually 1 per cent) and in some of the clothing departments a percentage is added to cost to cover alteration expenses.

If these items were eliminated the gross profit percentage would be increased.

Q. These buying expenses of 1 per cent are charged to the department on all?—A. That is, the majority of the departments bear 1 per cent; some of them are higher.

On statement TT-2 is shown a ten-year comparative statement of sales by departments which also shows as a percentage of sales, the initial mark-up and the maintained gross profit of each department and for the Toronto store as a whole. This statement was prepared from the records of the company on which percentages are always shown as percentages on sales, rather than as percentages on cost and they are so shown for this reason.

Q. Have you got the percentages on cost?—A. Not by departments.

Q. But you will have them later?—A. On the specific departments which we have inquired into, yes. Statement TT-2 is of the departments of the store for ten years.

An examination of the percentages of the gross profits to sales shown on this statement for the store as a whole indicates the same trend referred to above.

The following is a summary of the initial mark-up percentage (to sales) for the store as a whole:—

	Percentage
1924	33·9
1925	34·36
1926	34·84
1927	34·89
1928	35·44
1929	35·7
1930	35·39
1931	34·77
1932	34·92
1933	35·3

By Mr. Senn:

Q. Is it customary to estimate the mark-up on sale price rather than on cost price?—A. Yes.

By Mr. Sommerville:

Q. In departmental store business it is usually computed?—A. Yes.

Q. Will you give us the mark-up as expressed in terms of cost?—A. The following is the same initial mark-up expressed as a percentage of cost of sales:—

	Percentage
1924	51.3
1925	52.3
1926	53.5
1927	53.6
1928	54.9
1929	55.5
1930	54.8
1931	53.3
1932	53.7
1933	54.6

The individual departments do not all show the same trends—some of them show increasing mark-ups and maintained gross profits percentages over the ten-year period. On the other hand, some of them show the reverse.

By Mr. Ilsley:

Q. What do you mean by trend? There does not seem to be any trend?—A. I say that individual departments do not show the same trend. There is a trend from 1924 to 1928 from 51 per cent to 55 per cent. Then it varies in the next five years.

INVENTORY RESERVES

The company maintains an inventory reserve which, however, is not set up on its books as such—effect being given to this reserve by adjusting the values of its inventories at the year-end. This inventory reserve is not set up or adjusted by the departmental managers, any adjustment made being after the departmental results are obtained. In each of the years 1926, 1927 and 1928 the inventory reserve was increased by $100,000 and in 1930, 1931 and 1932, $104,052, $160,000 and $40,000 of this reserve was used to increase the profits. These adjustments are shown on statement TT-1. The total of the inventory reserves for all branches of the business at 3rd January, 1934, was $502,140 of which $400,000 applies against the Toronto store inventory. The gross profit percentages referred to previously are before any of these inventory reserve adjustments.

By Mr. Sommerville:

Q. And the inventory reserve, that is so much velvet to fall back upon?—A. They are to reduce inventories to their cost.

Q. If needed?—A. Yes, if needed.

Q. They are a very legitimate cushion?—A. Yes.

Q. This is an additional over-all inventory reserve?—A. Yes. The adjustments of the inventory reserve are shown separately on the statement because adjustments are not made in the departmental results, and in order to tie up to the departmental profits the inventory adjustments were shown separately on this statement.

EXPENSES

On statement TT-3 is shown a summary of the expenses charged to the departments in total in each of the ten years 1924 to 1933. The amounts included in the various expense items for interest and depreciation have been eliminated in total and shown separately on this statement, the totals of which are carried forward to statement TT-1. All of the expense items show a substantial increase in 1928 and 1929 because of the increased additions made at that time to the Toronto store which resulted in increased operating expenses. Since 1930 the expenses, exclusive of interest and depreciation, decreased from

$6,707,495 to $5,547,166, or by 17 per cent, largely accomplished by wage reductions. The charges made to the departments for rent have increased in the past few years because of the additions made to buildings and equipment.

Q. Wage reductions accounted for—largely accounted for a 17 per cent reduction in operating expenses?—A. Yes.

Q. Now, that was in 1930?—A. Yes.

Q. That is $1,200,000 was the reduction. You say " largely accomplished by wage reductions." Can you tell me to what extent wage reductions contributed? —A. That is referred to in our report upon the wages.

Q. It is dealt with?—A. Yes.

Mr. ILSLEY: This is a good place to tell us now.

By the Chairman:

Q. It was over a million dollars, was it?—A. That was the total reduction in the expenses.

By Mr. Sommerville:

Q. The total reduction in expenses due to wage reductions?—A. I do not know the exact amount. The reduction betweeen 1930 and 1933 in the total wages paid by the Toronto units excluding management was approximately $1,400.000.

Q. There was a slight reduction. There was about a 10 per cent reduction in personnel in the Toronto office?—A. That is total cost of wages.

The CHAIRMAN: In any case, there was a substantial reduction in wages in 1930?

The WITNESS: That includes the Toronto mail order.

By Mr. Sommerville:

Q. And there was in the prior year, 1929, a very substantial increase in the fixed charges in the matter of a large rental that had to be paid to the holding company?—A. This is exclusive of the interest and depreciation. This is only the departmental expense; it does not include the rentals to Simpsons Limited.

Q. I quite appreciate that; but coincident with or following upon the establishment of this large rental to the holding company came the reduction in wages to the departmental employees?—A. Yes.

Mr. HEAPS: What was that reduction in percentages?

Mr. SOMMERVILLE: When we come to the wage scale we will get it more fully.

The CHAIRMAN: It says here a reduction of about 17 per cent largely accounted for by wages, but not wholly. and the exact amount would be dealt with when we come to the wage schedule.

Mr. ILSLEY: Would it give a picture of the wage reductions if you could give the percentage of reduction and the number of those employed and also give with that the percentage and the total amount paid?

The CHAIRMAN: I think perhaps, gentlemen, it would be better to leave that until we get to the wage situation. We are going into the wage situation quite fully, so we will cover it all at that point; I think that would be better.

By Mr. Sommerville:

Q. All right, Mr. Adamson?—A. The net departmental result: The results of the departmental operations over the ten years are shown in the table set out in the earlier part of this memorandum. This statement shows that, after charging interest and depreciation the departments as a whole made profits in each of

the years excepting in 1932, when a loss of $420,108 was shown. The profits in 1933 were $24,813 as compared with a high in 1928 of $1,504,429.

Profit and Loss Account 1933: Statement No. TT-4 shows the net results for 1933 of the Toronto store operations. On Statement No. TT-5 the details of the departmental operations are shown, the totals of which are carried forward to Statement No. TT-4. Statement TT-6 shows the details of the direct and indirect expenses shown in total on Statement TT-5 (1933 only). This is dealing with 1933 in detail.

Q. That is departmental accounts, and the departmental statement of profit and loss?—A. The total departmental profits shown on TT-5 are carried forward to Statement No. 4, and then are shown other adjustments in the profit and loss account, in order to arrive at the net profit or loss for the year.

Q. Yes?—A. And Statement TT-6 shows the details of the expenses which are shown *in toto* in Statement TT-5.

Q. Yes, and that covers wages, buying expenses, advertising, and all the other items of direct expense?—A. Yes.

Q. It also covers indirect expense?

Mr. Factor: In the printed copy we have no TT-3 or TT-6?—A. They are large statements and were not printed.

The expenses shown on this statement are not grouped in the same manner as on the company's departmental statements, although the net results do not differ. The following changes have been made:—

(*a*) The amount of buying expenses charged into the cost of sales has been eliminated and shown instead as an expense item. For this reason the gross profit percentage of each department is higher than shown on the company's statements and on the comparative ten-year statement (No. TT-1).

(*b*) The charges made to the departments for interest and depreciation have been eliminated from the expenses and shown as separate items.

Interest

The interest eliminated and shown separately consists of:—

(1) The interest on inventories which was eliminated from "Miscellaneous Direct Expenses."

By Mr. Sommerville:

Q. In the matter of expenses charged, all departments and services are maintained as separate units?—A. Yes.

Q. And each service department is expected to show a profit operated as such, to cover its expenses and show a profit, is it not?—A. Yes, the cost of the various services is charged; at the beginning of the season the estimated cost of maintaining this service is arrived at, and that is spread over the expenses of the various departments on the basis of budgeted sales.

Q. Yes, and to these service departments there is added a proportion of rent, depreciation and interest?—A. The rent includes the interest.

Q. Interest, depreciation and other similar items?—A. Yes.

Q. Take, for instance, a service department, such as window display, that department is charged a rental for the window while it is used?—A. By the department.

Q. And then, the window trimming department charges for setting up the exhibit.

By Mr. Factor:

Q. That is not included in the 6 per cent?—A. No, the various services are charged separately.

By Mr. Sommerville:

Q. I am using that to illustrate one kind of service that is charged to the department as part of the departmental cost?—A. Yes. Window display is all included in the advertising; the proportion of advertising represented in window rental is included in the advertising expense.

Q. And then a certain proportion of advertising is charged to the department?—A. The actual advertising of the department.

Q. And a certain proportion of the repair department is charged?—A. That is included in the rent as building maintenance.

Q. Included in the rent?—A. Yes.

Q. Is a certain amount of depreciation on their fixtures charged to the department?—A. That is included in their rent, or prepaid expenses.

Q. I am not talking of rental of space, I am talking now of equipment?—A. Yes, equipment used.

Q. Yes, is that not charged in each department?—A. Yes.

Q. All of these are separate departments, and they are all expected in turn to show a profit?—A. In the case of equipment the actual equipment in the department is written off over a period of time against the department.

Q. Against the department, yes?—A. To proceed:—

(2) Interest charged to the departments as rent, as window rental (under advertising and display) and the interest charged to the service departments and included on the company's statements under "Services" and "Administrative."

(3) Interest charged to the departments under "Prepaid Expenses" for special equipment, alterations, etc., used by the departments.

Where details were available the actual interest included in the expenses charged to the departments was eliminated—in other cases a pro-rata basis as between interest and the other expenses included in the rent and other charges made to the departments was used for the purpose of elimination.

DEPRECIATION

(*a*) *On special equipment, alterations, etc.*

The total of the amount eliminated for depreciation on special equipment, alterations, etc., represents the balance of what is known as a "prepaid expense" account after eliminating interest on a *pro rata* basis as set out above.

(*b*) *On building and equipment—*

This represents the depreciation charged to the departments under the company's headings of advertising (window rent), overhead charges (rent charges for service departments), and rent account proper. These amounts have been eliminated from the departmental expenses on a *pro rata* basis in the same manner as interest.

The charges made to the departments in 1933 for interest and depreciation in total were on the same basis as in previous years, but actually the interest charge was increased and the depreciation charge decreased. This was occasioned by the decision of the company to take depreciation of only two-thirds of the usual rates. In order to show the departmental results on a comparable basis with previous years, however, the interest charge was increased.

Statement No. TT-5 shows that of the 88 departments in the Toronto store 52 showed profits and 36 showed losses.

SPECIFIC DEPARTMENTS INQUIRED INTO

Inquiry was made into the operations of certain of the Toronto store departments in order to ascertain the mark-ups obtained on diffrent classes of merchandise, the names of the principal suppliers of the merchandise sold to these

departments and the quantities of merchandise supplied by these firms—in order to show the trend of the operations of these departments over a period of years.

Various statements have been prepared on each of these departments, showing examples of price spreads and the operating results of each of the departments over a period.

The mark-ups indicated on the price spread statements represent the differences between the initial selling prices indicated on the invoices and the laid-down cost. The initial selling prices are not necessarily the selling prices, as in many cases the initial selling prices have to be reduced. The mark-up percentage on cost shown for the various items listed on the price spreads schedules may not, therefore, necessarily be the actual mark-up obtained. The actual maintained gross profits percentages of the departments may be obtained by a reference to the comparative departmental statements, on which are also shown the amounts of the stock write-downs, stock shortages and employees' discounts, which are deducted before arriving at the actual gross profits of the departments.

These comparative departmental operating statements also show the total expenses charged against the departments, including the interest and depreciation charges referred to previously.

By Mr. Sommerville:

Q. If stock is marked up at a certain figure and is sold at less than that figure there is what is called a mark-down allowance in that department?—A. Yes

Q. On a particular item?—A. Yes.

By the Chairman:

Q. All these variations then are reflected in your figure, the maintained mark-up?—A. Yes, that is, after eliminating all the stock write-downs and inventory variations.

ADVERTISING

On Statement No. TT-8 is shown the comparative newspaper expenses by newspapers of the Toronto store for the eleven years, 1923 to 1933 inclusive. This shows an increase from $412,000 in 1923 to $750,000 in 1933.

By Mr. Sommerville:

Q. $750,000 was the total newspaper advertising in 1933?—A. Yes. On the same statement is shown the lineages in one Toronto evening paper in each of the years 1927 to 1933 and the lineages in one Toronto morning paper in each of the years 1929 to 1933. The lineages of each of the two evening newspapers are approximately the same and this is also the case for the two morning newspapers. The lineage rates for each of the four Toronto newspapers over a period of years is also shown on this statement.

MR. SOMMERVILLE: In the printing of this statement of comparative advertising lineages you might note that there has been a mistake in the printing. They have put the dollar sign for lineage and I know that the *Evening Telegram* would have a faint if they found that they were reported as having received $2,500,000. They mean 2,500,000 lines. The dollar sign should not be there.

The WITNESS: *Advertising Allowances.*

Statement TT-9 shows the advertising allowances received from suppliers of the Toronto store, for the year 1933 and for the first two months of 1934. These advertising allowances are classified according to the departments receiving the benefit of the allowances. The amounts received from the various suppliers vary greatly. The total number of suppliers contributing advertising

allowances is approximately 150 and the total amount received in 1933 amounted to $37,521.90. In the first two months of 1933 advertising allowances totalled $8,485.52. These advertising allowances are credited against the cost of the—

By Mr. Sommerville:

Q. These advertising allowances are amounts that are given by various firms?—A. Yes.

Q. And you have given us a list of them?—A. Yes.

The CHAIRMAN: A large list.

Mr. SOMMERVILLE: It is a large list, yes.

The WITNESS: That was not printed, 6 pages.

By Mr. Sommerville:

Q. And are these advertising allowances actually based upon an audited return on the number of lines that are occupied, or are they just arbitrary figures?—A. They are amounts arrived at at the time of the purchase of the goods.

Q. As part of the bargain?—A. The vendor agrees to supply so much for advertising.

Q. It is pretty arbitrary?—A. Yes.

Q. You, of course, appreciate that advertising allowances where the advertiser does send in an audited statement showing the lines that have been used and the rate at which they have been used and return to the company is one thing, but where you have an arbitrary figure fixed at the time of purchase that is quite a distinct thing?—A. Yes.

Q. And you say that in this case?—A. There are various arrangements for advertising.

Q. Made at the time of the purchase?—A. Yes.

Q. Then may I ask are they reckoned on the basis of some rate that is paid by the advertiser to the Simpson Company which is a local rate and, therefore, I understand a lower rate, or are they based upon the national rate which is a larger rate?—A. It is usually just a round amount which they say they will contribute for advertising. There are various arrangements.

DEMONSTRATORS

There are some sales clerks in the Toronto store known as "demonstrators" whose wages, or part of them, are paid by the manufacturers of the product which they sell. These "demonstrators" are of two kinds:—

(1) Those whose wages are paid by the Robert Simpson Company, Limited, and charged by that company, either in whole or in part, to the outside firms.

(2) Those whose wages are paid directly by the outside firms.

On Statement No. TT-10 is shown the amounts so charged to these outside firms during the year ended January 3, 1934, which totalled $23,961.26. Of this amount $17,734.39 is in respect of "demonstrators" located in the Toilet Goods department, and primarily because of this, selling wages in that department were only 4·2 per cent of total sales, in contrast to 7·4 per cent for the store as a whole.

Q. Wait a minute till we get this: These demonstrators in the Toilet Goods department, their wages were paid by a number of firms here?—A. There are two kinds, one group whose wages are paid by the Robert Simpson Company, Limited, and charged to the outside firms; and the second class representing demonstrators who are paid directly by the outside firms.

Mr. FACTOR: To advertise a certain brand.

By Mr. Sommerville:

Q. Those demonstrators also sell other goods of the firm?—A. I understand they do.

Q. And that is one means of having the wages of the department taken care of.

By Mr. Factor:

Q. You say that the demonstrators that are paid by the outside firms also sell the firm's goods?—A. Their selling is confined largely to the goods of the firm whom they are representing, but I cannot say whether they actually do sell the goods or not.

The CHAIRMAN: Well, it is not very important; they are paid anyway; there is an allowance made for them.

By Mr. Sommerville:

Q. At any rate, the result of this operation is to cut the selling expenses of that department.

Q. From 7·4 per cent to 4·2 per cent?—A. 7·4 per cent is the average for the store as a whole and the actual of this Toilet Goods department in 1933 was 4·2 per cent.

By the Chairman:

Q. Which about indicates that a very substantial service is rendered by those demonstrators?—A. Yes.

Q. To the department?—A. Yes.

Mr. FACTOR: I suppose a substantial service is rendered by the demonstrators to the outside firms too.

The CHAIRMAN: Oh, yes, it is a very old practice.

The WITNESS: Complete information in respect of "demonstrators" paid directly by outside firms is lacking. At 8th January, 1930, there were 84 names of such on the payroll, and at 10th January, 1934, there were 117. Officials of the company state that not all of these necessarily worked during these weeks, as a name may be left on the payroll for a time after the employee has left. Some of these demonstrators are only in the store for a few days. Officials state that of the demonstrators at 10th January, 1934, 55 have since left the services of the company and there is no record as to the name of the manufacturers whose goods they were selling. The names of the other manufacturers are shown on statement TT-11 attached. As will be seen from this statement the departments which use these demonstrators most are:—

DEPARTMENT 204—TOILET GOODS

This department also has several demonstrators who are paid by Simpsons but whose wages are charged back to manufacturers (See statement TT-10.)

DEPARTMENT 430—STOVES, ETC.

The Easy Washing Machine Company and the Kelvinator Company of Canada, Limited, both employ six in this department.

LOWER PRICED STORE

Most of the demonstrators in this department are transients and twenty-six of those on the payroll at 10th January, 1934, are no longer employed. The store superintendent states that the merchandise which many of these demonstrators sell is only purchased by the Robert Simpson Company, Limited, when and as it is sold to customers.

By Mr. Sommerville:

Q. Consignment really?—A. The goods are sold by the demonstrators in the Lower Priced Store.

By Mr. Factor:

Q. The total paid to these outside clerks for the year ending 3rd January, 1934, was $22,000?—A. That is the amount paid by Simpsons.

By Mr. Sommerville:

Q. And they largely exceed those who are paid by the Robert Simpson Company in numbers?—A. Yes, but they vary from time to time. They may stay for a short time and go again.

By the Chairman:

Q. They are not steady?—A. No.

The CHAIRMAN: Then we turn to consignment purchases.

The WITNESS: Yes.

CONSIGNMENT PURCHASES

The company records consignment goods in the same manner as ordinary purchases excepting that separate accounts payable records are kept with suppliers for consignment merchandise. Officials of the company prepared a statement of consignment purchases in 1933, a summary of which is shown on statement No. TT-12. The statement was checked to the records of the company.

The largest number of consignment purchases occur in the Ladies' Dresses and Coats Departments. In other departments the volume is almost negligible. A summary of the consignment transactions in 1933, which involve approximately 150 vendors, is as follows:—

Consignment goods on hand at 4th January, 1933..	$ 32,188
Purchases in 1933 (of which $157,000 represents purchases in the Ladies' Dresses and Coats Departments)..	174,573
	$ 206,761
Payments to vendors in 1933..	147,090
	$ 59,671
Amounts charged back to vendors either for merchandise returned or for reductions in prices..	43,029
Consignment goods on hand at 4th January, 1934..	$ 16,642

By Mr. Sommerville:

Q. These goods are sent in——A. They are sent in on consignment.

Q. Yes, and the firms have no liability in respect of them?—A. No.

Q. And if they are sold then they are paid for?—A. Yes.

Q. And if they are not sold they are returned?—A. Yes.

Q. And if there are reductions in the prices of these goods what happens then?—A. Well, in some cases, at least, the vendor is charged with a proportion of the reduction in the selling price.

Q. The amount charged back here it seems is for merchandise returned or for reductions in price, $43,000; you have not got that here?—A. It is shown in the next statement for the larger consignment purchases.

Q. Oh, yes, price reductions $8,022?—A. A total charged back of $28,000 on 19 consignment accounts, $8,000 represented price reductions.

Q. Now, on these price reductions we have had complaints that while there are price reductions the firm never takes any portion of that price reduction, it always maintains its mark-up, and the price reduction has to be entirely taken by the manufacturer sending in the goods on consignment. Can you speak as to that?—A. The records of the company show that the amount charged back to the vendor is in proportion to the reduction in selling price.

Q. Their mark-up then is maintained?—A. No.

Q. At the reduced price, is it not?—A. They reduce their selling price and charge a proportion of that to the vendor.

By Mr. Factor:

Q. The vendor does not absorb the entire reduction?—A. Oh, no.

Q. What percentage?—A. Well, in some cases, at least, from the records which we examined the amount charged back to the vendor was the same proportion to the cost as the reduction was to the initial selling price; that is, if the goods were marked at $1 and were reduced to 75 cents, not all of the 25 cents is charged back to the vendor, only a proportion of that.

By Mr. Sommerville:

Q. The statement sent in to us indicated that the whole amount was charged back to the vendor and the mark-up was maintained on the goods on the reduced price?—A. There are no records to show whether that is so or not.

By the Chairman:

Q. Would you say that substantially any reductions were charged back to the vendor of the goods?—A. Yes.

Q. Would you say that substantial net reductions were charged back to the vendor of the goods?—A. Yes.

Q. Substantially?—A. Where reductions were made in the selling price, a portion of them were charged to the vendor, not the total.

By Mr. Sommerville:

Q. A substantial portion would be charged, anyway. You see, if they owned the goods themselves, and paid for them and sold them at a reduced price, they would take the entire reduction themselves?—A. Yes.

Q. But in the matter of this consignment goods, is it not a fact that practically all, if not all, of the reduction is charged back to the manufacturer?—A. No; the portion represented by the ratio of the cost to the initial selling price.

Mr. Nash: I think it might be explained in a very short table, if I might interrupt. If they purchased goods for a dollar, and mark them up $1.50, got goods on consignment, valued at a dollar, and mark them up to $1.50, and later those goods were reduced to 50 cents, they would mark them up to 75 cents and each would take one-half of the reduction.

Mr. Sommerville: Proportionate.

Mr. Nash: It is proportionate. They share the reduction.

Mr. Factor: That is rather a new system of merchandising.

It is reasonable to ship goods on consignment at a fixed price; I mean, I always understood the term "goods on consignment" meant, here are the goods, sell them at a price, and then pay me under certain terms.

Mr. Sommerville: On commission?

Mr. Factor: On commission.

The Chairman: There is usually a price intimated when goods are consigned?

Mr. Ilsley: They keep the same proportion of mark-up and reduction.

Mr. Nash: Their mark-up is maintained.

Mr. Sommerville: That is what I thought.

Mr. Young: The percentage.

Mr. Nash: They share the reduction with the vendor.

The CHAIRMAN: All right.

The WITNESS: Consignment purchases represent slightly more than 1 per cent of the total purchases of the store and slightly more than 4 per cent of the total purchases of those departments in which any consignment purchases were made.

An examination of a large number of the invoices shown in the company's records as representing 1933 consignment purchases was made. Very few of these invoices are marked "consignments." Most of them have a mark thereon, the usual terms of credit. An examination was also made of many of the debit notes by which amounts are charged back to the vendors either for merchandise sent back or for price reductions.

By Mr. Sommerville:

Q. Did you find this condition existing: That goods had been purchased on an invoice just as you indicate here, in the ordinary way, and that when they did not sell well, they had been returned to the manufacturer, and those that had been sold were treated as having been sold on consignment?—A. No.

Q. You did not find that condition?—A. No. Consignment accounts of the nineteen largest vendors were analyzed in detail and are summarized on statement No. TT-13. The volume of consignment transactions with these nineteen firms represents 60 per cent of the consignment business in 1933. An analysis is given on the statement of the amounts charged back to these vendors. i.e., as between goods returned and charge-backs for price reductions. This shows that of $28,481.84 charged back to the nineteen vendors whose accounts were examined, $20,459.82 represented returned merchandise and the balance, $8,022.02, represented price reductions.

Mr. FACTOR: Can you tell me what percentage of the returned merchandise was of the total merchandise purchased in the analysis?

The WITNESS: To the total merchandise?

Mr. SOMMERVILLE: The 19 accounts.

The WITNESS: Of those 19 accounts, yes.

The CHAIRMAN: The consigned goods.

Mr. SOMMERVILLE: It represents $99,464, and the goods returned amounted to $20,459.

The CHAIRMAN: About 20 per cent.

The WITNESS: 20 per cent.

Mr. SOMMERVILLE: $8,000 represents the amount charged back as reductions, so that about $28,000 of the $90,000 would mean more than 25 per cent was affected in this way.

The WITNESS: The debit notes respecting price reductions give little information, the usual explanation being "allowance as arranged with " —the person with whom we are dealing. The debit notes indicate the selling price as well as the cost price, and in many cases the amount charged back to the vendor was in the same ratio to the original cost as the reduction in selling price to the indicated original selling price. That is what we have gone over.

The CHAIRMAN: It is six o'clock, and I think we will call it a day. The committee stands adjourned until to-morrow at 11 o'clock.

The committee adjourned at six o'clock, to meet on Thursday, June 7, at 11 o'clock.
